3.6 Cultural and Tribal Cultural Resources IMPACT 3.6-1. Cause a Substantial Adverse Change in the Significance of Archaeological Resources as defined in CEQA Guidelines Section 15064.5.	Mitigation Measure 3.6-1: Treatment of Unanticipated Archaeological Discoveries Project applicants for future projects proposed under the WRTP Specific Plan would be required to implement the following procedures during any ground-disturbing activities: a. Prior to ground-disturbing activities necessary to implement proposed development and infrastructure projects, contractors shall receive cultural resource sensitivity training to identify potential archaeological resources and that all work should cease within 150 feet of prehistoric cultural resources that may be discovered during project implementation. b. During ground-disturbing activities necessary to implement proposed development and infrastructure projects, if any prehistoric or historic subsurface resources are discovered, all work within 150 feet of the resources shall be halted and a qualified archaeologist shall be consulted within 24 hours to assess the significance of the find, according to CEQA Guidelines Section 15064.5, and implement, as applicable, CEQA Guidelines Sections 15064.5(d), (e), and (f). • The California Office of Historic preservation utilizes the Secretary of the Interior's Standards and Guidelines for Archeology and Historic Preservation as found in Code of Federal Regulations, 36 CFR [Code of Federal Regulations] Part 61. The minimum professional qualifications in archeology are a graduate degree in archeology, anthropology, or closely related field plus: 1. At least one year of full-time professional experience or equivalent specialized training in archeological	Implementation: Project applicant(s) and contractor(s). Timing: Prior to and during any construction ground disturbing activities.		

Impact	Mitigation Measure	Implementation Responsibility/Timing	Compliance Verification	Date Completed
	research, administration or management; 2. At least four months of supervised field and analytic experience in general North American archeology; and 3. Demonstrated ability to carry research to completion. In addition to these minimum qualifications, a professional in prehistoric archeology shall have at least one year of full-time professional experience at a supervisory level in the study of archeological resources of the prehistoric period. A professional in historic archeology shall have at least one year of full-time professional experience at a supervisory level in the study of archeological resources of the historic period. c. If any find is determined to be a unique archaeological resource according to CEQA Guidelines Section 15064.5, representatives from the City and the archaeologist shall meet to determine the appropriate avoidance measures or other appropriate mitigation. Cultural resources shall be recorded on appropriate Department of Parks and Recreation forms, and all significant cultural materials recovered shall be, as necessary and at the discretion of the qualified archaeologist and in consultation with the local Native American community if the discovery is prehistoric in age, subject to scientific analysis, professional curation, and documentation according to professional standards. If it is determined that the proposed development or infrastructure project could damage a historical resource or a unique archaeological resource (as defined pursuant to the CEQA Guidelines), mitigation shall be implemented in accordance with Section 21083.2 of the California Public Resources Code and CEQA Guidelines Section 15126.4, with a preference for preservation in place. Work may proceed on other parts of the project site while mitigation for historical resources or unique archaeological resources is being carried out. Preservation in place may be accomplished by planning construction to avoid the resource; incorporating the resource within open space; capping and covering the resource; or deeding the site into a permanent conservation easement. d. If avoidance is not feasible, the qualified archaeologist shall develop and oversee the execution of a treatment plan. The treatment plan shall include, but shall not be limited to, data recovery procedures based on location and type of archaeological resources discovered and a preparation and submittal of report of findings to the Northwest Information Center of the California Historical Resources Information System. Data recovery shall be designed to recover the significant information the archaeological resource is expected to contain, based on the scientific/historical research questions that are applicable to the resource, what data classes the resource is expected to possess, and how the expected data classes would address the applicable resource questions. Data recovery, in general, should be limited to the portions of the historical property that could be adversely affected by project proponents' actions. Destructive data recovery methods shall not be applied to portions of the archaeological resources if nondestructive methods are practical.			

Impact	Mitigation Measure	Implementation Responsibility/Timing	Compliance Verification	Date Completed
3.6 Cultural and Tribal Cultural Resources IMPACT 3.6-2. Disturb Human Remains, including those Interred Outside of Formal Cemeteries.	Mitigation Measure 3.6-2: Treatment of Human Remains Consistent with Health and Safety Code, Section 7050 through 7052 and Health and Safety Code Section 8010 through 8030, in the event of the accidental discovery or recognition of any human remains in any location other than a dedicated cemetery during construction, the City and contractor/s shall take the following steps: (1) No further excavation or disturbance of the project site or any nearby area reasonably suspected to overlie adjacent human remains will occur until: (A) the coroner of Yolo County has been contacted to determine that no investigation of the cause of death is required, and (B) if the coroner determines the remains to be Native American: 1. the coroner shall contact the Native American Heritage Commission within 24 hours; 2. the Native American Heritage Commission shall identify the person or persons it believes to be the most likely descendant from the deceased Native American; and 3. the most likely descendant may make recommendations to the landowner or the person responsible for the excavation work, for means of treating or disposing of, with appropriate dignity, the human remains and any associated grave goods, as provided in Section 5097.98 of the Public Resources Code; or (2) Where the following conditions occur, the landowner or his or her authorized representative shall rebury the Native American remains and associated grave goods with appropriate dignity on the property in a location not subject to further subsurface disturbance: (A) the Native American Heritage Commission is unable to identify a most likely descendant or the most likely descendant fails to make a recommendation within 24 hours after being notified by the commission; (B) the most likely descendant identified fails to make a recommendation; or (C) the landowner or his or her authorized representative rejects the recommendation of the most likely descendant, and mediation by the Native American Heritage Commission fails to provide measures acceptable to the landowner.	Implementation: Project applicant(s) and contractor(s). Timing: In the event of the accidental discovery or recognition of any human remains in any location other than a dedicated cemetery during construction.		
3.7 Geology, Soils, Minerals and Paleontological Resources	Mitigation Measure 3.7-1: Conduct Construction Personnel Education, Stop Work if Paleontological Resources are Discovered, Assess the Significance of the Find, and Prepare and Implement a Recovery Plan, as Required. To minimize the potential for destruction of, or damage to potentially unique, scientifically important paleontological resources during earth-moving activities, the measures described below shall be implemented by project applicants and contractors for future projects proposed under the W RTP Specific Plan within the Riverbank or	Implementation: Project applicant(s) and contractor(s). Timing: Before and during excavation and other		

Impact	Mitigation Measure	Implementation Responsibility/Timing	Compliance Verification	Date Completed
IMPACT 3.7-1. Possible Damage to or Destruction of Unique Paleontological Resources.	Modesto Formations (in the southern portion of the WRTP Specific Plan Area and the proposed South Regional Pond area) before and during construction activities. • Prior to the start of earthmoving activities that would disturb 1 acre of land or more within the Riverbank or Modesto Formations (in the southern portion of the WRTP Specific Plan Area and the proposed South Regional Pond area), inform all construction personnel involved with earthmoving activities regarding the possibility of encountering fossils, the appearance and types of fossils likely to be seen during construction, and proper notification procedures should fossils be encountered. This worker training may either be prepared and presented by an experienced field archaeologist at the same time as construction worker education on cultural resources or prepared and presented separately by a qualified paleontologist. • If paleontological resources are discovered during earthmoving activities, the construction crew shall immediately cease work in the vicinity of the find and notify the City of Woodland Community Development Department. Retain a qualified paleontologist to evaluate the resource and prepare a recovery plan. The recovery plan may include, but is not limited to, a field survey, construction monitoring, sampling and data recovery procedures, museum curation for any specimen recovered, and a report of findings. Recommendations in the recovery plan that are determined by the City to be necessary and feasible shall be implemented before construction activities can resume at the site where the paleontological resources were discovered.	earth disturbing activities.		
3.8 Hazards and Hazardous Materials IMPACT 3.8-1. Create a Significant Hazard to the Public or the Environment through Reasonably Foreseeable Upset and Accident Conditions Involving the Release of Hazardous Materials into the Environment.	Mitigation Measure 3.8-1: Prepare a Remedial Action Plan, and Conduct Phase I and/or II Environmental Site Assessments and Implement Required Measures if Stained or Odiferous Soil is Discovered. To reduce health hazards associated with potential exposure to hazardous substances in the WRTP Specific Plan Area and the off-site South Regional Pond, implement the following measures before the start of ground-disturbing activities in areas of debris piles, pole-mounted transformers, where demolition will occur, and other areas where evidence of hazardous materials contamination is observed or suspected through either obvious or implied evidence (i.e., stained or odorous soil): • Prepare a remedial action plan that identifies any necessary remediation activities including excavation and removal of contaminated soils and redistribution of clean fill material at the diesel above-ground storage tank associated with the agricultural well on the East Central Parcel, and other areas within the WRTP Specific Plan Area, if necessary. All above-ground storage tanks shall be removed in accordance with State and local regulations. The remedial action plan shall include measures for the safe transport, use, and disposal of contaminated soil and building debris removed from the project site. During construction, project applicants for future projects proposed under the WRTP Specific Plan and the off-site South Regional Pond shall be required to comply with the remedial action plan and all applicable federal, State, and local laws.	Implementation: Project applicant(s) and contractor(s). Timing: Before the start of ground-disturbing activities in areas of debris piles, pole-mounted transformers, where demolition will occur, and other areas where evidence of hazardous materials contamination is observed or suspected through either obvious or		

Impact	Mitigation Measure	Implementation Responsibility/Timing	Compliance Verification	Date Completed
	The remedial action plan shall outline measures for specific handling and reporting procedures for hazardous materials and disposal of hazardous materials removed from the project site at an appropriate off-site disposal facility. • In the event that contaminated groundwater is encountered during site excavation activities, the contractor shall report the contamination to the appropriate regulatory agencies, dewater the excavated area, and treat the contaminated groundwater to remove contaminants before discharge into the sanitary sewer system. • If stained or odiferous soil is discovered during project-related construction activities, project applicants for future projects proposed under the WRTP Specific Plan and the off-site South Regional Pond shall retain a registered environmental assessor to conduct a Phase I ESA, and if necessary, Phase II ESAs and/or other appropriate testing. Recommendations in the Phase I and II ESAs to address any contamination that is found shall be implemented before initiating ground-disturbing activities in these areas. • Notify the appropriate federal, State, and local agencies if evidence of previously undiscovered soil or groundwater contamination (e.g., stained soil, odorous groundwater) or if known or previously undiscovered underground storage tanks are encountered during construction activities. Any contaminated areas shall be remediated in accordance with recommendations made by the EMD, Central Valley RWQCB, DTSC, and/or other appropriate federal, State, or local regulatory agencies. • Retain a licensed contractor to remove all septic systems in accordance with local, State, and federal regulations. • Retain a Cal-OSHA certified Asbestos Consultant before demolition of any buildings in the WRTP Specific Plan Area to investigate whether any asbestos-containing materials or lead-based paints are present, and could become friable or mobile during demolition activities. Provide a copy of the report to YSAQMD. If any materials containing asbestos or lead-based paints are found, they shall be removed by an accredited contractor in accordance with EPA and Cal-OSHA standards as required by YSAQMD. In addition, all activities (construction or demolition) in the vicinity of these materials shall comply with Cal-OSHA asbestos and lead worker construction standards. The materials containing asbestos and lead shall be disposed of properly at an appropriate off-site disposal facility. • Properly close and abandon all on-site groundwater wells in accordance with Yolo County requirements	implied evidence (i.e., stained or odorous soil).		
3.8 Hazards and Hazardous Materials IMPACT 3.8-2. Emit Hazardous	Mitigation Measure 3.8-2: Notify and Consult with Affected Schools, and Implement a Hazardous Materials Business Plan (if Required). Project applicants for future retail, commercial, or industrial projects proposed under the WRTP Specific Plan and supportive infrastructure improvements that would involve the long-term use of hazardous materials for project operation shall notify the Woodland	Implementation: Project applicant(s) and contractor(s).		

Impact	Mitigation Measure	Implementation Responsibility/Timing	Compliance Verification	Date Completed
Emissions or Handle Hazardous or Acutely Hazardous Materials, Substances, or Waste within One-Quarter Mile of an Existing or Proposed School.	Christian School, the Pioneer High School, and the Woodland Joint Unified School District, as appropriate based upon project location relative to school locations, in writing, and shall consult with appropriate school or district personnel about the types of activities that would occur and their estimated timing. Examples of the types of hazardous materials that could be used during proposed operational activities shall be provided. The written notification shall be provided at least 30 days before the commencement of any construction activities. Future businesses within the WRTP Specific Plan Area that handle and/or store a hazardous material or a mixture containing a hazardous material in amounts greater than the specified threshold quantities in Chapter 6.95, Section 25505 of the California Health & Safety Code shall prepare a Hazardous Materials Business Plan. The plan shall provide emergency plans and procedures that the businesses will follow in the event of a release or threatened release of a hazardous material, along with the other requirements of Section 25505 including an inventory of hazardous materials, site plan showing material storage areas and ingress and egress points for emergency vehicles, and employee safety training.	Timing: Written notification shall be provided at least 30 days before the commencement of any construction activities. For operations requiring a Hazardous Materials Business Plan, the plan shall be approved prior to the issuance of a permit to operate.		
3.9 Hydrology, Flooding, and Water Quality IMPACT 3.9-1. Substantially Increase the Rate or Amount of Surface Runoff Resulting in Flooding, Create or Contribute Runoff Water which would Exceed the Capacity of Existing or Planned Stormwater Drainage Systems, Provide Substantial Additional Sources of Polluted Runoff.	Mitigation Measure 3.9-1: Prepare Additional Storm Drainage Analysis for determining Amount of New Development Acreage Beyond the Previously Identified 80 Residential Acres Allowable in the South Urban Growth Area and Submit to the City for Review and Approval. The WRTP shall be required to fund an additional stormwater drainage analysis that utilizes the revised baseline conditions modeling and includes detailed information defining the operational capacity of the newly-installed infrastructure. A model will then be created that incorporates the pump station, detention, and conveyance improvements that have already been constructed, and then incorporates the full buildout of the Spring Lake Specific Plan Development. At that point, the fully developed acreage of the WRTP Specific Plan will be added to determine the new developable acreage (in terms of stormwater drainage) that can be accommodated with current infrastructure. The additional drainage analysis will also be required to determine what additional storm drainage infrastructure is needed to support full buildout of the WRTP Specific Plan. Building permits for development beyond the identified currently developable acreage will only be approved with confirmation that the required storm drainage and water quality treatment infrastructure is in place.	Implementation: Fee requirements pertain to Project Applicant(s)/ Leaseholder(s) / Developer(s) Implementation of the analysis shall be the requirement of the City of Woodland and its contractor Timing: Prior to issuance of building permits for development beyond the identified currently developable acreage [80 residential acres, per Section 3.9 of the Draft EIR].		

Impact	Mitigation Measure	Implementation Responsibility/Timing	Compliance Verification	Date Completed
3.11 Noise and Vibration IMPACT 3.11-1. Generation of a Substantial Temporary (Construction-related) Increase in Ambient Noise Levels in the Vicinity of the Project in Excess of Standards Established in the Local General Plan or Noise Ordinance, or Applicable Standards of Other Agencies.	Mitigation Measure 3.11-1– Implement Construction Noise Reduction Strategies a. Demolition, construction, site preparation, and related activities that would generate noise perceptible at the property line of the subject property are limited to the hours between 7:00 A.M. and 6:00 P.M. on Monday through Saturday and between 9:00 A.M. and 6:00 P.M. on Sunday and federal holidays. The building inspector may issue an exception to this limitation on hours in cases of urgent necessity where the public health and safety will not be substantially impaired. b. Idling times for noise-generating equipment used in demolition, construction, site preparation, and related activities shall be minimized either by shutting equipment off when not in use or reducing the maximum idling time to two (2) minutes. c. Where construction work is within 445 feet of properties with existing, occupied noise-sensitive uses, construction shall be prohibited on weekends and holidays and construction should start no earlier than 8 a.m. d. Where construction work is within 445-feet of an existing off-site residence, installation of continuous noise curtains shall be required between the construction site and those residences. e. Demolition, construction, site preparation, and related activities that do not involve pile driving proposed within 445 feet from the edge of properties with existing, occupied noise-sensitive uses shall incorporate all feasible strategies to reduce noise exposure for noise-sensitive uses, including: • Provide written notice to all known occupied noise-sensitive uses within 445 feet of the edge of the project site boundary at least 2 weeks prior to the start of each construction phase of the construction schedule; • Ensure that construction equipment is properly maintained and equipped with noise control components, such as mufflers, in accordance with manufacturers' specifications; • Re-route construction equipment away from adjacent noise-sensitive uses; • Locate noisy construction equipment away from surrounding noise-sensitive uses; • Use sound aprons or temporary noise enclosures around noise-generating equipment; • Position storage of waste materials, earth, and other supplies in a manner that will function as a noise barrier for surrounding noise-sensitive uses; • Use the quietest practical type of equipment; • Use electric powered equipment instead of diesel or gasoline engine powered equipment; • Use shrouding or shielding and intake and exhaust silencers/mufflers; and • Other effective and feasible strategies to reduce construction noise exposure for surrounding noise-sensitive uses.	Implementation: Project applicant(s) and contractor(s). Timing: Prior to and during any construction ground disturbing activities.		

Impact	Mitigation Measure	Implementation Responsibility/Timing	Compliance Verification	Date Completed
	f. For construction of buildings that require the installation of piles, an alternative to installation of piles by hammering shall be used. This could include the use of augured holes for cast-in-place piles, installation through vibration or hydraulic insertion, or another low-noise technique.			
3.11 Noise and Vibration IMPACT 3.11-2. Generation of a Substantial Permanent (Long-term Operations) Increase in Ambient Noise Levels in the Vicinity of the Project in Excess of Standards Established in the Local General Plan or Noise Ordinance, or Applicable Standards of Other Agencies.	Mitigation Measure 3.11-2– Reduce Noise Exposure from Transportation and Non-Transportation Sources Future development within the W RTP Specific Plan Area shall be required to meet allowable outdoor and indoor noise exposure standards. Noise mitigation measures that may be approved to achieve these noise level targets include but are not limited to the following: • Construct facades with sound insulation to achieve acceptable interior noise; • Use sound-rated windows for primary sleeping and activity areas; • Use sound-rated doors for all exterior entries at primary sleeping and activity areas; • Use setbacks and/or sound barriers where applicable, feasible, and reasonable; • Use acoustic baffling of vents for chimneys, attic and gable ends; • Install a mechanical ventilation system that provides fresh air under closed window conditions; and • Maximize site design so that buildings shelter outdoor areas	Implementation: Project applicant(s) and contractor(s). Timing: Demonstrate compliance with noise standards prior to issuance of a grading permit.		
3.11 Noise and Vibration IMPACT 3.11-3. Generation of Vibration.	Mitigation Measure 3.11-3a – Implement Vibration Reduction Measures g. New development that proposes the use of piles for foundations shall include all feasible measures necessary with the goal to ensure that vibration exposure for adjacent buildings is less than 0.5 PPV and less than 80 VdB for adjacent vibration-sensitive uses and less than 0.2 PPV for adjacent historic buildings. These performance standards shall take into account the reduction in vibration exposure that would occur through coupling loss provided by each affected building structure. If it is determined necessary to avoid damage, the project applicant shall coordinate with the Chief Building Official to implement corrective actions, which may include, but is not limited to building protection or stabilization. h. New developments that would generate substantial long-term vibration shall provide analysis and mitigation, as feasible, to achieve velocity levels, as experienced at habitable structures of vibration-sensitive land uses, of less than 80 vibration decibels.	Implementation: Project applicant(s) and contractor(s). Timing: For construction that would require use of piles for foundations, prior to and during construction. For operations that would generate substantial long-term vibration, demonstrate compliance prior to		

Impact	Mitigation Measure	Implementation Responsibility/Timing	Compliance Verification	Date Completed
		the issuance of a permit to operate.		
3.11 Noise and Vibration IMPACT 3.11-3. (Continued) Generation of Vibration.	Mitigation Measure 3.11-3b – Implement Mitigation Measure 3.11-1	Implementation: Project applicant(s) and contractor(s). Timing: Prior to and during any construction ground disturbing activities.		
3.13 Transportation and Circulation IMPACT 3.13-1. Conflict with A Program, Plan, Ordinance, or Policy Addressing the Circulation System, including Transit, Roadway, Bicycle, and Pedestrian Facilities.	Mitigation Measure 3.13-1a: The Draft WRTP Specific Plan Finance Plan shall incorporate a Transit Contribution. While not required as mitigation for a significant impact under CEQA, the following would be required for planning purposes to ensure transit equipment, infrastructure, and service is adequately funded to provide necessary service to the WRTP Specific Plan Area: The project applicant shall contribute its fair-share of the cost associated with providing transit service to the WRTP Specific Plan Area. It is anticipated that new transit vehicles may be required to provide additional service to the WRTP Specific Plan Area. However, the final determination of additional capital equipment or other costs shall be determined by the City of Woodland in coordination with YCTD and as identified in the Master TDM/VMT Program. The fair-share cost or a plan for providing the fair-share cost over time shall demonstrate funding is adequate to provide the necessary transit service or range of services required to meet the demand in the WRTP Specific Plan Area, as determined through the WRTP Specific Plans required coordination with YCTD and UC Davis. The funding mechanism(s) for transit and other TDM measures shall be outlined in the WRTP Specific Plan Finance Plan, and development projects shall be required to commit to contributing fair-share costs prior to the issuance of respective building permits by the City of Woodland.	Implementation: Fee requirements pertain to Project Applicant(s)/ Leaseholder(s) / Developer(s) Timing: Demonstrate binding commitment to contributing fair-share costs prior to the issuance of a building permit by the City of Woodland.		
3.13 Transportation and Circulation IMPACT 3.13-1. (Continued) Conflict with A Program, Plan, Ordinance, or Policy Addressing the	Mitigation Measure 3.13-1b: On-site Transit Stops. While not required as mitigation for a significant impact under CEQA, the following would be required for planning purposes to ensure proposed transit infrastructure provides for adequate service to the WRTP Specific Plan Area: The WRTP Specific Plan calls for development of a shared mobility hub in the Village Center. The project applicant shall develop detailed plans, to be reviewed and approved by the City of Woodland and YCTD [Yolo County Transportation Department] and construct the shared mobility hub improvements in the Village Center and identify the	Implementation: Fee requirements pertain to Project Applicant(s)/ Leaseholder(s) / Developer(s) Timing:		

Impact	Mitigation Measure	Implementation Responsibility/Timing	Compliance Verification	Date Completed
Circulation System, including Transit, Roadway, Bicycle, and Pedestrian Facilities.	specific locations of sheltered transit stops with bus turnouts at other locations. It is anticipated that other stops would be located near the business park uses north and west of the Village Center. The City of Woodland and YCTD shall approve the location, design, and implementation timing of the sheltered transit stops and bus turnouts prior to the prior to approval of the first final map or as otherwise required by the City. If transit stops are located on-street for segments of roadways that do not have designated curbside on-street parking that can be designated for a bus stop (i.e., only travel lanes, bike lanes), the street cross-sections shall be modified to provide for a curbside bus stop, or multiple stops if needed for bus operations.	Demonstrate binding commitment to contributing fair-share costs prior to the issuance of a building permit by the City of Woodland.		
3.13 Transportation and Circulation IMPACT 3.13-2. Substantially Increase Hazards Due to a Design Feature or Incompatible Uses.	Mitigation Measure 3.13-2: Implement a Construction Traffic Control Plan Prior to any construction activities for the WRTP Specific Plan, the applicant shall prepare a detailed Construction Traffic Control Plan and submit it for review and approval by the City Department of Public Works. The applicant and the City shall consult with Caltrans, Yolobus, and local emergency service providers for their input prior to approving the Plan. The plan shall ensure that acceptable operating conditions on local roadways and freeway facilities are maintained during construction. A copy of the construction traffic control plan shall be submitted to local emergency response agencies and these agencies shall be notified at least 14 days before the commencement of construction that would partially or fully obstruct roadways. At a minimum, the plan shall include: • The number of truck trips, time, and day of street closures • Time of day of arrival and departure of trucks • Limitations on the size and type of trucks, provision of a staging area with a limitation on the number of trucks that can be waiting • Provision of a truck circulation pattern • Provision of a driveway access plan so that safe vehicular, pedestrian, and bicycle movements are maintained (e.g., steel plates, minimum distances of open trenches, and private vehicle pick up and drop off areas) • Maintain safe and efficient access routes for emergency vehicles • Maintain safe and efficient access routes for farming equipment and vehicles • Manual traffic control when necessary • Proper advance warning and posted signage concerning street closures • Provisions for pedestrian safety	Implementation: Project applicant(s) Timing: Plan preparation and submittal to the City prior to any construction activities. A copy of the construction traffic control plan shall be submitted to local emergency response agencies and these agencies shall be notified at least 14 days before the commencement of construction that would partially or fully obstruct roadways.		
3.14 Utilities IMPACT 3.14-1. Increased Demand for Water Supply	Mitigation Measure 3.14-1: Prepare and Submit a Water Supply Conveyance Improvement Plan in Compliance with Applicable Standards and Construct Water Supply Conveyance Infrastructure Prior to Occupancy.	Implementation: Project applicant(s) Timing:		

Impact	Mitigation Measure	Implementation Responsibility/Timing	Compliance Verification	Date Completed
Conveyance Facilities.	While not required as mitigation for a significant impact under CEQA, the following would be required for planning purposes to ensure the water supply infrastructure is designed and sized to provide adequate service to the WRTP Specific Plan: Before approval of the final subdivision map and issuance of building permits, project applicants for projects proposed under the WRTP Specific Plan shall prepare a detailed water conveyance infrastructure improvement plan that depicts the locations and appropriate sizes of all required conveyance infrastructure, in conjunction with other site-specific improvement plans. Proposed on-site water facilities shall be designed and sized to provide adequate service to the project site for the amount of development identified in the tentative subdivision map, based on City of Woodland Engineering Standards. A final water conveyance infrastructure improvement plan shall be approved by the City of Woodland Engineering Division before approval of the final subdivision map by the City of Woodland Planning Division and issuance of building permits from the City of Woodland Building Division. All required infrastructure shall be in place prior to occupancy of development anticipated under the proposed project.	Plan approval to occur Prior to approval of a final subdivision map and issuance of any building permits for a use proposing to connect to public water utilities. All required infrastructure shall be in place prior to occupancy of development for which the plan applies.		
3.14 Utilities IMPACT 3.14-2. Increased Demand for Wastewater Collection and Conveyance Facilities.	Mitigation Measure 3.14-2: Prepare Additional Analysis to Verify the Spring Lake Specific Plan Pump Station Capacity Prior to Development Beyond 87 Percent of the WRTP Specific Plan Area. While not required as mitigation for a significant impact under CEQA, the following would be required for planning purposes to ensure the existing wastewater conveyance infrastructure has the capacity to provide adequate service to the WRTP Specific Plan Area: Prior to any development beyond 87 percent of the WRTP Specific Plan, the WRTP shall fund additional analysis to verify that the Spring Lake Specific Plan Pump Station has adequate capacity to provide for sewer flows from full buildout of the WRTP Specific Plan. If additional capacity is required, it may be provided by upsizing the pumps as part of the City's regular maintenance work of replacing the pumps. If the increased capacity is not provided by the City's maintenance work, then the WRTP Specific Plan will be responsible for funding improvements at the pump station to provide the additional required capacity.	Implementation: Fee requirements pertain to Project Applicant(s)/ Leaseholder(s) / Developer(s) Analysis requirements pertain to the City of Woodland and its contractor(s), leaseholders Timing: Prior to issuance of building permits for development beyond 87 percent of the WRTP Specific Plan development square footage.

I. INTRODUCTION

The California Environmental Quality Act (“CEQA”) (Public Resources Code §§ 21000 et seq.) requires the City of Woodland (City), as the lead agency, to make certain written findings and to identify overriding considerations for significant and unavoidable impacts identified in the Environmental Impact Report (“EIR”) for the *Woodland Research and Technology Park Specific Plan* (referred to as the “WRTP Specific Plan” or “proposed project”). CEQA Guidelines (Title 14 of the California Code of Regulations) sections 15091, 15092, and 15093 set forth the specific requirements for these findings.

CEQA requires an EIR to be prepared when the lead agency has determined that a project may or will have significant impacts on the environment. Prior to project approval, the EIR must be certified pursuant to Section 15090 of the CEQA Guidelines. When an EIR has been certified that identifies one or more significant environmental impacts, the approving agency must make one or more of the following findings, accompanied by a brief explanation of the rationale, pursuant to Section 15091 of the CEQA Guidelines, for each identified significant impact:

- a) Changes or alterations have been required in, or incorporated into, such project which avoid or substantially lessen the significant environmental effect as identified in the final environmental impact report.
- b) Such changes or alterations are within the responsibility and jurisdiction of another public agency and not the agency making the finding. Such changes have been adopted by such other agency, or can and should be adopted by such other agency.
- c) Specific economic, legal, social, technological, or other considerations, including provision of employment opportunities for highly trained workers, make infeasible the mitigation measures or project alternatives identified in the environmental impact report.

CEQA Guidelines Section 15092 states that after consideration of an EIR, and in conjunction with making the Section 15091 findings identified above, the lead agency may decide whether or how to approve or carry out the project. A project that would result in a significant environmental impact cannot be approved if feasible mitigation measures or feasible alternatives can avoid or substantially lessen the impact.

However, in the absence of feasible mitigation, an agency may approve a project with significant and unavoidable impacts if there are specific economic, legal, social, technological, or other considerations that outweigh the unavoidable adverse environmental effects. Section 15093 requires the lead agency to document and substantiate any such determination in “statements of overriding considerations” as a part of the record.

The requirements of Guidelines Sections 15091, 15092, and 15093 as summarized above are all addressed herein. This document is intended to serve as the findings of fact and statement of overriding considerations authorized by those provisions of the CEQA Guidelines. The findings provide the written analysis and conclusions of the City Council regarding the proposed project’s environmental impacts, mitigation measures, alternatives to the proposed project, and the overriding considerations that justify approval of the proposed project despite its environmental effects.

II. GENERAL FINDINGS AND OVERVIEW: PROJECT DESCRIPTION

A. PROPOSED PROJECT

The proposed project is adoption of WRTP Specific Plan. The WRTP Specific Plan Area is an approximately 350-acre area located in the southern-central portion of the City of Woodland's Planning Area, south of Farmers Central Road, east of State Route (SR) 113, west of Harry Lorenzo Avenue, and north of the Urban Limit Line (ULL).

1. RELATIONSHIP WITH THE GENERAL PLAN

The City's General Plan requires that substantial new residential development on "greenfield" or previously undeveloped land be planned through the specific plan process, as has been done in the past with Spring Lake, the Southeast area, and others. Addressed in Government Code Section 65450, a specific plan is a comprehensive planning and zoning document for a defined geographic region. It implements the general plan by providing a special set of development policies and standards that are applied to the specific plan area, and by specifying zoning, needed infrastructure, and an infrastructure financing plan to facilitate implementation.

Per the City of Woodland 2035 General Plan, adopted May 16, 2017,¹ Woodland has designated three new growth areas for future specific plan development: Specific Plan (SP)-1 in the south, SP-2 in the east, and SP-3 in the north. SP-1 is further separated into three sub-areas. SP-1A, which is the area covered by the WRTP Specific Plan, encompasses approximately 350 acres and is located on the eastern portion of SP-1 between SR 113 and the Spring Lake Specific Plan Area. SP-1B is located between East Street and SR 113, covering 248 acres. SP-1C is the smallest of the three at 151 acres and is located west of East Street. The City's Planning Area and the designated Specific Plan areas and subareas are shown in Exhibit 2-2.

SP-1A and SP-1B are envisioned to develop as mixed-use neighborhoods anchored by a research and technology business park in the "Southern Gateway" located at CR 25 and SR 113. SP-1C will be entirely residential, with a lower-density residential profile containing executive homes and rural estates on larger lots. Referred to as "SP-1A" in the General Plan, the City "envision[s] the [WRTP] Specific Plan Area to develop as a mixed-use neighborhood anchored by a research and technology business park in the 'Southern Gateway' [to the city] located at CR 25A and SR 113" (City of Woodland 2017, page LU 2-55). According to direction in the 2035 General Plan, for SP-1A (the WRTP Specific Plan Area):

"The highest intensity of development will occur within the business park area, providing a prime opportunity for job creation within Woodland. The remainder of SP-1A will be largely residential with some open space and recreation areas."

As directed by the General Plan (Policy 2.L.2, page LU 2-77), the City will:

Promote development of SP-1A as a mixed-use residential district anchored by a research and technology business park in the Southern Gateway area at CR 25 and SR 113. Concentrate the highest intensity of development within and in close proximity to the business park area, with

¹ The City's 1996 General Plan (amended in 2002) also included 316 acres of the WRTP Specific Plan Area in City's Planning Area and Urban Limit Line (ULL).

lower-density, largely residential uses to the north. Encourage sustainable development through the use of renewable energy sources and water conservation tools with the goal of striving to achieve zero net energy at the building and neighborhood level to the extent feasible.

Appendix B to the General Plan identifies assumed growth of 2.16 million square feet of nonresidential building space and 1,600 housing units will be developed within the WRTP Specific Plan (SP-1A) Area (City of Woodland 2017, Table B-1, page B-2). These assumptions serve to inform related planning efforts and the analysis of environmental impact of the General Plan – these assumptions were not adopted as a part of the 2035 General Plan. The City Council will consider consistency of the WRTP Specific Plan with the 2035 General Plan as a part of its actions on the WRTP Specific Plan.

2. PROJECT OBJECTIVES

An early step in the WRTP Specific Plan process was the development of a vision for the future and guiding principles to inform the method to achieve that vision. The vision statement is an aspirational description of what the WRTP Specific Plan would be like in the future. Guiding principles are shared values that will be used to develop the WRTP Specific Plan that would, once implemented, achieve the vision. The vision statement and guiding principles are outlined below. The guiding principles serve as the Project Objectives for the EIR.

VISION STATEMENT

The WRTP Specific Plan is envisioned as a new technology hub for the City of Woodland, intended to serve an array of research and technology companies interested in locating and growing near U.C. Davis, and other research and technology institutions within the Sacramento region. The WRTP Specific Plan will offer a unique business environment, supporting research and development, technology, and science and engineering-based companies. The WRTP Specific Plan is proposed as a new type of employment center that also includes a range of housing options, and a commercial mixed-use town center focused around a central green and connected by a multi-modal street network and trail system. Although the City anticipates that agricultural-related research will be a major focus at the WRTP Specific Plan, the plan will also support an environment of innovation in flexible formats for a wide variety of businesses in medical and veterinary, bio-tech, engineering, and other fields. The WRTP Specific Plan will also provide incubation spaces for small start-up firms, facilities for established mid-size or large size companies that require larger floorplates, flexible building spaces for high-tech research and light manufacturing/flex space for product testing and development. Employee-support services and retail will create an active landscape for collaboration and innovation.

GUIDING PRINCIPLES

The following principles provide the envisioned outcome and overarching vision for development within the WRTP Specific Plan Area:

- **Innovation** – The Specific Plan Area will develop as a state-of-the-art innovation center campus for technology, research and development, and office uses. Flexibility in design and implementation is supported, allowing businesses to respond to market demand through phasing of construction and the ability to offer a variety of building types and sizes. Complementary uses within immediate proximity to the business park, including hotel, commercial, employee-serving retail and recreational opportunities will support day-to-day needs of businesses, their clients, and their employees.

- ▶ **Technology Capture / Talent Retention** – Collaboration with University of California, Davis (UC Davis), Woodland Community College and others will bolster start-up businesses and growing mid-to-large size companies through technology transfer and IP sourcing. The Specific Plan will accommodate advanced technology-related jobs and training that allow a greater number of Woodland residents and college graduates from the Woodland Community College and throughout the region to live and work in the community, generating an infusion of intellectual capital.
- ▶ **Business Partnerships** – Companies locating in the Tech Campus will have the opportunity to take positive advantage of the existing and thriving seed, food, and agricultural-based industries currently located and doing business in and around Woodland. Access to additional resources and new markets, new ideas, materials, and expertise will grow through strategic partnerships with new and existing businesses in Woodland.
- ▶ **Sustainable and Resilient** – The Specific Plan Area will lead in energy efficiency and sustainable design. Development within the Specific Plan Area will incorporate cutting edge green building practices. Land use strategies and transportation demand management will reduce vehicle miles traveled and facilitate the use of alternative fuel vehicles. The city’s urban forest canopy will be increased and projects will incorporate naturalized stormwater management. These and other measures will contribute to meeting City goals for greenhouse gas reduction by 2035 contained in its 2035 Climate Action Plan.
- ▶ **Gathering Place** – A successful Village Center and featured 11-acre linear park will provide a mix of social gathering spaces for employees, residents, and visitors to connect, recreate, and relax. These informal networking opportunities will foster greater innovation and engagement among the workforce and allow for the balanced integration of work and life that the next generation of professionals seek.
- ▶ **Connectivity / Mobility** – A combination of well-designed complete streets, protected bicycle lanes, and pedestrian / bicycle greenways will prioritize the pedestrian experience throughout the Specific Plan Area. Well-connected parks, open spaces and greenbelts will encourage residents and employees to walk, bike, or scooter rather than drive to work, home and play. Existing bike trails and greenbelts will extend from and connect to the adjacent community including nearby schools, community center and shopping center. A shared mobility hub will serve as a point of connection for those arriving and departing the Tech Campus by various forms of alternative transportation – including micro transit stops and fixed bus routes with frequent service to Downtown Woodland and UC Davis. Amenities to support last mile active transportation alternatives are featured, including bike and scooter share services.
- ▶ **Healthy Community** – Connected streets with bicycle and pedestrian facilities, trails, accessible parks and open spaces with passive and programmed recreation will facilitate and encourage active, healthy living. Access to healthy foods through community gardens, a farmer’s market and/or fresh produce market in the Village Center will be promoted. A mix of social gathering places will enable employees and residents to come together for fun and relaxation, boosting emotional wellness.
- ▶ **New Neighborhoods / Seamless Transitions** – Diverse, high quality and attractive new neighborhoods and housing options, including single and multi-family residential units and mixed-used projects will allow Tech Park employees to live and work close by and “move up” within the same neighborhood as families grow or nests are emptied. Land use and circulation planning, coupled with design and development standards will

ensure a thoughtful transition between the Specific Plan Area and the adjacent Spring Lake neighborhood, complementing the established community.

3. WRTP SPECIFIC PLAN SUMMARY

The WRTP Specific Plan is the overarching policy and planning document for the City’s designated new growth area for future specific plan development, SP-1A, as identified in the 2035 General Plan. The WRTP Specific Plan is comprehensive in scope, addressing land use, transportation, community design, housing, conservation of resources, economic development, public facilities and infrastructure, public safety, and open space, among many other subjects.

The Specific Plan chapters include:

- ▶ Chapter 1, “Introduction and Vision”
- ▶ Chapter 2, “Land Use Framework”
- ▶ Chapter 3, “Land Use Regulations, Development Standards & Guidelines”
- ▶ Chapter 4, “Circulation and Mobility”
- ▶ Chapter 5, “Public Utilities and Services”
- ▶ Chapter 6, “Implementation”
- ▶ Chapter 7, “Administration”

The WRTP Specific Plan would provide for a variety of housing types and non-residential land uses, as well as parks and open space and supportive public facilities and infrastructure. As described in Section 2.3 of the WRTP Specific Plan, “Land Use Plan,” and for the purpose of analysis in the EIR, at build out, the land use plan is estimated result in the development of approximately 1,600 new dwelling units, 2.2 million square feet of non-residential building space, the opportunity for up to 5,000 employees, and 17.6 acres of parks and other types of open space. The total number of dwelling units, the number of units shown for each land use designation, total square footage, and number of employees that could be accommodated are all *assumptions* used for the purposes of informing related planning efforts and the analysis of environmental impact of the WRTP Specific Plan.

In addition to the land use designations and zones, the WRTP Specific Plan delineates the Planning Area into three Planning Districts, each of which have sub-districts. The three Planning Districts are: (1) Technology Park, which contains two sub-districts of North Campus and South Campus, (2) the Village Center, which contains the sub-districts of the Village Center Mixed Use, The Yard, and the Village Center Residential, and (3) the Villages, which contains the sub-districts of the North Villages, East Villages, and Urban Villages. The Planning Districts are used to identify the geographic and form types within the Land Use Plan. The WRTP Specific Plan contains design standards and guidelines that are defined in the WRTP Specific Plan and organized by Planning District, with special character guidelines for selected zones within each District. The design standards are a prescribed set of threshold requirements for development, while the design guidelines are a set of discretionary recommendations for preferred outcomes of development. Together, the design standards and guidelines address the desirable features of the land uses identified in the WRTP Specific Plan within each Planning District, while informing development in ways that reduce environmental impacts and provide economic benefits.

MOBILITY AND CIRCULATION

A multi-modal street network and bike-pedestrian trail system in the WRTP Specific Plan have been designed to balance the circulation and flow of vehicular traffic with the provision of safe and accessible facilities for walking, biking, public transit, and ride share drop-off/pick-up. A modified grid street network provides circulation and access within the WRTP Specific Plan Area, to the Spring Lake Specific Plan Area, and adjacent areas of the city.

A network of bike/pedestrian trails connecting from a linear open space system throughout the WRTP Specific Plan Area provide access between businesses, commercial centers, and residential areas throughout the WRTP Specific Plan Area as well as to the adjoining Spring Lake residential community. The WRTP Specific Plan provides for pedestrian and bicycle circulation, both in-street (sidewalks and bike lanes) and off-street (pedestrian/bicycle trails and paths). The WRTP Specific Plan provides for bicycle and pedestrian facilities on all streets, consistent with guidance from the General Plan and the function of each street (Principal or Minor Arterial, Collector, Local).

Bus service to the WRTP Specific Plan Area, including local, express, and intercity bus service, shuttle, and/or other potential future circulator for the WRTP Specific Plan Area and Spring Lake Specific Plan Area, will be coordinated with the Yolo County Transportation District (YCTD) and UC Davis Transportation and Parking Services/Unitrans to support the transit demands of the WRTP Specific Plan Area as it builds out.

To address both inter-city and intra-city public transit needs, the WRTP Specific Plan proposes development of a shared mobility hub along within the Village Center Planning District, with passenger drop-off and pick-up locations for bus and other transportation forms, such as carshare, local shuttle, and ride hailing services, as well as car and vanpool parking, electric vehicle charging stations, and bicycle and scooter share docking stations. The shared mobility hub will be the primary point of connection to fixed route bus service as part of the City's planned pulse route system

PARKS/OPEN SPACE

The City's 2035 General Plan establishes a parkland requirement of 6.0 acres of parks for every 1,000 residents and encourages the distribution of parks such that every residence is within one-quarter mile of a neighborhood park. The City will require the WRTP Specific Plan to meet these 2035 General Plan requirements.

The WRTP Specific Plan proposes the following:

- ▶ Mini/Pocket Parks and Plazas are proposed within the WRTP Specific Plan Area neighborhoods and multi-family developments, as well as the Research and Technology Park and commercial zones. A 0.5-acre pocket park is planned east of Road E along the Harry Lorenzo Avenue greenbelt.
- ▶ An 11.8-acre central linear green space, "The Yard," is planned as the neighborhood park to serve the WRTP Specific Plan Area, inclusive of a pedestrian promenade.
- ▶ Greenways proposed for the WRTP Specific Plan Area also provide stormwater management, including drainage and connections to open space areas used for stormwater detention/retention.

B. OFF-SITE IMPROVEMENT AREAS

While not a part of the WRTP Specific Plan Area, the EIR also addresses potential impacts associated with off-site improvement areas. Off-site improvement areas include a proposed approximately four-acre detention pond (i.e., South Regional Pond) that was not considered as part of the 2035 General Plan and Climate Action Plan (CAP) EIR and would be immediately south of the WRTP Specific Plan Area and adjacent to CR 25A, and the Caltrans Off-site Improvement Area, at which improvements would be made to the SR 113/CR 25A interchange adjacent to the southwest corner of the WRTP Specific Plan Area.

C. CONSIDERATION OF THE EIR

In adopting these Findings, the City Council finds that the Final EIR was presented to the City Council, the lead agency's decision-making body, and that the City Council reviewed and considered the information in the Final EIR prior to approving the proposed project. The City Council finds that the Final EIR reflects the independent judgment and analysis of the City.

Adoption and implementation of the WRTP Specific Plan will require (but not be limited to) the following discretionary actions by the City of Woodland:

- ▶ Adopt a resolution certifying the Final Environmental Impact Report for the WRTP Specific Plan, adopting Findings of Fact, and adopting a Statement of Overriding Considerations;
- ▶ Adopt a resolution adopting the WRTP Specific Plan;
- ▶ Approve an amendment to the City's General Plan to reflect the new City limits following annexation of the WRTP Specific Plan Area and the Open Space (OS) land use designation for the South Regional Pond area; and
- ▶ Adopt Chapter 3, "Land Use Regulations, Development Standards and Guidelines, of the WRTP Specific Plan by ordinance, as Section 17.58 of the Zoning Ordinance (Chapter 17 of the Woodland Municipal Code).

D. SUBSEQUENT PROJECT REVIEW

Further actions or decisions required to support implementation of the WRTP Specific Plan may include project-level approvals such as site plan reviews, tentative maps, building permits, grading permits, and other actions.

The WRTP Specific Plan permitted land use and design and development standards will be adopted by ordinance as part of the WRTP Specific Plan. The design and development standards supersede the City of Woodland Zoning Ordinance (Chapter 17 of the Municipal Code). Where a standard is not provided in the WRTP Specific Plan, the standards of the City's Zoning Ordinance and/or Standards and Specifications will apply.

The on-site and off-site public improvements necessary to serve the WRTP Specific Plan Area will be designed in adherence with applicable provisions of the City's Zoning and Subdivision Ordinances and the Design Standards and Design Guidelines provided in Section 3 of the WRTP Specific Plan, as applicable. Plans will include an infrastructure sequencing program that coordinates with and allows for orderly development. Building permits will not be issued until the City Engineer determines that proposed improvement plans are complete (engineered and approved) and found to be consistent with the WRTP Specific Plan and Financing Plan.

One of the City's goals in preparing the WRTP Specific Plan and EIR is to minimize the amount of new information that would be required to approve future projects that are consistent with the WRTP Specific Plan. Accordingly, the WRTP Specific Plan and the EIR anticipate the effects of subsequent projects proposed within the WRTP Specific Plan Area, as well as off-site infrastructure required to serve future development within the WRTP Specific Plan Area. The City will make full use of existing streamlining provided by CEQA, and will make use of streamlining techniques, as appropriate. Future projects that are consistent with the WRTP Specific Plan would either require no further environmental analysis or only focused, supplemental environmental analysis pursuant to CEQA and the CEQA Guidelines. The City will examine projects proposed under the WRTP Specific Plan to determine whether or not additional CEQA analysis will be necessary.

III. GENERAL FINDINGS: CEQA PROCESS

Pursuant to Section 15082 of the CEQA Guidelines, the City prepared a CEQA notice of preparation (NOP) and provided copies directly by mail and through the Governor's Office of Planning and Research (State Clearinghouse) to CEQA responsible and natural resource trustee agencies, local municipalities, interested persons, organizations, agencies, and landowners. The City issued the NOP for the Specific Plan EIR and comments were accepted between June 16, 2017 and July 17, 2017.

The City held a public scoping meeting for the project on June 26, 2017 at the Woodland Community & Senior Center, 2001 East Street, Woodland, CA 95776. The NOP for the WRTP Specific Plan EIR, introducing the project and outlining the CEQA process, Notice of Special Meeting for the scoping meeting, and a Scoping Comment Form for directly providing comments were made available for review at <https://www.cityofwoodland.org/584/Community-Outreach-Public-Hearing-Inform>.

The Draft EIR (State Clearinghouse Number 2017062042) was received by the State Clearinghouse and circulated for a 45-day public review period from May 17 through July 2, 2021. A video presentation by staff, introducing the Project and outlining the CEQA process, was provided via teleconferencing.² A recording of the presentation was made available for review at <https://woodlandca.portal.civicclerk.com/event/1498/media>. Comments were accepted in during the meeting and in advance of the meeting via voice messages and email, as well as throughout the public comment period via mail to the City of Woodland Economic Development Department at 300 First Street, Woodland, CA, 95695, and via email to Erika.Bumgardner@cityofwoodland.org.

² Public meetings that occur through virtual means are held in compliance with both the Ralph M. Brown Act and the Governor's Executive Orders, specifically Executive Orders N-29-20 and N-35-20. Those orders modified Brown Act requirements to allow public meetings to occur through teleconferencing means with limited person-to-person physical contact.

IV. GENERAL FINDINGS: RECORD OF PROCEEDINGS

A. FINAL EIR

The Final EIR for the Specific Plan includes the following items:

1. The Draft EIR (State Clearinghouse Number 2017062042) dated May 14, 2021;
2. Response to Comments on the Draft EIR dated August 10, 2023;
3. Errata to the Draft EIR dated August 10, 2023; and
4. Mitigation Monitoring and Reporting Program dated August 10, 2023.

As explained in Chapters 1 and 3 of the Draft EIR for the Specific Plan, the City's General Plan update explicitly considered development of the Specific Plan Area. The City's 2035 General Plan and CAP EIR addresses impacts of development of the City's Planning Area, including the W RTP Specific Plan Area. As such, the City's General Plan, Climate Action Plan, and 2035 General Plan and CAP EIR were extensively used in development of the Specific Plan and the Specific Plan EIR and these documents are a part of the administrative record for the Specific Plan EIR, along with technical reports prepared to support the General Plan and General Plan EIR.

B. THE ADMINISTRATIVE RECORD

Public Resources Code section 21167.6(e) sets forth the contents of the administrative record for CEQA purposes and these findings. Pursuant to CEQA Guidelines Section 15091(e), the location and custodian of the documents and other materials which constitute the record of proceedings upon which these decisions are based is as follows:

Woodland Community Development Department
300 First Street
Woodland, CA 95695
(530) 661-5820
www.cityofwoodland.org

V. FINDINGS REQUIRED UNDER CEQA

Public Resources Code Section 21002 provides that “public agencies should not approve projects as proposed if there are feasible alternatives or feasible mitigation measures available which would substantially lessen the significant environmental effects of such projects[.]” It also states that the procedures required by CEQA “are intended to assist public agencies in systematically identifying both the significant effects of proposed projects and the feasible alternatives or feasible mitigation measures which will avoid or substantially lessen such significant effects.” And it states that “in the event specific economic, social, or other conditions make infeasible such project alternatives or such mitigation measures, individual projects may be approved in spite of one or more significant effects thereof.”

The mandate and principles of Section 21002 are implemented, in part, through the requirement that agencies must adopt findings before approving projects for which EIRs are required. For each significant environmental effect identified in an EIR for a proposed project, the approving agency must issue a written finding reaching one or more of three permissible conclusions. The first such finding is that changes or alterations have been required or incorporated into the project to avoid or substantially lessen the significant environmental effect. Inclusion of mitigating General Plan policies and implementation programs are among the “changes or alterations” referenced in this finding. Other “changes and alterations” are discussed herein. For purposes of these findings, the term “avoid” refers to the effectiveness of one or more mitigation measures to reduce an otherwise significant effect to a less than significant level. In contrast, the term “substantially lessen” refers to the effectiveness of such measure or measures to substantially reduce the severity of a significant effect, but not to reduce that effect to a less-than-significant level.

The second permissible finding is that such changes or alterations are within the responsibility and jurisdiction of another public agency and not the agency making the finding, and that such changes have been adopted by such other agency or can and should be adopted by such other agency.

The third potential finding is that specific economic, legal, social, technological, or other considerations make infeasible the mitigation measures or project alternatives identified in the Final EIR (CEQA Guidelines Section 15091). “Feasible” means capable of being accomplished in a successful manner within a reasonable period of time, taking into account economic, environmental, social, legal, and technological factors. The concept of “feasibility” also encompasses the question of whether a particular alternative or mitigation measure promotes the underlying goals and objectives of a project. Moreover, “feasibility” under CEQA encompasses “desirability” to the extent that desirability is based on a reasonable balancing of the relevant economic, environmental, social, legal, and technological factors.

In the process of adopting mitigation, the City Council has made a determination regarding whether the mitigation proposed in the EIR is “feasible.” In some cases, modifications may have been made to the mitigating policies and implementation programs to update, clarify, streamline, correct, or make other revisions. These are discussed herein.

With respect to a project for which significant impacts are not avoided or substantially lessened, a public agency, after adopting proper findings, may nevertheless approve the project if the agency first adopts a statement of overriding considerations setting forth the specific reasons in support of the finding that the project benefits outweigh its unavoidable adverse environmental effects. In the process of considering the EIR for certification, the City Council has recognized that impact avoidance is not possible in all instances. To the extent that significant

adverse environmental impacts will not be reduced to a less-than-significant level with mitigating policies and implementation programs, the City Council has found that specific economic, social, and other considerations support approval of the proposed project. Those findings are reflected herein in Section V.B.4 (Findings Regarding Environmental Impacts not Fully Mitigated to a Level of Less than Significant) below and in Section VII (Statement of Overriding Considerations).

A. FINDINGS REGARDING EIR ERRATA AND EIR RECIRCULATION

1. STANDARD FOR RECIRCULATION UNDER CEQA

CEQA Guidelines Section 15088.5 requires a lead agency to recirculate an EIR when “significant new information” is added to the EIR after the lead agency gives public notice of the availability of the Draft EIR but before certification. “Information” may include project changes, changes to the environmental setting, or additional data or other information. The Guidelines do not consider new information to be significant unless the lead agency changes the EIR in a way that deprives the public of a meaningful opportunity to comment on a substantial adverse environmental effect or a feasible way to mitigate the impact that the agency or project proponent has declined to implement.

Section 15088.5 states “significant new information” requiring recirculation may include:

- (1) A new significant environmental impact that had not previously been disclosed in the Draft EIR would result from the project or from a new mitigation measure;
- (2) A substantial increase in the severity of an environmental impact that had already been identified unless mitigation measures would be adopted to reduce the impact to a level of insignificance;
- (3) A feasible project alternative or mitigation measure would considerably lessen the significant environmental impacts of the project, but the proponents will not adopt it; or
- (4) The Draft EIR was so inadequate and conclusory that meaningful public review and comment were precluded.

Recirculation is not required if new information added to the EIR just clarifies or makes minor modifications to an otherwise adequate EIR.

2. CHANGES TO THE PROPOSED PROJECT

Since the City released the Draft EIR, and as a result of public input and meetings, the City made various changes to the WRTP Specific Plan. The City made numerous non-substantive text changes to the proposed project to clarify terms, correct grammatical errors, correct figures, and place headers and other identifying information in the correct places. These changes did not substantively change the text of the WRTP Specific Plan. Rather, the changes corrected errors and provided additional clarity.

Within Exhibit 2-1, Land Use Plan, and Table 2.1, Land Use Summary, the proposed detention pond in the southeast corner of the WRTP Specific Plan Area was differentiated from the other open space land uses of the WRTP Specific Plan. Similarly, the general area available to serve a potential school was identified in Exhibit 2-1, Land Use Plan.

The definitions of Open Space/Park Zones in Section 3.2.4, Description of Zoning Categories, was refined for clarity.

A performance standard limiting truck trips serving any individual use was added as Performance Standard E to Section 3.3.2 to support the intent of the W RTP Specific Plan permitted land uses.

Table 3.1, Permitted Uses, was updated to clarify that greenhouses are allowed indefinitely when associated with Research and Development; to remove Warehouse, Storage and Distribution / Logistics as a permitted or ancillary use identified in the table; and to identify the permitted school as a Transitional Kindergarten/Kindergarten through 12th grade facility.

Additional design standards and design guidelines were added pertaining to sustainable materials and construction practices, and, consistent with the City's Climate Action Plan Consistency Checklist, to require all commercial and multifamily residential parking lots and/or structures provide electric vehicle charging pursuant to the California Green Building Standards Code Tier 1 requirements, and all single-family townhomes and duplexes be electric vehicle capable.

Additional detail regarding design features such as bicycle facilities, landscaping, walkways, car-share/vanpool spaces and EV charging in the parking areas of the shared mobility hub, *The Union*, were added to Section 4.2.2.

Street classifications in Exhibit 4.3, Road Circulation Diagram, were refined and clarified to be consistent with the City's General Plan, and detailed descriptions were refined throughout Section 4.5 for clarity.

Edits were made throughout Chapter 5, Public Utilities and Services, to reflect more current conditions and plans, such as reference to the more recently adopted 2020 Urban Water Management Plan, notation to the planned expansion of the recycled water utility into the Spring Lake and W RTP areas in 2024, and clarifications regarding proposed stormwater management systems. Additionally, changes to the green belt cross sections were made to accommodate the future recycled water line and provide at least 22 feet of clear distance between the underground utility and the western green belt property line in order to allow for a significant amount of tree coverage in the green belt.

Chapter 6, Implementation, was updated to acknowledge that implementation of the Specific Plan would also occur in accordance with the terms and conditions of the Nexus Study and Master Reimbursement Agreement, among the other plans and documents previously identified. In addition, the subsequent implementation documents and analysis, as listed in Section 6.2.3, was revised to more clearly describe the supplemental plans that must be prepared either prior to approval of the first development application or residential tentative map or as otherwise required by the conditions of approval and/or Environmental Impact Report and associated Mitigation Monitoring Program, or by the Community Development Director, as appropriate. Detailed assumptions and provisions pertaining to density transfer, as well as density requirements for each residential development zone, were also added to ensure future project consistency with the environmental analysis for the Specific Plan and with the General Plan development assumptions and project financing objectives.

Finding: None of the changes to the proposed project necessitated a change to the EIR. The changes did not create a new significant effect or worsen a previously identified one. The changes to the proposed project do not require any changes to the EIR; thus, recirculation is not necessary as the changes do not constitute significant new information under CEQA.

3. REVISIONS TO THE EIR AND ERRATA TO FINAL EIR

In response to comments from the public and public agencies on the Draft EIR, the City has incorporated minor revisions to the text of the Draft EIR into the Final EIR, which are described in Chapter 3, Errata, of the Final EIR. As discussed in the Final EIR, the revisions to the text of the Draft EIR outlined below present minor corrections, additions, and revisions initiated by the Lead Agency (City of Woodland) based on comments received during the public review period by reviewing agencies and/or the public, as well as minor corrections added by the City during preparation of the Mitigation Monitoring and Reporting Program (MMRP). None of the information added to the Draft EIR altered the significance conclusions. Rather, the new information amplified and clarified the information provided in the Draft EIR. None of the revisions or updates to the Draft EIR's analyses represents "significant new information" as that term is defined by the CEQA Guidelines Section 15088.5(a).

The City finds that recirculation of the Draft EIR is not required: (1) because the new information added to the EIR merely clarifies, amplifies, or makes insignificant modifications in an adequate EIR (CEQA Guidelines Section 15088.5(b); and (2) because no "substantial adverse" impact would result from any of the revisions to the portions of the Draft EIR that were not recirculated (CEQA Guidelines Section 15088.5(e)).

Changes are limited to Draft EIR Chapter 2, Project Description; and Sections 3.3, Air Quality; 3.4, Biological Resources; 3.9, Hydrology, Flooding, and Water Quality; 3.11, Noise and Vibration; and 3.12, Public Services and Recreation, as well as the Executive Summary.

Changes to Section 3.4 include updating the current listing status of the tricolored blackbird in Table 3.4-4 of the Draft EIR due to a change in this status since the drafting of the Draft EIR. Changes to Section 3.9 were to update the citation to Storm Drainage Facilities Master Plan South Urban Growth Area from the 2017 to the 2018 document, as the most current version of the plan and intended citation. The analysis throughout the section was reviewed for accuracy in the context of this 2018 plan. This revision does not change the findings, conclusions, or recommendations of the Draft EIR. Changes to Section 3.12 were to edit a typo from "design capacity" to "District capacity" when referencing the school capacity contained within Table 3.12-2 of the Draft EIR, and to update the grades at the elementary schools to include transitional kindergarten and update the enrollment and capacity data to reflect a more recent Woodland Joint Unified School District Annual Enrollment Project Report. Changes to the Project Description and Section 3.12 also include a change in the amount of park acreage to be included as a part of the Specific Plan. These changes were minor and did not substantively change the analysis presented in the EIR or any of the conclusions described in the EIR.

Changes to Section 3.2 include expanding the Draft EIR Mitigation Measure 3.3-2b to clearly distinguish the requirement for the use of equipment greater than 50 horsepower to be powered with engines that meet Tier 4 Final emissions standards and to incorporate additional feasible mitigation to further reduce construction-related emissions. Changes to Section 3.11 include revising Mitigation Measure 3.11-1 to include additional feasible actions to reduce potential construction-related noise associated with future construction activities associated with implementation of the W RTP Specific Plan. One edit has also been included to clarify that the intent of the mitigation measure already included in the Draft EIR requiring written notice to all known occupied noise-sensitive uses would occur for activities within 445 feet (not 400, as inadvertently stated in the Draft EIR as a typo) of the edge of the project site boundary. Since the City released the Draft EIR, the City made also amended two mitigation measures and Table ES-1 of the Draft EIR Executive Summary to take into account these changes. That errata is included as **Exhibit A** to the City Council's Resolution Certifying the EIR for the proposed project. The

amendments to the two mitigation measures are set forth as follows (new text shown in underline, deleted text shown in strikethrough):

Mitigation Measure 3.3-2b: Construction-Related Mobile Emissions Reductions for NO_x and PM₁₀ Emissions.

Construction contractors shall adhere to the following requirements:

[bullets 'a.' and 'b.' are not revised from the Draft EIR]

...

- c. ~~Comply with the State On Road Regulation by using on-road~~ For all off-road heavy-duty equipment greater than 50 horsepower, utilize equipment that meet or exceed CARB's Tier 4 Final standards for ~~on-off-road~~ heavy-duty diesel engines.
- d. Requiring off-road construction equipment to be zero-emission, where available, and all diesel-fueled off-road construction equipment, to be equipped with CARB Tier 4 Final engines, and including this requirement in applicable bid documents, purchase orders, and contracts, with successful contractors demonstrating the ability to supply the compliant construction equipment for use prior to any ground-disturbing and construction activities.
- e. Prohibiting off-road diesel-powered equipment from being in the "on" position for more than 10 hours per day.
- f. Requiring on-road heavy-duty haul trucks to be model year 2010 or newer if diesel-fueled.
- g. Providing electrical hook ups to the power grid, rather than use of diesel-fueled generators, for electric construction tools, such as saws, drills and compressors, and using electric tools whenever feasible.
- h. Limiting the amount of daily grading disturbance area. Prohibiting grading on days with an Air Quality Index forecast of greater than 100 for particulates or ozone for the project area.
- i. Forbidding trucks from idling for more than two minutes and requiring operators to turn off engines when not in use.
- j. Keeping onsite and furnishing to the lead agency or other regulators upon request, all equipment maintenance records and data sheets, including design specifications and emission control tier classifications.
- k. Conducting an on-site inspection to verify compliance with construction mitigation and to identify other opportunities to further reduce construction impacts.
- l. Providing meal options onsite or shuttles between the facility and nearby meal destinations for construction employees.

Finding: The City Council finds that this modified Mitigation Measure ensures that potential construction-related emissions are minimized to the extent feasible. This modified Mitigation Measure will not create a new, or worsen an existing, environmental impact.

Mitigation Measure 3.11-1– Implement Construction Noise Reduction Strategies

- a. Demolition, construction, site preparation, and related activities that would generate noise perceptible at the property line of the subject property are limited to the hours between 7:00 A.M. and 6:00 P.M. on Monday through Saturday and between 9:00 A.M. and 6:00 P.M. on Sunday and federal holidays. The building inspector may issue an exception to this limitation on hours in cases of urgent necessity where the public health and safety will not be substantially impaired.
- b. Idling times for noise-generating equipment used in demolition, construction, site preparation, and related activities shall be minimized either by shutting equipment off when not in use or reducing the maximum idling time to two (2)~~5~~ minutes.
- c. Where construction work is within 445 feet of properties with existing, occupied noise-sensitive uses, construction shall be prohibited on weekends and holidays and construction should start no earlier than 8 a.m.
- d. Where non-residential construction work is within 445-feet of an existing off-site residence, installation of continuous noise curtains shall be required between the construction site and those residences.
- e. Demolition, construction, site preparation, and related activities that do not involve pile driving proposed within 445 feet from the edge of properties with existing, occupied noise-sensitive uses shall incorporate all feasible strategies to reduce noise exposure for noise-sensitive uses, including:
 - Provide written notice to all known occupied noise-sensitive uses within ~~445~~⁵⁰⁰ feet of the edge of the project site boundary at least 2 weeks prior to the start of each construction phase of the construction schedule;
 - Ensure that construction equipment is properly maintained and equipped with noise control components, such as mufflers, in accordance with manufacturers' specifications;
 - Re-route construction equipment away from adjacent noise-sensitive uses;
 - Locate noisy construction equipment away from surrounding noise-sensitive uses;
 - Use sound aprons or temporary noise enclosures around noise-generating equipment;
 - Position storage of waste materials, earth, and other supplies in a manner that will function as a noise barrier for surrounding noise-sensitive uses;
 - Use the quietest practical type of equipment;
 - Use electric powered equipment instead of diesel or gasoline engine powered equipment;

- Use shrouding or shielding and intake and exhaust silencers/mufflers; and
 - Other effective and feasible strategies to reduce construction noise exposure for surrounding noise-sensitive uses.
- f. For construction of buildings that require the installation of piles, an alternative to installation of piles by hammering shall be used. This could include the use of augured holes for cast-in-place piles, installation through vibration or hydraulic insertion, or another low-noise technique.

Finding: The City Council finds that this modified Mitigation Measure ensures that potential construction-related noise is minimized to the extent feasible. This modified Mitigation Measure will not create a new, or worsen an existing, environmental impact.

Changes to the EIR that reflect a reduction in the amount of parkland acreage to be provided within the Specific Plan Area does not change the analysis provided in Section 3.12. As explained on page 3.12-4 of the Draft EIR, the City currently exceeds its parkland standard of 6 acres per thousand residents, and as explained on pages 3.12-17 through 3.12-19, the WRTP Specific Plan will meet its park obligation through a combination of park land development and through project impact fees – the WRTP Specific Plan will be required to meet the City’s requirements for new residential development to provide its fair-share of park acreage.

Because no new unmitigated environmental effects have been identified or created by the revised mitigation, and because no new significant information has been added to either the proposed project or the EIR, the EIR has not been changed in a way that deprives the public of a meaningful opportunity to comment upon a substantial adverse environmental impact of the proposed project. The revisions to the EIR are improvements to the environmental analysis. No impacts identified in the EIR would be substantially increased as a result of changes to the proposed project or the EIR. There are no new feasible alternatives or mitigation measures that are considerably different from those considered in the EIR that the City Council has declined to adopt. Therefore, recirculation of the EIR pursuant to CEQA Guidelines Section 15088.5 is not required.

B. FINDINGS REGARDING SPECIFIC ENVIRONMENTAL IMPACTS

The Draft EIR identified a number of less than significant impacts associated with the WRTP Specific Plan that do not require mitigation. The Draft EIR also identified a number of significant and potentially significant environmental effects (or impacts) that may be caused in whole or in part by the Proposed WRTP Specific Plan. Some of these significant effects can be fully avoided or substantially lessened through the adoption of feasible mitigation measures. Other effects cannot be, and thus may be significant and unavoidable. For reasons set forth in Section VII (Statement of Overriding Considerations), however, the City Council has determined that overriding economic, social, and other considerations outweigh the significant, unavoidable effects of the WRTP Specific Plan.

The City Council’s findings with respect to the WRTP Specific Plan’s significant effects and mitigation measures are set forth in the Final EIR and these Findings of Fact. The Summary of Findings does not attempt to describe the full analysis of each environmental impact contained in the Final EIR. Please refer to the Draft EIR and the Final EIR for more detail. Each of these documents is incorporated into these findings in their entirety. Without limitation, this incorporation is intended to elaborate on the scope and nature of mitigating policies and implementation programs, the basis for determining the significance of impacts, the comparative analysis of alternatives, and the

reasons for approving the WRTP Specific Plan project in spite of the potential for associated significant and unavoidable adverse impacts.

The Summary of Findings provides a summary description of each potentially significant and significant impact, describes the applicable mitigation measures identified in the Final EIR and adopted by the City Council, and states the findings of the City Council regarding the significance of each impact after imposition of the adopted mitigation measures. A full explanation of these environmental findings and conclusions can be found in the Final EIR and associated record (described herein), both of which are incorporated by reference. The City Council hereby ratifies, adopts, and incorporates the analysis and explanation in the record into these findings, and ratifies, adopts, and incorporates in these findings the determinations and conclusions of the Final EIR relating to environmental impacts and mitigation measures, except to the extent any such determinations and conclusions are specifically and expressly modified by these findings.

The following general findings are made by the City Council:

- ▶ For all impacts identified as less-than-significant in the EIR, the less-than-significant impact determination is hereby confirmed by the City Council based on the evidence and analysis provided in the record.
- ▶ For all adopted mitigation measures, the City Council finds that each such measure is appropriate and feasible and will lessen the impact to some degree.

Some of the measures identified in these Findings may also be within the jurisdiction and control of other agencies. To the extent any of the mitigation measures are within the jurisdiction of other agencies, the City Council finds those agencies can and should implement those measures within their jurisdiction and control (CEQA Guidelines Section 15091[a][2]).

1. FINDINGS REGARDING IMPACTS NOT DISCUSSED FURTHER

The 2035 General Plan and CAP EIR addresses impacts of development of the City’s Planning Area, including the WRTP Specific Plan Area. Consistent with Section 15183(b) of the CEQA Guidelines, the analysis contained within the Specific Plan EIR focuses on project-specific significant effects of the WRTP Specific Plan that: (a) are peculiar to the WRTP Specific Plan or the site; (b) were not addressed in the 2035 General Plan and CAP EIR (including off-site or cumulative impacts); or (c) would be more severe than previously described based on substantial new information. Pursuant to CEQA Guidelines Section 15150, relevant information from the 2035 General Plan and CAP EIR (State Clearinghouse Number 2013032015) has been incorporated by reference into the EIR. The 2035 General Plan, Climate Action Plan, and 2035 General Plan and CAP EIR are available for public review on the City of Woodland Planning Division website at: <https://www.cityofwoodland.org/1000/Documents>, or in person at the City’s Community Development Department at 300 First Street, Woodland, CA 95695.

The City Council agrees with the characterization in the Draft EIR of all project impacts identified as “not discussed further” and finds that a) there is no impact, or b) none of the factors triggering additional environmental review (as found in Section 15183(b)) exist because an impact was either addressed as a part of the 2035 General Plan and CAP EIR and/or substantially mitigated by uniformly applied development standards (CEQA Guidelines Section 15183[f][7]), as described in the Draft EIR. The following bulleted list summarizes the impacts of the WRTP Specific Plan that are not discussed further based on Section 15183(b) of the CEQA Guidelines.

AESTHETICS

- ▶ **Substantial Adverse Effect on a Scenic Vista:** Woodland's relatively flat topography results in few scenic vistas. Views consist mainly of the farmland surrounding the built environment seen from some adjacent properties at the urban edge. The 2035 General Plan and CAP EIR concluded that although views may be obstructed in localized areas due to proposed new development, views would not be affected on an area-wide basis. Furthermore, since there are no new growth areas proposed along the western edge of the City's Planning Area, where views of the Coastal Ranges are more dominant, new development, including that of the WRTP Specific Plan Area, was not expected to affect views of the Coast Ranges. As noted, development of the WRTP Specific Plan Area was planned for in the 2035 General Plan and CAP EIR and determined to result in a less-than-significant impact on scenic vistas. And, while the proposed South Regional Pond was not considered in the 2035 General Plan and CAP EIR, the row crops and nut tree orchard, including the areas south of CR 25A that include the southern portion of the WRTP Specific Plan Area and the proposed South Regional Pond, are typical of farmland throughout Yolo County and northern California as a whole. Furthermore, only a small portion of the Coast Ranges is visible in background views to the west, and only from a portion of the houses along the western margin of the Spring Lake development. The WRTP Specific Plan Area and the off-site improvement areas are of moderate visual quality and do not represent scenic vistas. There are no impacts that are peculiar to the WRTP Specific Plan that were not addressed in the 2035 General Plan and CAP EIR. As provided by CEQA Guidelines Section 15183(b), no additional CEQA review is required. (Draft EIR, pp. 3.1-12 through 3.1-13.)
- ▶ **Damage to Scenic Resources in a State Scenic Highway:** There are no State designated scenic highways in Yolo County (California Department of Transportation 2017). Old River Road, locally designated as a scenic highway by Yolo County, parallels the west side of the Sacramento River from the southern end of the Sacramento Bypass north to the Fremont Weir and is approximately 6.75 miles east of the WRTP Specific Plan Area (Yolo County 2009). Because of the flat topography in the region, Old River Road is not visible from the WRTP Specific Plan Area or the off-site improvement areas. Since there are no designated scenic highways in the vicinity from which the WRTP Specific Plan Area or off-site improvement areas would be visible, there would be no impact. (Draft EIR, p. 3.1-13.)

AGRICULTURAL AND FORESTRY RESOURCES

- ▶ **Conflict with Existing Williamson Act Contract:** No lands are under Williamson Act contract on the WRTP Specific Plan Area. Therefore, implementing the WRTP Specific Plan would not conflict with an existing Williamson Act contract. (Draft EIR, p. 3.2-16.)
- ▶ **Conflict with Existing Zoning for, or Cause Rezoning of, Forest Land, Timberland, or Timberland Zoned Timberland Production:** The WRTP Specific Plan Area and off-site improvement areas are not zoned as forestland, timberland, or a Timberland Production Zone. Thus, the WRTP Specific Plan would not conflict with existing zoning for, or cause rezoning of, forestry resources. (Draft EIR, p. 3.2-16.)
- ▶ **Result in the Loss of Forest Land or Conversion of Forest Land to Non-Forest Use:** The WRTP Specific Plan Area and off-site improvement areas do not contain timberland as defined by Public Resources Code Section 4526 or contain 10 percent native tree cover that would be classified as forestland under Public Resources Code Section 12220(g). Thus, the WRTP Specific Plan would not result in conversion of forest land to non-forest use. (Draft EIR, p. 3.2-16.)

BIOLOGICAL RESOURCES

- ▶ **Substantial Adverse Effects on Special-Status Plant Species:** The WRTP Specific Plan Area and off-site improvement areas do not provide habitat for special-status plant species. Because the WRTP Specific Plan and off-site improvements would not affect special-status plants, this issue is not discussed further. (Draft EIR, p. 3.4-23.)
- ▶ **Substantial Adverse Effects on Riparian Habitat, or Other Sensitive Natural Community:** The WRTP Specific Plan Area and off-site improvement areas do not contain any riparian habitat or other sensitive natural communities (alkali prairie habitat) identified in the 2035 General Plan and CAP EIR or other local or regional plans. Because the WRTP Specific Plan and off-site improvements would not affect sensitive habitats, this issue is not discussed further. (Draft EIR, p. 3.4-23.)

CLIMATE CHANGE, GREENHOUSE GAS EMISSIONS, AND ENERGY

- ▶ **Generation of Greenhouse Gas Emissions or Conflict with an Applicable Plan, Policy, or Regulation Adopted for the Purpose of Reducing the Emissions of Greenhouse Gases:** The WRTP Specific Plan is consistent with the City's 2035 CAP, and the CAP identifies reduction measures that would achieve reductions that would, based on substantial evidence, avoid a cumulatively considerable contribution to the significant cumulative impact of global climate change. Therefore, as provided by CEQA Guidelines Section 15183.5(b), the WRTP Specific Plan would not result in an incremental contribution to a cumulative effect and no additional CEQA review is required. (Draft EIR, p. 3.5-26.)

CULTURAL AND TRIBAL CULTURAL RESOURCES

- ▶ **Cause a Substantial Adverse Change in the Significance of Historical Resources as defined in CEQA Guidelines Section 15064.5.** Based on review of background research, combined with cultural resources pedestrian surveys, and Native American correspondence, two previously unrecorded cultural resources were identified in the WRTP Specific Plan Area that may be potentially affected by the proposed project: a historic-age site with house foundations and associated refuse deposit, and two historic-age buildings consisting of a barn and residence on a single parcel. These resources are not considered significant under CRHR criteria or as City of Woodland historical resources. None of the cultural resources were identified as meeting the eligibility requirements to be considered historical resources for the purposes of CEQA. Therefore, further discussion of impacts to historical resources as defined in CEQA Guidelines Section 15064.5 is not discussed further. (Draft EIR, p. 3.6-11.)
- ▶ **Cause a Substantial Adverse Change in the Significance of a Tribal Cultural Resources as defined in Public Resources Code Section 21074:** There are no known tribal cultural resources that would be impacted resulting from implementation of WRTP Specific Plan or off-site improvement areas. Per AB 52 consultation for the WRTP Specific Plan and the EIR, the Yocha Dehe tribe sent a letter to the City indicating that they are not aware of any tribal cultural resources near the WRTP Specific Plan Area. Therefore, further discussion of impacts to tribal cultural resources as defined in Public Resources Code Section 21074 is not discussed further. (Draft EIR, p. 3.6-11.)

GEOLOGY, SOILS, MINERALS, AND PALEONTOLOGICAL RESOURCES

- ▶ **Surface Fault Rupture.** The WRTP Specific Plan Area and the off-site improvement areas are not located within or adjacent to an Alquist-Priolo Earthquake Fault Hazard Zone, and there is no evidence of any known fault. Therefore, surface fault rupture would not pose a hazard for implementation of the WRTP Specific Plan, and this impact is not addressed further in the EIR. (Draft EIR, p. 3.7-10.)
- ▶ **Landslide Hazards.** Slopes within and immediately adjacent to the WRTP Specific Plan Area and off-site improvement areas are nearly flat, ranging from 0–4 percent. Therefore, landslides would not pose a hazard for the proposed project, and this impact is not addressed further in the EIR. (Draft EIR, p. 3.7-10.)
- ▶ **Soil Suitability for Septic Systems.** Wastewater treatment for the WRTP Specific Plan Area would be provided through connections with the City's existing wastewater conveyance pipelines for treatment at the City's Water Pollution Control Facility. Because septic systems or other forms of on-site wastewater treatment would not be employed under the WRTP Specific Plan, there would be no impact. Therefore, this impact is not addressed further in the EIR. (Draft EIR, p. 3.7-10.)
- ▶ **Loss of Availability of Mineral Resources.** There are no areas of known mineral resources within or immediately adjacent to the WRTP Specific Plan Area (i.e., areas that have been classified as MRZ-2 by CGS), and the WRTP Specific Plan Area and off-site improvement areas are more than 5 miles southeast of the designated Cache Creek mineral resource sector. Therefore, implementation of the WRTP Specific Plan would have no impact related to the loss of availability of mineral resources, and this impact is not addressed further in the EIR. (Draft EIR, p. 3.7-10.)
- ▶ **Seismic Hazards Related to Strong Seismic Ground Shaking and Liquefaction.** Although there are no faults present within the city of Woodland, people and structures within the Planning Area could experience seismic shaking or liquefaction as a result of earthquakes in the Sacramento Valley. However, the CBC regulates all aspects of building and foundation design and construction, including regulations that are specifically designed to reduce the risks from seismic hazards to the maximum extent practicable. Compliance with the CBC is required by law. General Plan Policies 8.A.1 and 8.A.2 are also designed to reduce the potential for adverse impacts to people or structures from seismic shaking and liquefaction. The 2035 General Plan and CAP EIR determined that this impact was less than significant. Crawford & Associates (2020) estimated that the projected PGA at the proposed Caltrans Off-site Improvement Area would be 0.36g. This calculation indicates that the proposed off-site interchange may be subject to moderate level of ground shaking during a large magnitude earthquake. They also determined that although active seismic sources are relatively close and most of the project site consists of Holocene-age deposits, these deposits are composed of stiff/dense soil layers, and given that groundwater is present at depths of 28.5 to 37.2 feet below the ground surface, Crawford & Associates (2020) determined that liquefaction likely does not represent a hazard. Because the Caltrans Off-site Improvement Area is located in the same geologic formations and is the same distance from active seismic sources as compared to the WRTP Specific Plan Area and the proposed off-site South Regional Pond location, the WRTP Specific Plan Area and the proposed off-site South Regional Pond would likely experience a similar level of seismic ground shaking and a similar susceptibility to liquefaction as the Caltrans Offsite Improvement Area. Design and construction of buildings, foundations, and retaining walls throughout the WRTP Specific Plan Area are subject to the requirements of the CBC. Design and construction of infrastructure in the WRTP Specific Plan Area are regulated by the City's Engineering Standards: Design Standards, Standard Details and

Construction Specifications (City of Woodland 2016a). Similarly, design and construction of the off-site South Regional Pond is an allowed use under Chapter 2 of Title 8 of the Yolo County Code, and would be subject to the Yolo County permit and ordinance requirements, including Title 7, Building Regulations, of the Yolo County Code. These standards apply to transportation, storm drainage, sewer, wastewater pumping, water distribution, graywater distribution, underground pipelines, and other improvements, and are designed, in part to avoid impacts related to geologic and seismic constraints. Existing seismic safety standards are enforced by the City through requirements that development to be designed to minimize risk related to earthquakes, and that site-specific geotechnical reports be prepared to identify methods to reduce hazards. Design and construction of the off-site SR 113/County Road 25A intersection improvements are regulated by Caltrans, and would comply with requirements contained in the Standard Plans and Specifications (Caltrans 2018) and the Highway Design Manual (Caltrans 2020). Therefore, impacts related to seismic hazards from implementation of the WRTP Specific Plan and related off-site infrastructure improvements were addressed in the 2035 General Plan and CAP EIR and are substantially mitigated by City-administered uniformly applied development standards, as provided by CEQA Guidelines Section 15183(f), and no additional CEQA review is required. (Draft EIR, p. 3.7-11.)

- Impacts Related to Soil Erosion. As discussed in the 2035 General Plan and CAP EIR Impact 4.7-2 (pages 4.7-27 through 4.7-29) (City of Woodland 2016b), construction projects have the potential to cause an increase in soil erosion due to increased grading, excavation, movement of construction vehicles, and other development-related construction activities. As presented above in Table 3.7-2, most soils within the WRTP Specific Plan Area and the off-site improvement areas have a moderate erosion potential and a high stormwater runoff potential. In addition, the Reiff soil type has a high wind erosion potential. Chapter 15.12 of the City of Woodland Municipal Code addresses erosion and sediment control under the City's Grading Ordinance. Project applicants for future projects proposed under the WRTP Specific Plan, including the off-site South Regional Pond if this feature is constructed by a private entity rather than the City, must obtain a grading permit that includes submittal of a soils engineering report and an engineering geology report specific to the project site, as required by Appendix Chapter 33 of the CBC, Section 3309. Chapter 8.08 of the City's Municipal Code regulates discharges into the municipal storm drain system including compliance with applicable provisions of construction NPDES permit requirements, including design of and discharge from the proposed off-site South Regional Pond. Furthermore, projects with the WRTP Specific Plan Area and the South Regional Pond, because they would disturb more than 1 acre of land, must comply with the requirements in the SWRCB General Permit for Storm Water Discharges Associated with Construction and Land Disturbance Activities (Order 2009-009-DWQ as amended by Order No. 2012-0006-DWQ). The SWRCB general permit contains a numeric, two-part, risk-based analysis process and requires development of a SWPPP and implementation of BMPs. The SWPPP must include a site map and a description of construction activities, and must identify the BMPs that will be employed to prevent soil erosion and discharge of other construction-related pollutants. Project applicants for future projects proposed under the WRTP Specific Plan must comply with the City's Engineering Standards: Design Standards, Standard Details and Construction Specifications (City of Woodland 2016a). These standards apply to transportation, storm drainage, sewer, wastewater pumping, water distribution, graywater distribution, underground pipelines, and other improvements, and are designed, in part, to avoid impacts related to geologic and seismic constraints. Design and construction of the off-site South Regional Pond is an allowed use under Chapter 2 of Title 8 of the Yolo County Code, and would be subject to the Yolo County permit and ordinance requirements, including Title 7, Building Regulations, of the Yolo County Code. Design and construction of the off-site SR 113/County Road 25A intersection improvements is regulated by Caltrans, and

would comply with requirements contained in the Standard Plans and Specifications (Caltrans 2018) and the Highway Design Manual (Caltrans 2020). Furthermore, Caltrans has its own NPDES permit issued by SWRCB (Order No. 2012-0011-DWQ, NPDES No. CAS000003), with which all Caltrans projects are required to comply. This NPDES permit regulates construction-related erosion and operational discharge on all Caltrans projects throughout the state. Therefore, implementation of the WRTP Specific Plan and related off-site improvements would be consistent with the 2035 General Plan and CAP EIR, which determined that this impact was less than significant. Project applicants for future projects proposed under the WRTP Specific Plan, including the off-site South Regional Pond if this feature is constructed by a private entity rather than the City, must implement BMPs and develop and implement SWPPPs, as required by CVRWQCB, and obtain grading permits from the City, all of which are specifically designed to minimize constructed-related soil erosion to the maximum extent feasible. Caltrans also must implement BMPs and develop and implement a SWPPP as required by its agency-specific NPDES permit. Therefore, the soil erosion impact from construction of the WRTP Specific Plan and related off-site infrastructure improvements was addressed by the 2035 General Plan and CAP EIR and is substantially mitigated by City administered uniformly applied development standards, as provided by CEQA Guidelines Section 15183(f), and no additional CEQA review is required. (Draft EIR, pp. 3.7-11 through 3.7-12.)

- **Geologic Hazards Related to Unstable and Expansive Soils.** A review of NRCS (2020) soil data (see Table 3.7-2) indicates that most of the soils within the WRTP Specific Plan Area and off-site improvement areas have been rated with severe limitations for construction of buildings and roads because of high shrink-swell potential, low soil strength, and ponding and soil saturation. As discussed in the 2035 General Plan and CAP EIR Impact 4.7-3 (pages 4.7-30 and 4.7-31) (City of Woodland 2016b), construction in unstable and expansive soils could result in structural damage to buildings, roads, and bridges. Expansive soils shrink and swell as a result of moisture change. These volume changes can result in damage over time to building foundations, underground utilities, and other subsurface facilities and infrastructure if they are not designed and constructed appropriately to resist the damage associated with changing soil conditions. Low soil bearing strength and long periods of soil saturation can result in subsidence from the weight of overlying structures. However, the CBC regulates all aspects of building and foundation design and construction, including regulations that are specifically designed to reduce or eliminate hazards from construction in expansive soil. Compliance with the CBC, which is required by law, ensures appropriate design and construction of building foundations to resist soil movement. In addition, the CBC also contains drainage-related requirements to reduce seasonal fluctuations in soil moisture content. Construction in soils of low strength is also addressed in the CBC through implementation of soil engineering tests and amending and compacting soils. General Plan Policies such as 8.A.1, 8.A.2, and 8.A.3 are designed to reduce hazards from construction in unstable soils by requiring preparation of a site-specific geotechnical report and incorporating special design requirements in areas of differential settlement. The 2035 General Plan and CAP EIR determined that this impact was less than significant. Project applicants for future projects proposed under the WRTP Specific Plan are required to comply with design and construction requirements contained in the CBC and the City's Engineering Standards: Design Standards, Standard Details and Construction Specifications (City of Woodland 2016a). Similarly, design and construction of the off-site South Regional Pond would be subject to the CBC and Yolo County permit and ordinance requirements including Title 7, Building Regulations, of the Yolo County Code. Project applicants must prepare site-specific geotechnical reports to identify soil constraints such as settlement and shrink-swell potential and implement design specifications to prevent damage associated with these limitations. Design and construction of the off-site SR 113/County Road 25A intersection improvements is regulated by Caltrans, and would comply with

requirements contained in the Standard Plans and Specifications (Caltrans 2018), which contain provisions to address unstable and expansive soils. Therefore, impacts from WRTP Specific Plan construction and related off-site infrastructure improvements in unstable and expansive soils are addressed by the 2035 General Plan and CAP EIR and are substantially mitigated by City-administered uniformly applied development standards, as provided by CEQA Guidelines Section 15183(f), and no additional CEQA review is required. (Draft EIR, pp. 3.7-12 through 3.7-13.)

HAZARDS AND HAZARDOUS MATERIALS

- Disposal of Hazardous Materials. As discussed in the 2035 General Plan and CAP EIR Impact 4.8-1 (pages 4.8-29 through 4.8-32) (City of Woodland 2016b), new land uses would require the routine use, transport, and disposal of hazardous material and waste and may increase exposure to risk of hazards. Construction activities may also generate hazardous materials and waste, such as fuels and oils from construction equipment and vehicles. Federal and State regulations require adherence to specific guidelines regarding the use, transportation, disposal, and accidental release of hazardous materials, as described in the Regulatory Framework section above. The U.S. EPA is responsible for administering the Federal Toxic Substances Control Act and RCRA, which regulate the generation, transportation, treatment, storage, and disposal of hazardous waste. The Yolo County Department of Community Services Environmental Health Services Division is the CUPA for the County and responsible for implementing hazardous waste and materials State standards, including HMBP, California Accidental Release Prevention Program, and managing fuel storage tanks. The U.S. Department of Transportation, Caltrans, and the California Highway Patrol regulate and manage routine transport of hazardous materials on I-5 and SR 113. The Yolo County Environmental Health HazMat Unit and Multi-Agency Emergency Response Team, which includes the City of Woodland, respond to local hazardous materials emergencies. Furthermore, implementation of General Plan Policies 3.I.1, 3.I.2, 8.E.1, 8.E.2, 8.E.3, and 8.E.4 are also designed to reduce the potential for adverse impacts from routine transport and use of hazardous materials. The 2035 General Plan and CAP EIR determined that this impact was less than significant. As emphasized by WRTP Specific Plan Performance Standard C, in Section 3.3.2 of the WRTP Specific Plan, all permitted land uses under the WRTP Specific Plan, including industrial and commercial tenants in the WRTP Specific Plan Area, shall comply with the provisions of the California Hazardous Materials Regulations and other federal, State, and local regulations and requirements discussed in the “Regulatory Framework” section above, including preparation of a Hazardous Material Business Plan. Design and construction of the SR 113/CR 25A interchange improvements would be regulated by Caltrans, and hazardous materials at Caltrans projects are address in the Standard Specifications (Caltrans 2018). Impacts from implementation of the WRTP Specific Plan and off-site improvements related to the routine use, transport, and disposal of hazardous materials were addressed as a part of the City’s General Plan and CAP EIR and are substantially mitigated by uniformly applied development standards administered at the local, state, and federal level and, as provided by CEQA Guidelines Section 15183(f), no additional CEQA review is required. (Draft EIR, p. 3.8-15.)
- Be Located on a Hazardous Materials Site Compiled Pursuant to Government Code Section 65962.5 (the Cortese List). The results of records searches of federal, State, local, and tribal databases indicate that the WRTP Specific Plan Area and the off-site improvement areas are not located on a known hazardous materials site on the Cortese List. Thus, there would be no impact and this issue is not evaluated further in the EIR. (Draft EIR, p. 3.8-15.)

- ▶ Safety Hazards Related to Public Use Airports. The WRTP Specific Plan Area and the off-site improvement areas are located 6.2 miles northeast of the nearest public use airport (Yolo County Airport). The WRTP Specific Plan Area and the off-site improvement areas are not located within an Airport Land Use Compatibility Plan area. Thus, there would be no impact related to safety hazards from a public use airport, and this issue is not evaluated further in the EIR. (See Impact 3.8-3 for safety hazards related to the Medlock Field private-use airport.) Airport noise hazards are addressed in Section 3.11, “Noise and Vibration,” of the EIR. (Draft EIR, p. 3.8-15.)

- ▶ Impair Implementation of or Physically Interfere with an Adopted Emergency Response Plan or Emergency Evacuation Plan. As discussed in the 2035 General Plan and CAP EIR Impact 4.8- 6 (pages 4.8-41 through 4.8-43) (City of Woodland 2016b), new development and population growth would result in an increased population that may require evacuation. The adopted Yolo County Emergency Operations Plan (of which the City is a participant) addresses the County and incorporated Cities’ planned response to extraordinary emergency situations associated with any type of natural disaster, technological incident, or state of war emergency. General Plan Policy 8.F.2 supports the continued coordination between the City and relevant agencies in preparing for and operating during an emergency. The 2035 General Plan and CAP EIR determined that this impact was less than significant. The WRTP Specific Plan and proposed off-site South Regional Pond are subject to design review by the City, and are required to comply with City standards relating to appropriate street design to accommodate emergency vehicles and emergency evacuation thoroughfares. Construction equipment would be staged on site, and therefore would not impede emergency access or emergency evacuation routes on the surrounding local roadways. Design and construction of the SR 113/CR 25A interchange improvements would be regulated by Caltrans, and would be designed for appropriate emergency vehicle access as per the Highway Design Manual (Caltrans 2020). Impacts from implementation of the WRTP Specific Plan and off-site improvements related to interference with an emergency response to evacuation plan were addressed as a part of the City’s General Plan and CAP EIR and are substantially mitigated by uniformly applied development standards and, as provided by CEQA Guidelines Section 15183 (f), no additional CEQA review is required. (Draft EIR, pp. 3.8-15 through 3.8-16.)

- ▶ Exposure to Wildland Fire Hazards. As shown on General Plan Figure 8- 7, “Fire Hazards,” and Exhibit 4.8-4 in the 2035 General Plan CAP EIR (City of Woodland 2016b:4.8-15), the WRTP Specific Plan Area and the off-site improvement areas are not located in or near a State Responsibility Area, but are located in a Local Responsibility Area. Furthermore, the WRTP Specific Plan Area and the off-site improvement areas are not located in a high or very high fire hazard severity zone and are not located in a wildlandurban interface fire area. As a result, the wildland fire threat is considered low by the local agency responsible for fire protection services (i.e., the City of Woodland). Furthermore, as discussed in the EIR in the “Regulatory Framework” of Section 3.8, “Hazards and Hazardous Materials,” and in Section 3.12, “Public Services and Recreation,” the WRTP Specific Plan Area and the off-site improvement areas would be provided with adequate fire suppression services by the City of Woodland, and design of the WRTP Specific Plan Area and the off-site South Regional Pond is required to comply with fire flow requirements contained in the City of Woodland Engineering Standards. Thus, there would be no impact related to wildland fire hazards, and this issue is not evaluated further in the EIR. (Draft EIR, p. 3.8-16.)

HYDROLOGY, FLOODING, AND WATER QUALITY

- ▶ **Impede or Redirect Flood Flows.** General Plan Policy 2.B.2 was not intended to constrain development that is not located in a 200-year floodplain. The WRTP Specific Plan Area and the off-site improvement areas are classified by FEMA (2012) as unshaded Zone X, which is an area of minimal flood hazard that is located outside the 100-year (0.01 AEP) floodplain and is higher than the elevation of the 500-year (0.2 AEP) floodplain. Since the WRTP Specific Plan Area and the off-site improvement areas are not located in a floodplain, there would be no impact and this topic is not evaluated further in the EIR. (Draft EIR, p. 3.9-14.)
- ▶ **Risk Release of Pollutants in a Flood Hazard, Seiche, or Tsunami Zone.** — General Plan Policy 2.B.2 was intended to provide general guidance, and was not intended to constrain development that is not located in a 200-year floodplain. The WRTP Specific Plan Area and the off-site improvement areas are classified by FEMA (2012) as unshaded Zone X, which is an area of minimal flood hazard that is located outside the 100-year (0.01 AEP) floodplain and is higher than the elevation of the 500-year (0.2 AEP) floodplain. Furthermore, there are levees on both the east and west sides of the Yolo Bypass (which is located between the city and the Sacramento River), as well as levees on the west side of the Sacramento River, that were designed and engineered to meet U.S. Army Corps of Engineers standards for levee stability (see Exhibit 4.9-2 on page 4.9-9 of the 2035 General Plan and CAP EIR [City of Woodland 2016b]). Because of the WRTP Specific Plan Area's distance from the Pacific Ocean, tsunamis would not represent a hazard. Seismic seiches have not been recorded in the Sacramento River north of the Delta; furthermore, levees on both sides of the Sacramento River have been designed and engineered to withstand seismic hazards such as seiches. Therefore, because the WRTP Specific Plan Area and the off-site improvement areas are not located in a flood hazard, seiche, or tsunami hazard zone, the WRTP Specific Plan and the off-site improvements would not result in increased risk of release of pollutants, and this impact is not addressed further in the EIR. (Draft EIR, p. 3.9-14.)
- ▶ **Violation of Water Quality Standards.** As discussed in the 2035 General Plan and CAP EIR Impact 4.9-1 (pages 4.9-33 through 4.9-38) (City of Woodland 2016b), land use changes have the potential to alter the types, quantities, and timing of contaminant discharges in stormwater runoff. Sediment, trash, organic contaminants, nutrients, trace metals, pathogens (e.g., bacteria and viruses), and oil and grease compounds are common urban runoff pollutants that can affect receiving water quality. In addition, agricultural runoff commonly contains elevated levels of nutrients, pesticides, and herbicides. However, before new urban development can proceed, a grading and drainage plan must be submitted to the City Department of Public Works that must incorporate stormwater pollution control as well as storm drainage design features to control increased runoff from the implementation of the WRTP Specific Plan, as required by Municipal Code Chapter 16. The City's Urban Stormwater Quality Management and Discharge Control Ordinance requires implementation of BMPs where a discharge has the potential to cause or contribute to pollution or contamination of stormwater, the City's storm drainage system, or receiving waters. Urban development projects are also required to comply with the City's Post-Construction Standards Plan (2015) to reduce post-construction runoff through the incorporation of BMPs, LID, and hydromodification management techniques. Industrial and commercial facilities require appropriate NPDES permits/WDRs, and implementation of BMPs consistent with the CASQA Industrial/Commercial BMP Handbook (2019b) or its equivalent, including annual reporting of any structural control measures and treatment systems. Urban development projects must also comply with the requirements in the SWRCB's General Permit for Storm Water Discharges Associated with Construction and Land Disturbance Activities (Construction General Permit) (Order 2009-009-DWQ as amended by Order No. 2012-0006-DWQ) with requires preparation of a SWPPP and implementation of BMPs designed to reduce erosion and pollutant transport. Furthermore,

implementation of General Plan Policies 5.I.5, 5.I.7, and 7.A.4 are also designed to reduce the potential for violation of water quality standards and waste discharge requirements. The 2035 General Plan and CAP EIR included Mitigation Measure 4.9-1 (pages 4.9-38 and 4.9-39), which recommended adoption of General Plan Policy 5.I.4 related to implementation of LID features to improve stormwater quality. The 2035 General Plan and CAP EIR determined that after incorporation of General Plan Policy 5.I.4, the impact would be less than significant. Since the WRTP Specific Plan Area has been in use for cultivation of row crops for decades, existing stormwater runoff from the WRTP Specific Plan Area, which flows into Willow Slough, likely contains elevated levels of nutrients, pesticides, and herbicides. Project implementation would reduce these agricultural pollutants. However, long-term operational discharges of contaminants into the City's stormwater drainage system and ultimate receiving waters would still occur with development of the WRTP Specific Plan, because conversion to urban land uses would increase the amount of impervious surfaces. Therefore, stormwater runoff that transports pollutants from parking lots, driveways, streets, rooftops, and sidewalks would increase. In addition, the presence of additional industrial, commercial, and other urban land uses that utilize potential pollutants (e.g., cleaning agents, pesticides, oil) could result in discharges if proper storage, application, and/or disposal does not occur. However, project applicants for future projects proposed under the WRTP Specific Plan, as well as the off-site South Regional Pond are required to comply with the stormwater, grading, and erosion control regulations described above and with General Plan Policies 5.I.4, 5.I.5, 5.I.7, 5.I.8, and 7.A.4; all of which are designed to reduce stormwater runoff, improve water quality, and prevent violations of water quality standards and waste discharge requirements as set forth in the Water Quality Control Plan for the Sacramento and San Joaquin River Basins (CVRWQCB 2018). Design and construction of the off-site SR 113/County Road 25A intersection improvements are regulated by Caltrans, and would comply with requirements contained in the Standard Plans and Specifications (Caltrans 2018) and the Highway Design Manual (Caltrans 2020). Furthermore, Caltrans has its own NPDES permit issued by SWRCB (Order No. 2012-0011-DWQ, NPDES No. CAS000003), with which all Caltrans projects are required to comply. This NPDES permit regulates construction-related erosion and operational discharge on all Caltrans projects throughout the state (SWRCB 2015). Therefore, impacts from WRTP Specific Plan construction and related infrastructure improvements related to violation of water quality standards are substantially mitigated by uniformly applied development standards, as provided by CEQA Guidelines Section 15183(f), and no additional CEQA review is required. (Draft EIR, pp. 3.9-14 through 3.9-15.)

- Substantial Depletion of Groundwater Supplies or Substantial Interference with Groundwater Recharge such that Sustainable Groundwater Management of the Basin would be Impeded. As discussed in the 2035 General Plan and CAP EIR Impact 4.9-4 (page 4.9-48) (City of Woodland 2016b), an increase in water demands and associated depletion of groundwater supplies could result from the land use changes throughout the City's Planning Area. In a partnership with the City of Davis, Woodland has secured water rights on the Sacramento River and the Woodland-Davis Clean Water Agency Regional Water Treatment Facility was designed to provide up to 18 million gallons per day (55 acre-feet per day) of surface water to Woodland. As part of the Woodland-Davis Regional Water Supply Project (which was completed in 2016), Woodland now has direct use of surface water, as well as the ability to store some of the treated surface water in the aquifer during low water demand months to be recovered and distributed to customers during high water demand months, under the City's aquifer storage and recovery program. The City also maintains wells for emergency use and for landscape irrigation in City parks. A limited amount of groundwater from three existing City wells is blended with the surface water; by adding surface water as well as recycled water (for industrial use) to the water supply that has previously been entirely dependent on groundwater, the potential for groundwater depletion is

decreased even though implementation of the 2035 General Plan would involve projects that could increase water demand. The 2015 Urban Water Management Plan projects zero retail water to come from groundwater sources between 2020 and 2040; 100 percent of water supplies would come from surface water and recycled water supplies. Thus, the addition of surface water to Woodland's water supply portfolio will substantially reduce groundwater extractions, reduce reliance on groundwater resources, as well as improved water quality. The 2035 General Plan and CAP EIR determined that this impact would be less than significant. The Sacramento Valley Groundwater Basin – Yolo Subbasin is a high priority basin as designated by DWR, but is not in a state of critical overdraft (DWR 2019). The Yolo Subbasin Groundwater Agency is the GSA responsible for preparation of the required GSP. The Yolo Subbasin GSP is in process and will be completed by January 1, 2022, as required by DWR (Yolo Subbasin Groundwater Agency 2020). As discussed in the 2035 General Plan and CAP EIR Impact 4.9-4 (pages 4.9-47 through 4.9-50) (City of Woodland 2016b), the primary areas of groundwater recharge in the Woodland area are the Sacramento River and other active stream channels. There are no major groundwater recharge areas in the City. Groundwater recharge also occurs as rainfall infiltrating through the soil to the aquifer, particularly in agricultural and open space areas. When impervious surfaces associated with new urban development are constructed on soils with a high water infiltration rate, a localized reduction in groundwater recharge can occur. However, most soils in the City are composed of loams and clays, which typically have low infiltration rates. Furthermore, new urban development projects in the City are required to comply with the City's Technical Guidance Manual for Stormwater Quality Control Measures (2006b) and Post Construction Standard Plan (2015) and incorporate BMPs, such as conserving natural areas and minimizing impervious area, which would reduce potential project interference with groundwater recharge. In addition, new development is required to comply with General Plan Policy 5.I.4 requiring the implementation of LID features, which could have the potential to locally, and likely minimally, increase groundwater recharge through the construction of infiltrative storm drainage facilities. The 2035 General Plan and CAP EIR determined that this impact would be less than significant. Implementation of the W RTP Specific Plan would convert a large agricultural area (approximately 350 acres, plus approximately 4 acres for the off-site South Regional Pond) to urban development with new impervious surfaces including streets, parking lots, and commercial, light industrial, and residential buildings. As discussed above, most of the W RTP Specific Plan Area and the off-site improvement areas are composed of hydrologic Group C soils (i.e., the Brentwood, Capay, and Sycamore soil types), which have a slow infiltration rate when thoroughly wet and therefore have a high runoff potential (NRCS 2020). However, a limited amount of groundwater recharge does occur in the W RTP Specific Plan Area through the Reiff Group A soil and the Yolo Group B soil. As shown in Exhibit 2-8 (Chapter 2, "Project Description") and discussed in the Woodland Research and Technology Park Specific Plan, Draft (City of Woodland 2020b), the proposed site design includes approximately 20 acres of landscaped open space. Some of the water applied to landscaping in the open space and in other landscaped areas throughout the W RTP Specific Plan Area (particularly to lawn grass in the residential housing areas), the on-site detention basin, and the on-site conveyance channel along the east side of SR 113 and the north side of County Road 25A, as well as the proposed off-site South Regional Pond would percolate through the soil and reach the groundwater aquifer as recharge. There are no active stream channels or other substantial sources of groundwater recharge in the W RTP Specific Plan Area or the off-site improvement areas. As stated above, the W RTP Specific Plan is required to comply with the City's Technical Guidance Manual for Stormwater Quality Control Measures (2006b) and Post Construction Standard Plan (2015) and incorporate BMPs, such as conserving natural areas and minimizing impervious area, which would reduce potential project interference with groundwater recharge. The proposed off-site improvements to the existing SR 113/County Road 25A would occur in hydrologic Group C soils and would involve only a minor increase in impervious surfaces. The W RTP Specific Plan is also

required to comply with General Plan Policy 5.I.4 requiring the implementation of LID features, could have the potential to locally, and likely minimally, increase groundwater recharge through the construction of infiltrative storm drainage facilities. Because development of the WRTP Specific Plan Area with urban land uses and the SR 113/County Road 25A interchange are planned as part of the City's General Plan, they will be included as part of regional planning efforts for the Sacramento Valley Groundwater Basin – Yolo Subbasin. Therefore, WRTP Specific Plan and associated off-site impacts from substantial depletion of groundwater supplies or substantial interference with groundwater recharge that would impede sustainable groundwater management of the basin are substantially mitigated by City-administered uniformly applied development standards, as provided by CEQA Guidelines Section 15183 (f), and no additional CEQA review is required. (Draft EIR, pp. 3.9-16 through 3.9-17.)

- On- and Off-site Erosion Impacts. As discussed in the 2035 General Plan and CAP EIR Impact 4.9-2 (pages 4.9-40 through 4.9-43) (City of Woodland 2016b), earth-moving activities associated with construction of new urban development would result in increased erosion and sedimentation, that could in turn result in degradation of waterways and conflict with beneficial uses, water quality objectives, and standards established in the as set forth in the Water Quality Control Plan for the Sacramento and San Joaquin River Basins (CVRWQCB 2018). In addition, accidental spills of construction-related contaminants (e.g., fuels, oils, paints, solvents, cleaners, concrete) could also occur during construction, thereby degrading water quality. Construction dewatering also has the potential to degrade water quality if proper dewatering procedures are not followed and water is not properly stored and disposed of. Chapter 15.12 of the City of Woodland Municipal Code addresses erosion and sediment control under the City's Grading Ordinance. Project applicants for future projects proposed under the WRTP Specific Plan and supportive infrastructure improvements must obtain grading permits that include submittal of a soils engineering report and an engineering geology report specific to the project site, as required by Appendix Chapter 33 of the CBC, Section 3309. Chapter 8.08 of the City's Municipal Code regulates discharges into the municipal storm drain system including compliance with applicable provisions of construction NPDES permit requirements. Furthermore, projects that disturb more than 1 acre of land must comply with the requirements in the SWRCB General Permit for Storm Water Discharges Associated with Construction and Land Disturbance Activities (Order 2009-009-DWQ as amended by Order No. 2012-0006-DWQ). The SWRCB general permit contains a numeric, two-part, risk-based analysis process and requires development of a SWPPP and implementation of BMPs. The SWPPP must include a site map and a description of construction activities, and must identify the BMPs that will be employed to prevent soil erosion and discharge of other construction-related pollutants. Finally, project applicants for future projects proposed under the WRTP Specific Plan and supportive infrastructure improvements must comply with the City's Engineering Standards: Design Standards, Standard Details and Construction Specifications (City of Woodland 2016a). These standards apply to transportation, storm drainage, sewer, wastewater pumping, water distribution, graywater distribution, underground pipelines, and other improvements, and are designed, in part to avoid impacts related to geologic and seismic constraints. Furthermore, implementation of General Plan Policies 5.I.3, 5.I.5, and 5.I.7 are also designed to reduce the potential for violation of water quality standards and waste discharge requirements. The 2035 General Plan and CAP EIR included Mitigation Measure 4.9-2 (page 4.9-43), which recommended adoption of General Plan Policy 5.I.4 related to implementation of LID features to improve stormwater quality. The 2035 General Plan and CAP EIR determined that after incorporation of General Plan Policy 5.I.4, the impact would be less than significant. As presented in Table 3.7-2 of the EIR (see Section 3.7, "Geology, Soils, Minerals, and Paleontological Resources"), most soils in the WRTP Specific Plan Area and the off-site improvement areas have a moderate erosion potential and a high stormwater runoff

potential. In addition, the Reiff soil type has a high wind erosion potential. Development of the WRTP Specific Plan must occur in compliance with the existing land use, stormwater, grading, and erosion control regulations described above and must implement applicable General Plan Policies such as 5.I.3, 5.I.4, 5.I.5, and 7.A.4. Project applicants for future projects proposed under the WRTP Specific Plan and the offsite South Regional Pond are required to implement BMPs and develop and implement SWPPPs as required by CVRWQCB, and obtain grading permits from the City, all of which are specifically designed to minimize degradation of water quality to the maximum extent feasible. Design and construction of the off-site SR 113/County Road 25A intersection improvements is regulated by Caltrans, and would comply with requirements contained in the Standard Plans and Specifications (Caltrans 2018) and the Highway Design Manual (Caltrans 2020). Furthermore, Caltrans has its own NPDES permit issued by SWRCB (Order No. 2012-0011-DWQ, NPDES No. CAS000003), with which all Caltrans projects are required to comply. This NPDES permit regulates construction-related erosion and operational discharge on all Caltrans projects throughout the state (SWRCB 2015). Therefore, impacts from WRTP Specific Plan construction and related off-site infrastructure improvements from construction-related degradation of water quality are substantially mitigated by uniformly applied development standards, as provided by CEQA Guidelines Section 15183 (f), and no additional CEQA review is required. (Draft EIR, pp. 3.9-17 through 3.9-18.)

LAND USE PLANNING, POPULATION, AND HOUSING

- ▶ Physically Divide an Established Community. The WRTP Specific Plan would not physically divide an established community. Only one rural residence is within the WRTP Specific Plan Area and no residents are within the off-site improvement areas. This residence is not formally or informally known as a community. Implementing the WRTP Specific Plan would not physically divide an established community. Therefore, this issue is not evaluated further in the EIR. (Draft EIR, p. 3.10-15.)
- ▶ Conflict with an Airport Land Use Compatibility Plan. The WRTP Specific Plan Area and off-site improvement areas are outside of the Yolo County Airport and Sacramento International Airport Influence Areas¹. Issues relating to potential conflicts with an Airport Land Use Compatibility Plan are discussed in Section 3.8, “Hazards and Hazardous Materials,” of the EIR. (Draft EIR, p. 3.10-15.)
- ▶ Conflict with the Yolo County General Plan and Planning Regulations. As discussed in the 2035 General Plan and CAP EIR Impact 4.10-2 (pages 4.10-24 through 4.10-26) (City of Woodland 2016), the 2035 General Plan proposes land use designations for all parcels within the City’s Planning Area, including on unincorporated county land. Yolo County has jurisdiction over unincorporated land in the County, including the WRTP Specific Plan Area, but approval and implementation of the WRTP Specific Plan requires no discretionary review by the County once the WRTP Specific Plan Area is annexed into the City’s jurisdictional boundary, so the County’s policies and standards do not apply. The South Regional Pond would not be annexed to the City. Land use inconsistencies resulting from development of the South Regional Pond and the Yolo County General Plan policies are not physical effects on the environment under CEQA unless it relates to a physical impact on the environment. Each technical section of the EIR provides a detailed analysis of other relevant physical environmental effects that could result from development of the South Regional Pond, as appropriate. The proposed WRTP Specific Plan would not conflict with the land use designation or zoning for the area proposed for the South Regional Pond in a way that would generate any adverse physical impacts beyond those addressed in detail in the environmental sections of the EIR (air quality, agricultural resources, biological resources, cultural resources, etc.). The WRTP Specific Plan Area is located outside the current City limits and will require

annexation into the City prior to development. The WRTP Specific Plan Area is within the City's Sphere of Influence and Urban Limit Line. The 2035 General Plan requires annexation before provision of City services to the area. Policy 2.B.6 Other Development in Unincorporated Areas within the Urban Limit Line. Prior to the provision of City services to unincorporated areas within the Urban Limit Line, require those unincorporated properties to be annexed into the City, or that a conditional service agreement be executed agreeing to annex when deemed appropriate by the City. There are no adverse physical environmental impacts related to Yolo County policies or standards that are not addressed in the General Plan and CAP EIR. Conflicts the Yolo County General Plan are addressed through the City's review and processing of the WRTP Specific Plan, which includes rezoning and annexation. As provided by CEQA Guidelines Section 15183(f), no additional CEQA review is required. (Draft EIR, p. 3.10-15.)

- ▶ Induce Substantial Unplanned Population Growth in an Area, either Directly (for example, by proposing new homes and businesses) or Indirectly (for example, through extension of roads or other infrastructure). As discussed in the 2035 General Plan and CAP EIR Impact 4.10-1 (pages 4.10- 26 through 4.10-30) (City of Woodland 2016), the 2035 General Plan anticipates development of currently undeveloped areas, which would result in infrastructure being extended into areas that are currently undeveloped and could result in pressure to plan for and entitle development beyond that anticipated under the 2035 General Plan. General Plan Policy 2.L.2 promotes development of SP-1A (the WRTP Specific Plan Area) as a mixed-use residential district, indicating that population growth in this area was considered. The WRTP Specific Plan Area had been subject to planning prior to the City's General Plan update, as well, as a part of broader planning for the Spring Lake Specific Plan Area and associated infrastructure master planning. More information on consistency with the 2035 General Plan is found below in Impact 3.10-1. The 2035 General Plan includes specific policies for both infill and new development that would avoid unplanned development that could be induced through infrastructure expansions into new growth areas (Policy 8.C.2 and Policy 8.C.5). This reduces the potential for unplanned, induced growth. In addition, the City's ultimate boundaries are circumscribed by a permanent Urban Limit Line established by a vote of the people in 2006 (Policy 2.A.1). The Urban Limit Line may only be modified by another vote by the people, and the initiative measure also places restrictions on the provision of services outside of the Urban Limit Line. The WRTP Specific Plan Area is within the Urban Limit Line. This provides an effective constraint to induced growth outside of the boundary. As stated in the 2035 General Plan and CAP EIR, growth inducement may indirectly lead to environmental effects. Such environmental effects may include increased traffic, degradation of air quality, conversion of agricultural land to urban uses directly from population and employment growth and indirectly from development associated with goods and services needed by such growth. Physical impacts associated with development of residential and nonresidential land uses, such as traffic, air quality degradation, noise generation, greenhouse gas emissions, and increased demand for public services and utilities, are evaluated in the respective specific resource areas throughout the EIR. The actual level of buildout and the timing of construction and development activities is subject to market conditions, economic trends, and other factors beyond the City's control. The 2035 General Plan and CAP EIR determined that this impact was less than significant. There are no impacts that are peculiar to the WRTP Specific Plan Area that were not addressed in the 2035 General Plan and CAP EIR. As provided by CEQA Guidelines Section 15183(b), no additional CEQA review is required. (Draft EIR, p. 3.10-16.)
- ▶ Displace Substantial Numbers of Existing People or Housing. As previously stated, only one rural residence is within the WRTP Specific Plan Area. Implementation of the WRTP Specific Plan could potentially result in the demolition of the one residence that is currently located within the WRTP Specific Plan Area. However, the demolition of one residence when compared to the number of existing residences currently located in Woodland

and in the unincorporated county is very minimal. Due to the low number of homes that could potentially be demolished with development of WRTP Specific Plan and because numerous homes are available, the City does not consider this level of displacement to be substantial. The WRTP Specific Plan would not displace substantial numbers of existing people or housing. Therefore, this issue is not evaluated further in the EIR. (Draft EIR, p. 3.10-16.)

NOISE AND VIBRATION

- ▶ **Expose People to Excessive Airport Noise.** The 2035 General Plan and CAP EIR (pages 3.11-63 to 3.11-64) discusses noise impacts from aircraft noise exposure. The EIR determines that the closest airport to the City's Planning Area is the Watts Woodland Airport, which is located 3.7 miles from the western city limits. The Sacramento International Airport is located approximately five miles northeast and Yolo County Airport approximately five miles southwest of the City limits. Based upon the most recent noise contours for the Watts Woodland and Yolo County Airports contained within the Yolo County 2030 General Plan EIR (April 2009) and recent noise contours obtained from Sacramento International Airport Land Use Compatibility Plan (SACOG 2013), areas within the City's Urban Limit Line are located outside of the 60 dB CNEL contours. The WRTP Specific Plan Area is within the City's Urban Limit Line; the only proposed development outside of the Urban Limit Line is the off-site South Regional Pond, which is not considered a sensitive noise receptor. Implementation of the WRTP Specific Plan would result in no different impact conclusion than disclosed in the 2035 General Plan and CAP EIR. This impact is less than significant. (Draft EIR, p. 3.11-20.)

PUBLIC SERVICES AND RECREATION

- ▶ **Impacts Related to Fire Protection Services.** As discussed in the 2035 General Plan and CAP EIR Impact 4.12-1 (pages 4.12-29 through 4.12-32) (City of Woodland 2016), Goal 5.B establishes a comprehensive program of fire protection services as a priority in the 2035 General Plan. Service standards for fire protection are addressed in Policies 5.B.1, which states the City should maintain a response time of 4 minutes or less for fire suppression calls, at least 90 percent of the time. Policy 5.B.4 requires development projects to develop and/or fund fire protection facilities, equipment, personnel, and operations and maintenance that maintain the City's standards. Policies 5.B.2 and 5.B.6 ensure high-quality staff and equipment, including adequate fire suppression throughout the city; Policy 5.B.7 reduces the need for new facilities through enforcement of safe building standards; and Policy 5.B.8 requires review of development applications by the fire department. Policy 5.B.10 of the 2035 General Plan specifically addresses the location of new fire stations in relation to planned growth. The environmental effects from construction and operation of new or expansion of existing fire stations were evaluated programmatically in the 2035 General Plan and CAP EIR throughout the individual environmental topic sections. Individual development projects would be required to conduct environmental review pursuant to CEQA prior to approval. Additionally, any new construction of fire facilities would be subject to construction permitting and Fire and Building Code standards. The 2035 General Plan and CAP EIR concluded that impacts related to fire protection services would be less than significant. Fire protection services for the WRTP Specific Plan Area would be provided by Station Three currently located at 1550 Springlake Court. As discussed in Section 3.12.1, "Environmental Setting," of the EIR, the City plans to relocate Station Three to improve service to existing and proposed development within the southeast portion of the City, including the WRTP Specific Plan Area. The City would conduct project-level CEQA analysis, if necessary, to analyze specific impacts and identify any required mitigation measures for construction and operation of Station Three. To the extent feasible, the environmental impacts associated with the construction of Station Three would be mitigated to

below a level of significance, consistent with CEQA. As concluded in the 2035 General Plan and CAP EIR, if siting and construction practices are consistent with the General Plan's policies and other existing regulatory standards, environmental impacts related to construction and operation of fire protection facilities should be minimal (2035 General Plan and CAP EIR page 3.12-32). Project applicants for future projects proposed under the WRTP Specific Plan would be required to submit project design plans to the Woodland Fire Department for review and implement recommended conditions (General Plan Policy 5.B.8). The proposed WRTP Specific Plan would not affect Woodland Fire Department response times because project applicants for future projects proposed under the WRTP Specific Plan would provide funding to ensure fire protection personnel and equipment is provided to meet increased demand for fire protection services (General Plan Policy 5.B.4). Incorporation of all California Fire Code, City development standards, and Woodland Fire Department requirements into project designs would reduce the dependence on fire department equipment and personnel by reducing fire hazards. Therefore, impacts from WRTP Specific Plan construction and related infrastructure improvements related to fire protection services are substantially mitigated by City-administered uniformly applied development standards, as provided by CEQA Guidelines Section 15183(f), and no additional CEQA review is required. (Draft EIR, pp. 3.12-13 through 3.12-14.)

- ▶ **Impacts Related to Police Protection Services.** As discussed in the 2035 General Plan and CAP EIR Impact 4.12-2 (pages 4.12-32 through 4.12-35) (City of Woodland 2016), future development consistent with the General Plan is not expected to require new Woodland Police Department facilities, but may require additional staff and policing resources to account for workload and to meet response time standards. Goal 5.A provides for sufficient law enforcement services that will adequately meet the needs of increasing population and non-residential development. Policies 5.A.1 and 5.A.2 require efficient and high-quality service standards. Development projects are required to fund police facilities according to Policy 5.A.3. Policies 5.A.4, 5.A.5, 5.A.6, and 5.A.7 reduce the need for additional police services through public safety programs and Crime Prevention through Environmental Design strategies, and development application review by the Police Department. In the event that new police facilities would be needed, they would be located within the development footprint analyzed in the 2035 General Plan and CAP EIR. The environmental effects from construction and operation of new police stations were evaluated programmatically in the 2035 General Plan and CAP EIR throughout the individual environmental topic sections. Individual development projects would be required to conduct environmental review pursuant to CEQA prior to approval. The 2035 General Plan and CAP EIR concluded that impacts related to police protection services would be less than significant. Police protection for future development in the WRTP Specific Plan Area would be provided by the Woodland Police Department. Project applicants for future projects proposed under the WRTP Specific Plan would be required to submit project design plans to the Woodland Police Department for review and implement recommended conditions of approval (General Plan Policy 5.A.7). The proposed WRTP Specific Plan would not affect Woodland Police Department response times or other performance objectives because project applicants for future projects proposed under the WRTP Specific Plan would provide funding to ensure police protection personnel and equipment is provided to meet increased demand for police protection services (General Plan Policy 5.A.3). Therefore, impacts from WRTP Specific Plan construction and related infrastructure improvements related to police protection services are substantially mitigated by City-administered uniformly applied development standards, as provided by CEQA Guidelines Section 15183(f), and no additional CEQA review is required. (Draft EIR, pp. 3.12-14 through 3.12-15.)
- ▶ **Impacts Related to School Services.** As discussed in the 2035 General Plan and CAP EIR Impact 4.12-3 (pages 4.12-35 through 4.12-39) (City of Woodland 2016), future development consistent with the General Plan, based

on the State’s classroom loading factors, would require new schools. Implementation of the 2035 General Plan will reduce the impacts related to school services. Specifically, Goal 5.E and Policy 5.E.2 encourages coordination with WJUSD and other educational institutions regarding future school sites. However, the siting of new schools is regulated by the California Department of Education, not the City of Woodland. As a result, the potential impacts associated with the construction of new schools could not be fully predicted at the time of analysis for the 2035 General Plan; the 2035 General Plan and CAP EIR found this impact to be potentially significant. Funding for new school construction is provided through State and local revenue sources. Senate Bill 50 (Chapter 407, Statutes of 1998) governs the amount of fees that can be levied against new development. Payment of fees authorized by the statute is deemed “full and complete mitigation.”^{3,4} The 2035 General Plan and CAP EIR concluded that pursuant to State law the impact is considered less than significant after mitigation. The WRTP Specific Plan Area is located within the WJUSD boundaries and could result in the construction and occupation of approximately 1,600 residential dwelling units. WJUSD uses student generation factors (students per new dwelling units) for single- and multi-family development in order to project student enrollment as shown in Table 3.12-5. Based on student-yield generation rates from WJUSD, implementation of the WRTP Specific Plan would generate approximately 376 new elementary school students (grades K–6), 104 middle school students (grades 7–8), and 222 high school students (grades 9–12). This yield is a general estimate. Actual student generation could be different for different housing types and would vary according to demographic and other influences. The WRTP Specific Plan Land Use Plan provides for a new elementary school in the area zoned for medium density residential, south of Parkland Avenue and east of Road B, should it be determined necessary by the WJUSD to support the anticipated student yield from development within the WRTP Specific Plan Area. Should residential development occur within the WRTP Specific Plan Area prior to the construction of this school, students within the WRTP Specific Plan Area would attend Spring Lake Elementary School, Tafoya Elementary School, Woodland Prairie Elementary School, Douglass Middle School, and Pioneer High School. As shown in Table 3.12-2 (as revised in Chapter 3, “Errata,” of this Final EIR, these schools are below capacity. Furthermore, projections through 2030 indicate that, with 2,800 new residential units becoming occupied and generating growth in the number of students districtwide, Tafoya Elementary School, Douglass Middle School, and Pioneer High School all maintain capacity, indicating that the nearby existing schools could accommodate all anticipated elementary school, middle school, and high school students at build out of the WRTP Specific Plan Area (DecisionInsight 2021). Therefore, a shortfall of elementary school, middle school, or high school services and facilities would not occur. Depending on the timing of future development within the WRTP Specific Plan Area, future students could potentially be bused or driven to schools within the WJUSD boundaries, resulting in indirect impacts related to transportation, such as air pollutant emissions, greenhouse gas emissions, and transportation noise. These potential impacts were considered in the 2035 General Plan and CAP EIR analysis for the relevant resource areas, and are addressed as part of the impact analyses in each of the environmental topic-specific sections of the EIR. As noted, in the case that additional students resulting from new residential development within the WRTP Specific Plan Area would exceed the elementary school capacity or an additional school is otherwise determined by the WJUSD and the California Department of Education to be necessary, the WRTP Specific Plan provides for a new elementary school within the Planning Area. The proposed development in the WRTP Specific Plan is consistent with that assumed for analysis in the 2035 General Plan and CAP EIR, including increased students within the school district due to residential development, and planning for additional schools. Funding for new school construction, as provided through fees authorized by SB 50 and identified as mitigation under the 2035 General Plan and CAP EIR would be applicable to development within the WRTP Specific Plan Area. Project applicants for future projects proposed under the WRTP Specific Plan would pay the State-mandated school

impact fees to the WJUSD that are being levied at the time of development. The City would determine the assessable square footage that would be subject to the fee at the time of development. The California Legislature has declared that payment of the applicable school impact fee is deemed to be full and adequate mitigation under CEQA for impacts on school facilities (California Government Code Section 65996). Direct effects associated with the construction and operation of a new elementary school within the WRTP Specific Plan Area are addressed in specific resource area analyses, as appropriate, throughout the EIR. The indirect effects associated with transporting students were addressed in the General Plan and CAP EIR and are addressed, as appropriate, in the respective sections throughout the EIR. No additional CEQA review is required. (Draft EIR, pp. 3.12-15 through 3.12-16.)

- Impacts Related to Parks and Recreation Services. As discussed in the 2035 General Plan and CAP EIR Impact 4.12-4 (pages 4.12-39 through 4.12-43) (City of Woodland 2016), 2035 General Plan Policy 5.C.3 states the City will “strive to achieve” 6.0 acres of parkland per 1,000 residents. The Quimby Act authorizes cities and counties to pass ordinances requiring that developers set aside land, donate conservation easements, or pay fees for park improvements. General Plan Policy 5.C.3 requires that the development of parks and recreation facilities keeps pace with development according to the City’s parkland standard. Policy 5.C.4 requires that new residential development meet its fair share of the park acreage goal by either dedicating land for new parks, paying a fair share of the costs for new parks and recreation facilities, and/or renovating existing parks and facilities. Policy 5.C.12 requires that the City’s parks, open space, and recreational resources and facilities include a variety of amenities and features to meet the needs of the community, and that factors such as water conservation, urban forest canopy, drinking fountains, restrooms, lighting, and parking be considered in the design of new parks and recreation facilities. The 2035 General Plan and CAP EIR states that for any new future master or specific plan area, parkland would be required to support residential development according to the 2035 General Plan standard, which is 6.0 acres of parkland per 1,000 residents. The amount, type, and location of the new parks and recreational facilities are determined during the planning process. The environmental effects from construction and operation of new parkland were evaluated in the 2035 General Plan and CAP EIR throughout the individual environmental topic area sections. The 2035 General Plan and CAP EIR concluded that impacts related to parks and recreation services would be less than significant. Table 3.12-6 shows the parkland acreage calculations based on the projected new residential population in the WRTP Specific Plan Area. For the purpose of this analysis, it is assumed that the planned residential land use will support a total projected population of approximately 4,386 people. Therefore, assuming 6 acres per thousand residents, 26.3 acres of parkland would be required. As explained in Chapter 5 of the WRTP Specific Plan, additional parks, open space, mini parks and public or private plazas may be identified within individual developments and with Tentative Subdivision Maps. The WRTP Specific Plan will meet its park obligation through a combination of park land development and through project impact fees. Therefore, the WRTP Specific Plan would meet or exceed the City’s requirements for new residential development to provide its fair-share of park acreage. As stated above, General Plan Policy 5.C.12 requires that the City’s parks, open space, and recreational resources and facilities include a variety of amenities and features to meet the needs of the community, and that factors such as water conservation, urban forest canopy, drinking fountains, restrooms, lighting, and parking be considered in the design of new parks and recreation facilities. The WRTP Specific Plan includes a central park, “The Yard”, of 11.6 acres that would serve as the primary park/open space feature; smaller parks, open spaces, and greenways are proposed throughout the WRTP Specific Plan Area. The Yard would include one or more areas for field and court sports, playgrounds/tot lots, restrooms, picnic tables, shade structures and shaded seating areas, passive recreation areas, and improvements at the southern end to provide a central gathering

place for outdoor socializing and events (such as a weekly farmers market). Smaller parks and open spaces would be designed for a variety of passive and active uses, depending on the size and configuration of the park/open space. The interconnected open space, and thee active and passive recreation facilities will be required to provide ample places for physical activity and recreation. The Design Standards and Design Guidelines in Chapter 3 of the WRTP Specific Plan contain criteria for parkland design related to water conservation, urban forest canopy, drinking fountains, restrooms, lighting, and parking. The environmental effects from construction and operation of the WRTP Specific Plan, including proposed recreational facilities, are evaluated throughout the individual environmental topic area sections in the EIR. There are no other known environmental effects associated with park facilities or services that are beyond the impacts disclosed in the relevant environmental topic area sections of the EIR. Therefore, impacts from WRTP Specific Plan implementation related to parks and recreation services are substantially mitigated by City-administered uniformly applied development standards, as provided by CEQA Guidelines Section 15183(f), and no additional CEQA review is required. (Draft EIR, pp. 3.12-16 through 3.12-18.)

- Impacts Related to Increased Use of Existing Parks and Recreational Facilities. As discussed in the 2035 General Plan and CAP EIR Impact 4.12-6 (pages 4.12-46 through 4.12-48) (City of Woodland 2016), additional population growth would place added physical demands on existing park facilities by increasing the number of people using the parks, lengthening the periods of time during which the parks would be in active use, and/or increasing the intensity of use over the course of a typical day. However, the City also anticipated that new parkland would be created to serve new residential growth areas. Therefore, as additional parkland was added over time with new development, impacts related to use overall would be spread over more facilities, and thus the increased use of existing parks and recreational facilities would not result in substantial physical deterioration of existing facilities. Furthermore, General Plan Policy 5.C.3 requires that the development of parks and recreation facilities keeps pace with development and growth within the city according to the City's parkland standard. General Plan Policy 5.C.4 requires that new residential development meet its fair share of the park acreage goal by either dedicating land for new parks, paying a fair share of the costs for new parks and recreation facilities, and/or renovating existing parks and facilities. Therefore, the 2035 General Plan and CAP EIR concluded that impacts related to increased use of existing parks and recreational facilities would be less than significant. The WRTP Specific Plan would provide a total of 17.6 acres of parks and open space for the use of new residents, visitors, and employees in the WRTP Specific Plan Area. Parkland created in the WRTP Specific Plan Area would be located in proximity to proposed and existing nearby housing, promoting use of new parkland. In addition, new residents, visitors, and employees may also use existing City park facilities such as the 28-acre Woodland Sports Park approximately 0.35 mile west of the WRTP Specific Plan Area, the 10-acre Rick Gonzales Sr. Park approximately 0.6 mile east of the WRTP Specific Plan Area, and the Woodland Regional Park approximately 1 mile east of the WRTP Specific Plan Area. As the Spring Lake Specific Plan continues to be implemented, additional parks would also be developed north and east of the WRTP Specific Plan Area. Additionally, although it cannot be fully ascertained with any degree of certainty exactly how many residents and with what frequency they would choose to use off-site recreational facilities, General Plan Policy 5.C.11 promotes mechanisms to adequately fund the ongoing maintenance and repair of the City's open space, parks, and recreational resources and facilities. In addition, General Plan Implementation Program 5.2 calls for the production and regular update of the Parks, Recreation, and Community Services Master Plan that would, among other items, identify funding sources for the development and maintenance of parks, recreation centers and open space resources. Therefore, impacts related to increased use of existing parks and recreational facilities from implementation of the WRTP Specific Plan are substantially mitigated by City-administered uniformly

applied development standards, as provided by CEQA Guidelines Section 15183(f), and no additional CEQA review is required. (Draft EIR, p. 3.12-19.)

- **Impacts Related to New Parks and Recreational Facilities.** As discussed in the 2035 General Plan and CAP EIR Impact 4.12-7 (pages 4.12-48 through 4.12-52) (City of Woodland 2016), new recreational facilities would be created to serve new growth. For any new future master or specific plan area, parkland is required to support residential development, and there may be new recreational facilities associated with new parkland. The precise amount, type, and location of the new parks and recreational facilities would be determined during the planning process for individual development projects or Specific Plans, and must be consistent with the requirements of the 2035 General Plan. Any new construction or expansion of recreation facilities would be subject to construction permitting and Fire and Building Code standards. Additionally, General Plan Policy 5.C.3 requires that development of recreation facilities keeps pace with development and growth within the city and Policy 5.C.5 supports the placement of parks and recreational facilities in proximity of housing. New development is required to meet its fair share of the park acreage goal, including greenbelt parks, according to Policies 5.C.4 and 5.C.9. Appropriate funding mechanisms for parks and recreational facilities must be identified according to Policy 5.C.11. Policy 5.C.12 requires that a variety of factors are considered in the design of new and renovated parks and recreational facilities, including flexibility for programming activities, travel distance of users, and citizen input. The 2035 General Plan and CAP EIR concluded that impacts related to creation of new parks and recreational facilities would be less than significant. The WRTP Specific Plan includes the creation of new on-site parks and recreational facilities, as well as payment of in-lieu fees towards expansion of the Woodland Sports Park, as required by the City. Parkland created in the WRTP Specific Plan Area would be located in proximity to proposed and existing nearby housing. The WRTP Specific Plan Design Standards contained in Chapter 3 of the WRTP Specific Plan require that a variety of factors are considered and incorporated into the new parks, including safety, security, water conservation, urban forest canopy, accessibility, restroom facilities, drinking fountains, and bike access and accommodations. The environmental effects from construction and operation of the WRTP Specific Plan, including proposed recreational facilities, are evaluated throughout the individual environmental topic area sections in the EIR. There are no other known environmental effects associated with park facilities or services that are beyond the impacts disclosed in the relevant environmental topic area sections of the EIR. Thus, no additional CEQA review is required. (Draft EIR, p. 3.12-19.)

TRANSPORTATION AND CIRCULATION

- **Conflict or Be Inconsistent with CEQA Guidelines Section 15064.3(b).** The proposed land use types and density and the proposed transportation network for the WRTP Specific Plan are consistent with that anticipated under the 2035 General Plan. The transportation network described in the WRTP Specific Plan is consistent with the planned Citywide Circulation Diagram (Figure 3-2) in the General Plan Transportation and Circulation Element as follows. The General Plan Citywide Circulation Diagram shows planned arterial and collector streets for the South Growth Area (SP-1) in which the WRTP is located. This includes Parkland Avenue (a new east-west principal arterial between East Street and Pioneer Avenue), a new north-south road designated as Road B in the WRTP Specific Plan (a new north-south minor arterial between CR 25A and Parkland Avenue), an extension of Marston Road (east-west collector street, new segment between Parkland Avenue and Road B), and widening of CR 25A (east-west minor arterial, widening between Road B and SR 113). Planned bikeways shown on Figure 3-3 in the General Plan Transportation and Circulation Element include Class I and II facilities on portions of Parkland Avenue, CR 25A, and Road B as well as a Class I bicycle facility on Marston Road. All

of these streets and bicycle facilities are included in the WRTP Specific Plan, as shown on the network alignment and street crosssections. The WRTP Specific Plan includes a Comprehensive Transportation Demand Management/Vehicle Miles Traveled Reduction Program (TDM/VMT Program) that requires the project “achieve a 10 percent reduction in Plan Area VMT per capita compared to baseline conditions by 2035,” as required by the 2035 General Plan Policy 3.A.4 (Reduce Vehicle Miles Traveled [VMT]) for new development, as well as “financing strategies, sources, and mechanisms to ensure short-term and long-term funding for implementation and monitoring of the TDM/VMT Program.” As detailed in Section 6.2.3, “Subsequent Implementation Documents/Analysis,” of the WRTP Specific Plan, the Master TDM/VMT Program shall: 1) establish transportation strategies, programs, facilities or services for the purpose of VMT reduction that are financed by and consistent with the strategies and requirements of the Development Agreement²; and 2) provide project-specific VMT reduction strategies that all property owners/tenants shall be required to implement through individual project-level TDM Plans consistent with the Master TDM Program. These measures are consistent with Policy 3.A.4 of the 2035 General Plan, and shall, in combination, achieve a 10 percent reduction in VMT per capita for the WRTP Specific Plan Area compared to baseline conditions by 2035. The Master TDM/VMT Program will include a monitoring plan for collecting VMT data in the interim years to 2035, every five years as input to citywide GHG monitoring, so that the effectiveness of the VMT reduction strategies can be confirmed and any required strategy adjustments made to reach VMT reduction targets. Monitoring reports shall be reviewed by the City, which may make adjustments to reach project VMT reduction targets, as necessary. CEQA Guidelines Section 15064.3 establishes VMT as the most appropriate measure of transportation impacts, shifting away from the level of service (LOS) analysis that evaluated a project’s impacts on traffic conditions on nearby roadways and intersections. Although the State’s Office of Planning and Research (OPR) provides recommendations for adopting new VMT analysis guidelines, lead agencies have discretion in selecting and developing a methodology to evaluate VMT. Lead agencies must demonstrate that their selected analysis methodology aligns with SB 743’s goals to promote infill development, reduce GHGs, and reduce VMT. OPR Tech Advisory is guidance and not a program, plan, ordinance, or policy. The 2035 General Plan and CAP EIR demonstrated that the mix of actions and policies to reduce emissions, inclusive of a 10 percent reduction in VMT across the City’s Planning Area, would achieve the necessary GHG reductions for the City’s Planning Area. The City’s CAP provides for interim monitoring and reevaluation over time to ensure that reduction targets are being met and to allow for adjustments in reduction strategies and policies if they are not being met. As the WRTP Specific Plan is consistent with the 2035 General Plan transportation network and land use program, including residential density and population estimates and non-residential building square footage, and includes a TDM/VMT Program and funding to achieve the 10 percent VMT reduction required for new projects per General Plan Policy 3.A.4, there are no impacts that are peculiar to the WRTP Specific Plan that were not addressed in the 2035 General Plan and CAP EIR, and potential impacts are substantially mitigated by uniformly applied development standards, being the WRTP Specific Plan’s TDM/VMT Program and funding mechanism. As provided by CEQA Guidelines Section 15183(f), no additional CEQA review is required. (Draft EIR, pp. 3.13-15 through 3.13-16.)

UTILITIES

- Impacts Related to Increased Demand for Water Supplies. As discussed in the 2035 General Plan and CAP EIR Impact 4.14-2 (pages 4.14-37 through 4.14-42) (City of Woodland 2016), additional residential, commercial, and industrial uses would increase demand for water supplies and water treatment facilities. General Plan goals and policies call for reductions in water use and ensure water system facilities are provided. General Plan Goal 5.G is to provide adequate potable water supply and delivery system to meet the needs of the city. General Plan

Policy 5.G.1 directs the City to provide an adequate water supply, while Policy 5.G.3 requires connection to the City's water system. Policy 5.G.2 requires preparation of a Water Supply Assessment for significant projects (those larger than a 500-dwelling unit project or 250,000 square foot commercial development), pursuant to Sections 10910 through 10915 of the California Water Code. Policies 5.G.5, 5.G.7, 5.G.9, and 7.A.5 reduce the demand on potable water production and delivery systems by requiring the expansion of the recycled water system, maintenance of existing facilities, coordination with regional partners to improve water efficiency and conservation, and updated landscaping regulations. Policy 7.A.5 encourages efficient use of water in landscaping. CAP Water and Solid Waste Objective 1 promotes reduced water demand, which is supported by a number of Actions outlined in Chapter 4 the CAP. The 2035 General Plan and CAP EIR determined that, based on the supply of surface water and groundwater, the City is expected to successfully meet water demand through 2035 (Table 4.14-3 of the 2035 General Plan and CAP EIR). The environmental effects from placement of infrastructure were evaluated in the 2035 General Plan and CAP EIR throughout the individual environmental topic area sections. The 2035 General Plan and CAP EIR concluded that impacts related to increased demand for water supplies and water treatment facilities would be less than significant. Development of the proposed WRTP Specific Plan would increase the demand for municipal water supplies. The City of Woodland Engineering Standards water-demand factors were applied to the acreage for each land use designation that generates municipal water use within the city. As shown in Table 3.14-2, the estimated potable water demand would be approximately 1.14 million gallons per day, which is approximately 1,278 afy at build-out of the WRTP Specific Plan. Table 3.14-1 identifies water supplies and demand within the City over the UWMP's planning period in normal, single-dry, and multiple-dry years. In all year types, if demand cannot be met from surface water alone, the City plans to meet any additional demand through reclaimed water and groundwater pumping. As stated above and shown in the Table 3.14-1, water supply is projected to be sufficient to meet demand through 2035 in all water years. The future water demands accounted for within the City's UWMP are based upon the population growth rate developed in the City's 2035 General Plan for the anticipated development within the City's Urban Limit Line, which included projections for the WRTP Specific Plan Area (West Yost Associates 2016); for the purposes of analysis, the EIR assumes the mix of land uses and overall amount of development in this WRTP Specific Plan Area of approximately 1,600 dwelling units and 2.2 million square feet of nonresidential building space, consistent with the 2035 General Plan. Therefore, the water demands for the WRTP Specific Plan Area were accounted for in water demand projections contained in the City's UWMP and evaluated in the 2035 General Plan and CAP EIR, and sufficient water supplies would be available to meet the demands of the WRTP Specific Plan. The WRTP Specific Plan provides guidelines and recommendations to reduce water demands through the use of highperformance, low-flow water fixtures; minimizing use of lawn and turf grass; the use of native plants and non-living groundcovers; and installation of climate sensitive irrigation systems. A reclaimed water system would be installed to meet landscape irrigation demands for medians, parks, and greenways to further reduce potable water demands. The City Public Works Department completed a Water Supply Assessment for the proposed land use plan contained within the WRTP Specific Plan. As documented in the Water Supply Assessment and Certification Form, the City has sufficient water supplies for the proposed project during normal, single dry, and multiple dry years over a 20- year period (City of Woodland 2019b). Therefore, as with the 2035 General Plan and CAP EIR, the impact related to additional water demand is less than significant. (Draft EIR pp. 3.14-12 through 3.14-13.)

- Impacts Related to Exceedance of Wastewater Treatment Requirements and Increased Demand for Wastewater Treatment Facilities. As discussed in the 2035 General Plan and CAP EIR Impact 4.14-1 (pages 4.14-32 through 4.14-36), Impact 4.14-2 (pages 4.14-37 through 4.14-42), and Impact 4.14-5 (pages 4.14-49 through 4.14-51)

(City of Woodland 2016), additional residential, commercial, and industrial uses anticipated under the General Plan would generate greater amounts of wastewater effluent compared to existing conditions. General Plan Goal 5.H ensures that wastewater treatment facilities are provided in a timely fashion to serve existing and future needs. General Plan Policy 5.H.6 requires all sewage generators within the Planning Area to connect to the City's system. General Plan Policies 5.F.1 ensures that there would be sufficient public services, including wastewater treatment facility capacity, to serve existing and new development in Woodland. Policies 5.F.2, 5.F.3, 5.F.4, and 5.F.5 address fiscal and funding impacts of new development to ensure there is funding available to support public facilities and services. Policies 5.H.2, 5.H.3, 5.H.4, and 5.H.5 address the need to plan for wastewater needs by requiring updates to the Sanitary Sewer Management Plan, consideration of the wastewater needs in amendments to the adopted General Plan, active planning for maintenance and repairs, and evaluation and updates to the Capital Improvement Program. Policy 5.H.9 requires a reduction in wastewater system demand. The WPCF was permitted and meeting facility specific permitted conditions under the State Water Resource Control Board National Pollution Discharge Elimination System permit requirements at the time of adoption of the 2035 General Plan, and the permit has been renewed and conditions continue to be met. Implementation of policies in the 2035 General Plan, along with existing local, State, and federal requirements would ensure that the wastewater treatment requirements of the Central Valley Regional Water Quality Control Board would continue to be met for amount of wastewater effluent. In terms of wastewater treatment, the hydraulic capacity of the City's WPCF is expected to meet the city's projected needs through 2035. The environmental effects from placement of infrastructure were evaluated in the 2035 General Plan and CAP EIR throughout the individual environmental topic area sections. The 2035 General Plan and CAP EIR concluded that impacts related to increased demand for wastewater treatment facilities would be less than significant. Wastewater flows generated by development of the WRTP Specific Plan Area were accounted for in wastewater flow projections contained in the 2035 General Plan and CAP EIR. Land use proposed in the WRTP Specific Plan is consistent with that contemplated for SP-1A in the 2035 General Plan, and therefore anticipated wastewater flows analyzed as part of the General Plan and CAP EIR would be the same, if not less due to recent regulatory changes and conservation measures, as that analyzed in the 2035 General Plan and CAP EIR. As described in the WRTP Wastewater Collection System Technical Memorandum, due to recent regulatory changes and implementation of the Model Calibration and Master Plan Update Recommendations prepared by Water Works Engineers in 2012, the City has reduced residential and commercial wastewater design sanitary sewer flow rate assumptions for the WRTP Specific Plan Area (Cunningham Engineering 2020c). As analyzed in support of the 2035 General Plan and CAP EIR, future average hydraulic flow to the WPCF would increase to about 8.3 mgd in 2035 with buildout of the General Plan, which is within the capacity of the WPCF (City of Woodland 2015). Similarly, the WPCF organic capacity would not be exceeded with buildout of the 2035 General Plan (City of Woodland 2015). As stated above and confirmed by the City's Wastewater Treatment Capacity Verification, the capacity of the City's WPCF is expected to exceed the city's projected needs through 2035, including the needs of the WRTP Specific Plan (City of Woodland 2019a). Thus, the WPCF would have adequate capacity to treat wastewater flows generated by the WRTP Specific Plan, as well as future development within the WPCF service area. Therefore, impacts from the WRTP Specific Plan related to exceedances of wastewater treatment requirements and increased demands that would be placed upon existing wastewater treatment facilities were addressed for the proposed WRTP Specific Plan as part of the 2035 General Plan and CAP EIR and are substantially mitigated by City-administered uniformly applied development standards. The 2035 General Plan and CAP EIR determined that this impact was less than significant. There are no impacts that are peculiar to the WRTP Specific Plan Area that were not addressed in the 2035 General

Plan and CAP EIR. As provided by CEQA Guidelines Section 15183(f), no additional CEQA review is required. (Draft EIR, pp. 3.14-13 through 3.14-14.)

- Impacts Related to Increased Generation of Solid Waste and Compliance with Solid Waste Regulations. As discussed in the 2035 General Plan and CAP EIR Impacts 4.14-6 and 4.14-7 (pages 4.14-51 through 4.14-56) (City of Woodland 2016), future residential, commercial, and industrial land uses anticipated under the General Plan would increase solid waste generation compared to existing conditions. General Plan Policies 5.J.1 and 5.J.2 require adequate solid waste services and compliance of solid waste collection in new development with local regulations, and Policy 5.J.4 requires compliance with State regulations. The 2035 General Plan and CAP EIR determined that existing State laws and regulations would reduce the potential environmental impact associated with solid waste generation (AB 341's solid waste diversion requirements and AB 1826's mandatory commercial organics recycling requirements). Furthermore, the City of Woodland Municipal Code reduces the potential environmental impact by regulating solid waste receptacles and disposal services, recyclable materials, and construction and demolition debris. The 2035 General Plan and CAP determined existing landfills have sufficient capacity to accommodate the solid waste disposal needs from anticipated future growth. The 2035 General Plan and CAP EIR concluded that impacts related to increased generation of solid waste and compliance with solid waste regulations would be less than significant. Construction activities for future projects under the WRTP Specific Plan would require site clearing and generate various construction-period wastes, including scrap lumber, scrap finishing materials, various scrap metals, and other recyclable and nonrecyclable construction-related wastes. The 2019 CALGreen Code (Title 24, Part 11 of the California Code of Regulations) requires all construction contractors to reduce construction waste and demolition debris by 65 percent. Code requirements include preparing a construction waste management plan that identifies the materials to be diverted from disposal by efficient usage, recycling, reuse on the project, or salvage for future use or sale; determining whether materials will be sorted on-site or mixed; and identifying diversion facilities where the materials collected will be taken. The code also specifies that the amount of materials diverted should be calculated by weight or volume, but not by both (California Building Standards Commission 2019). In addition, the 2019 CALGreen Code requires that 100 percent of trees, stumps, rocks, and associated vegetation and soils resulting primarily from land clearing be reused or recycled. In addition, the City requires contractors to comply with the Construction and Demolition Debris Recycling and Diversion Ordinance (Title 13, Chapter 13.40 of the City of Woodland Municipal Code) by reducing project waste entering landfill facilities by 65 percent as recycling 100 percent of excavated soil and land-clearing debris. Contractors are required to prepare a waste management plan that must be submitted to and approved by City's Community Development Department before issuance of a building permit and waste management logs must be submitted to the City's Community Development Department before final inspections (see Section 3.14.2, "Regulatory Framework," above). It is estimated the total population and employees resulting from implementation of the WRTP Specific Plan would generate 13.1 tpd and 32.25 tpd of solid waste, respectively. 5,6 These totals do not account for recycling programs required by AB 1826 or other City recycling programs. Therefore, the actual amount of solid waste generated by the proposed WRTP Specific Plan would be less than this estimate. Solid waste collected from the WRTP Specific Plan Area would be hauled to the Yolo County Central Landfill. The Yolo County Central Landfill has a maximum permitted throughput of 1,800 tpd, a remaining capacity of approximately 35 million cubic yards, and an expected closure date of 2081 (CalRecycle 2019a). The estimated 45.4 tpd of solid waste generated by the proposed project would be approximately two percent of the maximum tpd that could be received at the landfill. Therefore, sufficient landfill capacity would be available to accommodate solid-waste disposal needs for the WRTP Specific Plan. Development of the WRTP Specific

Plan would result in increased long-term generation of solid waste during operation. The City provides recycling programs, such as curbside recycling of paper, plastics, bottles, and organics, to reduce the volume of solid waste transported to landfills. In addition, the Recyclable Materials Ordinance (City Municipal Code Title 13, Chapter 13.36) reduces wastes further by requiring businesses and multi-family residential uses to provide integrated collection areas with recycling components. Furthermore, AB 1826 requires businesses to recycle organic wastes. Future projects developed under the WRTP Specific Plan will be required to comply with all statutes and regulations related to solid waste. Compliance with the CalGreen Code, the City’s Construction and Demolition Debris Recycling and Diversion Ordinance, AB 1826, the City’s Recyclable Materials Ordinance, and other City recycling programs would ensure that sufficient landfill capacity would be available to accommodate solid-waste disposal needs for future development. The anticipated increase in solid waste generation of time is based on an increase in population in the county. Per resident and per employee generation rates in the WRTP Specific Plan Area are likely to be less than existing rates as the City continues to implement waste diversion programs to comply with State regulations (AB 341 and AB 1826) and support State goals. Development assumptions and related population growth within the WRTP Specific Plan Area are within the envelope assumed in the 2035 General Plan. Therefore, impacts from WRTP Specific Plan and related infrastructure improvements related to increased generation of solid waste and compliance with solid waste regulations were addressed for the proposed WRTP Specific Plan as part of the 2035 General Plan and CAP EIR and are substantially mitigated by City-administered uniformly applied development standards in the form of 2035 General Plan and CAP EIR policies and implementation programs, or in the form of existing City standards or code requirements. The 2035 General Plan and CAP EIR determined that this impact was less than significant. There are no impacts that are peculiar to the WRTP Specific Plan Area that were not addressed in the 2035 General Plan and CAP EIR. As provided by CEQA Guidelines Section 15183(f), and no additional CEQA review is required. (Draft EIR, pp. 3.14-14 through 3.14-16.)

2. FINDINGS REGARDING LESS THAN SIGNIFICANT IMPACTS NOT REQUIRING MITIGATION

The City Council agrees with the characterization in the Draft EIR of all project impacts identified as “less than significant” and finds that those impacts have been described accurately and are either less than significant or have no impact, as described in the Draft EIR.

CEQA Guidelines Section 15091 does not require specific findings to address environmental effects that an EIR identifies as “no impact” or a “less than significant” impact. However, the impacts where the project would result in either no impact or a less-than-significant impact, and which require no mitigation, are detailed below. The less-than-significant conclusions and findings for these impacts are consistent with the findings of the EIR. Please refer to the Draft EIR and the Final EIR for more detail.

AGRICULTURE AND FORESTRY RESOURCES

- Impact 3.2-2. Conflict with Existing Zoning for Agricultural Use.

Finding: Less than significant. (Draft EIR, p. 3.2-19.)

Explanation: The WRTP Specific Plan and off-site improvement areas are zoned by Yolo County as Agricultural Intensive (AN). The A-N zoning designation is intended to promote intensive agricultural uses while preventing the encroachment of nonagricultural uses. The Yolo County Zoning Regulations (Chapter 2

of Title 8 of the Yolo County Code) state that privately-owned ponds for agricultural-related use are an allowable use in the A-N zoning designation (Yolo County 2020). Development of the WRTP Specific Plan Area will require annexation into the City and pre-zoning prior to development. The WRTP Specific Plan will also require amending the City's Zoning Ordinance to reference the WRTP Specific Plan for allowable land use, development standards, performance standards, and design guidelines. With approval of the WRTP Specific Plan, annexation of the WRTP Specific Plan Area into the City of Woodland, and associated zoning changes, development of the WRTP Specific Plan Area would not conflict with zoning for agricultural use. Land for the proposed South Regional Pond would not be annexed to the City and would remain within Yolo County jurisdiction in land designated as A-N. The balance of the parcel on which the South Regional Pond would be located is in agricultural use and the WRTP Specific Plan would not propose to change that. While this proposed land use could conflict with existing zoning, any potential adverse physical impacts associated with construction and operation of the South Regional Pond, such as loss of farmland, changes to the visual character, and other potential physical impacts, have been comprehensively analyzed throughout the EIR. Potential impacts associated with development of the South Regional Pond would be mitigated through implementation of mitigation measures presented in the EIR and through uniformly applied City administered development standards. There is no impact beyond those comprehensively considered throughout the other sections of the EIR. This impact is considered less than significant.

BIOLOGICAL RESOURCES

- Impact 3.4-6. Impacts on Migratory Corridors and Nursery Sites: Interference with Wildlife Movement Corridors and Nursery Sites.

Finding: Less than significant. (Draft EIR, p. 3.4-37)

Explanation: The city of Woodland is located within the Pacific flyway, which is a major north-south route for migratory birds along western North America. Large numbers of waterfowl and shorebirds may move through the area seasonally and may congregate and forage in wetlands, grasslands, and agricultural fields during winter or use them as resting grounds during longer migrations from the Arctic to Central or South America. Land use changes would allow development to occur in the agricultural habitats within the WRTP Specific Plan Area and off-site improvement areas within the Pacific flyway, but this development would not create a barrier to movement of migratory species or alter the character of existing habitat available to migrating birds such that it would no longer function as a migratory corridor because there still would be abundant agricultural habitat of equal or better value to migrating birds surrounding the WRTP Specific Plan Area and off-site improvement areas and this agricultural habitat, along with Cache Creek, Willow Slough, and the Yolo Bypass would continue to support the needs of migratory birds and provide wildlife movement opportunities for other native resident or migratory wildlife species in the area. Development of the WRTP Specific Plan Area and off-site improvement areas would not cause any areas of natural habitat to become isolated. Waterways consist of agricultural and roadside ditches that do not support riparian vegetation that would provide cover for wildlife movement. The WRTP Specific Plan Area and off-site improvement areas do not currently provide an important connection between any areas of natural habitat that would otherwise be isolated, and the WRTP Specific Plan Area and offsite improvement areas are not located within any of the ecological corridors identified in the Yolo Habitat Conservation Plan/Natural Communities Conservation Plan (HCP/NCCP) as important to maintaining connectivity between communities, habitat patches, species populations, or the Yolo HCP/NCCP proposed reserve system. No native wildlife nursery sites have been identified in the WRTP Specific Plan Area or off-

site improvement areas. Therefore, implementing the WRTP Specific Plan would not interfere substantially with the movement of any native resident or migratory species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites. The impact is less than significant.

- Impact 3.4-7. Consistency with Local Policies and Ordinances: Conflict with Local Ordinances Protecting Biological Resources.

Finding: Less than significant. (Draft EIR, p. 3.4-37.)

Explanation: Although a tree inventory has not been completed for the WRTP Specific Plan Area, the reconnaissance surveys confirmed several trees are present in the WRTP Specific Plan Area and off-site improvement areas. Implementing the proposed WRTP Specific Plan would allow development in the WRTP Specific Plan Area and off-site improvement areas, and several of these trees could be potential, heritage trees or other trees protected under the City of Woodland Tree Ordinance (Woodland Municipal Code Chapter 12.48). However, the City will require compliance with the Tree Ordinance as a part of WRTP Specific Plan implementation. The impact is less than significant.

- Impact 3.4-8. Conflict with an Adopted Habitat Conservation Plan: Conflict with an Adopted Habitat Conservation Plan / Natural Community Conservation Plan.

Finding: Less than significant. (Draft EIR, p. 3.4-38.)

Explanation: The avoidance, minimization, and mitigation measures included in the EIR are consistent with the Yolo HCP/NCCP (Yolo Habitat Conservancy 2018). In addition, the WRTP Specific Plan would comply with the 2035 General Plan policies and implementation programs, and these maintain consistency with the Yolo HCP/NCCP. The proposed WRTP Specific Plan and 2035 General Plan were designed for consistency with the Yolo HCP/NCCP. Goal 7.B of the 2035 General Plan is to maintain and protect natural habitats throughout the Planning Area, especially types that are considered sensitive by the Yolo HCP/NCCP, and Policy 7.B.1 of the 2035 General Plan requires full implementation of the Yolo HCP/NCCP, once adopted, to mitigate the impacts of growth projected under the General Plan on plant and wildlife habitats in the Woodland area (City of Woodland 2017). There are no sensitive habitats or other lands in the WRTP Specific Plan Area or off-site improvement areas that are identified in the Yolo HCP/NCCP as a part of the future reserves system. Therefore, implementing the WRTP Specific Plan would not reduce the effectiveness of the Yolo HCP/NCCP conservation strategy and would not interfere with attaining the overall biological goals and objectives of the Yolo HCP/NCCP. The City of Woodland is a permittee and participant of the Yolo HCP/NCCP, and will avoid, minimize, and mitigate impacts on covered species and habitats consistent with the Yolo HCP/NCCP conservation strategy, as described above. The impact is less than significant.

CLIMATE CHANGE, GREENHOUSE GAS EMISSIONS, AND ENERGY

- Impact 3.5-1. Result in Potentially Significant Environmental Impact Due to Wasteful, Inefficient, or Unnecessary Consumption of Energy Resources during Project Construction or Operations.

Finding: Less than significant. (Draft EIR, pp. 3.5-26 through 2.5-31.)

Explanation: The 2035 General Plan and CAP EIR (pages 4.5-43 to 4.5-63) discusses potential impacts related to the consumption of energy from implementation of the 2035 General Plan and CAP. The EIR estimated the maximum annual energy demand in the form of natural gas, electricity, and fuel associated with future operations within the City's Planning Area with implementation of the 2035 General Plan. The 2035 General Plan and CAP EIR also discussed the anticipated construction-related energy demand associated with development with implementation of the General Plan. With regard to construction-related energy consumption, the 2035 General Plan and CAP determined that the Planning Area and anticipated development do not have any unusual characteristics that would necessitate the use of construction equipment or methods that would be less energy-efficient than at comparable construction sites in the City. With regard to operational transportation and building energy consumption, the General Plan contains several policies that promote mixed-use and infill development and site residents, jobs, and retail amenities in proximity of each other to reduce the need for motor vehicle travel. Many policies through various mechanisms also support development of pedestrian and bicycle facilities and encourage alternative transportation and transit that would promote non-vehicular modes of travel. General Plan policies also encourage minimizing energy and water demand and wastewater generation and encourage methods to minimize solid waste generation and increase waste diversion systems. Policy 2.C.2 also requires new development to be consistent with the objectives and targets of the City's CAP, which specifically provides objectives, strategies, and implementation measures to reduce energy demand associated with the City's Planning Area. The 2035 General Plan and CAP EIR determined that implementation of the General Plan, for either alternative, would improve overall energy efficiency on a per-service population bases compared to existing conditions. The 2035 General Plan and CAP EIR found this impact to be less than significant.

Energy would be consumed through all phases of project construction and operations. Energy-requiring activities range from equipment operation during construction, to building operations, to transportation during all phases of the WRTP Specific Plan implementation. Table 3.5-5 summarizes total energy requirements for development under the WRTP Specific Plan. For comparison purposes, Table 3.5-5 shows conversion of all energy requirements to a common energy unit of British thermal units (Btu) per year. Operational transportation would be the greatest energy consuming factor associated with implementation of the WRTP Specific Plan. The WRTP Specific Plan provides for employment-generating land uses as well as a range of housing options, and implements land use and transportation planning strategies that would reduce the demand for motor vehicle travel, and thereby minimize overall transportation energy (fuel) demands. Building operations would account for approximately 30 percent of the energy consumption for the WRTP Specific Plan Area. Compliance with existing regulations would ensure that the proposed facilities would be more energy efficient than existing, average, similar-use buildings, as energy efficiency requirements have become more stringent over time. In addition, the implementation of the WRTP Specific Plan would be consistent with the City's 2035 General Plan and, as described above in Table 3.5-1 and further detailed in Section 3.10, "Land Use Planning, Population, and Housing," of the EIR. As detailed in the Design Standards and Design Guidelines in Chapter 3 of the WRTP Specific Plan, building design and construction of development under the WRTP Specific Plan will incorporate features that achieve energy and resource efficiencies. Considering this information, the WRTP Specific Plan would not be expected to cause inefficient, wasteful, or unnecessary consumption of energy and this impact is considered less than significant. No mitigation is required. Energy efficiency is a possible indicator of environmental impacts. The actual adverse physical environmental effects associated with energy use and the efficiency of energy use are detailed throughout the EIR in the environmental topic-specific sections. For example, the use of energy for transportation leads to air pollutant emissions, the impacts of which are addressed

in Section 3.3 of the EIR. There is no physical environmental effect associated with energy use that is not addressed in the environmental topic-specific sections of the EIR.

- Impact 3.5-2. Conflict with or Obstruct a State or Local Plan for Renewable Energy or Energy Efficiency

Finding: Less than significant. (Draft EIR, p. 3.5-32.)

Explanation: As described above in the discussion of Impact 3.5-1, implementation of the WRTP Specific Plan would result in the development of new land uses that would induce new demand for electricity and natural gas, as well as induce additional VMT that would result in the consumption of fossil fuels. However, design and construction of buildings would comply with the most recently adopted California Building Energy Efficiency Standards Code and California Green Building Standards Code (CalGreen), and the City's CAP. This would ensure that future development would consume energy efficiently through the incorporation of such features as efficient water heating systems, high performance attics and walls, and high efficacy lighting. The Design Standards and Design Guidelines in Chapter 3 of the WRTP Specific Plan also promote energy efficient design standards and transportation systems, promote energy efficiency in new construction that meet or exceed State Building Energy Efficiency Standards, promote energy efficiency and conservation programs associated with utilities, and require compliance with federal, State, and local energy-related regulations. Therefore, implementation of the WRTP Specific Plan would not conflict with or obstruct a State or local plan for renewable energy or energy efficiency. This impact is less than significant.

HAZARDS AND HAZARDOUS MATERIALS

- Impact 3.8-3. Result in a Safety Hazard for People Residing or Working in a Project Area Located in the Vicinity of a Private Airstrip.

Finding: Less than significant. (Draft EIR, pp. 3.8-22 through 3.8-23.)

Explanation: The 2035 General Plan and CAP EIR (page 4.8-29) (City of Woodland 2016b) stated that since there are no private airstrips within the General Plan Planning Area, implementation of 2035 General Plan land use changes and policies would have no impact related to the safety hazard for people residing or working in the vicinity of a private airstrip, and this impact was not addressed further in the 2035 General Plan and CAP EIR. Medlock Field is a privately owned and operated airport located approximately 1.3 miles south of the WRTP Specific Plan Area on CR 101. The north end of the runway is approximately 1.4 miles south of the WRTP Specific Plan and the proposed off-site South Regional Pond. Approximately 15 single-engine airplanes are based at the airport, which includes an administration building, aircraft hangers, maintenance sheds, a fueling station, and parking areas (AirNav 2020). As discussed above in the "Regulatory Framework," the Caltrans Division of Aeronautics applies the FAA Part 77 height regulations and notice requirements to private use airports. However, the height of buildings within the WRTP Specific Plan Area would have to exceed a slope of 25:1 at the imaginary surface extending outward and upward from the airport runway to the WRTP Specific Plan Area. As detailed in Section 3.4, "Site Development Standards," of the WRTP Specific Plan, buildings constructed within the WRTP Specific Plan Area would not exceed a height of 70 feet, and land within the WRTP Specific Plan Area is flat. Therefore, construction of buildings within the WRTP Specific Plan Area would not result in a height above the ground surface that would be tall enough to result in a flight hazard at Medlock Field (i.e., would not exceed the 25:1 slope limitation). The WRTP Specific Plan Area would include an approximately 4-acre water quality/hydromodification basin the southeastern corner. However, this

basin would be used only for detention of stormwater flows, which would be released over a 48-hour period. Therefore, this proposed on-site basin would not result in a large open area of water that would be retained for long periods of time that could attract waterfowl and thereby result in wildlife strike hazards. Proposed land uses in the WRTP Specific Plan Area include Village Center (retail or mixed use); Commercial–Business Park, Office, Research, High-Tech, or Light Industrial Flex; and Commercial–Highway. These facilities may handle hazardous substances, although they would not be expected to handle large quantities of acutely hazardous substances since the WRTP Specific Plan Area does not include zoning for heavy industrial land uses. Therefore, the potential for explosion hazard is minimal. As discussed in detail in Section 3.1, “Aesthetics,” of the EIR, the WRTP Specific Plan would not be implemented in a “dark sky” area; rather, existing nighttime lighting is already generated by the Woodland Sports Park west of SR 113, from street lighting along the east and west sides of SR 113 on the west side of the project site, and from street and residential lighting in the adjacent Spring Lake development to the east. General Plan Policies 2.F.4 and 2.F.5 require that artificial lighting be controlled to avoid spill-over lighting, preserve the night sky, and prevent glare. The proposed land uses in the WRTP Specific Plan Area would not include high mast, high foot-candle-power lighting towers such as those used at the Woodland Sports Park. Rather, standard City street lights would be constructed along the arterial, collector, and residential streets at heights of 31, 28, and 25 feet, respectively, as required by Section 9 of the City’s Engineering Standards: Design Standards, Standard Details and Construction Specifications (City of Woodland 2016a). The Engineering Standards also direct the maximum allowable amount of foot-candle illumination that may be used for arterial, collector, and residential streets (200, 100, and 70 watts, respectively). Furthermore, the WRTP Specific Plan Performance Standards and Design Standards and Design Guidelines, contained in Sections 3.3.2 and 3.5.2, respectively, of the WRTP Specific Plan also state that proposed land uses may not create new sources of glare, and that sign illumination must be confined to the area of the sign and may not cast a glare that is visible from any street or adjacent lot. The off-site South Regional Pond would not require nighttime lighting. The existing SR 113/CR 25A interchange is lighted with high-mast light standards that are shielded and direct the lighting downward; the proposed interchange improvements would include the continued use of shielded, directional high-mast light standards, but would not substantially change the amount of skyglow that is already emitted as compared to the existing interchange. Therefore, the WRTP Specific Plan and the off-site improvements would not include lighting that could be mistaken for airport lighting and/or cause glare in the eyes of pilots of aircraft using Medlock Field. For the reasons stated above, and consistent with the findings of the 2035 General Plan and CAP EIR, this impact would be less than significant.

LAND USE PLANNING, POPULATION, AND HOUSING

- Impact 3.10-1 Conflict with the Woodland 2035 General Plan and Municipal Code.

Finding: Less than significant. (Draft EIR, pp. 3.10-17 through 3.10-33.)

Explanation: Specific plans, under State law, are required to be consistent with the relevant jurisdiction’s general plan. The environmental topic-specific sections of the EIR include a discussion of relevant General Plan policies and implementation programs, which are used to frame mitigation measures presented throughout the EIR. The WRTP Specific Plan is one of three subareas designated by the City of Woodland General Plan 2035 within the Specific Plan 1 (SP-1) new growth area. Referred to as “SP-1A” in the General Plan, the City “envision[s] the Specific Plan to develop as a mixed-use neighborhood anchored by a research and technology

business park in the ‘Southern Gateway’ [to the city] located at CR 25A and SR 113” (City of Woodland 2017, page LU 2-55). According to direction in the General Plan, for the WRTP Specific Plan Area:

“The highest intensity of development will occur within the business park area, providing a prime opportunity for job creation within Woodland. The remainder of SP-1A will be largely residential with some open space and recreation areas.”

As directed by the General Plan (Policy 2.L.2, page LU 2-77), the City will:

Promote development of SP-1A as a mixed-use residential district anchored by a research and technology business park in the Southern Gateway area at CR 25 and SR 113. Concentrate the highest intensity of development within and in close proximity to the business park area, with lower-density, largely residential uses to the north. Encourage sustainable development through the use of renewable energy sources and water conservation tools with the goal of striving to achieve zero net energy at the building and neighborhood level to the extent feasible.

The WRTP Specific Plan Area is identified “New Growth (Planned Development)” and designated as SP-1A in the General Plan, but does not currently have specific City land use zoning designations. Because the WRTP Specific Plan Area is outside of the current City limits, development of the WRTP Specific Plan will require annexation into the City and pre-zoning prior to development. The WRTP Specific Plan will also require amendment of the City’s Zoning Ordinance. Table 3.10-4 provides a discussion of the WRTP Specific Plan’s consistency with the General Plan. Tables 3.5-1 and 3.5-2 in Section 3.5, “Climate Change, Greenhouse Gas and Energy,” of the EIR, lists the 2035 General Plan policies relevant to greenhouse gas emissions and the relevant policies of the City’s Climate Action Plan, respectively, and briefly explains the WRTP Specific Plan consistency with these policies. As shown in Table 3.10-1, implementation of the WRTP Specific Plan would be consistent with the 2035 General Plan policies. As noted in Section 3.10.2 and shown in Table 3.10-3 of the EIR, the current Housing Element and Land Use Plan was developed with consideration for the City of Woodland’s RHNA for the planning period of 2013 through 2021 (as shown in Table 3.10-3), which projected a need for the construction of an additional 1,877 housing units, allocated as follows: 195 extremely low income units, 195 very low income units, 274 low income units, 349 moderate income units, and 864 above moderate income units. The City met the rezoning requirement for the 2013-2021 planning period in May 2018 through the adoption of the Interim Zoning Ordinance. SACOG’s RHNA for the planning years 2021 through 2029 projected a need for the City of Woodland for the construction of an additional 3,087 housing units, allocated as follows: very low income (663 units), low income (399 units), moderate income (601 units), and above moderate income (1,424 units) (Table 3.10-2). The WRTP Specific Plan, once fully developed, could provide opportunities for approximately 1,673 new dwelling units, helping the City meet the RHNA. The WRTP Specific Plan includes a Housing Mix land use policy (Section 2.2 of the WRTP Specific Plan) to provide a mix of housing types at a range of densities and affordability levels that accommodate residents at all states of life. With densities ranging from less than 8 units per acre to 40 units per acre, a variety of housing types, sizes, and densities are planned, including conventional and small-lot single family homes, accessory dwellings (or secondary units), townhomes, multi-story apartments and condominiums, and livework units. WRTP Specific Plan consistency related to environmental topics is addressed in each technical section of the EIR, as appropriate. These technical sections provide a detailed analysis of other relevant physical environmental effects that could result from implementation of the WRTP Specific Plan and identify mitigation measures, as necessary, to reduce impacts. Implementation of the proposed WRTP Specific Plan would not conflict with

adopted City General Plan policies, land use designations, or zoning in a way that would generate any adverse physical impacts beyond those addressed in detail in the environmental sections of the EIR (air quality, biological resources, cultural resources, etc.). Therefore, and consistent with the finding in the 2035 General Plan and CAP EIR, this impact is considered less than significant.

- Impact 3.10-2 Potential conflicts with the Sacramento Area Council of Governments (SACOG) Metropolitan Transportation Plan (MTP)/Sustainable Communities Strategy (SCS).

Finding: Less than significant. (Draft EIR, pp. 3.10-33 through 3.10-34.)

Explanation: The SACOG MTP/SCS showed the WRTP Specific Plan Area as a Developing Community. According to the MTP/SCS, this community type is “typically, though not always, situated on vacant land at the edge of existing urban or suburban development; they are the next increment of urban expansion. Areas are identified in local plans as special plan areas, specific plans, or master plans and may be residential-only, employment-only, or a mix of residential and employment uses.” Although the WRTP Specific Plan Area was identified as a new growth area, only a portion of the WRTP Specific Plan Area is assumed for development within the MTP/SCS horizon of the year 2040. However, the methodology and purpose of the City’s estimate of development capacity under the 2035 General Plan is different from the methodology and purpose of SACOG’s forecast for the purposes of the MTP/SCS. The SACOG projections are market-based growth estimates that project the amount and location of likely growth in the region based on a variety of socio-economic factors that are updated every four years. The City’s general plan and this WRTP Specific Plan serve as long range planning tools that seek to create opportunities for growth and provides a range of land use options to encourage economic investment and promote other City policy objectives. In addition, the MTP/SCS is updated every four years, and new growth areas, as well as other regulatory and market factors not previously considered, can be considered when creating the land use forecasts for the ensuing MTP/SCS. Given these different purposes, it is reasonable to expect variations in the growth forecasts between the two. Finally, the EIR analyzes full development of the WRTP Specific Plan Area and all direct and reasonably foreseeable effects of implementing the WRTP Specific Plan including impacts related to transportation and greenhouse gas emissions and other topics that are the focus of the MTP/SCS. There is no impact related to plan consistency that is not addressed in the environmental topic-specific sections of the EIR (e.g., air quality, greenhouse gas emissions, etc.). This impact is considered less than significant.

- Impact 3.10-3 Potential conflicts with the Local Agency Formation Commission (LAFCo) Policies, Standards, and Procedures Guidelines.

Finding: Less than significant. (Draft EIR, pp. 3.10-33 through 3.10-34.)

Explanation: LAFCo is charged with applying the policies and provisions of the Cortese-Knox Act (California Government Code Section 56000 et seq.) to its decisions regarding incorporations, reorganizations, and other changes in government organization. This act establishes the process through which a local agency boundary change is made, and associated planning authority is transferred from one local agency to another. Generally, LAFCo is responsible for determining whether any incorporations are consistent with the LAFCo objectives and policies of ensuring that services would be available to new development; avoiding premature conversion of farmland; and ensuring planned, logical, and orderly patterns of urban growth. California Government Code Section 56668 sets forth criteria for evaluation of annexation projects. This statute establishes factors that

LAFCo agencies must use in reviewing annexation proposals. Any future urban development within the WRTP Specific Plan Area would require annexation by the City of Woodland and would be subject to this statute. A Municipal Service Review and Sphere of Influence Amendment was conducted for Woodland in 2018. This Municipal Service Review covered the portion of the WRTP Specific Plan Area south of CR 25A and east of SR 113 (Yolo LAFCo 2019). The City created a framework of controlled growth by adopting its voter-approved Urban Limit Line. The General Plan 2035 included policies to ensure that the development of finite land resources will be carefully planned and managed. The WRTP Specific Plan provides controlled, yet flexible, land use planning for development within the WRTP Specific Plan Area, identified as SP-1A in the 2035 General Plan. The WRTP Specific Plan includes non-residential uses that will accommodate advanced technology-related jobs and training that allow a greater number of Woodland residents and college graduates from the Woodland Community College and throughout the region to live and work in the community. The WRTP Specific Plan, once fully developed, could provide opportunities for 1,600 new dwelling units at a range of densities and affordability levels that accommodate residents at all states of life, helping the City meet the RHNA. The WRTP Specific Plan also provides for adequate public facilities and services, and would not exceed the capacity of existing water support or other public resources. There are planned land uses within this portion of the WRTP Specific Plan Area that would create the need for an expanded service area and would result in the loss of prime agricultural land or open space. However, the City's Urban Limit Line preempts any uncontrolled sprawl. Section 3.2, "Agricultural and Forestry Resources," of the EIR discusses this loss and explains that development under the WRTP Specific Plan shall comply with applicable City and County regulations, including mitigation requirements to address the conversion of farmland to urban uses. The WRTP Specific Plan also includes policy (Section 2.2) requiring a 150-foot buffer from adjacent agricultural land at the Urban Limit Line, where feasible. Detailed discussion of impacts and mitigation measures associated with implementation of the WRTP Specific Plan that would require expansion of the WRTP Specific Plan Area are evaluated throughout other sections of the EIR, including Agricultural Resources; Hydrology, Flooding, and Water Quality; Public Services and Recreation; and Utilities. As described above implementation of the WRTP Specific Plan, is consistent with LAFCo policies. Thus, this impact is considered less than significant.

TRANSPORTATION AND CIRCULATION

- Impact 3.13-3. Result in Inadequate Emergency Access.

Finding: Less than significant. (Draft EIR, p. 3.13-22.)

Explanation: The WRTP Specific Plan will modify the existing transportation network generally to expand existing facilities or to construct new facilities to accommodate planned population and employment growth. Construction of the WTP Specific Plan Area would not require temporary lane or street closures or detours, therefore, would not affect emergency access. In addition, there are no pedestrian and bicycle facilities currently around the site. Construction-related vehicular movements may not need to be restricted or redirected to accommodate material hauling, construction, staging, and modifications to existing infrastructure. This impact would be less than significant. The plan for operations under the WRTP Specific Plan must meet City's standards for turning radii, drive aisle width, and other road geometry and must comply with City landscaping standards requiring that vegetation be set back to maintain the line of sight. Maintaining adequate safety and operation at internal intersections and drive aisles and trimming the shrubbery and landscaping near the internal intersections and site access points would ensure adequate emergency access. Therefore, operational impacts would be less than significant.

3. FINDINGS REGARDING IMPACTS MITIGATED TO A LEVEL OF LESS THAN SIGNIFICANT WITH MITIGATION INCORPORATED

In accordance with Public Resources Code Section 21081 and CEQA Guidelines Section 15091, subdivision (a), this section provides a specific finding for each potentially significant environmental impact and its associated mitigation measures.

The City Council hereby finds that feasible mitigation measures have been identified in the EIR and these Findings of Fact that will avoid or substantially lessen the following potentially significant environmental impacts to a less-than-significant level. The potentially significant impacts and the mitigation measures that will reduce them to a less-than-significant level are summarized below and herein incorporated by reference. Please refer to the Draft EIR and the Final EIR for more detail.

AIR QUALITY

Impact 3.3-3. Expose Sensitive Receptors to Substantial Pollutant Concentrations.

Finding: Less than significant with mitigation. (Draft EIR, pp. 3.3-31 through 3.3-43.)

Explanation: Construction activities and the operational phase of the WRTP Specific Plan could involve activities that could expose sensitive receptors to substantial pollutant concentrations. The WRTP Specific Plan Area is bordered by the Spring Lake Specific Plan development area to the north and east, which includes residential development and open space immediately adjacent to the WRTP Specific Plan Area. To the west is SR 113, with open space and agricultural land uses to the south and opposite SR 113. As the WRTP Specific Plan buildout occurs, sensitive land uses would be developed within the WRTP Specific Plan Area, including residential uses and parks and recreational facilities. These land uses could be built within proximity to other future construction sites, as well as operations of emissions generating activities from surrounding existing and future land uses.

Emissions and ambient concentrations of carbon monoxide (CO) have decreased substantially throughout California in the past three decades. The national statewide CO standard is attained statewide in California, and an exceedance of NAAQS or CAAQS in the region was last recorded in 1993. This is primarily attributable to requirements for cleaner vehicle emissions. The Federal Motor Vehicle Control Program has mandated increasingly lower emission levels for vehicles manufactured since 1973. Between 2000 and 2019, national average CO concentrations, as well as regional average CO concentrations in the California and Nevada region, have decreased by approximately 65 percent.

While ambient CO concentrations in the region have not exceeded NAAQS or CAAQS in many years, localized CO concentrations could still occur, particularly at intersections of high-volume roadways. Relevant screening metrics that serve as indicators of potential CO hotspots include whether a project would contribute to substantial traffic delays at or along high-volume intersections and roadways or contribute additional traffic to a unique setting in which mixing of air, and therefore pollutant dispersion, would be substantially limited, such as within a tunnel, underpass, urban street canyon, below-grade roadway, or other similar setting. Several air districts, including the surrounding Bay Area Air Quality Management District, San Joaquin Valley Unified Air Pollution Control District, and Placer County Air Pollution Control District provide recommended screening methodologies as a conservative indication of whether implementation of a proposed project would result in localized CO emissions that would generate a hotspot and potentially significant impact. Traffic volumes at roads and streets affected by Specific Plan

traffic would be substantially less than the historical Sacramento Metropolitan Air Quality Management District (SMAQMD) second-tier screening criterion of 31,600 vehicles per hour, as well as the above noted BAAQMD screening criterion of 44,000 vehicles per hour. In addition, the future development within the WRTP Specific Plan Area would not contribute to a tunnel, parking garage, bridge underpass, urban street canyon, below-grade roadway, or other locations where horizontal or vertical mixing of air would be substantially limited, and the mix of vehicle types at the intersections is not anticipated to be substantially different from the County average. Therefore, emissions of CO from local mobile sources generated by operations with future development of the WRTP Specific Plan Area would not result in, or substantially contribute to, emissions concentrations that exceed the ambient air quality standards for CO. Therefore, and consistent with the findings of the 2035 General Plan and CAP EIR, this impact from potential CO hotspots would be less than significant.

Heavy-duty construction equipment, haul trucks, on-site generators, and construction worker vehicles associated with construction could generate diesel PM (DPM), which the CARB has identified as a TAC. Implementation of the WRTP Specific Plan and off-site improvement areas would result in the construction of new buildings, structures, paved areas, roadways, utilities, and other improvements. Generation of DPM from construction projects typically occurs in a single area (e.g., at the project site) for a short period of time, but could also include linear infrastructure projects to support new land uses. Concentrations of mobile-source DPM emissions are typically reduced by 70 percent at a distance of approximately 500 feet. Therefore, even in intensive phases of construction, any potential substantial DPM concentrations would be limited to the immediate vicinity of the construction site.

For buildout of the WRTP Specific Plan Area and off-site improvement areas, construction activities and related emissions would vary depending on the phase of construction (e.g., grading, building construction), and therefore, the construction-related emissions to which nearby receptors are exposed would also vary throughout the construction period. Existing off-site residents and other sensitive receptors would only be within close proximity to construction activities associated with development near the perimeter of the WRTP Specific Plan Area. Potential future on-site receptors are unknown at this time, but it is reasonable to assume future sensitive receptors may at some time be located in close proximity to future construction activities associated with buildout of the WRTP Specific Plan Area. Therefore, it is conservatively assumed that certain construction activities would result in the exposure of sensitive receptors to substantial TAC concentrations. This impact from construction-related TACs is considered potentially significant.

Certain land uses are more likely than others to generate substantial TAC emissions due to allowable activities within those land use designations. Residential land uses do not typically generate substantial TAC emissions. Commercial land uses may potentially include stationary sources of TACs, such as dry-cleaning establishments and diesel-fueled back-up generators. Land uses that are more likely to generate substantial TAC emissions include industrial land uses that involve stationary sources and manufacturing processes. In addition, heavily trafficked roadways can serve as a TAC source due to the vehicle emissions, particularly DPM.

Future development within the WRTP Specific Plan Area is anticipated to include mixed-use, residential, retail, commercial and industrial uses, as well as parks and open space. Commercial land uses may potentially include stationary sources of TACs, such as dry-cleaning establishments and diesel-fueled back-up generators. Land uses that are more likely to generate substantial TAC emissions include industrial land uses that involve stationary sources and manufacturing processes. Existing sources of DPM emissions within the WRTP Specific Plan Area include diesel-fueled agricultural vehicles and equipment and backup generators that serve agricultural wells. While these vehicles and equipment may continue as part of existing and ongoing agricultural operations until the land is

developed, these sources are limited and would, at the most, generate intermittent emissions proximate to future development. These uses are not considered a substantial TAC emissions source.

Mobile sources of TACs from future development within the WRTP Specific Plan Area could include operational activities associated with planned land uses could require the use of diesel-fueled vehicles for extended periods, such as commercial trucking facilities or delivery/distribution areas, and thereby generate emissions that could expose sensitive receptors to DPM emissions. The DPM emissions generated by these uses could be produced primarily at single locations on a regular basis (e.g., loading dock areas). Occupants of nearby existing and proposed residences or other sensitive land uses could be exposed to DPM emissions on a recurring basis. Although commercial and industrial uses that would be developed under the WRTP Specific Plan have not been specifically identified, it is possible that uses developed under the WRTP Specific Plan could have tenants that would emit TACs during operations, such as through the operations of gasoline-dispensing facilities or diesel-fueled backup generators.

Exposure of existing or future sensitive receptors to operational TACs could occur due to proximity to operational sources of TACs associated with specific future land uses. Although land use designations within the WRTP Specific Plan Area are defined in Chapter 2 of the WRTP Specific Plan, specific proposed uses have not been determined at the time of this analysis. The Land Use Plan Layout for the WRTP Specific Plan generally separates incompatible land uses and applies permitting conditions to those that could have external effects. In addition, as detailed in Table 3.1 of the WRTP Specific Plan, specific land uses have been identified as permitted, subject to conditions, allowed as ancillary use, and not allowed within the WRTP Specific Plan Area. Adherence to these allowed uses during siting and permitting of future development within the WRTP Specific Plan Area would reduce potential impacts to sensitive receptors that could otherwise reside or spend other time in proximity to operational sources of TACs. In addition, Section 3.3.2 of the WRTP Specific Plan contains performance standards, including Performance Standard D, with regard to odor, particulate matter, and air contaminants. This performance standard restricts the emissions of dust and particulate matter to the property lines from which it is generated, and requires that exhaust air ducts be located or directed away from abutting residentially-zoned properties. In addition, as described in Chapter 3 of the WRTP Specific Plan, large canopy shade trees will be provided along all major arterial and collector streets, to shade road surfaces and reduce the urban heat island effect. The design and location of trees and landscaping for homes shall consider opportunities for solar access and solar panels, as well as address shading and ventilation needs during hot summer months. Adjacent to SR-113, a landscaped buffer (20-foot when adjacent to commercial zones and 30-foot when adjacent to residential zones) shall be maintained, consisting of a mix of trees, low groundcover and vine training on all sound walls or highway adjacent perimeter fencing, further reducing the potential for exposure by sensitive land uses to substantial pollutant concentrations.

Due to uncertainty associated with specific development within each land use type identified within the WRTP Specific Plan, it is possible that development within the WRTP Specific Plan Area could generate substantial TAC emissions as a result of long-term operations. It is possible that sensitive receptors could be located at distances from stationary sources that would expose them to substantial TAC concentrations. This TAC impact is considered potentially significant.

Mitigation Measure 3.3-3a: Implement Mitigation Measure 3.3-2b - Construction-Related Mobile Emissions Reductions for NO_x and PM₁₀ emissions.

Mitigation Measure 3.3-3b: Implement Guidelines in the California Air Resources Board's Air Quality and Land Use Handbook: A Community Health Perspective, and subsequent Technical Advisory.

New development that would result in substantial TAC emissions directly or indirectly (e.g., industrial sources) or that would expose sensitive receptors to substantial TAC concentrations (e.g., residential land uses located near existing TAC sources) shall implement California Air Resources Board's (CARB's) Air Quality and Land Use Handbook: A Community Health Perspective (Handbook) guidance concerning land use compatibility with regard to sources of TAC emissions, or CARB guidance as it may be updated in the future.

Mitigation Measure 3.3-3c: Conduct Project-Level Analysis and Implement Mitigation for Sources of TACs.

For projects with the potential to generate substantial TAC emissions or expose sensitive receptors to substantial TAC pollutant concentrations, the City will require a site-specific analysis for construction and/or operational activities, and appropriate mitigation, as necessary, to ensure that sensitive receptors are not exposed to substantial pollutant concentrations. In communication with the Yolo-Solano Air Quality Management District (YSAQMD), the City will require, if necessary, a site-specific analysis for operational activities to determine whether health risks attributable to future proposed projects in relation to proposed, planned, and/or existing sensitive receptors would exceed applicable thresholds of significance. Site-specific analysis may include screen level analysis, dispersion modeling, and/or a health risk assessment, consistent with applicable guidance from the YSAQMD. Analyses shall take into account regulatory requirements for proposed uses.

The City will require the project applicant(s) to identify and implement feasible mitigation measures to reduce any potentially significant effect and communicate with the YSAQMD to identify measures to reduce exposure of sensitive receptors to substantial pollutant concentrations to levels consistent with thresholds recommended by the YSAQMD applicable at the time the project is proposed. If the YSAQMD does not have applicable thresholds at the time of this analysis, the thresholds will be a probability of contracting cancer for the Maximally Exposed Individual equal to 10.0 in a million or more attributable to the project, or a non-cancer risk of 1.0 Hazard Index (chronic or acute) or more attributable to the project. If the project would exceed applicable thresholds recommended by the YSAQMD or the substitute thresholds outlined above, mitigation will be required to reduce the impact to a less-than-significant level. Agreed upon feasible mitigation actions shall be documented as a project condition of approval.

If the results of analysis for the operational activities of any future development project within the W RTP Specific Plan Area determine that the performance standard for this mitigation would be exceeded, actions shall be taken to reduce potential operational impacts which may include, but not necessarily be limited to:

- locating air intakes and designing windows to reduce particulate matter exposure by, for example, not allowing windows facing the source to open;
- providing electrification hook-ups for TRUs to avoid diesel-fueled transport refrigeration units (TRUs) continuing to operate at loading docks during loading and unloading operations;

- requiring the TAC-generating activity (e.g., loading docks) be located away from sensitive receptors;
- incorporating exhaust emission controls on mobile and/or stationary sources (e.g., filters, oxidizers);
- develop and implement a dock management system at the time of occupancy to minimize on-site idling below regulatory limits;
- require all on-site user owned and operated trucks with transportation refrigeration units to be capable of plugging into power at loading docks and require plug-in when at the loading dock;
- utilize on-site cargo and material handling equipment that is the lowest emitting equipment available at the time of occupancy;
- evaluate the potential to electrify a portion of entirety of an on-site user-owned and operated truck fleet;
- evaluate the potential to consolidate delivery or haul truck trips to increase the load and decrease vehicle trips;
- provide building air filtration units with a Minimum Efficiency Reporting Value (MERV) that is adequate to address adjacent sensitive land uses according to performance standards of this mitigation measure;
- ensure adequate distance between existing and planned sensitive receptors and gasoline dispensing facilities, based on the proposed size and design of any gasoline-dispensing facilities;
- utilize vegetated buffers between substantial TAC-generating source locations and sensitive receptors.

If analysis demonstrates that construction activities associated with development of on-site W RTP Specific Plan land uses or off-site improvement components would exceed the performance standards identified in this mitigation measure, actions shall be taken to reduce potential construction-related impacts which may include, but not necessarily be limited to:

- installing diesel particulate filters or implementing other CARB-verified diesel emission control strategies on all construction equipment to reduce diesel particulate matter (PM) emissions;
- using equipment during time when receptors are not present (e.g., when school is not in session or during non-school hours, or when office buildings are unoccupied);
- establishing staging areas for the construction equipment that are as far as possible from sensitive receptors;
- rerouting construction trucks away from congested streets or sensitive receptor areas;
- communicating requirements through daily kick-off meetings and signage that off-road diesel equipment operators shut down their engines rather than idle for more than five minutes;
- documenting that all off-road equipment is compliant with the CARB in-use off-road diesel vehicle regulation;

- establishing an electrical supply to the construction site and use electric-powered equipment instead of diesel-powered equipment or generators, where feasible;
- using haul trucks with on-road engines instead of off-road engines;
- equipping nearby buildings with High Efficiency Particle Arresting (HEPA) filters systems at all mechanical air intake points to the building to reduce the levels of diesel PM that enter buildings;
- planning construction phasing so that future construction activities continue to move further away from occupied land uses; and
- planning construction phasing to complete mass site grading, which typically generates the largest portion of diesel PM emissions, prior to occupancy of the project site.

Significance after Mitigation: Mitigation Measures 3.3-3a and 3.3-3b would reduce impacts associated with construction-related mobile emissions from construction equipment and heavy-duty trucks, and operational TAC sources, respectively. The WRTP Specific Plan would be compliant with General Plan Policy 7.F.3 that would discourage development in locations that would conflict with the buffer recommendations in the CARB Air Quality and Land Use Handbook. The buffer distances incorporated into Mitigation Measure 3.3-3b are consistent with guidance from CARB.

Implementation of Mitigation Measure 3.3-3c would ensure that future development that could generate TAC emissions during operations would evaluate and mitigate TAC emissions to ensure that sensitive receptors are not exposed to substantial TAC concentrations. This evaluation and mitigation design is only possible once project-specific details for the TAC-generating use and the sensitive receptors are known. With the feasible actions outlined that have been demonstrated to substantially reduce exposure to TAC emissions and the clear performance standards included in this mitigation, with implementation of mitigation, this impact would be reduced to a less-than-significant level. (Draft EIR, pp. 3.3-43.)

Impact 3.3-4. Generation of Other Emissions (Such as Those Leading to Odors) Adversely Affecting a Substantial Number of People.

Finding: Less than significant with mitigation. (Draft EIR, pp. 3.3-43 through 3.3-45.)

Explanation: Future development in the WRTP Specific Plan Area could result in short-term odorous emissions from diesel exhaust generated by on-site construction equipment or from asphalt paving and architectural coating activities; this would be temporary and intermittent in nature and dissipate rapidly from the source. Operational activities of future land uses within the WRTP Specific Plan Area could involve odor sources. The WRTP Specific Plan would implement measures that would avoid exposure of a substantial number of people to objectionable odors. This impact is considered potentially significant.

Mitigation Measure 3.3-4: Reduce Exposure of Sensitive Receptors to Odorous Emissions.

The City of Woodland shall require, as part of plans for development within the WRTP Specific Plan Area, the implementation of strategies to avoid exposure of sensitive receptors to objectionable odors:

- a. Project applicant(s) for residential development in areas adjacent to ongoing agricultural operations shall include a disclosure clause advising buyers and tenants of the potential adverse odor impacts in the deeds to all residential properties. Residential subdivisions shall provide notification to buyers in writing of odors associated with existing dairies, agricultural burning, and decay of agricultural waste.
- b. For existing odor-producing sources, sensitive receptors shall be sited as far away as possible from the existing sources.
- c. For new project-generated odor-producing sources, sensitive receptors shall be sited as far away as possible from the new sources.
- d. Apply Sacramento Metropolitan Air Quality District (SMAQMD) Recommended Odor Screening Distances in the siting of land uses.
- e. As an alternative to these buffer distances, indoor air filtration systems could be implemented to reduce exposure to odors. For odor-producing sources, activities would be maintained within and enclosed space and appropriate air filtration systems would be implemented to reduce odors expelled from the building. For developments that would host sensitive receptors, design would include air site layout, landscaping, and indoor air filtration systems to minimize exposure to odors.

Significance after Mitigation: Implementation of Mitigation Measure 3.3-4 would reduce impacts related to other emissions, such as those leading to odors, because siting measures imposed would avoid conflicts between odor emissions and sensitive receptors. Therefore, and consistent with the findings of the 2035 General Plan and CAP EIR, this impact would be less than significant.

BIOLOGICAL RESOURCES

Impact 3.4-1. Swainson's Hawk, White-tailed Kite, and Burrowing Owl.

Finding: Less than significant with mitigation. (Draft EIR, pp. 3.4-24 through 3.4-26.)

Explanation: WRTP Specific Plan implementation would result in loss of suitable nesting and foraging habitat for Swainson's hawk, white-tailed kite, and burrowing owl. Construction could disturb active nests on or near the construction area, potentially resulting in nest abandonment by the adults and mortality of chicks and eggs. This impact is considered potentially significant.

Implementing the WRTP Specific Plan and off-site improvement areas would result in removal of up to approximately 310 acres of cultivated land under Caltrans Off-site Improvement Area Alternative 1 (i.e., 306 acres from the WRTP Specific Plan Area, plus up to 4.1 acres of impact related to the Caltrans Off-site Improvement Area Alternative 1), or up to 307 acres under Caltrans Off-site Improvement Area Alternative 2 (i.e., 306 acres from the WRTP Specific Plan Area, plus up to 1.1 acre of impact related to the Caltrans Off-site Improvement Area Alternative 2) that may provide suitable foraging habitat for Swainson's hawk, white-tailed kite, and burrowing owl, which are covered under the Yolo HCP/NCCP. This habitat type is classified under the Cultivated Lands Seminatural Community under the Yolo HCP/NCCP, and includes lands that are cultivated for alfalfa, field crops, truck/berry crops, and grain/hay crops. Trees that provide potential nest sites for Swainson's hawk, white-tailed kite, and other raptors (discussed under Impact 3.4-2) would also be removed. All raptors and their nests are protected under Section 3503.5 of the California Fish and Game Code. Common raptors that could nest on or near

the WRTP Specific Plan Area include red-tailed hawk, great horned owl, and barn owl. Impacts to and mitigation measures for common raptors are provided under Impact 3.4-2. No burrowing owl were observed during the reconnaissance visits; however, ground squirrel burrows were observed along the southern slope of the Farmers Central Ditch near the western boundary of the Caltrans off-site improvement area, and under valley oak trees in the traffic median immediately southeast of the CR 25A overpass. Burrowing owl could also use a debris pile observed in the vicinity of a warehouse within the WRTP Specific Plan Area, and a pile of broken concrete in the southwest traffic median in the Caltrans off-site improvement area, as nesting and cover habitat. Furthermore, small mammal burrows (gopher/vole sized) were found in friable soils along the slopes of a ditch immediately adjacent to, but outside of the WRTP Specific Plan Area, within the dry roadside ditches along CR 25A and along the interior slopes of the SR 113/CR 25A traffic medians that could be used by burrowing owls in the future. Burrowing owls need burrows at all times to survive, and displacing individuals from their burrows can result in indirect impacts such as predation, increased energetic costs, increased stress, and risks associated with having to find and compete for burrows, all of which can lead to take or reduced reproduction. Vegetation removal, grading, and other construction activities could result in mortality of burrowing owl individuals and nest abandonment. If trees are to be removed during the breeding season for Swainson's hawk and white-tailed kite, mortality of eggs and chicks could result if an active nest were present. In addition, project construction could disturb active nests near the construction area, potentially resulting in nest abandonment by the adults and mortality of chicks and eggs. Swainson's hawks generally nest within two miles of suitable foraging habitat, which consists of alfalfa, disked fields, fallow fields, dry-land pasture, beets, tomatoes, irrigated pasture, grains, other row crops, and uncultivated grasslands (Estep 1989, Estep pers. comm. 2007, Estep 2009). The most important foraging habitat lies within a one-mile radius of each nest (City of Sacramento et. al 2003: Appendix H, page 5-29). However, Swainson's hawks have been recorded foraging up to 18.6 miles from nest sites (Estep 1989) and foraging habitat within 10 miles of an active nest is generally considered to be important to supporting the reproductive success of that pair. According to the Yolo HCP/NCCP, the WRTP Specific Plan Area is within modeled agricultural foraging and nesting habitat for Swainson's hawk, and secondary foraging habitat for white-tailed kite (Yolo Habitat Conservancy 2018). There are 17 nesting Swainson's hawk records within 2 miles of the study area. There is one occurrence of an active nest (within the last 5 years) within 1 mile of the WRTP Specific Plan Area. The loss of up to 307 to 310 acres (the greater of which is due to Caltrans Off-site Improvement Area Alternative 1 resulting in 4.1 acres of impact as opposed to Alternative 2 resulting in 1.1 acres of impact) of foraging habitat (i.e., cultivated fields) from the WRTP Specific Plan Area and off-site improvement areas could affect nesting success, survival rates, and availability of prey for the local population, or result in displacement of nesting pairs of Swainson's hawk or white-tailed kite. Therefore, the loss of foraging habitat resulting from development of the WRTP Specific Plan Area is considered a potentially significant impact. Project construction could result in direct destruction of an active Swainson's hawk, white-tailed kite, burrowing owl, or other raptor nest or disturb nesting raptors located on or near the WRTP Specific Plan and off-site improvement areas, resulting in nest abandonment by adult birds and abandonment of chicks and eggs, causing mortality. Direct and indirect impacts on active raptor nests or burrows are considered potentially significant. Mitigation for impacts to nesting common raptors is included under Mitigation Measure 3.4-2a (Avoid Direct Loss of Protected Bird Nests).

Mitigation Measure 3.4-1a: Minimize Take and Adverse Effects on Habitat of Swainson's Hawk and WhiteTailed Kite

- a. In accordance with AMM 16 of the Yolo HCP/NCCP, the City will require project proponent/s to retain a qualified biologist to conduct species-specific surveys and identify any nesting habitat present within 1,320 feet of the footprint of a proposed project prior to any ground disturbing activities necessary to

implement proposed development and infrastructure projects. Adjacent parcels under different land ownership will be surveyed only if access is granted or if the parcels are visible from authorized areas.

b. If a construction project cannot avoid potential nest trees (as determined by the qualified biologist) by 1,320 feet, the City will require project proponent/s to retain a qualified biologist to conduct preconstruction surveys for active nests consistent with guidelines provided by the Swainson's Hawk Technical Advisory Committee (2000), between March 1 and August 30, within 15 days prior to the beginning of the construction activity. The results of the survey will be submitted to the Yolo Habitat Conservancy and CDFW. If active nests are found during preconstruction surveys, a 1,320-foot initial temporary nest disturbance buffer shall be established. If project-related activities within the temporary nest disturbance buffer are determined to be necessary during the nesting season, then the qualified biologist will monitor the nest and will, along with the City, consult with CDFW to determine the best course of action necessary to avoid nest abandonment or take of individuals. Work may be allowed only to proceed within the temporary nest disturbance buffer if Swainson's hawk or white-tailed kite are not exhibiting agitated behavior, such as defensive flights at intruders, getting up from a brooding position, or flying off the nest, and only with the agreement of CDFW. The designated on-site biologist/monitor shall be on-site daily while construction-related activities are taking place within the 1,320-foot buffer and shall have the authority to stop work if raptors are exhibiting agitated behavior. Up to 20 Swainson's hawk nest trees (documented nesting within the last 5 years) may be removed during the permit term, but they must be removed when not occupied by Swainson's hawks.

c. For covered activities that involve pruning or removal of a potential Swainson's hawk or whitetailed kite nest tree, the City will require project proponent/s to conduct preconstruction surveys that are consistent with the guidelines provided by the Swainson's Hawk Technical Advisory Committee (2000). If active nests are found during preconstruction surveys, no tree pruning or removal of the nest tree will occur during the period between March 1 and August 30 within 1,320 feet of an active nest, unless a qualified biologist determines that the young have fledged and the nest is no longer active.

Mitigation Measure 3.4-1b: Comply with Yolo HCP/NCCP Requirements for Compensation for Loss of Swainson's Hawk Foraging Habitat

Before any ground-disturbing activities, the City will require project proponent/s to identify and quantify (in acres) Swainson's hawk habitat (as defined in the Yolo County HCP/NCCP Appendix A, Covered Species Accounts [Yolo HCP/NCCP 2018]) in and within 1,320 feet of a project footprint. The City will require project proponent/s to submit the Yolo HCP/NCCP Application Form for non-member agency projects and Member Agency Reporting Form for member agency projects, as applicable, and will pay applicable fees to the Yolo Habitat Conservancy as specified in the appropriate form.

Mitigation Measure 3.4-1c: Minimize Take and Adverse Effects on Western Burrowing Owl

Suitable habitat for the western burrowing owl is present within the WRTP Specific Plan Area and the Caltrans off-site improvement area. There is no suitable habitat for burrowing owl in the South Regional Pond off-site improvement area. In accordance with avoidance and minimization measures (AMM) 18 of the Yolo Habitat Conservation Plan (HCP)/Natural Community Conservation Planning (NCCP), the City will require project proponent/s to retain a qualified biologist to conduct species-specific surveys and within

30-days but no less than 14 days prior to any ground disturbing activities necessary to implement proposed development and infrastructure projects, consistent with Appendix L of the Yolo HCP/NCCP, which follows California Department of Fish and Wildlife (CDFW) guidelines.

If burrowing owls are identified during the species-specific pre-project survey, the City will require project proponent/s to minimize activities that will affect occupied habitat, as follows. Occupied habitat is considered fully avoided if the project footprint does not impinge on a non-disturbance buffer around the suitable burrow. For occupied burrowing owl nest burrows, this non-disturbance buffer could range from 150 to 1,500 feet (Table 4-2 of the Yolo HCP/NCCP, Recommended Restricted Activity Dates and Setback Distances by Level of Disturbance for Burrowing Owls), depending on the time of year and the level of disturbance, based on current guidelines. A copy of this table is provided below as Table 3.4-8.

Table 3.4-8. Recommended Restricted Activity Dates and Setback Distances by Level of Disturbance for Burrowing Owls (Yolo HCP/NCCP 2018)

Time of Year	Low (Feet)	Medium (Feet)	High (Feet)
April 1 – April 15	600	1,500	1,500
August 16 – October 15	600	600	1,500
October 16 – March 31	150	300	1,500

Source: Yolo Habitat Conservancy 2018

The Yolo HCP/NCCP generally defines low, medium, and high levels of disturbances of burrowing owls as follows.

- **Low:** Typically 71–80 decibels (dB), generally characterized by the presence of passenger vehicles, small gas-powered engines (e.g., lawn mowers, small chain saws, portable generators), and high tension power lines. Includes electric hand tools (except circular saws, impact wrenches and similar). Management and enhancement activities would typically fall under this category. Human activity in the immediate vicinity of burrowing owls would also constitute a low level of disturbance, regardless of the noise levels.
- **Moderate:** Typically 81–90 dB, and would include medium- and large-sized construction equipment, such as backhoes, front end loaders, large pumps and generators, road graders, dozers, dump trucks, drill rigs, and other moderate to large diesel engines. Also includes power saws, large chainsaws, pneumatic drills and impact wrenches, and large gasoline-powered tools. Construction activities would normally fall under this category.
- **High:** Typically 91–100 dB, and is generally characterized by impacting devices, jackhammers, compression (“jake”) brakes on large trucks, and trains. This category includes both vibratory and impact pile drivers (smaller steel or wood piles) such as used to install piles and guard rails, and large pneumatic tools such as chipping machines. It may also include large diesel and gasoline engines, especially if in concert with other impacting devices. Felling of large trees (defined as dominant or subdominant trees in mature forests), truck horns, yarding tower whistles, and muffled or underground explosives are also included. Very few covered activities are expected to fall under this category, but some construction activities may result in this level of disturbance.

In accordance with AMM 18 of the Yolo HCP/NCCP, the project proponent may qualify for a reduced buffer size, based on existing vegetation, human development, and land use, if agreed upon by CDFW and U.S. Fish and Wildlife Service (USFWS) (Yolo Habitat Conservancy 2018).

If the project does not fully avoid direct and indirect effects on nesting sites (i.e., if the project cannot adhere to the buffers described above), the City will require the project proponent/s to retain a qualified biologist to conduct preconstruction surveys and document the presence or absence of western burrowing owls that could be affected by the covered activity. Prior to any ground disturbance related to covered activities, the qualified biologist will conduct the preconstruction surveys within three days prior to ground disturbance in areas identified in the planning-level surveys carried out in preparation of the EIR as having suitable burrowing owl burrows, consistent with CDFW preconstruction survey guidelines (Appendix L of the Yolo HCP/NCCP, Take Avoidance Surveys) (Yolo Habitat Conservancy 2018). The qualified biologist will conduct the preconstruction surveys three days prior to ground disturbance. Time lapses between ground disturbing activities will trigger subsequent surveys prior to ground disturbance. If the biologist finds the site to be occupied³ by western burrowing owls during the breeding season (February 1 to August 31), the City will require project proponent/s to avoid all nest sites, based on the buffer distances described above, during the remainder of the breeding season or while the nest is occupied by adults or young (occupation includes individuals or family groups that forage on or near the site following fledging). Construction may occur inside of the disturbance buffer during the breeding season if the nest is not disturbed and the project proponent develops an AMM plan that is approved by the Conservancy, CDFW, and USFWS prior to project construction, based on the following criteria:

- The Conservancy, CDFW, and USFWS approves the AMM plan provided by the project proponent.
- A qualified biologist monitors the owls for at least three days prior to construction to determine baseline nesting and foraging behavior (i.e., behavior without construction).
- The same qualified biologist monitors the owls during construction and finds no change in owl nesting and foraging behavior in response to construction activities.
- If the qualified biologist identifies a change in owl nesting and foraging behavior as a result of construction activities, the qualified biologist will have the authority to stop all construction-related activities within the non-disturbance buffers described above. The qualified biologist will report this information to the Conservancy, CDFW, and USFWS within 24 hours, and the Conservancy will require that these activities immediately cease within the non-disturbance buffer. Construction cannot resume within the buffer until the adults and juveniles from the occupied burrows have moved out of the project site, and the Conservancy, CDFW, and USFWS agree. If monitoring indicates that the nest is abandoned prior to the end of nesting season and the burrow is no longer in use by owls, the project proponent may remove the nondisturbance buffer, only with concurrence from CDFW and USFWS. If the burrow cannot be avoided by construction activity, the biologist will excavate and collapse the burrow in accordance with CDFW's 2012 guidelines to prevent reoccupation after receiving approval from the wildlife agencies. If evidence of western burrowing owl is detected outside the breeding season (December 1 to January 31), the City will require the project proponent/s to establish a non-disturbance

³ Occupancy of burrowing owl habitat during preconstruction surveys is confirmed at a site when at least one burrowing owl or sign (fresh whitewash, fresh pellets, feathers, or nest ornamentation) is observed at or near a burrow entrance.

buffer around occupied burrows, consistent with Table 4-2 of the Yolo HCP/NCCP (Yolo Habitat Conservancy 2018), as determined by a qualified biologist. Construction activities within the disturbance buffer are allowed if the following criteria are met to prevent owls from abandoning important overwintering sites: A qualified biologist monitors the owls for at least three days prior to construction to determine baseline foraging behavior (i.e., behavior without construction). The same qualified biologist monitors the owls during construction and finds no change in owl foraging behavior in response to construction activities.

- If there is any change in owl roosting and foraging behavior as a result of construction activities, these activities will cease within the buffer. If the owls are gone for at least one week, the project proponent may request approval from the Conservancy, CDFW, and USFWS for a qualified biologist to excavate and collapse usable burrows to prevent owls from reoccupying the site if the burrow cannot be avoided by construction activities. The qualified biologist will install one-way doors for a 48-hour period prior to collapsing any potentially occupied burrows. After all usable burrows are excavated, the buffer will be removed and construction may continue.

Monitoring must continue as described above for the nonbreeding season as long as the burrow remains active. A qualified biologist will monitor the site, consistent with the requirements described above, to ensure that buffers are enforced and owls are not disturbed.

If burrowing owls are detected during the nonbreeding season, instead of establishing buffers and monitoring for behavior, the qualified biologist in consultation with the Conservancy may determine that passive relocation (i.e., exclusion) of owls is necessary, in which case the project proponent will develop a burrowing owl exclusion plan in consultation with CDFW biologists. Exclusion and burrow closure will not be conducted during the breeding season for any occupied burrow. The methods will be designed, as described in the species monitoring guidelines (California Department of Fish and Game 2012) and consistent with the most up-to-date checklist of passive relocation techniques maintained by the Yolo Habitat Conservancy. This may include the installation of one-way doors in burrow entrances by a qualified biologist during the nonbreeding season. These doors will be in place for 48 hours and monitored twice daily to ensure that the owls have left the burrow, after which time the biologist will collapse the burrow to prevent reoccupation. Burrows will be excavated using hand tools. During excavation, an escape route will be maintained at all times. This may include inserting an artificial structure, such as piping, into the burrow to prevent collapsing until the entire burrow can be excavated and it can be determined that no owls are trapped inside the burrow. The Yolo Habitat Conservancy may allow other methods of passive or active relocation, based on best available science, if approved by the wildlife agencies. Artificial burrows will be constructed prior to exclusion and will be created less than 300 feet from the existing burrows on lands that are protected as part of the reserve system.

Significance after Mitigation: Implementing Mitigation Measures 3.4-1a through 3.4-1c would reduce significant impacts on Swainson's hawk, white-tailed kite, and burrowing owl to a less-than-significant level because it would ensure that these species are not disturbed during nesting so that project construction would not result in nest abandonment and loss of eggs or young and implementation of the WRTP Specific Plan would not result in decreased reproductive success of Swainson's hawks. These measures would also ensure that Swainson's hawk foraging habitat would be preserved at the appropriate ratio of habitat value lost, consistent with the conservation strategy of the Yolo HCP/NCCP (Yolo Habitat Conservancy 2018). The in-lieu fees paid by the City for loss of

Swainson's hawk foraging habitat would help achieve the Yolo HCP/NCCP Goal SH1 to provide for the conservation of Swainson's hawk in the Plan Area. The WRTP Specific Plan will be implemented in accordance with the Yolo HCP/NCCP avoidance and minimization measures. Through payment of HCP/NCCP fees or equivalent mitigation, the WRTP Specific Plan will contribute to the HCP/NCCP's conservation strategy, thereby benefiting the above-listed covered species. Therefore, with incorporation of HCP/NCCP fees or equivalent mitigation and adherence to other HCP/NCCP avoidance and minimization measures, the WRTP Specific Plan's individual impacts and its contribution to cumulative impacts to covered species are less than significant.

Impact 3.4-2. Special-Status and Migratory Nesting Birds and Raptors.

Finding: Less than significant with mitigation. (Draft EIR, pp. 3.4-30 through 3.4-32.)

Explanation: WRTP Specific Plan implementation would result in potential loss of wintering habitat for mountain plover and loss of potential foraging habitat for tricolored blackbird and loss of potential nesting and foraging habitat for common migratory birds and raptors. Construction could disturb active nests on or near the construction area, potentially resulting in nest abandonment by the adults and mortality of chicks and eggs. This impact is considered potentially significant.

Mountain plover may winter in mowed ruderal areas (i.e., urban ruderal and semiagricultural/incidental to agriculture land cover types under the Yolo HCP/NCCP) and cultivated lands in the WRTP Specific Plan Area and off-site improvement areas. Tricolored blackbirds nest colonially in marshes, riparian scrub, and other areas that support cattails or dense thickets of shrubs or herbs, such as blackberry. Ideal breeding habitats consist of a suitable nesting substrate surrounded by foraging habitats in annual grasslands, shrublands, or agricultural fields that produce large numbers of grasshoppers, dragonflies, and other large insects, with a source of surface water nearby (Beedy and Hamilton 1999, Meese 2014, cited in Beedy and Meese 2015). Tricolored blackbirds are known to forage up to 3 miles from active breeding colonies (Beedy and Meese 2015). No suitable nesting habitat for tricolored blackbird was observed within the study area or in a 1,300-foot buffer the study area during biological surveys. According to the Yolo HCP/NCCP tricolored blackbird modeled habitat, there is no nesting habitat within the WRTP Specific Plan Area, but suitable foraging habitat is present (Yolo Habitat Conservancy 2018). The closest known active breeding colony is located approximately 2 miles east of the WRTP Specific Plan Area and was estimated to contain a breeding colony of 7,000 tricolored blackbirds in 2014 (CNDDDB 2017). Implementing the WRTP Specific Plan would result in removal of up to approximately 310 acres of cultivated lands that may provide potential suitable foraging habitat for tricolored blackbird and wintering habitat for mountain plover. Loss of this cultivated land would not substantially affect nesting success or survival rates of tricolored blackbird and survival rates of mountain plover because approximately 5 miles south and at least 7 miles east and west of the WRTP Specific Plan Area consists of agricultural land that provides many times the acres of potential foraging habitat for tricolored blackbird and wintering habitat for mountain plover than that provided in the WRTP Specific Plan Area. Therefore, the loss of foraging habitat resulting from development of the WRTP Specific Plan Area is considered a less-than-significant impact. All raptors and their nests are protected under Section 3503.5 of the California Fish and Game Code. Common raptors that could nest on or near the WRTP Specific Plan Area and off-site improvement areas include red-tailed hawk, great horned owl, and barn owl. If trees are to be removed during the raptor breeding season (February – August), mortality of eggs and chicks of tree-nesting raptors could result if an active nest were present. In addition, project construction could disturb active nests near the construction area, potentially resulting in nest abandonment by the adults and mortality of chicks and eggs. Construction resulting from implementation of the WRTP Specific Plan could disturb active bird nests in and near the construction area, potentially resulting in

nest abandonment by the adults and mortality of chicks and eggs. Tree and vegetation removal and structure removal could result in the direct destruction of active nests of birds protected under the MBTA and California Fish and Game Code. Loss of common migratory birds and raptors (those not meeting the definition of special-status as provided above) would not be a significant impact under CEQA, but mitigation to avoid the loss of active nests of these species is required for compliance with the MBTA and California Fish and Game Code.

Mitigation Measure 3.4-2a: Avoid Direct Loss of Protected Bird Nests

While not required as mitigation for a significant impact under CEQA, the following would be required for compliance with the MBTA and California Fish and Game Code:

- To the extent feasible, the City will require that construction activities be carried out during the nonbreeding season (between September 1 and January 31) for protected bird species in this region to avoid and minimize impacts to common migratory nesting birds.
- For any ground disturbance activity necessary to implement proposed development and infrastructure projects that would occur during the nesting season (between February 1 and August 31), the City will require the project applicant to conduct a preconstruction survey. The preconstruction survey shall be conducted by a qualified biologist before any activity occurring within 500 feet of suitable nesting habitat for any protected bird species. The survey shall be timed to maximize the potential to detect nesting birds, and should be repeated within 10 days of the start of project-related activity.
- If an active common bird species protected by the Migratory Bird Treaty Act or California Fish and Game Code nest is found, the qualified biologist shall establish a buffer around the nest. No project activity shall commence within the buffer area until a qualified biologist confirms that the nest is no longer active. The size of the buffer shall be determined in consultation with CDFW. Buffer size is anticipated to range from 50 to 500 feet, depending on the nature of the project activity, the extent of existing disturbance in the area, and other relevant circumstances as determined by a qualified biologist in consultation with CDFW.
- Monitoring of all protected nests by a qualified biologist during construction activities will be required if the activity has potential to adversely affect the nest. If construction activities cause the nesting bird to vocalize, make defensive flights at intruders, get up from a brooding position, or fly off the nest, then the no-disturbance buffer shall be increased until the agitated behavior ceases. The exclusionary buffer will remain in place until the chicks have fledged or as otherwise determined by a qualified biologist.

Mitigation Measure 3.4-2b: Implement Mitigation Measure 3.4-1b

Significance after Mitigation: Implementing Mitigation Measure 3.4-2 would avoid disturbing birds during nesting so that project construction would not result in nest abandonment and loss of eggs or young and would ensure compliance with the MBTA and California Fish and Game Code. Loss of common migratory birds and raptors (those not meeting the definition of special status as provided above) would not be a significant impact under CEQA, but mitigation would avoid the loss of active nests of these species, consistent with the requirements of the MBTA and California Fish and Game Code. Mitigation Measure 3.4-2b would require developers for each individual project within the W RTP Specific Plan Area are responsible for applying for the HCP/NCCP coverage

and payment of development-based fees to fund mitigation that will offset losses of land cover types, covered species habitat, and other biological values.

These one-time fees pay for the full cost of mitigating project effects on the covered species and natural communities. Implementing Mitigation Measure 3.4-2b would reduce significant impacts on foraging habitat for tricolored blackbird and wintering habitat for mountain plover to a less-than-significant level because it would ensure that foraging habitat (i.e., 310 acres of cultivated lands) would be preserved at the appropriate ratio of habitat value lost, consistent with the conservation strategy of the Yolo HCP/NCCP.

Impact 3.4-3. Loss of Valley Elderberry Longhorn Beetle (VELB) Larvae and Habitat.

Finding: Less than significant with mitigation. (Draft EIR, pp. 3.4-32 through 3.4-34.)

Explanation: WRTP Specific Plan implementation could result in the loss of elderberry found in the WRTP Specific Plan Area. The elderberry shrub is potential habitat for valley elderberry longhorn beetle and removal of the shrub could result in direct loss of Valley Elderberry Longhorn Beetle (VELB) larvae and habitat. This impact is considered potentially significant.

A single elderberry shrub was identified along the western boundary of the WRTP Specific Plan Area during the 2017 reconnaissance survey that has the potential to support valley elderberry longhorn beetle (*Desmocerus californicus dimorphus*). Additional elderberry shrubs could become established in the WRTP Specific Plan Area by the time future construction projects are implemented. This species is entirely dependent on its host plant, the elderberry shrub (*Sambucus* spp.), during its life cycle. The majority of the species' life is spent in larval form within the stem of an elderberry plant. If an elderberry shrub is removed as part of the WRTP Specific Plan implementation – either the existing shrub or one that becomes established in the future, loss of valley elderberry longhorn beetle larvae and loss of habitat could occur. Indirect impacts from ground-disturbing activities or use of herbicides could also result if the health of elderberry shrubs containing valley elderberry longhorn beetle larvae is adversely affected. This impact is considered potentially significant. The U.S. Fish and Wildlife Service's Framework for Assessing Impacts to the Valley Elderberry Longhorn Beetle (*Desmocerus californicus dimorphus*) (2017b), recommends conducting a habitat assessment and appropriate surveys to determine VELB occupancy of elderberry shrubs(s) in a project site. This includes assessing potential habitat within the range of VELB to determine if the habitat is riparian or non-riparian habitat and conducting exit hole surveys to further determine potential occupancy. The elderberry shrub in the WRTP Specific Plan Area is in non-riparian habitat. Mitigation Measure 3.4-3 is consistent with the VELB AMM described in the Yolo HCP/NCCP (Yolo Habitat Conservancy 2018).

Mitigation Measure 3.4-3: Minimize Take and Adverse Effects on Habitat of Valley Elderberry Longhorn Beetle

- In accordance with AMM 12 of the Yolo HCP/NCCP, the City will require project proponent/s to retain a qualified biologist who is familiar with valley elderberry longhorn beetle and evidence of its presence (i.e., exit holes in elderberry shrubs) to map all elderberry shrubs in and within 100 feet of a proposed project footprint with stems that are greater than one inch in diameter at ground level during the project design phase. To avoid take of valley elderberry longhorn beetle fully, the City will require project proponent/s to design projects to avoid mapped elderberry shrubs, if feasible. To avoid effects on shrubs, the City will require that project proponent/s maintain a buffer of at least 100 feet from any elderberry shrubs with stems greater than one inch in diameter at ground level. AMM 1 of the Yolo

HCP/NCCP, Establish Buffers, describes that a lesser buffer may be approved by the Conservancy, USFWS, and CDFW if they determine that the covered species is avoided to an extent that is consistent with the project purpose.

- For elderberry shrubs that cannot be avoided with a designated buffer distance as described above, the qualified biologist will quantify the number of stems one inch or greater in diameter to be affected, and the presence or absence of exit holes. The Conservancy will use this information to determine the number of plants or cuttings to plant on a riparian restoration site to help offset the loss, consistent with Section 6.4.2.4.1 Valley Elderberry Longhorn Beetle, of the Yolo HCP/NCCP (Yolo Habitat Conservancy 2018). Additionally, prior to construction, the City will require that the project proponent/s transplant elderberry shrubs identified within the project footprint that cannot be avoided.
- Transplantation will only occur if a shrub cannot be avoided and, if indirectly affected, the indirect effects would otherwise result in the death of stems or the entire shrub. If the project proponent/s choose/s, in coordination with a qualified biologist and the City, not to transplant the shrub because the activity would not likely result in death of stems of the shrub, then the qualified biologist will monitor the shrub annually for a five-year monitoring period. The monitoring period may be reduced with concurrence from the wildlife agencies if the latest research and best available information at the time indicates that a shorter monitoring period is warranted. If death of stems at least one inch in diameter occurs within the monitoring period, and the qualified biologist determines that the shrub is sufficiently healthy to transplant, the City will require the project proponent/s to transplant the shrub as described in the following paragraph, in coordination with the qualified biologist. If the shrub dies during the monitoring period, or the qualified biologist determines that the shrub is no longer healthy enough to survive transplanting, then the Conservancy will offset the shrub loss consistent with the preceding paragraph.
- The City will require project proponent/s to transplant the shrubs into a location in the HCP/NCCP reserve system that has been approved by the Conservancy. Elderberry shrubs outside the project footprint but within the 100-foot buffer will not be transplanted. Transplanting will follow the following measures:
 1. Monitor: A qualified biologist will be on-site for the duration of the transplanting of the elderberry shrubs to ensure the effects on elderberry shrubs are minimized.
 2. Timing: The project proponent will transplant elderberry plants when the plants are dormant, approximately November through the first two weeks of February, after they have lost their leaves. Transplanting during the non-growing season will reduce shock to the plant and increase transplantation success.
 3. Transplantation procedure:
 - a. Cut the plant back three to six feet from the ground or to 50 percent of its height (whichever is taller) by removing branches and stems above this height. Replant the trunk and stems measuring one inch or greater in diameter. Remove leaves that remain on the plants.

- b. Relocate plant to approved location in the reserve system, and replant as described in Section 6.4.2.4.1, Valley Elderberry Longhorn Beetle of the Yolo HCP/NCCP (Yolo Habitat Conservancy 2018).

Significance after Mitigation: Implementing Mitigation Measure 3.4-3 would reduce potentially significant impacts on VELB to a less-than-significant level because all elderberry shrubs would be mapped and impacts would be avoided and if impacts cannot be avoided, compensatory mitigation will be required. The WRTP Specific Plan will be implemented in accordance with the Yolo HCP/NCCP avoidance and minimization measures. Therefore, with incorporation of HCP/NCCP equivalent mitigation and adherence to other HCP/NCCP avoidance and minimization measures, WRTP Specific Plan's individual impacts and its contribution to cumulative impacts to covered species would be less than significant.

Impact 3.4-4. Loss of Bat Roosts, and Special-status Bats.

Finding: Less than significant with mitigation. (Draft EIR, pp. 3.34 through 3.4-35.)

Explanation: WRTP Specific Plan implementation would allow development that could result in the removal of human-made structures and trees that may support bat roosts. If these structures or trees are used by bats as a day roost, hibernation roost, or maternity colony roost, implementation of the WRTP Specific Plan could result in loss of a roost, or injury and mortality of pallid bat or western red bat. This impact is considered potentially significant.

The almond orchard (i.e., the deciduous fruits/nuts land cover type under the Yolo HCP/NCCP) and other trees in the WRTP Specific Plan Area and off-site improvement areas could provide day, hibernation, or maternity roosting habitat for western red bat and other common foliage roosting bat species. Several structures in the WRTP Specific Plan Area, including an old barn and trailer, could also provide day, hibernation, or maternity roosting habitat for pallid bat or other common bat species. Both the western red bat and pallid bat are CDFW species of special concern. Direct adverse effects on these special-status bat species may occur during construction, when tree removal and road improvements occur. The bat maternity season is from May 1 to August 31 and the overwintering season from November 1 to March 15. Loss of a maternity roost, regardless of species, could adversely affect a regional population of a species that reproduces very slowly. This impact is considered potentially significant.

Mitigation Measure 3.4-4: Avoid Direct Loss of Bat Roosts and Special-status Bats

For any project activity necessary to implement proposed development and infrastructure projects that would require removal of roost habitat (i.e., trees or structures) and would occur during the maternity season (between May 1 and August 31), the City will require the project applicant to conduct a preconstruction survey for special-status bats. Camera inspection as well as an emergence (exit survey with night optics) and/or acoustic survey shall be conducted in the summer prior to construction/land disturbance, which provides the best opportunity to determine if roosting bats are present.

If bats are found during the preconstruction survey(s), then removal of roost habitat will be delayed until the end of maternity season (August 31) or until the young are capable of flights, as determined by a qualified bat biologist and in consultation with CDFW. Any removal of highly suitable roost habitat should be conducted during the shoulder season, September 1 to October 31, to avoid harm to the species. If a highly suitable roost tree or structure is to be removed, trees and/or structures surrounding the roost habitat

should be removed first, allowing any bats that may be present time to leave the area. A qualified monitor shall be present during removal of the habitat tree or structure.

Significance after Mitigation: Implementing Mitigation Measure 3.4-4 would reduce potentially significant impacts on bat roosts and special-status bat species, including pallid bat and western red bat, to a less-than-significant level because appropriate avoidance and minimization measures will be implemented.

Impact 3.4-5. Loss and Degradation of State or Federally Protected Wetlands.

Finding: Less than significant with mitigation. (Draft EIR, PP. 3.4-35 through 3.4-37.)

Explanation: Implementing the WRTP Specific Plan could result in conversion of land that currently supports waterways to developed land. These waters may be subject to U.S. Army Corps of Engineers (USACE) jurisdiction under the Clean Water Act (CWA) and/or may be considered waters of the state by the Central Valley RWQCB. This impact is considered potentially significant.

Implementing the WRTP Specific Plan would allow development in areas that currently support agricultural and roadside ditches. Impacts on waters could occur through habitat conversion, encroachment, routine maintenance, or other activities in the immediate vicinity of waterways. Land conversion could result in direct fill of waters. Indirect impacts could result from adjacent development that leads to habitat modifications, such as changes in hydrology and reduction in water quality caused by urban runoff, erosion, and siltation. It is possible that some waterways in the WRTP Specific Plan Area and off-site improvement areas would qualify as waters of the United States due to hydrological connectivity to navigable waters (e.g., the Sacramento River via Willow Slough) or adjacency to other waters of the United States; however, some waters may be disclaimed by the USACE as isolated waters or may be excluded from regulation under the Clean Water Act. Ditches, including agricultural ditches that were not constructed in streams, are not modified streams, do not drain wetlands, and have only ephemeral or intermittent flows are generally excluded from the Clean Water Act according to the Clean Water Rule issued July 13, 2015 (80 Federal Register [FR] 37053). The Navigable Waters Protection Rule: Definition of “Waters of the United States” (2020 Final Rule) (85 Federal Register [FR] 22250) outlines four clear jurisdictional categories of waters considered “waters of the United States.” These four categories are defined as follows:

- Territorial Seas and Traditional Navigable Waters (TNWs)—all waters subject to the ebb and flow of the tide, or waters that are presently used, have been used in the past, or may be used in the future to transport interstate or foreign commerce, and all waters that are navigable in fact under federal law for any purpose;
- Tributaries— rivers, streams, or similar naturally occurring surface water channels that contribute surface water flow in a typical year either directly or indirectly through another water, including an impoundment or adjacent wetlands, to a TNW, interstate waters or wetlands, or a territorial sea. A tributary must be perennial or intermittent in a typical year;
- Lakes and Ponds, and impoundments of jurisdictional waters - standing bodies of open water that contribute surface water flow in a typical year either directly or indirectly through another water to a TNW, interstate waters or wetlands, or a territorial sea.
- Adjacent Wetlands—waters bordering, contiguous with, or neighboring jurisdictional waters, including waters separated by natural river berms, banks, dunes or similar natural feature, or constructed dikes or

barriers or the like, so long as that structure allows for a direct hydrologic surface connection between the wetlands and the waters in a typical year, such as through a culvert, flood or tide gate, pump, or similar artificial feature. An adjacent wetland is jurisdictional in its entirety when a road or similar artificial structure divides the wetland, as long as the structure allows for a direct hydrologic surface connection through or over that structure in a typical year.

Any waters disclaimed by the USACE would still be subject to regulation by Central Valley RWQCB as waters of the state, and impacts to waters of the state would require mitigation. For work in the Caltrans right-of-way at the Caltrans off-site improvement area, standard BMPs will be implemented as required under the Construction General Permit and Caltrans MS4 Permit. Compliance with the requirements of these permits and adherence to the conditions would reduce or avoid potentially significant construction-related impacts in this off-site improvement area (Caltrans 2013). For other portions of the study area where implementation of the WRTP Specific Plan could result in development of land that currently supports waterways the impact is potentially significant.

Mitigation Measure 3.4-5: Avoid Loss of and Degradation of Federally Protected Waters

- If the implementation of the WRTP Specific Plan would result in ground disturbance on the agricultural or roadside ditches, the City will require project proponent/s to conduct a delineation of waters of the United States according to U.S. Army Corps of Engineers' methods, and to submit the completed delineation to the U.S. Army Corps of Engineers for jurisdictional determination.
- If implementation of the WRTP Specific Plan would result in fill of waters of the United States, the City will require that project proponent/s obtain a Section 404 Clean Water Act permit from the U.S. Army Corps of Engineers and water quality certification from the Regional Water Quality Control Board pursuant to Section 401 of the Clean Water Act.
- If implementation of the WRTP Specific Plan involves work in areas containing waters disclaimed by the USACE, the City will require that the applicant obtain a Waste Discharge Requirement permit from the Regional Water Quality Control Board pursuant to the Porter Cologne Act.
- The City will require that the applicant obtain all needed permits prior to project implementation, to abide by the conditions of the permits, including all mitigation requirements, and to implement all requirements of the permits in the timeframes required therein.

Significance after Mitigation: Implementing Mitigation Measure 3.4-5 would reduce potentially significant impacts on potentially jurisdictional water features, to a less-than-significant level because implementation of the Best Management Practices (BMPs), and permit conditions, and mitigation requirements will avoid, minimize and mitigate for impacts on jurisdictional waters.

CULTURAL AND TRIBAL CULTURAL RESOURCES

Impact 3.6-2. Disturb Human Remains, including those Interred Outside of Formal Cemeteries.

Finding: Less than significant with mitigation. (Draft EIR, pp. 3.6-14 through 3.6-15.)

Explanation: The WRTP Specific Plan would result in development and infrastructure improvement projects throughout the WRTP Specific Plan Area and off-site improvement areas that would involve earthmoving activities

that could impact human remains. There is the potential for discovery of human remains during construction. This impact is considered potentially significant.

The 2035 General Plan and CAP EIR (pages 4.6-29 to 4.6-32) discusses potential impacts related to the disturbance of human remains from implementation of the General Plan. The 2035 General Plan EIR identifies existing regulations and includes 2035 General Plan Goal 7.E and Policies 7.E.1 and 7.E.2 that would reduce impacts. However, the 2035 General Plan and CAP EIR determined that potential impacts related to the discovery of human remains during implementation of the General Plan, even with implementation of Mitigation Measure 4.6-2, would be significant and unavoidable. The WRTP Specific Plan plans for development and infrastructure improvement projects throughout the WRTP Specific Plan Area and off-site improvement areas that would involve grading, trenching, excavation, soil stockpiling, and other earthmoving activities that could impact human remains. Although there is presently no indication that any particular area in the WRTP Specific Plan Area or off-site improvement areas has been used for human burial purposes outside of designated cemeteries in the recent or distant past, there is nonetheless the potential for discovery during construction of development and infrastructure under the WRTP Specific Plan. As described, these existing regulations will reduce potential impacts associated with implementation of the WRTP Specific Plan by requiring a stop to potentially damaging excavation. However, human remains can occur below ground with little or no surface manifestation. Therefore, the potential for the WRTP Specific Plan to result in the disturbance of human remains is considered potentially significant.

Mitigation Measure 3.6-2: Treatment of Human Remains

Consistent with Health and Safety Code, Section 7050 through 7052 and Health and Safety Code Section 8010 through 8030, in the event of the accidental discovery or recognition of any human remains in any location other than a dedicated cemetery during construction, the City and contractor/s shall take the following steps:

- (1) No further excavation or disturbance of the project site or any nearby area reasonably suspected to overlie adjacent human remains will occur until:
 - (A) the coroner of Yolo County has been contacted to determine that no investigation of the cause of death is required, and
 - (B) if the coroner determines the remains to be Native American:
 1. the coroner shall contact the Native American Heritage Commission within 24 hours;
 2. the Native American Heritage Commission shall identify the person or persons it believes to be the most likely descendant from the deceased Native American; and
 3. the most likely descendant may make recommendations to the landowner or the person responsible for the excavation work, for means of treating or disposing of, with appropriate dignity, the human remains and any associated grave goods, as provided in Section 5097.98 of the Public Resources Code; or

- (2) Where the following conditions occur, the landowner or his or her authorized representative shall rebury the Native American remains and associated grave goods with appropriate dignity on the property in a location not subject to further subsurface disturbance:
 - (A) the Native American Heritage Commission is unable to identify a most likely descendant or the most likely descendant fails to make a recommendation within 24 hours after being notified by the commission;
 - (B) the most likely descendant identified fails to make a recommendation; or
 - (C) the landowner or his or her authorized representative rejects the recommendation of the most likely descendant, and mediation by the Native American Heritage Commission fails to provide measures acceptable to the landowner.

Significance after Mitigation: Mitigation Measure 3.6-2 would reduce the potential impacts in the event of the accidental discovery or recognition of any human remains. In addition, records searches, Native American consultation, and intensive pedestrian field survey did not indicate that the WRTP Specific Plan Area or off-site improvement areas are sensitive for buried human remains. Therefore, although human remains can occur below ground with little or no surface manifestation, encountering such during buildout of the WRTP Specific Plan is considered unlikely. If buried human remains are encountered during construction without prior discovery, implementation of Mitigation Measure 3.6-2 and compliance with regulatory requirements reduce this impact to a less-than-significant level

GEOLOGY, SOILS, MINERALS RESOURCES, AND PALEONTOLOGICAL RESOURCES

Impact 3.7-1. Possible Damage to or Destruction of Unique Paleontological Resources.

Finding: Less than significant with mitigation. (Draft EIR, pp. 3.7-13 through 3.7-15.)

Explanation: Most of the WRTP Specific Plan Area and all of the proposed SR 113/County Road 25A interchange area are underlain by Holocene-age rock formations, which are not paleontologically sensitive. However, the southern portion of the WRTP Specific Plan Area and the proposed South Regional Pond would be constructed in paleontologically sensitive rock formations. This impact is considered potentially significant.

Most of the WRTP Specific Plan Area is underlain by Holocene-age Levee, Channel, and Basin Deposits. Furthermore, the geotechnical report prepared by Crawford & Associates (2020) demonstrated, based on the results of site-specific soil borings, that only Holocene-age deposits are present at the proposed SR 113/County Road 25A interchange improvements. As a common industry threshold, a fossil is typically considered a unique paleontological resource if it is more than 11,700 years old (i.e., the generally accepted end of the last glacial period of the Pleistocene Epoch). Holocene deposits contain only the remains of extant, modern taxa (if any resources are present), which are not considered “unique” paleontological resources. Therefore, earth-moving activities in the Levee, Channel, and Basin Deposits throughout most of the WRTP Specific Plan Area, and the entirety of the proposed Caltrans Off-site Improvement Area, would have no impact on unique paleontological resources. However, a mixture of the Riverbank and Modesto Formations is present in the southern portion of the WRTP Specific Plan Area and at the proposed South Regional Pond. As presented above in Table 3.7-1 and discussed in the 2035 General Plan and CAP EIR Impact 4.7-4 (pages 4.7-33 and 4.7-34) (City of Woodland 2016b), due to the

large number of vertebrate fossils recovered from these formations throughout the Sacramento and San Joaquin Valleys, including the vicinity of Woodland, these formations are considered paleontologically sensitive. General Plan Policies 7.E.1 and 7.E.2 are designed to help avoid impacts to paleontological resources. Earth-moving activities in the Riverbank and Modesto formations have the potential to accidentally damage or destroy unique paleontological resources, and the 2035 General Plan and CAP EIR determined that this impact was significant. For the same reasons discussed herein, WRTP Specific Plan and proposed South Regional Pond impacts to unique paleontological resources from earth-moving activities in the Riverbank and Modesto Formations are considered potentially significant.

Mitigation Measure 3.7-1: Conduct Construction Personnel Education, Stop Work if Paleontological Resources are Discovered, Assess the Significance of the Find, and Prepare and Implement a Recovery Plan, as Required.

To minimize the potential for destruction of, or damage to potentially unique, scientifically important paleontological resources during earth-moving activities, the measures described below shall be implemented by project applicants and contractors for future projects proposed under the WRTP Specific Plan within the Riverbank or Modesto Formations (in the southern portion of the WRTP Specific Plan Area and the proposed South Regional Pond area) before and during construction activities.

- Prior to the start of earthmoving activities that would disturb 1 acre of land or more within the Riverbank or Modesto Formations (in the southern portion of the WRTP Specific Plan Area and the proposed South Regional Pond area), inform all construction personnel involved with earthmoving activities regarding the possibility of encountering fossils, the appearance and types of fossils likely to be seen during construction, and proper notification procedures should fossils be encountered. This worker training may either be prepared and presented by an experienced field archaeologist at the same time as construction worker education on cultural resources or prepared and presented separately by a qualified paleontologist.
- If paleontological resources are discovered during earthmoving activities, the construction crew shall immediately cease work in the vicinity of the find and notify the City of Woodland Community Development Department. Retain a qualified paleontologist to evaluate the resource and prepare a recovery plan. The recovery plan may include, but is not limited to, a field survey, construction monitoring, sampling and data recovery procedures, museum curation for any specimen recovered, and a report of findings. Recommendations in the recovery plan that are determined by the City to be necessary and feasible shall be implemented before construction activities can resume at the site where the paleontological resources were discovered.

Significance after Mitigation: This mitigation measure is consistent with the 2035 General Plan and CAP EIR Mitigation Measure 4.7-4 (pages 4.7-34 and 4.7-35). Consistent with the findings of the 2035 General Plan and CAP EIR, implementation of Mitigation Measure 3.7-1 would reduce the impacts of WRTP Specific Plan and associated offsite infrastructure implementation on unique paleontological resources to a less-than-significant level because construction workers would be alerted to the possibility of encountering paleontological resources and, in the event that resources were discovered, fossil specimens would be recovered and recorded and would undergo appropriate curation.

HAZARDS AND HAZARDOUS MATERIALS

Impact 3.8-1. Create a Significant Hazard to the Public or the Environment through Reasonably Foreseeable Upset and Accident Conditions Involving the Release of Hazardous Materials into the Environment.

Finding: Less than significant with mitigation. (Draft EIR, pp. 3.8-16 through 3.8-20.)

Explanation: The WRTP Specific Plan Area includes above-ground storage tanks containing fuels and chemicals; several small sheds; a large building where equipment is stored and maintained; water wells and associated equipment; residual pesticides from agricultural activities in soils; and a residence with an on-site septic system and the potential for asbestos and lead-based paint. Construction of the off-site improvements could result in exposure to lead-based paint, aerially-deposited lead in soils, chemically-treated wood residue, and residual pesticides from agricultural activities in soils. Therefore, workers and members of the public could be exposed to hazards during construction activities from accidental releases of hazardous materials. This impact is considered potentially significant.

Federal, State, and local regulations and City of Woodland General Plan Policies 3.I.1, 3.I.2, 8.E.1, 8.E.2, 8.E.3, and 8.E.4 (many of which are described in detail in Section 3.8.3, “Regulatory Framework” of the EIR) are designed to reduce the potential for adverse impacts from accidental release of hazardous materials, including risks associated with future operation of the various types of land uses that are proposed as part of the WRTP Specific Plan. The 2035 General Plan and CAP EIR determined that this impact was less than significant. As described in detail in the “Environmental Setting” above, a search of State and federal hazardous materials databases indicated there are no known hazardous materials sites within 0.5 mile of the WRTP Specific Plan Area, proposed off-site South Regional Pond, or the proposed off-site SR 113/CR 25A interchange improvements (DTSC 2020, SWRCB 2020, EPA 2020). Caltrans has entered into an agreement with DTSC to ensure the safe reuse of soils contaminated with aeriallydeposited lead during construction of highway projects. The agreement requires Caltrans to sample and test soils for lead content, place a certain volume of cover material on top of the soils when the lead content is above specified levels, place the soils only in areas that are at least 5 feet above the maximum water table elevation, cover leadcontaining soil stockpiles with plastic until the soil is reused, and properly dispose of excavated soils that are not reused (DTSC 2016a). Because Caltrans is required to implement the conditions of the Soil Management Agreement for Aerially Deposited Lead-Contaminated Soils (DTSC 2016b) per California Health and Safety Code 25187(b)(5), impacts from human health and environmental exposure to aerially-deposited lead at the off-site Caltrans SR 113/CR 25A interchange are considered less than significant. Geocon (2020) noted that concrete, asphalt, and expansion joint fill material at the Caltrans SR 113/CR 25A interchange bridge structure may contain asbestos; asbestos-containing pipe may be also present within the bridge structure; roadway traffic striping at the interchange may contain lead and chromium; and treated-wood guardrail posts are present at the interchange. Asbestos, lead in traffic striping, and treated-wood waste require proper handling and disposal in accordance with State and federal regulatory requirements. Design and construction of the off-site SR 113/CR 25A intersection improvements are regulated by Caltrans, and would comply with requirements related to the proper handling and disposal of hazardous materials contained in the Standard Plans and Specifications (Caltrans 2018). Therefore, impacts from human health and environmental exposure to asbestos, lead-based paint, and treated wood at the off-site Caltrans SR 113/CR 25A interchange are considered less than significant. As described in detail in the “Environmental Setting” above, based on the results of a site-specific Phase I ESA (Geocon 2018:12–13), the WRTP Specific Plan Area includes several above-ground storage tanks containing fuels and fertilizers; a large building where equipment is stored and maintained; several small sheds; numerous agricultural water wells and

associated equipment; an older existing residence and barn (with a domestic water well); and a former residence that has been demolished. Although the current property owner indicated that the large storage building is not used to store agricultural chemicals, Geocon was not provided with access to the interior of the 1,500-square-foot storage building or any of the smaller storage sheds. Since the WRTP Specific Plan Area and the off-site South Regional Pond site, as well as the areas that would be acquired for improvements adjacent to the existing SR 113/CR25A interchange, have been in agricultural use for decades, the potential exists for elevated levels of residual agricultural chemicals to be present in the soil. This is particularly true for the southern portion of the WRTP Specific Plan Area and the off-site South Regional Pond site, which consist of an almond orchard. Orchards and orchard-cultivated soils generally require the repeated application of higher levels of agricultural chemicals to fruit or nut trees. Geocon conducted a limited Phase II screening-level pesticide assessment for soils in the WRTP Specific Plan Area. Geocon obtained 20 soils samples from locations throughout the WRTP Specific Plan Area, including two soil samples from the southeastern parcel where the almond orchard is located. The results indicated that trace amounts of 4,4'-DDT (dichlorodiphenyltrichloroethane), 4,4'-DDE (dichlorodiphenyldichloroethylene), and dieldrin were present in WRTP Specific Plan Area soils. Because the proposed South Regional Pond and the areas that would be acquired for improvements adjacent to the existing SR 113/CR 25A interchange have also been in agricultural use for decades, it is likely that similar residual pesticides are present in those locations as well. DDT was used as an insecticide prior to 1972, when it was banned by EPA. DDE is a byproduct of the breakdown of DDT. Dieldrin was used as an insecticide on crops until 1974, when it was also banned by EPA. The amounts of DDT, DDE, and dieldrin detected at the WRTP Specific Plan Area do not exceed EPA screening levels for residential land uses, and the same is likely the case for the adjacent South Regional Pond site. The Phase II pesticide assessment also found arsenic in all of the 20 WRTP Specific Plan Area soil samples at concentrations that exceed DTSC's Health and Ecological Risk screening level. However, because arsenic is widely found in soil as a result of the natural geologic weathering cycle, arsenic levels are generally compared to standardized "background" concentration levels as part of a risk assessment. The amount of arsenic in the soil in the WRTP Specific Plan Area does not exceed DTSC's arsenic background screening levels, and the same is likely the case for the off-site improvement areas. Therefore, Geocon determined there is no evidence that a hazard exists to human health or the environment from on-site agricultural chemicals, and further testing in the WRTP Specific Plan Area is not necessary (Geocon 2018:13–15). Based on the similar nature of crops and the time period of agricultural use at the off-site improvement areas, residual metal and pesticide levels are likely similar to those found in the WRTP Specific Plan Area, and thus residual metal (arsenic) and agricultural pesticides in the off-site improvement areas would not represent a human health or environmental hazard. Geocon noted that any unused agricultural and domestic wells, along with septic systems in the WRTP Specific Plan Area should be properly abandoned per Yolo County permit requirements, which are designed to reduce adverse impacts to the environment such as leaks and spills of hazardous materials during the decommissioning process. Due to the age of the on-site residence and barn, asbestos and lead-based paint could be encountered during demolition activities. Therefore, Geocon recommended that an asbestos-containing materials and lead-based paint survey be completed prior to demolition. Finally, Geocon determined that one REC is present at the project site: the diesel above-ground storage tank associated with the agricultural well on the East Central Parcel in the WRTP Specific Plan Area. Geocon recommended that this tank be removed, replaced with a double-walled tank, or placed within secondary containment to prevent further releases. Because soil staining was observed, soils around the tank should be tested, and if the soil has been contaminated with petroleum hydrocarbons, it should be removed and properly disposed of (Geocon 2018:15). Furthermore, the on-site agricultural residence may have septic system which, if not cleaned and closed properly, could result in exposure of construction workers and future residents to hazardous materials. Therefore, for the reasons stated above, this impact is considered potentially significant.

Mitigation Measure 3.8-1: Prepare a Remedial Action Plan, and Conduct Phase I and/or II Environmental Site Assessments and Implement Required Measures if Stained or Odiferous Soil is Discovered.

To reduce health hazards associated with potential exposure to hazardous substances in the WRTP Specific Plan Area and the off-site South Regional Pond, implement the following measures before the start of ground-disturbing activities in areas of debris piles, pole-mounted transformers, where demolition will occur, and other areas where evidence of hazardous materials contamination is observed or suspected through either obvious or implied evidence (i.e., stained or odorous soil):

- Prepare a remedial action plan that identifies any necessary remediation activities including excavation and removal of contaminated soils and redistribution of clean fill material at the diesel above-ground storage tank associated with the agricultural well on the East Central Parcel, and other areas within the WRTP Specific Plan Area, if necessary. All above-ground storage tanks shall be removed in accordance with State and local regulations. The remedial action plan shall include measures for the safe transport, use, and disposal of contaminated soil and building debris removed from the project site. During construction, project applicants for future projects proposed under the WRTP Specific Plan and the offsite South Regional Pond shall be required to comply with the remedial action plan and all applicable federal, State, and local laws. The remedial action plan shall outline measures for specific handling and reporting procedures for hazardous materials and disposal of hazardous materials removed from the project site at an appropriate off-site disposal facility.
- In the event that contaminated groundwater is encountered during site excavation activities, the contractor shall report the contamination to the appropriate regulatory agencies, dewater the excavated area, and treat the contaminated groundwater to remove contaminants before discharge into the sanitary sewer system.
- If stained or odiferous soil is discovered during project-related construction activities, project applicants for future projects proposed under the WRTP Specific Plan and the off-site South Regional Pond shall retain a registered environmental assessor to conduct a Phase I ESA, and if necessary, Phase II ESAs and/or other appropriate testing. Recommendations in the Phase I and II ESAs to address any contamination that is found shall be implemented before initiating ground-disturbing activities in these areas.
- Notify the appropriate federal, State, and local agencies if evidence of previously undiscovered soil or groundwater contamination (e.g., stained soil, odorous groundwater) or if known or previously undiscovered underground storage tanks are encountered during construction activities. Any contaminated areas shall be remediated in accordance with recommendations made by the Environmental Management Department (EMD), Central Valley RWQCB, Department of Toxic Substances Control (DTSC), and/or other appropriate federal, State, or local regulatory agencies.
- Retain a licensed contractor to remove all septic systems in accordance with local, State, and federal regulations.
- Retain a California Occupational Safety and Health Administration (Cal-OSHA) certified Asbestos Consultant before demolition of any buildings in the WRTP Specific Plan Area to investigate whether any asbestos-containing materials or lead-based paints are present, and could become friable or mobile

during demolition activities. Provide a copy of the report to YSAQMD. If any materials containing asbestos or lead-based paints are found, they shall be removed by an accredited contractor in accordance with Environmental Protection Agency (EPA) and Cal-OSHA standards as required by YSAQMD. In addition, all activities (construction or demolition) in the vicinity of these materials shall comply with Cal-OSHA asbestos and lead worker construction standards. The materials containing asbestos and lead shall be disposed of properly at an appropriate off-site disposal facility.

- Properly close and abandon all on-site groundwater wells in accordance with Yolo County requirements.

Significance after Mitigation: Implementing Mitigation Measure 3.8-1 would reduce the potentially significant impact from accidental release of hazardous materials to a less-than-significant level, consistent with the findings of the 2035 General Plan and CAP EIR, because potentially hazardous materials would be identified; a site management plan that specifies remediation activities and procedures to appropriately identify, stockpile, handle, reuse, and/or remove and dispose of hazardous materials would be prepared and implemented; and hazardous materials that are encountered would be removed and properly disposed of or otherwise remediated by licensed contractors in accordance with federal, State, and local laws and regulations.

Impact 3.8-2. Emit Hazardous Emissions or Handle Hazardous or Acutely Hazardous Materials, Substances, or Waste within One-Quarter Mile of an Existing or Proposed School.

Finding: Less than significant with mitigation. (Draft EIR, pp. 3.8-20 through 3.8-22.)

Explanation: Existing schools are located approximately 300 feet and 0.3 mile from the WRTP Specific Plan boundary. The WRTP Specific Plan accommodates up to 10 acres for a future school in the medium density residential zone at the southwestern corner of Parkland Avenue and Harry Lorenzo Avenue. The WRTP Specific Plan also includes retail, commercial, and light industrial land uses that may use and store hazardous materials. Because the exact types of businesses and the exact types and quantities of hazardous materials that may be used by these businesses in the future cannot be known at this time, this impact is considered potentially significant.

The privately owned and operated Woodland Christian School (grades K–12), located at 1787 Matmor Road, is approximately 300 feet northwest of the WRTP Specific Plan Area, on the west side of SR 113. Pioneer High School (part of the Woodland Joint Unified Public School District), located at 1400 Pioneer Avenue, is approximately 0.3-mile northeast of the WRTP Specific Plan Area. The WRTP Specific Plan accommodates up to 10 acres for a future school in the medium density residential zone at the southwestern corner of Parkland Avenue and Harry Lorenzo Avenue. The relevant school district (or the private entity responsible for operating the school if it is privately owned) would be responsible for conducting the appropriate site-specific analysis required by the California Department of Education to determine the suitability of the potential school site, before moving forward with improvement plans. Under Public Resources Code Section 21151.4, unless certain conditions are first met, an EIR or mitigated negative declaration may not be certified or adopted for a project within one-quarter mile of a school if a project would involve constructing or altering facilities that meet any of the following criteria:

- might reasonably be anticipated to emit hazardous air emissions (i.e., toxic air contaminants);

- ▶ would handle an extremely hazardous substance or a mixture containing extremely hazardous substances in a quantity equal to or greater than the State threshold quantity specified in Section 25532(j) of the California Health and Safety Code; or
- ▶ may pose a health or safety hazard to persons who would attend or would be employed at the school.

For an EIR to be certified or mitigated negative declaration to be adopted for such a project, both of the following must have already occurred:

1. The lead agency preparing the EIR must have consulted with the school district with jurisdiction about the potential impact of the project on the school.
2. The school district must have been notified about the project in writing at least 30 days before the proposed certification of the EIR or adoption of the mitigated negative declaration.

Proposed land uses in the WRTP Specific Plan Area include Village Center (retail or mixed use); Commercial–Business Park, Office, Research, High-Tech, or Light Industrial Flex; and Commercial–Highway. These facilities may handle hazardous substances, although they would not be expected to handle large quantities of acutely hazardous substances since the WRTP Specific Plan Area does not include zoning for heavy industrial land uses. However, because the exact businesses that would be operating in the WRTP Specific Plan Area and the types and quantities of hazardous materials that may be used by those businesses cannot be known at this time, in order to be conservative, this impact is considered potentially significant.

Mitigation Measure 3.8-2: Notify and Consult with Affected Schools, and Implement a Hazardous Materials Business Plan (if Required).

Project applicants for future retail, commercial, or industrial projects proposed under the WRTP Specific Plan and supportive infrastructure improvements that would involve the long-term use of hazardous materials for project operation shall notify the Woodland Christian School, the Pioneer High School, and the Woodland Joint Unified School District, as appropriate based upon project location relative to school locations, in writing, and shall consult with appropriate school or district personnel about the types of activities that would occur and their estimated timing. Examples of the types of hazardous materials that could be used during proposed operational activities shall be provided. The written notification shall be provided at least 30 days before the commencement of any construction activities.

Future businesses within the WRTP Specific Plan Area that handle and/or store a hazardous material or a mixture containing a hazardous material in amounts greater than the specified threshold quantities in Chapter 6.95, Section 25505 of the California Health & Safety Code shall prepare a Hazardous Materials Business Plan. The plan shall provide emergency plans and procedures that the businesses will follow in the event of a release or threatened release of a hazardous material, along with the other requirements of Section 25505 including an inventory of hazardous materials, site plan showing material storage areas and ingress and egress points for emergency vehicles, and employee safety training.

Significance after Mitigation: Implementing Mitigation Measure 3.8-2, along with compliance with other regulations, guidelines, and laws related to hazardous materials use, handling, transport, and disposal (discussed in the “Regulatory Framework” section above) would reduce the impact related to handling of hazardous materials

within one-quarter mile of a school to a less-than-significant level, consistent with the findings of the 2035 General Plan and CAP EIR, because affected schools would be notified prior to the start of construction activities, and proper hazardous materials spill prevention techniques would be implemented during construction and operational activities. Furthermore, the relevant school district (or the private entity responsible for operating the school if it is privately owned) would be responsible for conducting the appropriate site-specific analysis required by the California Department of Education to determine the suitability of the potential school site, before moving forward with improvement plans.

HYDROLOGY, FLOODING, AND WATER QUALITY

Impact 3.9-1. Substantially Increase the Rate or Amount of Surface Runoff Resulting in Flooding, Create or Contribute Runoff Water which would Exceed the Capacity of Existing or Planned Stormwater Drainage Systems, Provide Substantial Additional Sources of Polluted Runoff.

Finding: Less than significant with mitigation. (Draft EIR, pp. 3.9-18 through 3.9-22.)

Explanation: Implementation of the WRTP Specific Plan and the off-site supporting infrastructure would increase the rate and amount of surface water runoff (primarily from construction of new impervious surfaces), which could exceed the capacity of stormwater conveyance systems, result in on-site or off-site flooding, and result in additional sources of polluted runoff. This impact is considered potentially significant.

As discussed in the 2035 General Plan and CAP EIR Impact 4.9-3 (pages 4.9-43 through 4.9-47) (City of Woodland 2016b), new urban development on currently undeveloped land would result in alteration of site-specific drainage patterns, which in turn could result in erosion, sedimentation, and on-site or downstream flooding. Increased peak flow rates may exceed drainage system capacities, exacerbate erosion in overland flow and drainage swales and creeks, and result in downstream sedimentation. Sedimentation, in turn, could increase the rate of deposition in natural receiving waters and reduce conveyance capacities, resulting in an increased risk of flooding. Erosion of upstream areas and related downstream sedimentation typically leads to adverse changes to water quality and hydrology.

The addition of impervious surfaces and drainage infrastructure from urbanization results in increased runoff volumes and dry weather flows, increased frequency and number of runoff events, and increased long-term cumulative duration of flows, as well as increased peak flows. However, the City of Woodland's Storm Drainage Facilities Master Plan Update and Preliminary Engineering (2006a) includes requirements for development to preserve water quality and minimize localized flooding during storm events. It outlines floodplains, design criteria, storm drainage water quality monitoring, and implementation of future facilities. The City's Drainage Master Plan was updated in 2017, and revised in 2018, to address issues specific to the South Urban Growth Area, particularly as related to additional urban development projected in the City's updated General Plan, in the Storm Drainage Facilities Master Plan South Urban Growth Area (City of Woodland 2018). Design Standards include drainage facility capacity criteria designed to ensure the containment and/or conveyance of the design storm. The City's Engineering Standards: Design Standards, Standard Details and Construction Specifications (City of Woodland 2016a) include design capacities for storm drains, open channels, bridges, culverts, regional storage facilities, and drains, as well as requirements to ensure access for maintenance and operation of drainage systems. All development projects in the City are required to comply with City's Post Construction Standard Plan (2015) to reduce post-construction runoff and control urban runoff pollution in compliance with of the City's Phase II MS4 permit through

the incorporation of BMPs, LID, and hydromodification management techniques. This includes the requirement to treat stormwater runoff through evapotranspiration, infiltration, stormwater harvesting and reuse, or biotreatment. Hydromodification management requires regulated projects to slow and minimize the amount of runoff so that there is no net-increase in post-construction runoff flow rate as compared to the pre-construction value for a 2-year, 24-hour storm event (City of Woodland 2015:24). Furthermore, a SWPPP would be required in compliance with the NPDES Construction General Permit and would include BMPs to avoid construction-related erosion and sedimentation on- or off-site. Furthermore, implementation of General Plan Goal 5.I and Policies 5.I.1, 5.I.3, 5.I.4, 5.I.5, 5.I.7, and 7.A.4 are also designed to reduce on-site and downstream erosion and sedimentation and alteration of drainage patterns. The 2035 General Plan and CAP EIR included Mitigation Measure 4.9-3 (page 4.9-47), which recommended adoption of General Plan Policy 5.I.4 related to implementation of LID features to improve stormwater quality. The 2035 General Plan and CAP EIR determined that after incorporation of General Plan Policy 5.I.4, the impact would be less than significant (City of Woodland 2001:Section 6).

The City has determined that a new off-site regional detention basin, called the South Regional Pond, is necessary to detain a portion of the stormwater flows from the WRTP Specific Plan Area as well as future planned growth. The proposed South Regional Pond would detain stormwater flows from a portion of the WRTP Specific Plan Area. The South Regional Pond would be constructed to a size of approximately 4 acres, and would be located adjacent to and east of the southern portion of the WRTP Specific Plan Area, south of County Road 25A (Cunningham Engineering 2020). Because the South Regional Pond is outside of (but adjacent to) the City's Planning Area boundary, it was not included as part of the 2035 General Plan and CAP EIR. Construction of the proposed South Regional Pond would include clearing, excavating, and grading of the basin, and installing inflow and outflow structures. The City would perform periodic maintenance activities once the basin is operational. The potential environmental impacts of constructing and operating the South Regional Pond are evaluated in all of the topic area sections throughout the EIR. Preliminary stormwater engineering, in the form of a Stormwater Management Technical Memorandum, has been performed for the WRTP Specific Plan Area and surrounding areas that drain to the WRTP Specific Plan Area (Cunningham Engineering 2020). Stormwater in the northern portion of the WRTP Specific Plan Area drains to the east. As part of the Spring Lake Specific Plan, stormwater from the northerly portion of the WRTP Specific Plan Area was planned for future drainage to and detention in the existing off-site East Regional Pond, which was sized at the time of construction to accommodate flows from this portion of the WRTP Specific Plan Area with proposed development. The East Regional Pond functions as a water quality treatment basin and serves to attenuate postdevelopment peak flows for a 100-year storm/10-day event (as required by the City). Furthermore, underground drainage pipelines adjacent to the WRTP Specific Plan Area to the east, in the Spring Lake development, were sized to accommodate projected future stormwater drainage outflows from development in the northern portion of the WRTP Specific Plan Area. A small portion of the WRTP Specific Plan Area adjacent to SR 113 would be required to completely retain, detain, and treat all of the stormwater flows that are generated within this approximately 30- acre area using LID measures and distributed water quality BMPs (to allow the large central proposed park area to fully function as a park, rather than integrating a detention basin). An existing unlined, on-site drainage channel along the east side of SR 113 would be modified (to a wider and deeper trapezoidal channel) to carry a portion of the WRTP Specific Plan Area's stormwater flows southward to a new underground drainage pipe, that would cross underneath County Road 25A and discharge to the South Regional Pond. An approximately 4-acre on-site water quality and hydromodification basin would be constructed in the southeast corner of the WRTP Specific Plan Area; this basin would receive flows from the southeastern portion of the WRTP Specific Plan Area. A new on-site underground drainage pipeline would be installed south of County Road 25A to convey flows in this area eastward to the proposed South Regional Pond. A network of appropriately

sized underground drainage pipelines would be installed throughout the WRTP Specific Plan Area to convey stormwater flows to the on-site and off-site basins. Flows from the proposed on-site basin in the southeast corner and proposed South Regional Pond would be conveyed eastward along County Road 25A to the existing South Canal, where flows are conveyed northward to the City's storm drainage pumping facility at the intersection of County Road 103 and East Main Street. From the East Regional Pond (which would accept stormwater from the northern portion of the WRTP Specific Plan Area as described above), stormwater is conveyed from the pond to the Gibson Canal, then to the South Canal northward to the City's storm drainage pumping facility. From the pumping facility, all City flows are conveyed eastward to an outfall channel that discharges directly into the Yolo Bypass, approximately 4.5 miles northeast of the WRTP Specific Plan Area (City of Woodland 2006a: Map 14).

The City of Woodland Storm Drainage Facilities Master Plan South Urban Growth Area (City of Woodland 2018) estimates that 30 cubic feet per second of pumping and construction of the North Regional Pond will accommodate the buildout of the Spring Lake Specific Plan plus approximately 80 additional acres of currently unbuilt residential development, flowing to the existing Farmers Central Channel. It is assumed that non-residential development could alternatively be accommodated, as long as the development acreage is hydrologically equivalent to 80 acres of residential use. Based on the modeling conducted for the Storm Drainage Facilities Master Plan South Urban Growth Area, development of more than the equivalent of 80 acres within the WRTP Specific Plan Area would trigger further improvements to the new pump station constructed near the site of the existing South Canal Pump Station, the East Main Channel, and the Yolo Bypass Outfall. However, in support of the more recent ongoing update of the City's Citywide Storm Drainage Facility Master Plan, Wood Rodgers provided preliminary findings to the City for revised baseline conditions from the overall City modeling being performed for the City's North Area. The findings of this recent downstream analysis indicate that the amount of developable acreage is likely higher without implementation of these downstream improvements. With the full combination of the North and South Areas of the City and the incorporation of the 2009 Yolo County rainfall, the South Area conditions have changed along the High Line Ditch. In the revised simulation, the volume of water spilling over the High Line Ditch under baseline is greater than previously estimated. With the recently installed infrastructure and a higher allowable spill over the High Line Ditch, it is anticipated that more than 80 acres of development in the South Area can occur before triggering new improvements (Nick Ponticello, personal communication, February 22, 2021). To extend development in the WRTP Specific Plan Area beyond the 80-acre residential equivalent, additional study will be necessary, if downstream improvements are not yet operational.

Design and construction of the off-site SR 113/County Road 25A intersection improvements is regulated by Caltrans, and would comply with requirements contained in the Standard Plans and Specifications (Caltrans 2018) and the Highway Design Manual (Caltrans 2020), as well as the Caltrans NPDES permit issued by SWRCB (Order No. 2012-0011-DWQ, NPDES No. CAS000003). Although only a small amount of additional impervious surfaces would be created by the proposed interchange improvements, the stormwater runoff from these improvements would flow onto the surrounding areas including the WRTP Specific Plan Area, and therefore must be included in stormwater planning for the WRTP Specific Plan.

Operational water quality treatment design for the WRTP Specific Plan Area would be addressed by implementing a combination of LID measures, standard treatment control BMPs, and 'end-of-pipe' temporary water quality storage within existing and proposed detention basins (Cunningham Engineering 2020). The NPDES General Permit also contains requirements related to hydromodification, including matching the post-project 2-year/24-hour peak flows to pre-project levels. The hydromodification requirements would be accomplished via a combination of

upland LID-style runoff reduction measures and end-of-pipe detention storage within existing and/or proposed detention basins. As noted by Cunningham Engineering (2020) these measures could include the following:

- ▶ Small-scale distributed drainage management features such as shallow, decentralized surface detention areas and/or infiltration areas that are included in streetscapes and individual site landscapes as a design element (in addition to a functional requirement) throughout the WRTP Specific Plan Area;
- ▶ Reducing new impervious surfaces, which could be accomplished by using compact building footprints, alternative driveway layouts and/or materials, narrower roadway cross-sections (as appropriate), pervious pavement, and efficient parking to minimize the overall area of the lot on a per-parking-space basis;
- ▶ Disconnection of new impervious areas by placing pervious areas (e.g., landscaping and/or pervious pavement) downstream of a site's impervious surfaces (e.g., roofs and conventional pavement), with site grading/landscaping designs that provide for sheet flow from those impervious surfaces onto the pervious surface areas;
- ▶ Treatment control BMPs, which could include vegetated swales, stormwater planters, rain gardens, pervious pavement, and inclusion of a water quality treatment component as part of the detention basins.

In accordance with General Plan Policies 5.I.3 and 5.I.7, the Technical Guidance Manual for Stormwater Quality Control Measures (City of Woodland 2006b), and the Engineering Standards: Design Standards, Standard Details and Construction Specifications (City of Woodland 2016a), project applicants for future projects proposed under the WRTP Specific Plan are required to design site-specific on-site stormwater systems and submit the proposed designs to the City for approval prior to the start of any construction activities. The WRTP Specific Plan identifies BMPs, LID, and hydromodification management techniques that will be incorporated into the site-specific stormwater system designs and operation as required by the City's Post Construction Standard Plan (2015) to reduce post-construction runoff and control urban runoff pollution in compliance with of the City's Phase II MS4 permit. The proposed development in the WRTP Specific Plan Area would substantially increase the rate or amount of surface runoff, primarily as a result of new impervious surfaces. Because detailed drainage and stormwater flooding calculations and designs for the WRTP Specific Plan Area and the off-site SR 113/County Road 25A interchange improvements have not yet been performed, stormwater generated from implementation of the WRTP Specific Plan and the off-site interchange improvements could result in on- or off-site flooding, create or contribute runoff water which would exceed the capacity of existing or planned stormwater drainage systems, and/or provide substantial additional sources of polluted runoff. Therefore, this impact is considered potentially significant.

Mitigation Measure 3.9-1a: Prepare Additional Storm Drainage Analysis for determining Amount of New Development Acreage Beyond the Previously Identified 80 Residential Acres Allowable in the South Urban Growth Area and Submit to the City for Review and Approval.

The WRTP shall be required to fund an additional stormwater drainage analysis that utilizes the revised baseline conditions modeling and includes detailed information defining the operational capacity of the newly-installed infrastructure. A model will then be created that incorporates the pump station, detention, and conveyance improvements that have already been constructed, and then incorporates the full buildout of the Spring Lake Specific Plan Development. At that point, the fully developed acreage of the WRTP Specific Plan will be added to determine the new developable acreage (in terms of stormwater drainage)

that can be accommodated with current infrastructure. This additional drainage analysis will also be required to determine what additional storm drainage infrastructure is needed to support full buildout of the WRTP Specific Plan. Building permits for development beyond the identified currently developable acreage will only be approved with confirmation that the required storm drainage and water quality treatment infrastructure is in place.

Significance after Mitigation: Implementation of Mitigation Measure 3.9-1 would reduce the WRTP Specific Plan's impacts from increased stormwater runoff resulting in an increased need for stormwater conveyance, stormwater-related flooding, and stormwater pollutants to a less-than-significant level because appropriately sized pipelines and detention basins, along with the appropriate LID features and water quality BMPs, that are specifically engineered to ensure that WRTP Specific Plan Area flows are conveyed such that flooding does not occur and to provide appropriate water quality treatment, would be integrated as part of the design and implementation of the WRTP Specific Plan Area.

TRANSPORTATION AND CIRCULATION

Impact 3.13-1. Conflict with A Program, Plan, Ordinance, or Policy Addressing the Circulation System, including Transit, Roadway, Bicycle, and Pedestrian Facilities.

Finding: Less than significant. (Draft EIR, pp. 3.13-16 through 3.13-20.)

Explanation: The WRTP Specific Plan does not conflict with adopted policies, plans, or programs for bicycle, transit, or pedestrian facilities, nor would it adversely affect performance or safety of such facilities. The WRTP Specific Plan contains provisions that will enhance these modes to encourage greater use of transit and more walking and bicycling in the future. All new facilities, as proposed in Chapter 4 of the WRTP Specific Plan, "Circulation and Mobility," would be constructed to applicable design standards that have been created to minimize the potential for conflicts or collisions. The impact is considered less than significant.

Mitigation Measure 3.13-1a: The Draft WRTP Specific Plan Finance Plan shall incorporate a Transit Contribution.

While not required as mitigation for a significant impact under CEQA, the following would be required for planning purposes to ensure transit equipment, infrastructure, and service is adequately funded to provide necessary service to the WRTP Specific Plan Area:

The project applicant shall contribute its fair-share of the cost associated with providing transit service to the WRTP Specific Plan Area. It is anticipated that new transit vehicles may be required to provide additional service to the WRTP Specific Plan Area. However, the final determination of additional capital equipment or other costs shall be determined by the City of Woodland in coordination with YCTD and as identified in the Master TDM/VMT Program. The fair-share cost or a plan for providing the fair-share cost over time shall demonstrate funding is adequate to provide the necessary transit service or range of services required to meet the demand in the WRTP Specific Plan Area, as determined through the WRTP Specific Plan's required coordination with YCTD and UC Davis. The funding mechanism(s) for transit and other TDM measures shall be outlined in the WRTP Specific Plan Finance Plan, and development projects shall be required to commit to contributing fair-share costs prior to the issuance of respective building permits by the City of Woodland.

Mitigation Measure 3.13-1b: On-site Transit Stops.

While not required as mitigation for a significant impact under CEQA, the following would be required for planning purposes to ensure proposed transit infrastructure provides for adequate service to the WRTP Specific Plan Area:

The WRTP Specific Plan calls for development of a shared mobility hub in the Village Center. The project applicant shall develop detailed plans, to be reviewed and approved by the City of Woodland and YCTD and construct the shared mobility hub improvements in the Village Center and identify the specific locations of sheltered transit stops with bus turnouts at other locations. It is anticipated that other stops would be located near the business park uses north and west of the Village Center. The City of Woodland and YCTD shall approve the location, design, and implementation timing of the sheltered transit stops and bus turnouts prior to the approval of the first final map or as otherwise required by the City. If transit stops are located on-street for segments of roadways that do not have designated curbside on-street parking that can be designated for a bus stop (i.e., only travel lanes, bike lanes), the street cross-sections shall be modified to provide for a curbside bus stop, or multiple stops if needed for bus operations.

Significance after Mitigation: The WRTP Specific Plan does not conflict with adopted policies, plans, or programs for bicycle, transit or pedestrian facilities, nor would it adversely affect performance or safety of such facilities. This impact is less than significant. Mitigation Measures 3.13-1a and 3.13-1b are not required to address a significant impact under CEQA, but serve as conditions of approval for planning purposes to ensure that adequate funding is contributed by future development within the WRTP Specific Plan Area, as well as provides for a transit infrastructure plan for the WRTP Specific Plan Area.

Impact 3.13-2. Substantially Increase Hazards Due to a Design Feature or Incompatible Uses.

Finding: Less than significant with mitigation. (Draft EIR, pp. 3.13-20 through 3.13-21.)

Explanation: Construction vehicles and equipment associated with development of the WRTP Specific Plan Area and off-site improvement areas would result in utilize local roadways, which could cause disruptions to the transportation network and degradation to the roadways. Also, the use of large trucks to transport equipment and materials to and from the worksite could also affect roadway conditions on the access routes by increasing the rate of roadway wear. The degree to which this impact would occur would depend on the design (pavement type and thickness) and the existing condition of the roadway. Implementation of the WRTP Specific Plan will modify the existing transportation network to accommodate existing and future users that could change existing travel patterns or traveler expectations. This impact is considered potentially significant.

The WRTP Specific Plan will modify the existing transportation network generally to expand existing facilities or to construct new facilities to accommodate planned population and employment growth. Construction vehicles and equipment associated with development in the WRTP Specific Plan Area and off-site improvement areas would maneuver among the general-purpose vehicles on local roads, which could cause safety hazards. The presence of haul trucks and other on-road construction vehicles could increase hazard risks on existing roadways. Construction activities could result in disruptions to the transportation network near project sites, including the possibility of temporary lane closures, street closures, sidewalk closures, and bikeway closures. Also, the use of large trucks to transport equipment and materials to and from the worksite could also affect roadway conditions on the access routes by increasing the rate of roadway wear. The degree to which this impact would occur would depend on the

design (pavement type and thickness) and the existing condition of the roadway. This impact is considered potentially significant. The WRTP Specific Plan would not increase hazards due to design features of transportation facilities. Implementation of the Specific Plan will adhere to applicable design standards. All existing facility modifications and new facilities resulting from the circulation diagram proposed improvements would be constructed to the City of Woodland Engineering Standards: Design Standards, Standard Details and Construction Specifications (2016), which have been developed to minimize the potential for conflicts or collisions. In addition, the Caltrans off-site improvements would be regulated by Caltrans, and would be designed and constructed in accordance with Caltrans standards and guidelines developed to promote safety. This anticipated increase in traffic during operations and expansion of the transportation network with implementation of the Specific Plan has no potential to substantially increase traffic safety hazards on area roadways, and no impact would result from operations under the WRTP Specific Plan.

Mitigation Measure 3.13-2: Implement a Construction Traffic Control Plan

Prior to any construction activities for the WRTP Specific Plan, the applicant shall prepare a detailed Construction Traffic Control Plan and submit it for review and approval by the City Department of Public Works. The applicant and the City shall consult with Caltrans, YoloBus, and local emergency service providers for their input prior to approving the Plan. The plan shall ensure that acceptable operating conditions on local roadways and freeway facilities are maintained during construction. A copy of the construction traffic control plan shall be submitted to local emergency response agencies and these agencies shall be notified at least 14 days before the commencement of construction that would partially or fully obstruct roadways. At a minimum, the plan shall include:

- The number of truck trips, time, and day of street closures
- Time of day of arrival and departure of trucks
- Limitations on the size and type of trucks, provision of a staging area with a limitation on the number of trucks that can be waiting
- Provision of a truck circulation pattern
- Provision of a driveway access plan so that safe vehicular, pedestrian, and bicycle movements are maintained (e.g., steel plates, minimum distances of open trenches, and private vehicle pick up and drop off areas)
- Maintain safe and efficient access routes for emergency vehicles
- Maintain safe and efficient access routes for farming equipment and vehicles
- Manual traffic control when necessary
- Proper advance warning and posted signage concerning street closures
- Provisions for pedestrian safety

Significance after Mitigation: Mitigation Measures 3.13-2 would reduce the construction-related impacts to the transportation network and roadways to a less-than-significant level because the plan shall ensure that acceptable operating conditions on local roadways facilities are maintained during construction.

UTILITIES

Impact 3.14-1. Increased Demand for Water Supply Conveyance Facilities.

Finding: Less than significant with mitigation. (Draft EIR, pp. 3.14-16 through 3.14-17.)

Explanation: Implementation of the WRTP Specific Plan would require construction of on-site water supply conveyance facilities. Water transmission pipelines to distribute the water to individual residences would be constructed and would be required to be sufficiently sized to provide fire flows. The preliminary network leading from these connections was designed in accordance with the City of Woodland Engineering Standards.

Reclaimed water would be conveyed to the WRTP Specific Plan Area via a pressure system and routed to serve areas with irrigation demands. The reclaimed water network within the WRTP Specific Plan Area is designed to provide service to typical areas with commercial and public irrigation demands such as medians, parks, and greenways. The public reclaimed water supply pipelines would be within the right-of-way of public streets and greenways.

Physical impacts associated with construction and operation of utilities is evaluated throughout the EIR, such as Air Quality, Biological Resources, and Greenhouse Gas Emissions, which specifically analyze the potential for project construction and implementation. Impacts of the WRTP Specific Plan would be mitigated through implementation of mitigation measures presented in the EIR and through uniformly applied City-administered development standards. There is no impact beyond those comprehensively considered throughout the other sections of the EIR. This impact is considered less than significant.

However, the City requires project applicants to demonstrate necessary public facilities are available or adequately financed before approval of proposed development (General Plan Policy 5.F.1). The City will only approve new development that connects to the City's public water supply system (General Plan Policy 5.G.3) and requires project applicants to demonstrate adequate water supply conveyance facilities are in place prior to occupancy and that an adequate funding source is in place to finance system development and maintenance (City General Plan Policy 5.G.6). The following mitigation measure is provided for planning purposes to ensure water supply infrastructure is designed and sized to provide adequate service to the WRTP Specific Plan.

Mitigation Measure 3.14-1: Prepare and Submit A Water Supply Conveyance Improvement Plan in Compliance with Applicable Standards and Construct Water Supply Conveyance Infrastructure Prior to Occupancy.

While not required as mitigation for a significant impact under CEQA, the following would be required for planning purposes to ensure the water supply infrastructure is designed and sized to provide adequate service to the WRTP Specific Plan:

Before approval of the final subdivision map and issuance of building permits, project applicants for projects proposed under the WRTP Specific Plan shall prepare a detailed water conveyance infrastructure improvement plan that depicts the locations and appropriate sizes of all required conveyance infrastructure,

in conjunction with other site-specific improvement plans. Proposed on-site water facilities shall be designed and sized to provide adequate service to the project site for the amount of development identified in the tentative subdivision map, based on City of Woodland Engineering Standards. A final water conveyance infrastructure improvement plan shall be approved by the City of Woodland Engineering Division before approval of the final subdivision map by the City of Woodland Planning Division and issuance of building permits from the City of Woodland Building Division. All required infrastructure shall be in place prior to occupancy of development anticipated under the proposed project.

Significance after Mitigation: This impact is less than significant. There are no additional significant impacts beyond those comprehensively considered throughout the other sections of the EIR. Mitigation Measure 3.14-1 would ensure adequate water supply conveyance facilities would be documented before approval of the final subdivision map and issuance of building permits.

Impact 3.14-2. Increased Demand for Wastewater Collection and Conveyance Facilities.

Finding: Less than significant with mitigation. (Draft EIR, pp. 3.14-17 through 3.14-19.)

Explanation: There are currently no wastewater mains or services located within the WRTP Specific Plan Area. A combination of on-site gravity and pressure sewers would be required to convey new wastewater flows from the WRTP Specific Plan Area to the SLSP Pump Station located at Farmers Central Road and Mickle Avenue. A 7.5-acre area within the WRTP Specific Plan Area would require a lift station to convey wastewater runoff to the existing gravity main in SLSP.

Physical impacts associated with construction and operation of utilities is evaluated throughout other sections of the EIR, such as Air Quality, Biological Resources, and Greenhouse Gas Emissions, which specifically analyze the potential for project construction and implementation. Impacts of the WRTP Specific Plan would be mitigated through implementation of mitigation measures presented in the EIR and through uniformly applied City-administered development standards. There is no impact beyond those comprehensively considered throughout the other sections of this EIR. The impact is considered less than significant.

The City will only approve new development that connects to the City's sewer system (General Plan Policy 5.H.6). In addition, the City requires project applicants demonstrate necessary public facilities are available or adequately financed to serve new development (General Plan Policy 5.F.1). The following mitigation measure is provided for planning purposes to ensure wastewater conveyance infrastructure is designed and sized to provide adequate service to the WRTP Specific Plan Area.

Mitigation Measure 3.14-2: Prepare Additional Analysis to Verify the Spring Lake Specific Plan Pump Station Capacity Prior to Development Beyond 87 Percent of the WRTP Specific Plan Area.

While not required as mitigation for a significant impact under CEQA, the following would be required for planning purposes to ensure the existing wastewater conveyance infrastructure has the capacity to provide adequate service to the WRTP Specific Plan Area:

Prior to any development beyond 87 percent of the WRTP Specific Plan, the WRTP shall fund additional analysis to verify that the Spring Lake Specific Plan Pump Station has adequate capacity to provide for sewer flows from full buildout of the WRTP Specific Plan. If additional capacity is required, it may be

provided by upsizing the pumps as part of the City's regular maintenance work of replacing the pumps. If the increased capacity is not provided by the City's maintenance work, then the WRTP Specific Plan will be responsible for funding improvements at the pump station to provide the additional required capacity.

Significance after Mitigation: This impact is less than significant. There are no additional significant impacts beyond those comprehensively considered throughout the other sections of this EIR. Implementation of Mitigation Measure 3.14-2 requires evaluation of the Spring Lake Specific Plan Pump Station Capacity prior to development and prior to development beyond 87 percent of the WRTP Specific Plan, and specific improvements or funding of improvements to address any capacity shortfall.

4. FINDINGS REGARDING ENVIRONMENTAL IMPACTS THAT CANNOT BE FULLY MITIGATED TO A LESS THAN SIGNIFICANT LEVEL

The following significant environmental impacts of the proposed project are significant and unavoidable and cannot be mitigated in a manner that would substantially lessen the environmental impact despite the incorporation of Mitigation Measures identified in the EIR and in these Findings. The City Council finds that the project's environmental, economic, social, and other benefits outweigh and override the significant adverse impact related to change in the environment." (see Section VII, "Statement of Overriding Considerations")

AESTHETICS AND VISUAL RESOURCES

Impact 3.1-1. Substantially Degrade the Existing Visual Character or Quality of Public Views of the Site and its Surroundings.

Finding: Implementation of the WRTP Specific Plan and the off-site South Regional Pond would substantially change the existing visual character from agricultural cropland to a mix of urban land uses and supporting infrastructure. The proposed WRTP Specific Plan and off-site improvement areas would be visually incompatible with surrounding agricultural land to the west, south, and southeast. Consistent with the findings of the 2035 General Plan and CAP EIR, this impact is considered significant.

All feasible mitigation in the form of policies and programs in the 2035 General Plan, as well as the WRTP Specific Plan (Chapter 2, "Specific Plan Concepts" and Chapter 3, "Land Use, Development Standards, and Design Guidelines"), are presented herein. No additional feasible mitigation measures are available that would avoid this impact without fundamentally changing the purpose of the WRTP Specific Plan. Therefore, and consistent with the findings of the 2035 General Plan and CAP EIR, this impact would be significant and unavoidable.

The impact would remain **significant and unavoidable**. As described in Section VII, specific social, economic, and environmental benefits of the Project outweigh the identified potential unavoidable significant impacts. (Draft EIR, pp. 3.1-13 through 3.1-16.)

Impact 3.1-2: Create a New Source of Substantial Light or Glare Which Would Adversely Affect Day or Nighttime Views in the Area.

Finding: The WRTP Specific Plan would require nighttime lighting of new streets and buildings for security purposes near existing and proposed sensitive receptors, which could cause increased light and glare that could

adversely affect day or nighttime views in the area effects. Consistent with the findings of the 2035 General Plan and CAP EIR, this impact would be significant.

As discussed in the 2035 General Plan and CAP EIR Impact 4.1-4 (pages 4.1-32 through 4.1-33) (City of Woodland 2016b), development in new growth areas would produce light and glare in areas that currently do not experience these effects. Parking lots, commercial buildings, and signs often emit light 24 hours per day. In contrast, most residential buildings produce limited light during the night. In addition, new buildings with reflective surfaces, such as office buildings with glazed windows, may add daytime glare in new development areas. General Plan Policy 3.E.7 requires that adequate pedestrian-scale lighting be provided near sidewalks, trails, and parking lots to improve visibility of pedestrians and provide a safe walking environment. General Plan Policy 2.B.1 requires that new Specific Plans must examine impacts on the completion of infrastructure and amenities within existing Specific Plan Areas that are still developing. Policy 2.E.2 encourages high-quality new development that enhances and blends with the established fabric of the natural, social, and built environment, while allowing for innovative architectural styles. However, since new development would add to the overall amount of lighting and glare in the City, the 2035 General Plan and CAP EIR concluded that impacts from new sources of light and glare would be significant. Mitigation measures recommending new General Plan Policies 2.F.4 and 2.F.5 (requiring that artificial lighting be controlled to avoid spill-over lighting, preserve the night sky, and prevent glare) were adopted as part of the 2035 General Plan. Because additional nighttime lighting would still occur and no other feasible mitigation measures were available, the 2035 General Plan and CAP EIR concluded that impacts from new sources of light and glare would be significant and unavoidable.

The WRTP Specific Plan would not be implemented in a “dark sky” area; rather, existing nighttime lighting is already generated by the Woodland Sports Park west of SR 113 (see Viewpoint 3, above), from street lighting along the east and west sides of SR 113 on the west side of the WRTP Specific Plan Area, and from street and residential lighting in the adjacent Spring Lake development to the east. Additional nighttime lighting will be present in the future in the planned Spring Lake development to the north and east. Because the WRTP Specific Plan Area would be developed with a mix of urban uses, this would create new sources of additional nighttime lighting that would be visible to adjacent residents in the Spring Lake development, as well as motorists traveling on SR 113 and County Roads 25A and 101. WRTP Specific Plan implementation could also create new sources of daytime glare from new buildings. As discussed above, General Plan policies 2.F.4 and 2.F.5 require that artificial lighting be controlled to avoid spill-over lighting, preserve the night sky, and prevent glare. The WRTP Specific Plan Performance Standards and Design Standards and Design Guidelines, contained in Sections 3.3.2 and 3.5.2, respectively, of the WRTP Specific Plan, state that lighting would include of a variety of types and styles designed to illuminate the intended surfaces or spaces, avoid light spillover and glare into surrounding areas, reduce night sky pollution, and contribute to the City’s Climate Action Plan objectives for reducing energy use. A common overall theme, material, and color palette would be considered for the entire WRTP Specific Plan Area, except that the Research and Technology Park may have different but complementary lighting and street furnishings, to create a unified identity throughout the WRTP Specific Plan Area.

Pedestrian-scaled pathway lighting would be provided in both residential and non-residential zoning districts. Exterior lighting on individual lots, particularly with the Research and Technology Park campus, would emphasize lighting entries, walkways, parking and loading, and service areas. Lighting on buildings would be designed to reinforce the architectural design of the building, including lighting of building entries, landscape elements, and major architectural features, and would contribute to enhancing the safety and security within the Research and Technology Park, as well as the remainder of the community. A comprehensive signage plan would be implemented

for the entire Research and Technology Park that governs the location, size, height, color, lighting, orientation, and type of signs to be permitted. Energy-efficient exterior lighting fixtures, such as LED or other energy-efficient lighting technologies, would be used throughout the WRTP Specific Plan Area. Furthermore, the Design Standards and Design Guidelines provided in Section 3.5.2 of the WRTP Specific Plan also state that proposed land uses may not create new sources of glare, and that signs shall be spot illuminated from the front or consist of letters, numbers, or graphics that are halo backlit and may not cast a glare that is visible from any street or adjacent lot. (The potential for nighttime lighting within the WRTP Specific Plan Area to result in airport safety hazards is discussed in Section 3.8, “Hazardous Materials and Toxics,” of the EIR).

The proposed off-site South Regional Pond would not require nighttime lighting and would not represent a new source of daytime or nighttime glare. The existing SR 113/CR 25A interchange is currently lighted with high-mast light standards that are shielded and direct the lighting downward; the proposed interchange improvements would include the continued use of shielded, directional high-mast light standards, but would not substantially change the amount of skyglow that is already emitted as compared to the existing interchange. Where direction is not otherwise provided in the WRTP Specific Plan, development in the WRTP Specific Plan Area must be designed in accordance with City of Woodland regulations and requirements, including the City’s Engineering Standards: Design Standards, Standard Details and Construction Specifications (City of Woodland 2016a). Section 9 of the Engineering Standards describes typical design practices for new or modified street lighting systems within the City. The Engineering Standards include requirements for lighting values for each type of street; street light locations, types, and spacing; poles; mast arm lengths; service connections; pull boxes; and conductors. The Engineering Standards require that all street lights be equipped with light-emitting diode (LED) lights. Furthermore, the developer must prepare and submit improvement plans to the City for review that show existing and proposed street lighting locations, along with the following details:

- ▶ existing City-owned electrical facilities and electrical conduits;
- ▶ proposed street light types, locations, conduit sizes and locations, service locations, pull boxes, mast arm lengths, and light pattern to be installed;
- ▶ rights-of-way and easements;
- ▶ subdivision and lot details; and
- ▶ amount and type of luminaires on each new or existing service, the service location and voltage, the number of lights removed or added from an existing service, and any other pertinent information affecting the service load.

Finally, the Engineering Standards require that master planning be employed in the determination of street light locations so that an overall uniform street light system meeting minimum City requirements is achieved. If an elementary school were to be developed in the WRTP Specific Plan Area, it would not include nighttime outdoor sports events and therefore would not include lighted outdoor sports fields. Minor nighttime security lighting for school buildings and parking lots would be provided. This lighting would be shielded and directed downward to avoid light spillover and nighttime glare effects, as required by CDE school facility design standards and the Division of the State Architect. Therefore, as discussed above, the WRTP Specific Plan would employ all feasible measures to avoid light spillover and glare into surrounding areas, and reduce night sky pollution. However, WRTP Specific Plan implementation would still add to the overall amount of lighting and glare in the City; therefore, this impact is considered significant.

All feasible mitigation in the form of policies and programs in the 2035 General Plan and the WRTP Specific Plan Design Standards, are presented herein. No additional feasible mitigation measures are available that would avoid this impact without fundamentally changing the purpose of the WRTP Specific Plan. Therefore, and consistent with the findings of the 2035 General Plan and CAP EIR, this impact would be significant and unavoidable.

The impact would remain **significant and unavoidable**. As described in Section VII, specific social, economic, and environmental benefits of the Project outweigh the identified potential unavoidable significant impacts. (Draft EIR, pp. 3.1-16 through 3.1-18.)

AGRICULTURE AND FORESTRY RESOURCES

Impact 3.2-1. Loss of Important Farmland and Conversion of Agricultural Land to Nonagricultural Urban Uses.

Finding: Implementation of the WRTP Specific Plan and off-site improvements would result in the permanent conversion agricultural land, including Important Farmland, to urban uses. Consistent with the findings of the 2035 General Plan and CAP EIR, this impact is considered significant.

As discussed in the 2035 General Plan and CAP EIR Impact 4.2-1 (pages 4.2-28 through 4.1-36) (City of Woodland 2016), development in new growth areas would convert farmland, including Prime Farmland, Unique Farmland, or Farmland of Statewide Importance, to urban land uses. General Plan Policy 2.A.1 establishes an ULL that permanently circumscribes urban development and complies with provisions for protection of agricultural lands. The WRTP Specific Plan Area is located in an area planned for development that is inside the ULL. The 2035 General Plan and CAP EIR concluded that, despite proposed policies, implementation of the 2035 General Plan would still accommodate development in new growth areas that would convert farmland, including Important Farmland, defined as Prime Farmland, Farmland of Statewide Importance, Unique Farmland, and Farmland of Local Importance, to urban uses. Mitigation Measure 4.2-1 recommending new General Plan Policy 2.A.3 (requiring for every acre of farmland that is converted, an acre of that same type (or better) of farmland will be conserved) was adopted as part of the 2035 General Plan. However, the 2035 General Plan and CAP EIR concluded that there is no additional feasible mitigation available that would mitigate the loss of Important Farmland and conversion of agricultural land to nonagricultural urban uses, and the impact was significant and unavoidable. Yolo LAFCo prepared a municipal service review and sphere of influence study for the City of Woodland (Yolo LAFCo 2019b). The Yolo LAFCo determined that:

“Development of the proposed SOI would result in the loss of prime agricultural land. However, most of Yolo County is fertile agricultural soils and it is difficult to expand the City’s footprint without impacting agricultural land and the City’s Urban Limit Line preempts any uncontrolled sprawl. The City’s General Plan Environmental Impact Report mitigates for this loss consistent with LAFCo policies and concludes that this loss is significant and unavoidable.”

Chapter 15.33 of the City of Woodland Municipal Code implements Policy 2.A.3 of the 2035 General Plan. As described above, the Chapter 15.33 requires that for every acre converted to urban development, one acre of mitigation will be required (1:1 ratio); agricultural mitigation land must be of same quality of land or higher than the land being converted; and specified agricultural mitigation lands must be located wholly within Yolo County. 3 General Plan Policy 2.A.1 establishes the ULL that permanently circumscribes urban development and complies with provisions for protection of agricultural lands. The WRTP Specific Plan Area is located in an area planned for development that is inside the ULL. The 2035 General Plan included site-specific conversion of this farmland to

urban land uses as shown in Figure 2-5, “Land Use Diagram” (page LU 2-33 of the 2035 General Plan). As discussed in Chapter 2, “Project Description,” the City promotes development of SP-1A [the WRTP Specific Plan Area] as a mixed-use residential district anchored by a research and technology business park in the Southern Gateway area at CR 25 and SR 113 (page LU 2-77 of the 2035 General Plan). The proposed South Regional Pond would be adjacent to, but south of, the Specific Plan Area, and existing agricultural lands in this off-site improvement area were not considered in the 2035 General Plan and CAP EIR. Agricultural uses within the WRTP Specific Plan Area would be converted to urban land uses from implementation of the WRTP Specific Plan and the proposed 4-acre South Regional Pond. Based on analysis of the Yolo County Important Farmland map (DOC 2016), approximately 346 acres of Prime Farmland and 3 acres of Farmland of Local Potential within the WRTP Specific Plan Area would be directly and permanently converted to urban uses. 4 Off-site improvements, specifically the proposed South Regional Pond, would directly and permanently convert approximately 4 acres of Prime Farmland to a detention pond for stormwater management. There is no Farmland of Statewide Importance or Unique Farmland identified within the WRTP Specific Plan Area or off-site improvement areas. In 2016, approximately 250,588 acres of Prime Farmland existed in Yolo County, of which 1,545 acres were located in the City’s Planning Area (Tables 3.2-1 and 3.2-2). A conversion of approximately 350 acres of Prime Farmland would account for less than one percent of the total Prime Farmland in Yolo County as a whole, but approximately 23 percent of total Prime Farmland in the City’s Planning Area. Project applicants for future projects proposed within the WRTP Specific Plan Area are required to comply with Municipal Code Chapter 15.33, which requires replacement of Prime Farmland at a 1:1 ratio. In addition, the South Regional Pond development area would not be annexed to the City. Therefore, this use would require compliance with the County’s agricultural conservation ordinance (Section 8-2.404 and Section 8.2-405 of the Yolo County Code), which requires replacement of Prime Farmland at a ratio of three acres of conserved farmland to one acre of converted land and replacement of other types of farmland at a ratio of two acres to one; small projects of less than 20 acres may pay an in-lieu fee rather than conserve farmland directly. While the WRTP Specific Plan would comply with City and County municipal code requirements for the loss of farmland that require permanent protection of agricultural land proportional to that proposed for conversion to urban use, 1:1 for the City and 3:1 for the County, as detailed, above, no new farmland would be made available, and a net loss of Important Farmland would occur as a result of development under the WRTP Specific Plan. This impact is considered significant.

All feasible mitigation in the form of policies in the 2035 General Plan, as well as the City’s Municipal Code Chapter 15.33 and Yolo County Code Section 8-2.404 and 8-2.405, are presented herein. No additional feasible mitigation measures are available that would avoid this impact without fundamentally changing the purpose of the WRTP Specific Plan. Therefore, and consistent with the findings in the 2035 General Plan and CAP EIR, impacts related to the conversion of Important Farmland to urban uses would be significant and unavoidable.

The impact would remain **significant and unavoidable**. As described in Section VII, specific social, economic, and environmental benefits of the Project outweigh the identified potential unavoidable significant impacts. (Draft EIR, pp. 3.2-16 through 3.2-18.)

Impact 3.2-3. Conflict with Existing On-Site and Off-Site Agricultural Operations.

Finding: Implementation of the WRTP Specific Plan would locate residential land uses adjacent to existing on-site and off-site agricultural lands, resulting in potential conflicts with adjacent agricultural operations. Consistent with the findings of the 2035 General Plan and CAP EIR, this impact is considered significant.

As discussed in the 2035 General Plan and CAP EIR Impact 4.2-1 (pages 4.2-38 through 4.2-41) (City of Woodland 2016), urban development can result in direct and indirect impacts on agricultural. Urban development has the potential to divide large tracts of agricultural land leaving smaller, less viable tracts of land for farming. Urban development can result in conflicts at the urban edge with adjacent agricultural practices, and lead to restrictions on the use of agricultural chemicals, complaints regarding noise, dust and odors, trespassing, and vandalism. The Yolo County Agricultural Commissioner requires a buffer between pesticide application and environmentally sensitive areas, including residential developments, as explained in the Regulatory Framework. Unless otherwise provided, the farmer has responsibility for providing this buffer, and therefore the buffer potentially limits the amount of land that can be used for agriculture. These conflicts may increase costs of agricultural operations and, together with other factors, encourage the conversion of additional farmland to urban uses. In addition, urban growth may increasingly compete with agriculture for the use of water resources and may conflict with farm-to-market use and/or operational use of area roadways.

The 2035 General Plan and CAP EIR concluded that impacts related to conflicts with existing agricultural operations and urban land uses would be significant. The 2035 General Plan includes policies to support agriculture in Woodland and minimize conflicts between urban and agricultural uses. 2035 General Plan Policy 7.C.4 requires the City to ensure that urban development within the ULL does not affect the economic viability of adjacent farms outside of the ULL. 2035 General Plan Policies 4.G.2 and 4.C.9 help strengthen specific segments of the agricultural industry and explicitly supports the continuation and development of the agricultural industry in Woodland, and Policy 8.G.10 requires the City's support for both the City's and the County's right to farm ordinances. Policy 7.C.2 helps protect existing agriculture within the ULL. Although proposed policies will reduce the impact that development and other changes to the existing environment would have on existing agricultural uses and support the continued viability of the agricultural industry in Woodland, it cannot be guaranteed that farmland would not be indirectly impacted by development envisioned in the 2035 General Plan. Mitigation Measure 4.2-3 recommending new General Plan Policy 7.C.5 (requiring new development that occurs at the edge of the ULL to be set back a minimum of 150 feet from adjacent agricultural land where possible) was adopted as part of the 2035 General Plan. However, the 2035 General Plan and CAP EIR concluded that there is no additional feasible mitigation available that would mitigate the potential conflicts of future development with existing agricultural uses, and the impact was significant and unavoidable. The WRTP Specific Plan is consistent with 2035 General Plan Policies 7.C.2, 7.C.4, 4.C.9 and 4.G.2, which support existing agricultural uses and the development of agricultural-related industries.

As noted in Impact 3.2-1, development of the WRTP Specific Plan Area is envisioned as part of the 2035 General Plan and would occur in phases; Chapter 3 of the WRTP Specific Plan states that "existing agricultural uses may be permitted to continue until the area is required for the development of infrastructure or other allowed uses. Agricultural operations shall comply with applicable local, state, and federal laws and regulations." As discussed in Chapter 2 of the EIR, the City anticipates that agricultural-related research will be a major focus at the WRTP Specific Plan. In addition, one of the WRTP Specific Plan's Guiding Principles would be to take positive advantage of the existing and thriving seed, food, and agricultural-based industries currently located and doing business in and around Woodland. Chapter 9.52, "Right to Farm," of the Woodland Municipal Code protects the rights of agricultural property owners and farmers to continue agricultural operations on their land, even if it is adjacent to other land uses. The ordinance requires a right-to-farm deed restriction on any transfer of property within 500 feet of agricultural land or agricultural operations. The deed restriction notifies prospective purchasers and users of property near or adjacent to agricultural operations of the sounds, odors, dust and chemicals that may accompany agricultural operations. The Right to Farm ordinance also establishes a procedure for settling disputes regarding

agricultural operations. Residential land uses would be developed in phases on the WRTP Specific Plan Area and agricultural production could potentially continue within the WRTP Specific Plan Area until these lands are ready to be developed, resulting in potential conflicts when the development edge is adjacent to ongoing agricultural operations on undeveloped portions of the WRTP Specific Plan Area. No buffers or other features are proposed, other than those encouraged by the WRTP Specific Plan, that would separate urban land uses from ongoing agricultural operations on undeveloped portions of the WRTP Specific Plan Area, resulting in potential agricultural-urban interface conflicts. However, these conflicts would be resolved as the WRTP Specific Plan Area is developed to urban uses. In addition, land use conflicts could occur where the development edge within the WRTP Specific Plan Area is adjacent to off-site agricultural operations south of the WRTP Specific Plan Area along the ULL.

In order to be consistent with 2035 General Plan Policy 7.C.5, which implements the 2035 General Plan and CAP EIR Mitigation Measure 4.2-3, the WRTP Specific Plan policy encourages a minimum 150-foot buffer, where feasible, along the southern edge of the Plan Area, adjacent to agricultural lands along the ULL, as stated in the WRTP Specific Plan Policies in section 2.2.3 of the WRTP Specific Plan as well as in the Site Development Standards detailed in Section 3.4 of the WRTP Specific Plan. Buffers may include parking, streets, bike/pedestrian multi-use trails, shipping/receiving yards, stormwater management uses/facilities, or uses. Additionally, uses consistent and compatible with agricultural uses, such as agricultural field research or similar (i.e. greenhouses, field research offices, community gardens or agricultural uses/structures), are permitted within the agricultural buffer. Areas identified for medium density residential development in the southeastern corner of the WRTP Specific Plan Area along the border of the ULL would be buffered from on-going agricultural operations by an on-site detention pond and the 4-acre South Regional Pond south of the WRTP Specific Plan Area. These buffers would reduce the conflicts associated with on-going offsite agricultural operations within the ULL. Prospective residents within 500 feet of agricultural uses would be notified of potential land use conflicts associated with agricultural activities as required by the Chapter 9.52, "Right to Farm," of the Woodland Municipal Code and a buffer zone would be established between the edge of development and adjacent off-site agricultural land. Conflicts could still occur between agricultural and urban land uses, particularly in areas where the development edge is adjacent to ongoing agricultural operations on undeveloped portions of the WRTP Specific Plan Area. This impact is considered significant.

All feasible mitigation in the form of policies and programs in the 2035 General Plan are presented herein. No additional feasible mitigation measures are available that would avoid this impact without fundamentally changing the purpose of the WRTP Specific Plan. Therefore, and consistent with the findings in the 2035 General Plan and CAP EIR, this impact would be significant and unavoidable.

The impact would remain **significant and unavoidable**. As described in Section VII, specific social, economic, and environmental benefits of the Project outweigh the identified potential unavoidable significant impacts. (Draft EIR, pp. 3.2-19 through 3.2-21.)

AIR QUALITY

Impact 3.3-1. Conflict with or Obstruct Implementation of the Applicable Air Quality Plan.

Finding: YSAQMD and other air districts in the Sacramento Valley Air Basin (SVAB) developed air quality plans to enable the region to achieve attainment of the national ambient air quality standards (NAAQS) and California ambient air quality standards (CAAQS) for ozone and PM. These air quality plans are based on an inventory of

existing emission sources, as well as projections about the future level of land use development in the SVAB. Because the levels of growth associated with the construction and operation of future land uses anticipated under the WRTP Specific Plan were not accounted for in these projections of emissions-generating activity, and emissions could exceed the YSAQMD quantitative thresholds for short-term and long-term emissions, the WRTP Specific Plan could conflict with or obstruct the applicable air quality plan. Consistent with the findings of the 2035 General Plan and CAP EIR, the impact is considered significant.

A project is non-conforming with an air quality plan if it conflicts with or delays implementation of any applicable attainment or maintenance plan. YSAQMD recommends that an evaluation for consistency with AQAP and SIP consider consistency with the AQAP and SIP population and vehicle use projections and AQAP and SIP transportation control measures, as well as a consideration of buffer zones around sources of odors and toxics (YSAQMD 2007). The most current update for YSAQMD AQAP to address the regional nonattainment status for CAAQS was adopted in July 2016. The most current plan for the Sacramento Federal Nonattainment Area, within which the WRTP Specific Plan Area is located and YSAQMD is included, is the Sacramento Regional 8-Hour Ozone Attainment and Reasonable Further Progress Plan updated in 2017. The AQAP specifically addresses the area's nonattainment status for ozone and, to a lesser extent, CO and PM10. The AQAP stresses attainment of ozone standards and focuses on strategies to reduce emissions of ozone precursors (ROG and NOX). The AQAP promotes active public involvement, enforcement of compliance with district rules and regulations, and public education in both the public and private sectors. It also urges development and promotion of transportation and land use programs designed to reduce vehicle miles traveled within the region and implementation of stationary- and mobile-source control measures. Emissions inventory forecasts for both the YSAQMD AQAP and the Sacramento Regional 8-Hour Ozone Attainment and Reasonable Further Progress Plan incorporate population and VMT projections, in part, based on data from the SACOG Metropolitan Transportation Plan/Sustainable Communities Strategy (MTP/SCS) for the region. SACOG developed population and employment projections that inform transportation planning throughout the region and that are based, in part, on land use information from General Plans. According to the projections available to inform development of the most recently adopted air quality plans, the city's population was expected to increase to 66,041 people in 2035, the number of housing units to increase to 24,452, and employment in the city to increase to 33,368 jobs (City of Woodland 2013). As indicated in Table 4.10-4 of the 2035 General Plan and CAP EIR, the population, housing, and employment projections under the 2035 General Plan are higher than the SACOG projections for 2035. Although the WRTP Specific Plan Area was identified as a new growth area, SACOG growth projections at the time of development of the relevant air quality plans did not assume full development of the WRTP Specific Plan Area within the MTP planning horizon. The methodology and purpose of the City's estimate of development capacity under the 2035 General Plan is different from the methodology and purpose of SACOG's forecast for the purposes of the MTP/SCS. The SACOG projections are market-based growth estimates that project the amount and location of likely growth in the region based on a variety of socio-economic factors that are updated every four years. The City's General Plan and this WRTP Specific Plan serve as long-range planning tools that seek to create opportunities for growth and provide a range of land use options to encourage economic investment and promote other City policy objectives. Given these different purposes, it is expected that there would be variations in the growth forecasts between the two.

Future development and operations under the WRTP Specific Plan would be required to comply with all applicable rules and regulations, including YSAMD Rules and Regulations and permitting requirements for any stationary sources, adopted for the purposes of reducing air pollutant emissions and supporting regional attainment of the CAAQS and NAAQS pursuant to the AQAP and SIP. As detailed in Section 6.2.3 of the WRTP Specific Plan, a Comprehensive Transportation Demand Management strategy, in conjunction with key stakeholders that identifies

check-in points to demonstrate consistency, as well as a Mobility Hub Master Plan, shall be prepared no later than prior to the approval of the first development application or tentative map or as otherwise required by the City's Community Development Director. Similarly, coordination with the Yolo County Transportation District, Yolo County, and University of California, Davis, on policies of the WRTP Specific Plan will be required to ensure timely provision of transit service and appropriate funding mechanisms in place. As shown in Exhibit 4-2 of the WRTP Specific Plan, a network of bike/pedestrian trails connecting from a linear open space system throughout the WRTP Specific Plan Area provides access to planned businesses, commercial centers, and residential areas, as well as to the adjoining Spring Lake residential community. The detailed planning and policies of the WRTP Specific Plan are consistent with the intent of the transportation control measures of the AQAP and SIP to reduce regional mobile source emissions of criteria air pollutants and ozone precursors. Adopted YSAQMD rules and regulations, as well as the YSAQMD-recommended thresholds of significance, have been developed with the intent to ensure continued attainment, or work toward attainment, of the NAAQS and CAAQS, consistent with the air quality plans. By exceeding the YSAQMD's mass emission thresholds, a project may be considered to conflict with or obstruct implementation of the YSAQMD air quality planning efforts. As detailed in Impact 3.3-2 below, construction and operation of future development under the WRTP Specific Plan could exceed the YSAQMD mass emissions thresholds of significance for criteria air pollutants and ozone precursors.

Although the WRTP Specific Plan is designed and includes policies to minimize air pollutant emissions, implementation of the WRTP Specific Plan would result in population growth beyond that contemplated under the current AQAP and SIP planning efforts, and short-term and long-term emissions generated by future development under the WRTP Specific Plan could exceed YSAQMD thresholds of significance. Therefore, implementation of the WRTP Specific Plan is considered to potentially conflict with the applicable air quality plans and, consistent with the findings of the 2035 General Plan and CAP EIR, this impact is considered significant.

Mitigation Measures Mitigation Measure 3.3-1a – Implement Mitigation Measures 3.3-2a through 3.3-2d

Significance after Mitigation: Mitigation Measure 3.3-2a would reduce emissions of fugitive dust PM and exhaust emissions that would be generated during construction of future development in the WRTP Specific Plan Area and off-site improvement areas. Implementation of Mitigation Measure 3.3-2b, would require the use of heavy-duty equipment powered with engines that meet CARB Tier 4 emissions standards, and thereby further reduce construction-related exhaust emissions, particularly NO_x. Mitigation Measure 3.3-2c would require the use of ultra-low volatile organic compound (VOC) architectural coatings in all possible applications during construction, thereby further reducing reactive organic gas (ROG) emissions from this construction-related source. Mitigation Measure 3.3-2d would reduce operational emissions of ROG and PM associated with wood burning stoves and fireplaces.

However, emissions of criteria air pollutants and precursors could still exceed significance thresholds. In addition, although the regional planning efforts and relevant air quality plans are updated on a regular basis and it is, therefore, reasonable to assume that future air quality plans will account for development of the WRTP Specific Plan Area, growth projections used for the purposes of the relevant air quality plans do not currently account for development of the WRTP Specific Plan Area. As such, implementation of the WRTP Specific Plan could conflict with or obstruct implementation of the applicable air quality plan. There are no additional feasible mitigation measures available to address this impact. This impact is significant and unavoidable. (Draft EIR, pp. 3.3-18 through 3.2-20.)

The impact would remain **significant and unavoidable**. As described in Section VII, specific social, economic, and environmental benefits of the Project outweigh the identified potential unavoidable significant impacts.

Impact 3.3-2. Result in a Cumulatively Considerable Net Increase of Criteria Air Pollutant and Precursor Emissions.

Finding (Construction): The WRTP Specific Plan Area was assumed as part of the land use development anticipated under the 2035 General Plan. However, the General Plan EIR assessed emissions for all proposed development within the City's Planning Area and not individually for the specific proposed land uses and implementation timeline of the WRTP Specific Plan. Due to the size of the WRTP Specific Plan Area and variability of land uses, as well as the uncertainty of the construction timing, it was assumed that different types of construction activities (i.e. site grading, trenching, asphalt paving, building construction, and application of architectural coatings) could occur simultaneously at various locations within the WRTP Specific Plan Area. Modeling of construction emissions was conducted for the year 2021, as this is assumed to be the earliest year during which construction would occur for the future development of the WRTP Specific Plan Area. For purposes of modeling emissions associated with construction of future development of the WRTP Specific Plan, it is conservatively assumed that up to 25 percent of all land uses within the WRTP Specific Plan Area could be developed within the earliest possible construction year (2021).

Based on the conservative assumptions made for the purpose of this analysis, emissions associated with construction for implementation of the WRTP Specific Plan and off-site South Regional Pond could exceed YSAQMD thresholds of significance. The Caltrans Off-site Improvement Area is not anticipated to be constructed in the first year of construction, but was conservatively modeled using emissions factor for this earliest year. While it would not on its own exceed the YSAQMD thresholds of significance, in conjunction with other development within the WRTP Specific Plan Area, it could result in an exceedance of YSAQMD PM₁₀ threshold. Thus, construction of future development within the WRTP Specific Plan Area and off-site improvement areas could exceed or contribute substantially to an existing or projected air quality violation due to incremental contribution to PM and ozone precursor emissions. The YSAQMD thresholds of significance are considered the allowable amount of emissions each project can generate without resulting in a cumulatively considerable net increase of criteria air pollutants and precursor emissions. Consequently, because implementation of the WRTP Specific Plan, including the construction of off-site improvement areas, could generate construction-related emissions that exceed the YSAQMD thresholds, this impact is considered significant. (Draft EIR, pp. 3.3-20 through 3.2-31.)

Mitigation Measure 3.3-2a – Implement Construction Best Management Practices.

New development shall incorporate the following construction best management practices, those included in an updated set of mitigation recommendations prepared by the YSAQMD, or those determined by the City to be as effective:

- a. Water all active construction areas at least twice daily.
- b. Haul trucks shall maintain at least two feet of freeboard.
- c. Cover all trucks hauling soil, sand, and other loose materials.
- d. Apply non-toxic binders (e.g., latex acrylic copolymer) to exposed areas after cut-and-fill operations and hydroseed area.

- e. Apply chemical soil stabilizers on inactive construction areas (disturbed lands within construction projects that are unused for at least four consecutive days).
- f. Plant vegetative ground cover in disturbed areas as soon as possible.
- g. Cover inactive storage piles.
- h. Sweep streets if visible soil material is carried out from the construction site.
- i. Treat accesses to a distance of 100 feet from the paved road with a 6-inch layer of gravel.
- j. Limit all idling of vehicles and equipment that use gasoline or diesel fuel to five minutes maximum.
- k. Use alternative power source, such as electricity, for construction equipment or use reformulated and emulsified fuels, incorporate catalyst and filtration technologies, and generally modernize the equipment fleet with cleaner and newer engines.

Mitigation Measure 3.3-2b: Construction-Related Mobile Emissions Reductions for NO_x and PM₁₀ Emissions (as revised in Chapter 3, "Errata," of the Final EIR).

- a. Construction contractors shall adhere to the following requirements: a. Maintain all construction equipment properly according to manufacturer's specifications.
- b. Fuel all off-road and portable diesel-powered equipment with CARB-certified motor vehicle diesel fuel (non-taxed version suitable for use off-road).
- c. For all off-road heavy-duty equipment greater than 50 horsepower, utilize equipment that meet or exceed CARB's Tier 4 Final standards for off-road heavy-duty diesel engines.
- d. Requiring off-road construction equipment to be zero-emission, where available, and all diesel-fueled off-road construction equipment, to be equipped with CARB Tier 4 Final engines, and including this requirement in applicable bid documents, purchase orders, and contracts, with successful contractors demonstrating the ability to supply the compliant construction equipment for use prior to any ground-disturbing and construction activities.
- e. Prohibiting off-road diesel-powered equipment from being in the "on" position for more than 10 hours per day.
- f. Requiring on-road heavy-duty haul trucks to be model year 2010 or newer if diesel-fueled.
- g. Providing electrical hook ups to the power grid, rather than use of diesel-fueled generators, for electric construction tools, such as saws, drills and compressors, and using electric tools whenever feasible.
- h. Limiting the amount of daily grading disturbance area. Prohibiting grading on days with an Air Quality Index forecast of greater than 100 for particulates or ozone for the project area.
- i. Forbidding trucks from idling for more than two minutes and requiring operators to turn off engines when not in use.

- j. Keeping onsite and furnishing to the lead agency or other regulators upon request, all equipment maintenance records and data sheets, including design specifications and emission control tier classifications.
- k. Conducting an on-site inspection to verify compliance with construction mitigation and to identify other opportunities to further reduce construction impacts.
- l. Providing meal options onsite or shuttles between the facility and nearby meal destinations for construction employees.

Mitigation Measure 3.3-2c: Require the Use of Ultra-Low VOC (10 grams per liter [g/L] or less) Architectural Coatings for Construction-related Application

Construction contractors shall be required to use architectural coatings that are ultra-low VOC (10 g/L or less) in all possible applications. These products are identified by manufacturers as “super-compliant.” For construction-related applications, the product manufacturer, product name, product code, and intended use shall be identified on the construction design drawings for approval prior to the issuance of a building permit.

Significance after Mitigation (Construction): As proposed within the 2035 General Plan and CAP EIR, Mitigation Measures 3.3-2a is consistent with General Plan Policy 7.F.2 and would reduce potentially significant impacts related to fugitive dust PM and exhaust emissions that would be generated during construction of future development in the W RTP Specific Plan Area and off-site improvement areas. Mitigation Measure 3.3-2a will reduce construction-related emissions impacts. These dust control BMPs are identified by YSAQMD and the effectiveness of such practices is estimated to range from 4 up to 99 percent effective, depending on the details of the site and project at hand (YSAQMD 2007). When multiple measures are applied to the same source of particulates, the effectiveness of a second measure would be based on the amount of dust that remains after implementing the first measure. Implementation of Mitigation Measure 3.3-2b, would require the use of heavy-duty equipment powered with engines that meet CARB Tier 4 emissions standards, and thereby further reduce construction-related exhaust emissions generated from use of heavy-duty construction equipment. Mitigation Measure 3.3-2c would require the use of ultra-low VOC architectural coatings in all possible applications during construction, thereby further reducing ROG emissions from this construction-related source. All construction contractors would comply with the California Code of Regulations Title 14, Sections 2449(d) and 2485, which would limit heavy-duty construction truck and equipment idling time to five minutes or less. In addition, according to the YSAQMD Air Quality Handbook, all incremental emission sources must be mitigated to the greatest extent possible in order to achieve and maintain ambient air quality standards. Implementation of Mitigation Measures 3.3-2a, 3.3-2b and 3.3-2c would substantially reduce PM and ozone precursor emissions. Annual emissions of ROG and NO_x are anticipated to be less than YSAQMD thresholds of significance, which is a result of Mitigation Measure 3.3-2b (use of Tier 4 equipment) and Mitigation Measure 3.3-2c (use of ultra-low VOC architectural coatings). However, PM₁₀ emissions would still exceed YSAQMD thresholds. In addition, although ROG emissions would be reduced substantially as a result of implementation of Mitigation Measure 3.3-2c to use ultra-low VOC architectural coatings wherever possible, there may be instances in which the necessary application is not available as an ultra-low VOC product, and emissions could be higher than modeled. However, even without the use of ultra-low VOC architectural coatings, implementation of Mitigation Measures 3.3-2 a and 3.3-2b, alone, reduces emissions to just over 10 tons per year, so use of ultra-low VOC architectural coatings for the majority of

applications, with some required use of higher VOC architectural coatings, would still substantially reduce ROG emissions from construction to below the YSAQMD annual threshold for ROG. Because the assumptions used to estimate potential construction-related emissions are conservative, it is possible that construction related to implementation of the WRTP Specific Plan would not exceed YSAQMD thresholds of significance. However, since the timing and level of construction activities each year is unknown, it is not possible to refine these assumptions and determine the extent to which additional reduction strategies are feasible or would result in emission reductions. Therefore, it is conservatively assumed that construction-related emissions could exceed significance thresholds and, consistent with the findings of the 2035 General Plan and CAP EIR, this impact is significant and unavoidable.

The impact would remain **significant and unavoidable**. As described in Section VII, specific social, economic, and environmental benefits of the Project outweigh the identified potential unavoidable significant impacts.

Finding (Operation): Development of the WRTP Specific Plan Area was assumed as part of the development anticipated under the 2035 General Plan. However, the General Plan EIR assessed emissions for all proposed development within the City's Planning Area and not individually for the anticipated land uses and implementation timeline of the WRTP Specific Plan. Buildout of the WRTP Specific Plan is anticipated to occur in phases over approximately two decades. For purposes of modeling emissions associated with operation of future development of the WRTP Specific Plan, full operations are modeled for the year 2035, consistent with the City's planning horizon of the 2035 General Plan; this is considered a conservative assumption, as it is unlikely that the entire Specific Plan will be built out in 2035 and emissions from building operations and mobile sources would likely be reduced in future years due to increasingly stringent regulatory requirements and technological advances to reduce emissions.

Operations of proposed development under the WRTP Specific Plan would generate long-term emissions that would exceed YSAQMD thresholds of significance. Area emissions and related threshold exceedances of ROG and PM₁₀ are primarily driven by the assumed use of wood burning fireplaces in new residential developments. The NO_x threshold exceedance is driven by mobile source emissions. As detailed in Section 3.5.4 of the Climate Change, Greenhouse Gas Emissions & Energy section of the EIR, implementation of the WRTP Specific Plan would achieve a 10 percent reduction in VMT; this would be achieved through a Comprehensive Transportation Demand Management/Vehicle Miles Traveled Reduction Program (TDM/VMT Program) to be prepared prior to approval of the first development application of tentative map. As the TDM/VMT Program may include a range of transportation strategies, programs, facilities, or services for the purpose of VMT reduction, it is speculative at this time to attempt to quantify the reduction in criteria air pollutant emissions that would be achieved.

The YSAQMD thresholds of significance are considered the allowable amount of emissions each project can generate without resulting in a cumulatively considerable net increase of criteria air pollutants and precursor emissions. Consequently, because operational activities associated with buildout of the WRTP Specific Plan could generate emissions that exceed the YSAQMD thresholds, this impact is considered significant.

In addition to the emissions from mobile, energy, and area sources, it is possible that operational activities within the WRTP Specific Plan Area could include new stationary sources, which also generate long-term operational emissions. For example, agricultural processing and manufacturing uses, which are a conditionally allowed use, could potentially include stationary emissions sources. Any such stationary sources would be required to obtain permits from YSAQMD, which are issued with the intent of reducing air pollution and attaining (or maintaining) the ambient air quality standards. Permitted stationary-source facilities are required to implement BACT, which

may include the installation of emissions control equipment or implementation of administrative practices to reduce emissions. Stationary-source facilities may also be required to offset their emissions of criteria air pollutants in order to be permitted. Information on operations of stationary sources within the WRTP Specific Plan Area is not available at this time and associated emissions have not been estimated.

While compliance with YSAQMD and WRTP Specific Plan policies and implementation of land use planning strategies to reduce VMT would reduce overall operational emissions, emissions associated with operations of future development of the WRTP Specific Plan could exceed or contribute substantially to an existing or projected air quality violation. This impact is considered significant.

Health effects associated with ozone include respiratory symptoms, worsening of lung disease, and damage to lung tissue. In 2020, SMAQMD published Guidance to Address the Friant Ranch Ruling for CEQA Projects in the Sac Metro Air District, which provides a screening level analysis estimating the health effects of criteria air pollutants and their precursors, as well as provides guidance for conducting a health effects analysis of a project that satisfies the requirements of the Friant Ranch court decision. Modeling results using this guidance support a conclusion that the WRTP Specific Plan does not, on its own, lead to sizeable regional health effects from the emissions of criteria air pollutants and precursors. However, as the ROG emissions are well above the screening tool maximum limits, and emissions overall exceed the YSAQMD thresholds of significance set with consideration of attaining the CAAQS and NAAQS for the region, implementation of the WRTP Specific Plan could result in a cumulatively considerable net increase of emissions of criteria air pollutants for the region and this impact is considered potentially significant. (Draft EIR, pp. 3.3-20 through 3.2-31.)

Mitigation Measure 3.3-2d: Ban Wood-burning Stoves and Fireplaces in New Development

Wood burning or pellet stoves and fireplaces shall not be permitted. Natural gas or propane fired fireplaces shall be clearly delineated on plans submitted to obtain building permits.

Significance after Mitigation (Operation): Implementation of Mitigation Measure 3.3-2d would reduce area source emission, particularly ROG and PM. Mitigated emissions are substantially reduced compared to unmitigated. The mobile source emissions estimates would likely be lower than as estimated due to the WRTP Specific Plan's TDM/VMT Program. However, because the specific development projects within the WRTP Specific Plan Area cannot be defined at the time of this analysis, precise effectiveness and feasibility of these measures cannot be determined for individual future projects, and operational emissions of criteria air pollutants and precursors could still exceed significance thresholds. As such, operational emissions could exceed or contribute substantially to an existing or projected air quality violation and thereby could conflict with or obstruct implementation of the applicable air quality plan. There are no additional feasible mitigation measures available to address this impact. Therefore, and consistent with the findings of the 2035 General Plan and CAP EIR, this impact is significant and unavoidable.

The impact would remain **significant and unavoidable**. As described in Section VII, specific social, economic, and environmental benefits of the Project outweigh the identified potential unavoidable significant impacts.

Criteria air pollutant emissions would be substantially reduced as a result of implementation of Mitigation Measures 3.3-2a through 3.3-2d. In particular, long-term maximum daily ROG emissions would be reduced to 202 pounds per day, NO_x to 383 pounds per day, and PM_{2.5} to 126 pounds per day. These emissions would fall within the SMAQMD Strategic Area Project Health Screening Tool limits. When applying these maximum daily emissions

estimates for the strategic growth area location of Woodland, the screening tool estimates that an increase of 0.65 premature deaths per year or a 0.0015-percent increase from background health incidences across the five-area-district region due to the increase in PM concentrations, and 0.082 premature deaths per year or a 0.00027-percent increase from background health incidences across the five-area-district region due to an increase in ozone. Criteria air pollutants generated as a result of the proposed WRTP Specific Plan would not result in the exposure of sensitive receptors to substantial criteria air pollutant concentrations and this impact would be less than significant with mitigation.

CULTURAL AND TRIBAL CULTURAL RESOURCES

Impact 3.6-1. Cause a Substantial Adverse Change in the Significance of Archaeological Resources as defined in CEQA Guidelines Section 15064.5.

Finding: The WRTP Specific Plan plans for the construction of new buildings and structures. Although there are no previously recorded archaeological resources within the WRTP Specific Plan Area or off-site improvement areas, implementation of the WRTP Specific Plan has the potential to damage or destroy subsurface archaeological resources that may qualify as archaeological resources under CEQA. The significance of such resources could be materially impaired because their ability to convey significance could be destroyed or diminished. Consistent with the findings of the 2035 General Plan and CAP EIR, this impact is considered significant.

The 2035 General Plan and CAP EIR (pages 4.6-21 to 4.6-23) discusses potential impacts related to the discovery of archaeological resources from implementation of the General Plan. The 2035 General Plan EIR identifies existing regulations and includes 2035 General Plan Goal 7.E and Policies 7.E.1, 7.E.2, and 7.E.3 that would reduce impacts to unanticipated finds. However, the 2035 General Plan and CAP EIR determined that potential impacts to previously undiscovered archaeological resources could be significant and, even with implementation of Mitigation Measure 4.6-1d, the impact would be significant and unavoidable. Implementation of the WRTP Specific Plan, inclusive of off-site improvement areas, could result in significant impacts to archaeological resources through either direct physical impacts or by changes to the setting. Direct physical impacts would result from activity such as excavation, demolition, grading, or ground compaction required for construction of new land uses. For resources that qualify as archaeological resources, such damage would be significant if it diminished the qualities that contribute to the significance of these resources. Changes to the setting would occur where new land uses and built environment features are placed on rural, undeveloped land. Changes to the setting could result in significant impacts where the natural or undeveloped setting forms part of the significance or integrity of a resource. Though record searches did not identify known archaeological resources in the WRTP Specific Plan Area or off-site improvement areas, the broader area does have an elevated sensitivity for archaeological resources, due to the long-standing Native American inhabitation and past historical agricultural and settlement uses. It is reasonable to assume that the area may contain resources not yet identified but that would qualify as archaeological resources under CEQA. Ground-disturbing construction would result from buildout in the WRTP Specific Plan Area and off-site improvement areas. These areas have historically been used for, and are currently utilized primarily for, agricultural purposes consisting of relatively large, rural, open, and minimally developed parcels and agricultural fields. In these areas, implementation of the WRTP Specific Plan would involve development of a mix of uses, including research and technology facilities, light industrial, commercial, retail and residential uses, public facilities (e.g., schools and parks), supporting infrastructure (e.g. roadways, utilities), and preserved open space that may also include some habitat restoration activities. Off-site improvements include the proposed South Regional Pond (a stormwater detention pond) within an agricultural field adjacent to, but south of, the WRTP Specific Plan Area, which was not

considered in the 2035 General Plan and CAP EIR, and the Caltrans Off-site Improvement Area. There is a moderate to low likelihood that archaeological resources may be present in the WRTP Specific Plan Area and South Regional Pond off-site area and implementation of the WRTP Specific Plan has the potential to affect such unidentified archaeological resources through ground-disturbing activities. The Caltrans Intersection Off-site Improvement Area is assumed to be imported fill with no archaeological sensitivity. With implementation of policies in the 2035 General Plan and CAP EIR, combined with current laws, regulations, and policies, including Public Resources Code 5097, the impact on cultural resources would be reduced. However, implementation of the WRTP Specific Plan would involve grading, trenching, excavation, soil stockpiling, and other earthmoving activities that could impact previously unknown archaeological resources. Potential impacts to previously undiscovered archaeological resources are considered potentially significant.

Mitigation Measure 3.6-1: Treatment of Unanticipated Archaeological Discoveries

Project applicants for future projects proposed under the WRTP Specific Plan would be required to implement the following procedures during and ground-disturbing activities:

- a. Prior to ground-disturbing activities necessary to implement proposed development and infrastructure projects, contractors shall receive cultural resource sensitivity training to identify potential archaeological resources and that all work should cease within 150 feet of prehistoric cultural resources that may be discovered during project implementation.
- b. During ground-disturbing activities necessary to implement proposed development and infrastructure projects, if any prehistoric or historic subsurface resources are discovered, all work within 150 feet of the resources shall be halted and a qualified archaeologist shall be consulted within 24 hours to assess the significance of the find, according to CEQA Guidelines Section 15064.5, and implement, as applicable, CEQA Guidelines Sections 15064.5(d), (e), and (f).
- c. If any find is determined to be a unique archaeological resource according to CEQA Guidelines Section 15064.5, representatives from the City and the archaeologist shall meet to determine the appropriate avoidance measures or other appropriate mitigation. Cultural resources shall be recorded on appropriate Department of Parks and Recreation forms, and all significant cultural materials recovered shall be, as necessary and at the discretion of the qualified archaeologist and in consultation with the local Native American community if the discovery is prehistoric in age, subject to scientific analysis, professional curation, and documentation according to professional standards. If it is determined that the proposed development or infrastructure project could damage a historical resource or a unique archaeological resource (as defined pursuant to the CEQA Guidelines), mitigation shall be implemented in accordance with Section 21083.2 of the California Public Resources Code and CEQA Guidelines Section 15126.4, with a preference for preservation in place. Work may proceed on other parts of the project site while mitigation for historical resources or unique archaeological resources is being carried out. Preservation in place may be accomplished by planning construction to avoid the resource; incorporating the resource within open space; capping and covering the resource; or deeding the site into a permanent conservation easement.
- d. If avoidance is not feasible, the qualified archaeologist shall develop and oversee the execution of a treatment plan. The treatment plan shall include, but shall not be limited to, data recovery procedures

based on location and type of archaeological resources discovered and a preparation and submittal of report of findings to the Northwest Information Center of the California Historical Resources Information System. Data recovery shall be designed to recover the significant information the archaeological resource is expected to contain, based on the scientific/historical research questions that are applicable to the resource, what data classes the resource is expected to possess, and how the expected data classes would address the applicable resource questions. Data recovery, in general, should be limited to the portions of the historical property that could be adversely affected by project proponents' actions. Destructive data recovery methods shall not be applied to portions of the archaeological resources if nondestructive methods are practical.

Significance after Mitigation: Implementation of Mitigation Measure 3.6-1 provides for the identification and evaluation in the case that a potential archaeological resource is discovered during ground disturbing activities associated with construction of future projects under the WRTP Specific Plan, as well as for the assessment of potential impacts to such resources and the development of mitigation strategies.

Although Mitigation Measure 3.6-1 will help to avoid impacts to archaeological resources and minimize the severity of potentially significant impacts associated with implementation of the WRTP Specific Plan, impacts may occur that cannot be reduced to a less-than-significant level through mitigation. Beyond existing regulations that protect cultural resources and the proposed mitigation, no further mitigation is available. Consistent with findings of the 2035 General Plan and CAP EIR, this impact is considered significant and unavoidable. (Draft EIR, pp. 3.6-11 through 3.6-14.)

The impact would remain **significant and unavoidable**. As described in Section VII, specific social, economic, and environmental benefits of the Project outweigh the identified potential unavoidable significant impacts. As described in Section VII, specific social, economic, and environmental benefits of the Project outweigh the identified potential unavoidable significant impacts.

NOISE AND VIBRATION

Impact 3.11-1. Generation of a Substantial Temporary (Construction-related) Increase in Ambient Noise Levels in the Vicinity of the Project in Excess of Standards Established in the Local General Plan or Noise Ordinance, or Applicable Standards of Other Agencies.

Finding: Future development and implementation of the WRTP Specific Plan would result in exposure of existing and anticipated noise sensitive land uses (if occupied during construction of the remaining properties within the WRTP Specific Plan Area) to noticeable increases from construction activities. Consistent with the findings of the 2035 General Plan and CAP EIR, this impact is considered significant.

The 2035 General Plan and CAP EIR (pages 4.11-47 to 4.11-51) discusses construction noise impacts resulting from construction activities that occur during noise-sensitive times of the day (early morning, evening, or nighttime hours), and when the construction occurs in areas immediately adjoining noise sensitive land uses, or when construction durations last over extended periods of time, and when construction noise occurs in new growth areas, including the City's Specific Plan Areas. The EIR noted that, while most portions of the WRTP Specific Plan Areas are not directly adjacent to existing noise-sensitive uses, they have the ability to accommodate planned noisesensitive uses, and depending on the timing and location of development, the Specific Plans, including SP-1, could have construction noise occurring near locations that have been developed with noise-sensitive land uses. As

discussed in the 2035 General Plan and CAP EIR, without noise control, typical noise levels generated by large pieces of earth-moving equipment, such as graders, excavators, and dozers, range from approximately 80 dB Leq to 90 dB Leq, measured at a distance of 50 feet, as shown in Table 3.11-6 (assuming no pile driving is required, which would be atypical) (EPA 1971); should the installation of piles for foundations be required, this type of construction activity could produce noise levels of approximately 105 dB Leq at 50 feet. Noise from localized point sources (such as construction sites) typically decrease at a rate of approximately 6 dB with each doubling of distance between the noise source and receptor. Intervening structures would provide shielding from the noise source, resulting in lower noise levels; however, these reductions would vary and are not quantifiable at the plan level. Therefore, the 2035 General Plan and CAP EIR determined that construction within the City's Planning Area could result in the temporary exposure of sensitive receptors to noise levels that would exceed the City's then-existing standards of 45 dB Leq nighttime, 50 dB Leq daytime, 65 dB Lmax nighttime, 70 dB Lmax daytime (as shown in Table 3.11-5, the 2035 General Plan increased daytime standards to 60dB Leq and 75 dB Lmax). Even with implementation of noisemitigating practices incorporated into construction of future development within the City's Planning Area (now Implementation Program 8.13 of the 2035 General Plan), the 2035 General Plan and CAP EIR determined that that there could still be a noticeable temporary increase in noise levels for noise-sensitive uses that are adjacent to construction sites, and the impact was determined to be significant and unavoidable.

Construction activities anticipated within the WRTP Specific Plan Area are consistent with those analyzed in the 2035 General Plan and CAP EIR, but also took into consideration construction of the off-site improvements and sensitive land uses that have been constructed or are planned for construction within the Spring Lake Specific Plan Area. With respect to increase above existing ambient noise levels, as shown in Table 3.11-2 measurement LT-01 represents the WRTP Specific Plan Area south of CR 25A, and Measurement LT-02 represents the WRTP Specific Plan Area north of CR 25A. The measured daytime average ambient noise levels at LT-01 and LT-02 are 48 dB Leq (70 dB Lmax) and 55 dB Leq (93 dB Lmax), respectively. The measured nighttime average ambient noise levels at LT01 and LT-02 are 49 dB Leq (66 dB Lmax) and 54 dB Leq (71 dB Lmax), respectively. Construction activities associated with development of the WRTP Specific Plan Area and off-site improvement areas would substantially increase noise-levels above existing ambient conditions. Construction activities within the WRTP Specific Plan Area are anticipated along the eastern and northern boundaries adjacent to existing and potential future residences associated with the Spring Lake development. In addition, as development of the WRTP Specific Plan Area proceeds, construction activities could take place in proximity to future sensitive land uses within the WRTP Specific Plan Area. With respect to the Caltrans Off-site Improvement Area, the nearest construction would occur within approximately 120 feet of the residence southwest of the SR 113/CR 25A interchange. At this distance, assuming an approximately 6dB decrease in noise from construction equipment with each doubling of distance, the estimated average 80 to 90 dB generated by potential construction equipment at 50 feet could still exceed 75 dB. Therefore, construction activities within the WRTP Specific Plan Area and off-site improvement areas could result in exposure of existing and future noise-sensitive land uses to noticeable increases in noise levels. If construction activities were to occur during more noise-sensitive hours, construction source noise levels could also result in annoyance and/or sleep disruption to occupants of existing and proposed noise-sensitive land uses, and could create a substantial temporary increase in ambient noise levels. Section 9.28.090 of the City's Municipal Code limits noisy construction activities within or near residential areas to weekdays and Saturdays between 7:00 A.M. and 6:00 P.M. and Sundays between 9:00 A.M. and 6:00 P.M. Land use and development under the WRTP Specific Plan will comply with all applicable regulations, including the City's Municipal Code. Compliance with the City's Municipal Code and implementation of the performance standards of the WRTP Specific Plan, which are consistent with the 2035 General Plan policies and Implementation Programs, would reduce the potential for significant noise exposure

impacts from the implementation of the W RTP Specific Plan. However, there could still be a noticeable temporary increase above ambient noise levels for noisesensitive uses that are adjacent to future construction sites. This impact is considered significant.

Mitigation Measure 3.11-1– Implement Construction Noise Reduction Strategies (as revised in Chapter 3, “Errata,” of the Final EIR)

- a. Demolition, construction, site preparation, and related activities that would generate noise perceptible at the property line of the subject property are limited to the hours between 7:00 A.M. and 6:00 P.M. on Monday through Saturday and between 9:00 A.M. and 6:00 P.M. on Sunday and federal holidays. The building inspector may issue an exception to this limitation on hours in cases of urgent necessity where the public health and safety will not be substantially impaired.
- b. Idling times for noise-generating equipment used in demolition, construction, site preparation, and related activities shall be minimized either by shutting equipment off when not in use or reducing the maximum idling time to two (2)~~5~~ minutes.
- c. Where construction work is within 445 feet of properties with existing, occupied noise-sensitive uses, construction shall be prohibited on weekends and holidays and construction should start no earlier than 8 a.m.
- d. Where non-residential construction work is within 445-feet of an existing off-site residence, installation of continuous noise curtains shall be required between the construction site and those residences.
- e. Demolition, construction, site preparation, and related activities that do not involve pile driving proposed within 445 feet from the edge of properties with existing, occupied noise-sensitive uses shall incorporate all feasible strategies to reduce noise exposure for noise-sensitive uses, including:
 - Provide written notice to all known occupied noise-sensitive uses within 400 feet of the edge of the project site boundary at least 2 weeks prior to the start of each construction phase of the construction schedule;
 - Ensure that construction equipment is properly maintained and equipped with noise control components, such as mufflers, in accordance with manufacturers’ specifications;
 - Re-route construction equipment away from adjacent noise-sensitive uses;
 - Locate noisy construction equipment away from surrounding noise-sensitive uses;
 - Use sound aprons or temporary noise enclosures around noise-generating equipment;
 - Position storage of waste materials, earth, and other supplies in a manner that will function as a noise barrier for surrounding noise-sensitive uses;
 - Use the quietest practical type of equipment;
 - Use electric powered equipment instead of diesel or gasoline engine powered equipment;

- Use shrouding or shielding and intake and exhaust silencers/mufflers; and
 - Other effective and feasible strategies to reduce construction noise exposure for surrounding noise-sensitive uses.
- f. For construction of buildings that require the installation of piles, an alternative to installation of piles by hammering shall be used. This could include the use of augured holes for cast-in-place piles, installation through vibration or hydraulic insertion, or another low-noise technique.

Significance after Mitigation: Mitigation Measure 3.11-1 would reduce construction-related noise exposure. However, since the timing and specific details with regard to equipment use and intensity of future construction activities is unknown, it is not possible to quantify the noise reductions achievable by implementation of this mitigation. Therefore, there could still be a substantial temporary increase in noise levels for existing and future noise-sensitive uses in proximity to construction activities within the WRTP Specific Plan Area and off-site improvement areas, which could lead to adverse noise-related impacts.

The City has accepted the potentially significant outcome of construction noise as a trade-off for promoting compact development. This is communicated in the 2035 General Plan, including Policy 2.C.1, that promotes compact development patterns, mixed land use, and higher-development intensities that conserve land resources, reduce vehicle trips, improve air quality, and facilitate walking, bicycling, and transit use, but may result in some less desirable impacts, such as increased traffic, greater noise, reduced private residential open space, and reduced privacy than in lower density areas. The City acknowledges that temporary construction noise is a necessary byproduct of meeting the City's objectives for development, resource conservation, air quality and greenhouse gas emission reduction, and related topics. General Plan Policy 8.G.11 considers construction noise to be an acceptable impact that is an expected byproduct of planned growth, so long as the land use is consistent with the General Plan, and noise levels are consistent with the General Plan and Construction Noise Ordinance. Where growth and increased density is allowed pursuant to the City's General Plan, including the WRTP Specific Plan Area, these issues are acknowledged and accepted (please refer to Page 4.11-51 of the 2035 General Plan and CAP EIR for details). There are no additional policies that would reduce the potential environmental impact beyond the analysis presented above. There is no additional feasible mitigation. Therefore, and consistent with the findings of the 2035 General Plan and CAP EIR, this impact is significant and unavoidable. (Draft EIR, pp. 3.11-20 through 3.11-24.)

The impact would remain **significant and unavoidable**. As described in Section VII, specific social, economic, and environmental benefits of the Project outweigh the identified potential unavoidable significant impacts. As described in Section VII, specific social, economic, and environmental benefits of the Project outweigh the identified potential unavoidable significant impacts.

Impact 3.11-2. Generation of a Substantial Permanent (Long-term Operations) Increase in Ambient Noise Levels in the Vicinity of the Project in Excess of Standards Established in the Local General Plan or Noise Ordinance, or Applicable Standards of Other Agencies.

Finding: Land uses contemplated under the WRTP Specific Plan could potentially expose existing or anticipated noise-sensitive uses to noise levels that exceed standards. Consistent with the findings of the 2035 General Plan and CAP EIR, this impact is considered significant.

The 2035 General Plan and CAP EIR (pages 4.11-51 to 4.11-60) analyzed long-term operational noise impacts resulting from the future development, with assumed development within the City's new growth areas, including the WRTP Specific Plan Area. The analysis determined that future development of noise-sensitive uses within the WRTP Specific Plan Area could occur adjacent to areas that are exposed to noise from transportation sources and from non-transportation noise sources, as well as in areas that either are currently exposed to or would be exposed to ambient noise levels that exceed the existing ambient exterior noise levels at noise-sensitive uses. The analysis also determined that future development would include the creation of long-term sources of noise that could increase noise levels above existing ambient levels. Although the General Plan policies were designed to avoid substantial disturbances to noise-sensitive receptors, the City anticipated that, despite implementation of feasible noise reduction strategies, noise-sensitive uses could be exposed to noise in exceedance of the City's standards, including noise generated by new development within the WRTP Specific Plan Area, and concluded in the 2035 General Plan and CAP EIR that impacts related to the generation of a permanent increase in ambient noise levels would be significant and unavoidable. As a necessary outcome of development allowed under the WRTP Specific Plan, long-term sources of noise would be created. Also, future development of noise-sensitive uses would occur in areas that either are currently exposed to or would be exposed to ambient noise levels that exceed the existing ambient exterior noise levels at noisesensitive uses. Table 3.11-2 shows the long-term measured ambient noise levels in the vicinity of the WRTP Specific Plan Area. Sources of ambient noise in the vicinity of the WRTP Specific Plan Area are vehicular traffic noise, non-transportation noise sources, as well as noise generated by landscape and building maintenance activities, mechanical equipment, solid waste collection, parking lots, commercial, office, residential, school, and recreation activities and events. As noted, the WRTP Specific Plan Area was assumed as part of the development anticipated under the 2035 General Plan. Land use contemplated by the WRTP Specific Plan is consistent with the vision of the General Plan for SP-1A and the 2035 General Plan Policy 2.L.2, which describes the intended land use concept for SP-1A. Although the off-site South Regional Pond was not specifically analyzed in the 2035 General Plan and CAP EIR, the operational noise associated with this land use is negligible as a passive open-space detention pond. Potential increases in noise levels associated with traffic at the SR 113/CR 25A interchange, with implementation of the proposed Caltrans interchange improvements, are detailed below as part of the discussion of "Transportation Noise."

Transportation Noise: Development under the WRTP Specific Plan would generate and attract vehicular traffic, which would increase traffic noise levels along existing and future roadways. Analysis in support of the 2035 General Plan and CAP EIR evaluated future highway and roadway (arterials, collectors and local roadways) noise levels anticipated with implementation of the 2035 General Plan, which included assumed development of the WRTP Specific Plan Area. Future noise levels were modeled for buildout of the General Plan in the year 2035 and accounted for traffic volumes assuming full development of the City's Planning Area, including all new growth areas. Based on noise modeling for these conditions, the 2035 General Plan and CAP EIR identified up to 14 roadway segments for which the change in noise levels due to traffic would be perceptible, and up to four roadway segments for which the change would be clearly noticeable (6 dB change or more) (Tables 4.11-11 and 4.11-12 of the 2035 General Plan and CAP EIR, City of Woodland 2017). The analysis also determined that noise-sensitive uses could be developed in areas where transportation-related noise could exceed City's noise standards. One such location proximate to the WRTP Specific Plan Area is along SR 113, at which existing noise levels for modeled segments within the Planning Area were between 75 Ldn and 76 Ldn. The nearest modeled roadway segment to the WRTP Specific Plan Area was on SR 113 south of East Gibson Road; at this location, existing transportation-related noise was modeled to be 76 Ldn and the future condition with implementation of the General Plan, including development of the WRTP Specific Plan Area, was modeled to be 77 Ldn. In order to more specifically evaluate

the traffic noise associated with the proposed roadway network under the WRTP Specific Plan, traffic noise was modeled using traffic study conducted in support of the EIR (see Appendix E, Transportation Impact Study, Fehr & Peers 2020). As shown in Tables 3.11-8a,b, there are several roadway segments associated with the WRTP Specific Plan's proposed circulation network for which the addition of vehicular trips would increase noise levels so that they would be perceptible (by at least 3 dB) and some roadways where the increase over existing conditions is anticipated to be clearly noticeable (by at least 5 dB). The predicted traffic noise levels shown in Tables 3.11-8a,b represent conservative potential noise exposure associated with roadways within and at the perimeter of the WRTP Specific Plan Area. In reality, noise levels may vary from that represented, since the calculations do not assume natural or artificial shielding or reflection from existing or proposed structures or variations in attenuation rates resulting from changes in intervening surfaces. In addition, noise levels would vary from day to day depending on factors such as local traffic volumes, speed, and meteorological conditions. Tables 3.11-8a,b lists the predicted distances to the 60 dB, 65 dB, and 70 dB Ldn traffic noise contours, and compares projected future traffic noise levels at proposed and existing roadways within and adjacent to the WRTP Specific Plan Area under the buildout of the WRTP Specific Plan to those under existing conditions. These contour distances are used to identify portions of the WRTP Specific Plan Area that could be subject to noise impacts. Table 3.11-9 compares projected future traffic noise levels from approved projects and buildout of the WRTP Specific Plan with existing traffic noise levels. This table provides an evaluation of the changes in traffic noise levels that would result from development of the WRTP Specific Plan and other approved projects. As shown in Tables 3.11-8a,b, traffic associated with implementation of the WRTP Specific Plan is expected to increase noise levels by 3 to 10 dB from existing condition. The increase of 10 dB would only occur along CR 25A from SR 113 NB Ramps to the proposed Road A; the WRTP Specific Plan land use designations adjacent to this roadway segment are Highway Commercial and Research and Technology Park, in which permitted uses would primarily not accommodate noise sensitive uses, except Highway Commercial does allow for hotels and the Research and Technology Park could accommodate daycare facilities. Also, as shown, existing plus project condition traffic noise would range from 61 to 68 dB at 100 feet. Therefore, traffic noise levels would not exceed the City's noise standards of 70 dB, as shown in Table 3.11-5, for noise-sensitive uses. Although transportation-related noise would be less than the City's standards at existing and planned roadways within and adjacent to the WRTP Specific Plan Area, future development of new noisesensitive land uses could occur under the WRTP Specific Plan within areas that are currently exposed to noise from transportation sources (e.g., west of SR 113). This impact is significant. Traffic noise due to improvement at the SR 113 and CR 25A interchange was not modeled\evaluated in this analysis. Traffic noise was not computed along SR 113 as the traffic study did not evaluate freeway volume increase along SR 113 due to the project and future conditions. However, Project-related traffic increase along SR 113 would not even cause doubling of the traffic volumes, in which case it would have only caused a 3 dB (barely perceptible) increase in traffic noise. Improvements to the SR 113 and CR 25A interchange would slightly increase traffic noise at the nearest sensitive receiver located to the southwest of the interchange. However, the traffic noise along SR 113 would be the dominant noise source and would mask the slight noise increase due to the interchange movements. Therefore, implementation of the SR 113/CR 25A interchange improvements would result in noise related impacts that are less than significant.

Stationary and Area Source Noise: The WRTP Specific Plan would accommodate a variety of land uses, including residential, commercial, retail, light industrial, research facilities within office complexes, open space and recreation; and institutional and public facilities (e.g., electrical substations, wastewater conveyance facilities, and school facilities). The long-term operation of these uses could result in stationary and area source noise from, but not limited to:

- ▶ landscape and building maintenance activities (e.g., hand tools, power tools, lawn and garden equipment);
- ▶ whistles, amplified voices, and other sounds associated with sporting or other organized activities;
- ▶ amplified music;
- ▶ mechanical equipment (e.g., pumps, generators heating, ventilation, and cooling systems);
- ▶ loading dock activities;
- ▶ parking lots;
- ▶ safety and warning devices;
- ▶ garbage collection; and
- ▶ other noise sources.

The 2035 General Plan and CAP EIR determined that the proposed intensification of land uses within the City's Planning Area would result in somewhat greater ambient noise levels. The General Plan included noise performance standards and required feasible mitigation to reduce the potential for significant noise exposure impacts. Performance Standard F of the WRTP Specific Plan (Section 3.3.2.) requires application of the noise-related provisions in Chapter 8 of the General Plan and applicable sections of the City of Woodland Municipal Code that relate to noise and nuisance considerations to all proposed projects within the WRTP Specific Plan Area. The noise provisions in Chapter 8 of the General Plan are detailed in Section 3.11.3, "Regulatory Framework," of the EIR, limiting the maximum noise levels at property lines to not exceed 70 dB Ldn. Similarly, Chapter 3 of the WRTP Specific Plan contains Design Standards and Design Guidelines for ensuring compatibility between adjacent uses with regard to noise and nuisance impacts. For example, Table 3.1 of the WRTP Specific Plan identifies permitted uses within each land use designation, with consideration for, among other factors, noise sources and receivers. Specific commercial and retail uses within the medium-density and high-density residential zones are permitted as part of a mixed-use project along the perimeter of a subdivision/development project, but may be subject to, at the discretion of the Community Development Director, conditions that limit noise, odor, or other potential impacts to adjoining residential uses and/or the Director may elevate review/approval to a Zoning Administrator Permit or Conditional Use Permit. Similarly, Design Guidelines and Special Character Guidelines throughout Chapter 3 provide for building orientation and separation guidelines, as well as consideration of placement and orientation of noise-generating equipment, such as vents/fans and refrigeration units, to minimize potential noise levels at future noise-sensitive receivers. Finally, the guidelines provide for set back distances, landscaping, and other noise attenuating recommendations, and standards with regard to solid masonry or block wall, should the be required as a last resort measure for noise attenuation to achieve noise standards; as noted Section 3.5, "Design Standards and Design Guidelines," in the WRTP Specific Plan, sound walls are not expected to be required within the WRTP Specific Plan Area, except where necessary along SR 113 in locations where residential development is planned. The policies referenced above would reduce long-term noise exposure impacts by establishing noise compatibility standards and requiring new development to include certain measures and strategies to achieve acceptable noise environments, wherever feasible. Although the policies are designed to avoid substantial disturbances to noise-sensitive receptors, despite implementation of feasible noise reduction strategies contained in Chapter 8 of the

General Plan and Chapter 3 of the WRTP Specific Plan, noise-sensitive uses could be exposed to noise generated by new development anticipated under the WRTP Specific Plan. This impact is significant.

Mitigation Measure 3.11-2– Reduce Noise Exposure from Transportation and Non-Transportation Sources

Future development within the WRTP Specific Plan Area shall be required to meet allowable outdoor and indoor noise exposure standards. Noise mitigation measures that may be approved to achieve these noise level targets include but are not limited to the following:

- Construct facades with sound insulation to achieve acceptable interior noise;
- Use sound-rated windows for primary sleeping and activity areas;
- Use sound-rated doors for all exterior entries at primary sleeping and activity areas;
- Use setbacks and/or sound barriers where applicable, feasible, and reasonable; • Use acoustic baffling of vents for chimneys, attic and gable ends;
- Install a mechanical ventilation system that provides fresh air under closed window conditions; and
- Maximize site design so that buildings shelter outdoor areas

Significance after Mitigation: Land use and development within the WRTP Specific Plan Area is subject to conformance with the permitted uses, the site development regulations, development standards, and design guidelines, as outlined in Chapter 3 of the WRTP Specific Plan and inclusive of the General Plan noise mitigating provisions and the City’s Municipal Code noise performance standards. Development of the land use plan for the WRTP Specific Plan Area took into consideration land use-noise compatibility, including the potential for noise source and noise sensitive land uses, of allowable land uses within each land use designation and zoning classification. The WRTP Specific Plan requires noise performance standards be met, as outlined in Section 3.3.2 of the WRTP Specific Plan. These standards are consistent with the 2035 General Plan policies described above, and would reduce the potential for significant noise exposure impacts from the implementation of the WRTP Specific Plan. Mitigation Measure 3.11-2 would further ensure implementation of all noise mitigation features and strategies with future development. Although the WRTP Specific Plan policies and Mitigation Measure 3.11-2 are designed to avoid substantial disturbances to noise-sensitive receptors, because the exact location and design of future noise generating sources and noise-sensitive uses is unknown at this time, it cannot be demonstrated at this time that policies in the WRTP Specific Plan and would reduce impacts of the WRTP Specific Plan related to exposure of noise-sensitive uses to transportation- and non-transportation noise sources to a less-than-significant level. There is no additional feasible mitigation available. Therefore, and consistent with the findings of the 2035 General Plan and CAP EIR, this impact is considered significant and unavoidable. (Draft EIR, pp. 3.11-24 through 3.11-28.)

The impact would remain **significant and unavoidable**. As described in Section VII, specific social, economic, and environmental benefits of the Project outweigh the identified potential unavoidable significant impacts. As described in Section VII, specific social, economic, and environmental benefits of the Project outweigh the identified potential unavoidable significant impacts.

Impact 3.11-3. Generation of Vibration.

Finding: Construction of projects under the WRTP Specific Plan could cause temporary, short-term disruptive vibration for locations near sensitive receptors within and adjacent to the WRTP Specific Plan Area. Under the WRTP Specific Plan, new vibration-sensitive uses could locate in areas exposed to vibration. Consistent with the findings of the 2035 General Plan and CAP EIR, this impact is considered significant.

The 2035 General Plan and CAP EIR (pages 4.11-60 to 4.11-63) discusses vibration impacts resulting from operation and construction activities that occur in areas immediately adjoining vibration-sensitive land uses, and when construction vibration occurs in new growth areas, including the WRTP Specific Plan Areas. The 2035 General Plan and CAP EIR anticipated that existing and future vibration-sensitive receptors could be located within close proximity to construction sites that could generate temporary, short-term vibration levels from construction sources that exceed FTA's maximum-acceptable vibration standard of 80 VdB with respect to human response for residential uses (i.e., annoyance) at vibration-sensitive land uses. Table 3.11-7 provides vibration levels for typical construction equipment. If construction activities were to occur during more noise-sensitive hours, vibration from construction sources could annoy and/or disrupt the sleep of occupants of existing and proposed residences and expose persons to excessive groundborne vibration or groundborne noise levels. The 2035 General Plan and CAP EIR also acknowledged that vibration levels from future vibration sources associated with planned development, including within the WRTP Specific Plan Area, could exceed FTA's maximum-acceptable vibration standard of 80 VdB with respect to human response for residential uses (i.e., annoyance) at vibration-sensitive land uses. Vibration from future sources could annoy and/or disrupt the sleep of occupants of existing and proposed residences and expose persons to excessive groundborne vibration or groundborne noise levels if vibration-generating activities were to occur during more noise-sensitive hours. The 2035 General Plan and CAP EIR found that, even with implementation of mitigation that would reduce the level of impact associated with temporary construction-related vibration exposure for sensitive uses, and the potential for vibration levels in areas of new vibration-sensitive land uses, impacts may not be avoidable in all instances, and the impact was determined to be significant and unavoidable. Implementation of the WRTP Specific Plan would include construction and operation of future land uses within the WRTP Specific Plan Area and off-site improvement areas. Construction activities associated with the off-site improvements would be consistent with other construction proposed throughout the WRTP Specific Plan Area and anticipated under the 2035 General Plan. Implementation of the WRTP Specific Plan would result in no additional or different impact than disclosed in the analysis presented in the General Plan EIR, summarized below. Construction and demolition activities associated with the WRTP Specific Plan have the potential to result in varying degrees of temporary groundborne vibration, depending on the specific construction equipment used, the location of construction activities relative to sensitive receptors, and operations/activities involved. The required construction equipment for future proposed projects under the WRTP Specific Plan is not known at this time, but could include maximum generation of vibration from pile drivers, trucks, and bulldozers. According to the FTA, vibration levels associated with the use of such equipment would be approximately 0.089 in/sec PPV and 87 VdB at 25 feet, as shown in Table 3.11-7. Using FTA's recommended procedure for applying a propagation adjustment to these reference levels, predicted worst-case vibration levels with respect to construction related to improvements of SR 113 and Road 25A interchange, would be 67 VdB (0.008 in/sec PPV) at the nearest vibrationsensitive use which is located at approximately 120 feet to the southwest of the interchange. Also, the vibration levels would not exceed 0.2 in/sec PPV (Caltrans's recommended standard with respect to the prevention of structural damage for normal buildings) within the WRTP Specific Plan Area, but would exceed 80 VdB (FTA's maximum-acceptable vibration standard with respect to human annoyance for residential uses) within 60 feet of vibration-sensitive receptors. The WRTP Specific Plan provides for multi-story development integrated into the

various land use designations, as detailed in Section 3 of the WRTP Specific Plan. Therefore, while unlikely, it is possible that pile-driving could occur at some development sites. This type of construction activity could produce very high vibration levels of approximately 112 VdB (1.518 PPV) at 25 feet, as shown in Table 3.11-7. These vibration levels drop off at a rate of about 9 VdB per doubling of distance between the noise source and receptor. Vibration levels from construction sources could exceed FTA's maximum-acceptable vibration standard of 80 VdB with respect to human response for residential uses (i.e., annoyance) at vibration-sensitive land uses. More importantly, vibration from construction sources could annoy and/or disrupt the sleep of occupants of existing and proposed residences and expose persons to excessive groundborne vibration or groundborne noise levels if vibration-generating activities were to occur during more noise-sensitive hours. Therefore, vibration levels would exceed the established standards. This impact is potentially significant.

Mitigation Measure 3.11-3a – Implement Vibration Reduction Measures

- a. New development that proposes the use of piles for foundations shall include all feasible measures necessary with the goal to ensure that vibration exposure for adjacent buildings is less than 0.5 peak particle velocity (PPV) and less than 80 vibration decibels (VdB) for adjacent vibration-sensitive uses and less than 0.2 PPV for adjacent historic buildings. These performance standards shall take into account the reduction in vibration exposure that would occur through coupling loss provided by each affected building structure. If it is determined necessary to avoid damage, the project applicant shall coordinate with the Chief Building Official to implement corrective actions, which may include, but is not limited to building protection or stabilization.
- b. New developments that would generate substantial long-term vibration shall provide analysis and mitigation, as feasible, to achieve velocity levels, as experienced at habitable structures of vibration-sensitive land uses, of less than 80 vibration decibels.

Mitigation Measure 3.11-3b – Implement Mitigation Measure 3.11-1

Significance after Mitigation: Mitigation Measure 3.11-3a requires use of project-specific vibration mitigation measures (preparation of vibration analysis and implementation of vibration abatement measures, as necessary and to the greatest extent feasible) and best practices during construction to mitigate vibration impacts to sensitive land uses. Mitigation Measure 3.11-1 requires noise mitigation measures be implemented during construction, which, in many cases, would also reduce vibration-generation associated with construction activities. Implementation would reduce the potential for vibration levels in areas of new vibration-sensitive land uses and the level of impact associated with temporary construction-related vibration exposure for sensitive uses. However, since the timing and specific details with regard to equipment use and intensity of future construction activities is unknown, it is not possible to quantify the noise reductions achievable by implementation of this mitigation. Therefore, there could still be a substantial temporary increase in noise levels for existing and future noise-sensitive uses in proximity to construction activities within the WRTP Specific Plan Area and off-site improvement areas, which could lead to adverse noise-related impacts. There is no additional feasible mitigation.

Land use and development within the WRTP Specific Plan Area is subject to conformance with the permitted uses, the site development regulations, development standards and design guidelines, as outlined in Chapter 3 of the WRTP Specific Plan. The WRTP Specific Plan requires performance standards be met, as outlined in Section 3.3.2 of the WRTP Specific Plan. These standards are consistent with the 2035 General Plan policies described above,

and would reduce the potential vibration levels associated with implementation of the WRTP Specific Plan. However, because the exact location of future vibration generating sources and sensitive uses is unknown at this time, construction associated with future development of the WRTP Specific Plan could cause temporary, shortterm disruptive vibration for locations near sensitive receptors and planned vibration-sensitive uses could be located in areas exposed to future vibration. There is no additional feasible mitigation. Therefore, and consistent with the findings of the 2035 General Plan and CAP EIR, this impact is considered significant and unavoidable. (Draft EIR, pp. 3.11-28 through 3.11-30.)

The impact would remain **significant and unavoidable**. As described in Section VII, specific social, economic, and environmental benefits of the Project outweigh the identified potential unavoidable significant impacts. As described in Section VII, specific social, economic, and environmental benefits of the proposed project outweigh the identified potential unavoidable significant impacts.

C. MANDATORY FINDINGS OF SIGNIFICANCE

CEQA Guidelines Section 15065(a) states that a project may have a significant effect on the environment when one of the following four conditions occurs:

- (1) The project has the potential to substantially degrade the quality of the environment, substantially reduce the habitat of a fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, substantially reduce the number or restrict the range of an endangered, rare, or threatened species, or eliminate important examples of the major periods of California history or prehistory.
- (2) The project has the potential to achieve short-term environmental goals to the disadvantage of long-term environmental goals.
- (3) The project has possible environmental effects that are individually limited but cumulatively considerable, which means that the incremental effects of an individual project are significant when viewed in connection with the effects of past projects, the effects of other current projects, and the effects of probable future projects.
- (4) The environmental effects of a project will cause substantial adverse effects on human beings, either directly or indirectly.

Section 15061(a)(1) states that a lead agency shall find that a project may have a significant effect on the environment when there is substantial evidence that the project has the potential to (1) substantially reduce the habitat of a fish or wildlife species; (2) cause a fish or wildlife population to drop below self-sustaining levels; (3) substantially reduce the number or restrict the range of an endangered, rare, or threatened species; or (4) eliminate important examples of major periods of California history or prehistory. The EIR fully addresses any impacts that might relate to reduction of habitat and the effect on species. Impacts related to wildlife and plant species are addressed under Impacts 3.4-1, 3.4-2, 3.4-3, and 3.4-4, and as outlined above, impacts are less than significant with mitigation. Historic and prehistoric impacts are addressed under Impact 3.6-1, as outlined above, impacts are significant and unavoidable.

Section 15061(a)(2) states that a lead agency shall find that a project may have a significant effect on the environment when there is substantial evidence that the project has the potential to achieve short-term environmental goals to the disadvantage of long-term environmental goals. Chapter 5 of the EIR includes a section on Significant Irreversible Environmental Effects of the Proposed Project. In addition, Section 5.4 of the EIR identifies all significant and unavoidable impacts that could occur and create a long-term impact on the environment. Finally, Chapter 5 of the EIR also identifies any long-term environmental impacts caused by the proposed project.

Section 15061(a)(3) states that a lead agency shall find that a project may have a significant effect on the environment when there is substantial evidence that the project has potential environmental effects that are individually limited but cumulatively considerable. This means that the “incremental effects of an individual project are significant when viewed in connection with the effects of past projects, the effects of other current projects, and the effects of probably future projects.” Cumulative impacts are addressed for each of the environmental topics in the EIR and are discussed in each technical section of the EIR.

Section 15065(a)(4) requires a lead agency to find that a project will have a significant effect on the environment when there is substantial evidence that the project has the potential to cause substantial adverse effects on human beings, either directly or indirectly. This factor relates to effects to the environment on human beings generally but not to effects on specific individuals. Any of the environmental effects analyzed in the EIR could cause adverse impacts to human beings, but all impacts that could directly affect human beings (such as aesthetics, air quality, hazardous materials, hydrology, flooding, and water quality, noise and vibration, and transportation) were examined in Chapter 3 of the EIR.

The City Council finds that the EIR for the proposed project analyzed and reported on all four mandatory findings of significance.

D. MITIGATION MONITORING AND REPORTING PROGRAM

Pursuant to CEQA Guidelines Section 15091(d), the City has included all feasible mitigation measures that avoid or substantially lessen the potentially significant and significant effects of the proposed project. These mitigation measures are fully enforceable by the City Council.

The MMRP includes Table 2-1, which is a summary of the impacts and mitigation measures, and is simultaneously being adopted by the City Council with its Resolution Certifying the EIR for the proposed project.

E. GROWTH INDUCEMENT

Chapter 5, “Other CEQA Considerations,” of the Draft EIR provides a discussion of the growth-inducing impacts of the 2035 General Plan pursuant to Section 15126.2(d) of the CEQA Guidelines. The WRTP Specific Plan Area is located outside the existing City limits; however, the WRTP Specific Plan Area would ultimately be annexed to the City and was considered as part of the City’s 2035 General Plan, adopted in 2017.

The development framework for the WRTP Specific Plan area was guided by Policy 2.L.2 of the 2035 General Plan, which describes the WRTP Specific Plan Area as “a mixed-use residential district anchored by a research and technology business park in the Southern Gateway area at CR 25 and SR 113” and supports development that would “concentrate the highest intensity development within and in close proximity to the business park area, with lower density, largely residential uses to the north.” The 2035 General Plan designated three subareas within the City’s Planning Area for new growth (SP-1, 2, and 3); although specific land use designations were not identified for the WRTP Specific Plan Area, it is one of three subareas (SP-1A) within the designated SP-1 new growth area. As described in Chapter 2, “Project Description,” of the EIR, the WRTP Specific Plan Area could accommodate a broad range of uses that could generate approximately 5,000 jobs and 4,823 residents. This is consistent with the general growth anticipated for this WRTP Specific Plan Area in the 2035 General Plan. Because implementation of the WRTP Specific Plan would not involve more employment 115enerateng land uses or residential development and population than anticipated under the City’s 2035 General Plan, the WRTP Specific Plan would not induce unplanned population growth.

Construction activities associated with future development within the WRTP Specific Plan Area and off-site improvement areas would generate temporary employment, but these construction jobs are anticipated to be filled from the existing local and regional employment pool. In addition, if some nonlocal construction workers were employed for the project, due to the temporary nature of the work, these workers would not typically change residences when assigned to a new construction site. Therefore, construction of future development within the

WRTP Specific Plan Area and off-site improvement areas would not indirectly result in a population increase or induce growth by creating permanent new jobs. The additional population associated with the WRTP Specific Plan could spur an increase in demand for goods and services in the surrounding area, which could potentially result in additional development to satisfy this demand. In this respect, the WRTP Specific Plan would be growth inducing. It would be speculative to attempt to predict where and when any such new services would be developed, and whether or not existing and future planned industrial and commercial development would satisfy additional demand for goods and services created by the project. The WRTP Specific Plan will provide roadway and other multi-modal connections to surrounding existing and planned neighborhoods within the City's Planning Area, such as the Spring Lake Development to the north and east and future development within SP-1B west of State Route 113, which could be useful to future development, but these areas have been planned for eventual development as a part of the City's 2035 General Plan. In addition, the General Plan anticipated the highest intensity of development for new growth to occur within the SP-1A and SP1B within the business park area, and the remainder of these sub-areas to be largely residential with some open space and recreation areas (City of Woodland 2017, pages LU 2-55 and 2-56). The WRTP Specific Plan provides the additional job opportunities to support existing and future residential development within the City's Planning Area. With regard to other infrastructure improvements, in anticipation of future development of the WRTP Specific Plan Area, the backbone utility lines in the Spring Lake area were oversized and stubbed out at the border of the two planning areas, to ensure efficient service to the WRTP Specific Plan Area through extension of those backbone utility lines from Spring Lake. New stormwater facilities and on-site water and wastewater infrastructure required to serve the WRTP Specific Plan Area would be sized to accommodate WRTP Specific Plan Area -related demands. Although the 2035 General Plan anticipates additional development west of the WRTP Specific Plan Area in new growth areas identified as SP-1B and SP-1C, downstream stormwater infrastructure associated with implementation of the WRTP Specific Plan will be designed to accept pre-development flows generated by these areas; it is assumed that development within these areas would include implementation of stormwater management features to reduce future post-development flows to their respective pre-development flows. Infrastructure improvements will be phased with development. Because the infrastructure that would be provided for the WRTP Specific Plan Area would be consistent with that anticipated under the 2035 General Plan, the WRTP Specific Plan would not result in indirect growth-inducing effects by increasing infrastructure capacity that could serve additional development in excess of that anticipated under the City's 2035 General Plan.

In summary, the WRTP Specific Plan may indirectly induce population growth because the increased population and employment opportunities associated with the future development could increase demand for goods and services, thereby fostering population and economic growth in the City and surrounding unincorporated Yolo County and other nearby communities. It is possible that the WRTP Specific Plan could place pressure on adjacent areas to seek development entitlements or annexation applications. However, WRTP Specific Plan Area, along with other areas planned for development under the City's General Plan, would provide sufficient acreage to accommodate population and employment growth in alignment with the purpose and intent of the 2035 General Plan. Therefore, the WRTP Specific Plan would not induce substantial unplanned growth in the City of Woodland.

F. SIGNIFICANT IRREVERSIBLE ENVIRONMENTAL CHANGES

Chapter 5.0, "Other CEQA Considerations," of the Draft EIR examines "significant irreversible environmental changes" pursuant to Section 15126.2© of the CEQA Guidelines. Sections 15126(c) and 15126.2(c) of the CEQA Guidelines, require that an EIR address any significant irreversible environmental changes that would occur should

the project be implemented. Generally, a project would result in significant irreversible environmental changes if any of the following would occur:

- ▶ The project would involve a large commitment of non-renewable resources;
- ▶ The primary and secondary impacts of the project would generally commit future generations to similar uses;
- ▶ The project involves uses in which irreversible damage could result from any potential environmental accidents;
or
- ▶ The proposed consumption of resources is not justified.

Development of the WRTP Specific Plan Area and off-site improvement areas would use both renewable and nonrenewable natural resources during both construction and operational phases—both within the WRTP Specific Plan Area and also to construct required off-site improvements. Nonrenewable fossil fuels would be used during construction and operation. Other nonrenewable and slowly-renewable resources consumed as a result of development under the WRTP Specific Plan would include, but not necessarily be limited to, lumber and other forest products, sand and gravel, asphalt, petrochemical construction materials, steel, copper, and water. Proposed development would consume energy for multiple purposes including, but not limited to, building heating and cooling, lighting, appliances, electronics, office equipment, and commercial machinery. Energy could also be consumed during each vehicle trip associated with these proposed uses. It is important to note that actual energy usage could vary substantially, depending upon factors such as the type of uses that would occupy the buildings, actual miles driven by future residents and employees, and the degree to which energy conservation measures are incorporated into the design of the various facilities. There are no unusual project characteristics that would necessitate the use of construction equipment that would be less energy-efficient than at comparable construction sites in other parts of the City. Therefore, it is not expected that construction fuel consumption associated with the proposed project would be more inefficient, wasteful, or unnecessary than at other construction sites in the region. In addition, the WRTP Specific Plan requires consistency with the City's Climate Action Plan and includes several policies, development standards, and design guidelines that require implementation of energy reducing and conserving measures in future development within the WRTP Specific Plan Area, thereby promoting reduced operational demand for non-renewable and slowly-renewable resources compared to existing City operations and compared to new development that could occur elsewhere within the region.

Irreversible changes would likely occur as a result of future excavation, grading, and construction activities. Proposed development would also generate additional transportation demand, construction, energy demand, and other activities that would increase emissions of greenhouse gases and other air pollutants, as well as generation of noise. Different air pollutants and different greenhouse gas emissions remain in the atmosphere for different amounts of time, ranging from a few years to thousands of years.

Implementation of the WRTP Specific Plan and off-site improvement areas would permanently convert agricultural land to nonagricultural uses. All agricultural uses within the WRTP Specific Plan Area would be converted to urban uses at buildout of the proposed project. This change in land use would represent a long-term commitment to new land uses, since the potential for developed land to be reverted back to undeveloped land uses is highly unlikely.

Operation of projects in the vicinity could include the use of hazardous materials, which could increase the risk of an accidental spill or release. During construction, equipment would be using various types of fuel and material

classified as hazardous. In California, the storage and use of hazardous substances are strictly regulated. The enforcement of these existing regulations would preclude credible significant impacts related to environmental accidents.

The 2035 General Plan and CAP EIR addresses impacts of development of the City's Planning Area, including the WRTP Specific Plan Area. Section 6.3 of the 2035 General Plan and CAP EIR addressed significant irreversible environmental changes that could occur as a result of implementation of the 2035 General Plan. The City acknowledges that there could be significant irreversible environmental changes as a result of implementation of the 2035 General Plan, and similarly, there could be significant irreversible environmental changes as a result of implementation of the WRTP Specific Plan. Detailed assessments, including cumulative impacts, for each of the above-mentioned topics are provided throughout Chapter 3 of the EIR. However, and as explained below in Section VII of these Findings, the City Council finds that the benefits of the proposed project outweigh the significant and unavoidable growth-inducing effects caused by the proposed project.

G. CUMULATIVE IMPACTS

Regarding the Project's potential to result in cumulative impacts, the City hereby finds as follows:

1. AESTHETICS

The 2035 General Plan and CAP EIR (pages 6-9 and 6-10) (City of Woodland 2016b) determined that new development throughout the region would result in substantial changes to the regional visual character, including views of agricultural land. As development occurs throughout the region, substantial changes in visual conditions would continue as open viewsheds are replaced by urban development, including both higher-density development and tall buildings that are visible from longer distances, as well as rural and lower-density development with one and two-story buildings that are only visible from adjacent public viewing areas or transportation corridors. Many changes in the aesthetic environment are only experienced locally, and would not tend to combine with nearby development to create cumulative impacts that are more severe than the sum of individual plans and projects. However, cumulative development within the region also adds additional lighting, which combines together to create skyglow effects that obscure views of the night sky. Future development in nearby cities and the surrounding unincorporated County land would lead to a more intense nighttime glow, which would be perceptible throughout the region. Therefore, the changes in scenic vistas, visual character, and nighttime skyglow from projects considered in the cumulative impact analysis would be substantial, and were considered in the 2035 General Plan and CAP EIR to have significant cumulative impacts in and of themselves.

Adverse Effects On Scenic Vistas: Because there are few scenic vistas in the City of Woodland, and it was determined that new views would compensate for—and be very similar to—any lost views, the 2035 General Plan and CAP EIR found that a less-than-cumulatively considerable impact to scenic vistas from new development would occur. As described in this aesthetics analysis, the WRTP Specific Plan viewshed, including the off-site South Regional Pond proposed location and the SR 113/CR 25A intersection, is of moderate visual quality and does not contain any scenic vistas. Because the WRTP Specific Plan Area and the off-site improvement areas are of moderate visual quality and do not represent scenic vistas, and because blockage of the limited background views of the Coast Ranges from the western edge of the Spring Lake development due to development of the proposed WRTP Specific Plan Area was planned for in the 2035 General Plan and CAP EIR (and determined to represent a less-than-significant impact), the impacts of development of the WRTP Specific Plan Area and the off-site improvements

would not be cumulatively considerable, and would represent a less-than-cumulatively considerable impact. Therefore, implementing the WRTP Specific Plan in conjunction with development of related projects would result in a less-than-cumulatively considerable contribution to the significant cumulative impact related to changes in scenic vistas.

Degradation of Visual Character: New development envisioned by the 2035 General Plan would allow for greater density and development intensity in certain areas. However, new buildings do not necessarily constitute an adverse visual impact, and policies in the 2035 General Plan establish high standards for design and compatibility with a project's surroundings. In addition to adding uses and density, new investment in urban infill areas typically improves visual quality by developing vacant or underutilized properties and improving maintenance of existing structures and yards. However, implementing new development would change the visual character of the Planning Area, which would be perceived within the Planning Area, as well as from adjacent areas. The 2035 General Plan and CAP EIR found that even with implementation of all feasible measures in the form of policies and programs in the 2035 General Plan and the City's Community Design Standards, new development would make a cumulatively significant and unavoidable contribution to the significant cumulative impact related to degradation of visual character. The WRTP Specific Plan is designed in compliance with the 2035 General Plan, which includes numerous policies that promote high quality design to ensure that new urban development in the City is visually attractive and aesthetically pleasing (see Section 3.1.2, "Regulatory Framework," above). The Spring Lake development, which is immediately adjacent to the proposed WRTP Specific Plan Area to the north and east, envisioned urban development of the WRTP Specific Plan Area and planned for joint underground sewer, water, and storm drainage capacity for both specific plan areas. The WRTP Specific Plan Design Standards and Design Guidelines incorporate requirements similar to the Spring Lake Specific Plan Design Standards (City of Woodland 2003). The standards and guidelines for both Specific Plans promote attractive tree-lined streets with curbside planting strips, neighborhoods with homes facing the street, front-facing windows, and functioning porches. Residential subdivisions would include internal trails (landscaped linear open space connections separate from sidewalks, paths, and landscaping in street right-of-way) that allow for pedestrian and bicycle circulation within and between subdivisions, and that provide greater connectivity to the planned off-street pedestrian/bicycle loop pathway system including connectivity with the proposed WRTP Specific Plan Area. The WRTP Specific Plan Area would be consistent with General Plan Policy 2.E.2, which encourages high-quality new development that enhances and blends with the established fabric of the natural, social, and built environment, while allowing for innovative architectural styles. The Design Standards and Design Guidelines, in addition to the Land Use Plan and Mobility and Circulation Network, detailed in the WRTP Specific Plan require that streets in the WRTP Specific Plan Area be designed to connect to the Spring Lake development and provide direct access to parks, transit facilities, and commercial uses for pedestrians and bicyclists. The proposed off-site SR 113/CR 25A interchange improvements would be designed in accordance with Caltrans standards, and at the conclusion of construction activities, would appear visually similar to the existing interchange. The off-site South Regional Pond would be designed in accordance with the City's Engineering Standards: Design Standards, Standard Details, and Construction Specifications (City of Woodland 2016a) and standard engineering practices for design of detention basins, and at the conclusion of construction activities, would appear visually similar to other ponds and detention basins in the project region, and would not detract from the existing visual character. However, project implementation would still result in conversion of rural agricultural land to new urban development on approximately 350 acres, and the off-site South Regional Pond would convert 4 acres of orchard to a detention basin, which would inherently change the visual character in this portion of the City. Therefore, the WRTP Specific Plan and the off-site South Regional Pond would make a cumulatively considerable contribution to this

cumulatively significant impact. Because all feasible mitigation measures in the form of policies and programs in the 2035 General Plan and the W RTP Specific Plan Design Standards and Guidelines have already been incorporated, implementation of the W RTP Specific Plan in conjunction with development of related projects would result in a cumulatively significant and unavoidable contribution to the significant cumulative impact related to degradation of visual character.

Lighting and Glare Effects: The 2035 General Plan and CAP EIR found that new development envisioned under the General Plan would contribute nighttime light to the already increasing amount of light pollution in the region, and therefore would make a cumulatively significant and unavoidable contribution to this significant cumulative impact even after implementation of new General Plan Policies 2.F.4 and 2.F.5 (which were adopted as part of the 2035 General Plan). Because the W RTP Specific Plan Area would be developed with commercial, light industrial, and residential uses, implementation of the W RTP Specific Plan would create new sources of additional nighttime lighting that would be visible to adjacent residents in the Spring Lake development as well as motorists traveling on SR 113 and County Roads 25A and 101. As shown in Viewpoint 3, existing nighttime lighting for sporting events at the Woodland Sports Park is visible from the W RTP Specific Plan Area and from homes along the western edge of the Spring Lake development. Furthermore, existing nighttime lighting is already present adjacent to and west of the W RTP Specific Plan Area along SR 113, and adjacent to and east of the W RTP Specific Plan Area in the Spring Lake development. Street lighting in the W RTP Specific Plan Area must be designed in accordance with the lighting standards contained in Section 9 of the City’s Engineering Standards: Design Standards, Standard Details and Construction Specifications (City of Woodland 2016a). The W RTP Specific Plan Design Guidelines state that development may not create new sources of glare, and include lighting design requirements that are designed to comply with 2035 General Plan Policies such as 2.F.4 and 2.F.5. Therefore, the W RTP Specific Plan would employ all feasible measures to avoid light spillover and glare into surrounding areas, and reduce night sky pollution. The off-site South Regional Pond would not require nighttime lighting. The existing SR 113/CR 25A interchange is lighted with high-mast light standards that are shielded and direct the lighting downward; the proposed interchange improvements would include the continued use of shielded, directional high-mast light standards, and would not substantially change the amount of lighting that is already emitted as compared to the existing interchange. However, W RTP Specific Plan implementation would still add to the overall amount of nighttime lighting and potential night sky pollution effects in the City and the region. Therefore, the W RTP Specific Plan would make a cumulatively considerable contribution to this significant cumulative impact. Because all feasible mitigation measures in the form of policies and programs in the 2035 General Plan and the W RTP Specific Plan Design Standards and Design Guidelines have already been incorporated, implementation of the W RTP Specific Plan in conjunction with development of related projects would result in a cumulatively significant and unavoidable contribution to the significant cumulative impact related to nighttime lighting and glare effects. (Draft EIR, pp. 3.1-18 through 3.1-21.)

2. AGRICULTURE AND FORESTRY RESOURCES

The 2035 General Plan and CAP EIR (pages 6-13 and 6-14) (City of Woodland 2016) determined that new development throughout the region would convert agricultural land, including Important Farmland, to nonagricultural uses resulting in a significant cumulative impact. New development envisioned by the 2035 General Plan would convert all of the farmland in the Planning Area to non-agricultural uses (see Table 6-5 of the 2035 General Plan and CAP EIR). The proposed South Regional Pond would be adjacent to, but south of, the W RTP Specific Plan Area, and was not considered in the 2035 General Plan and CAP EIR. Multiple policies are identified in the 2035 General Plan to manage agricultural land conversion, including an urban limit line that is designed to

protect agricultural land surrounding the city limits, which would reduce the potential impact associated with conversion of agricultural land. The 2035 General Plan also requires mitigation for lost farmland within the ULL at a rate of one acre of permanently conserved farmland for every acre converted to urban development or non-agricultural uses. The 2035 General Plan and CAP EIR found that even with implementation of all feasible measures in the form of policies and programs in the 2035 General Plan new development would make a cumulatively significant and unavoidable contribution to the significant cumulative impact related to the loss of farmland, including Important Farmland. As described in Section 3.2.4 of the EIR, future development under the WRTP Specific Plan would result in conversion of approximately 346 acres of Prime Farmland to new urban development, the off-site South Regional Pond would convert 4 acres of Prime Farmland to a detention basin. The proposed WRTP Specific Plan and the off-site SR 113/County Road 25A are within the City's Planning Area and therefore were included as part of the cumulative analysis contained in 2035 General Plan and CAP EIR, and there are no substantial changes to environmental conditions, regulatory updates, or the WRTP Specific Plan that require additional cumulative analysis or mitigation. Although the off-site South Regional Pond was not included within the 2035 General Plan and CAP EIR analysis, 2035 General Plan policies would be applicable to the South Regional Pond, similar to the WRTP Specific Plan Area. Therefore, implementation of the WRTP Specific Plan and off-site improvements, in conjunction with development of related projects, would result in a cumulatively considerable and unavoidable contribution to the significant cumulative impact related to conversion of farmland, including Important Farmland, to nonagricultural uses. (Draft EIR, pp. 3.2-21 through 3.-22.)

3. AIR QUALITY

The geographic scope for air quality consists of the Sacramento Valley Air Basin. The 2035 General Plan and CAP EIR (pages 6-14 through 6-18) (City of Woodland 2016) analyzed cumulative impacts to air quality. The proposed WRTP Specific Plan Area was included as part of the cumulative analysis contained in Chapter 6 of the 2035 General Plan and CAP EIR.

Generation of Short-Term Construction and Long-Term Operational Emissions of Criteria Air Pollutants and Precursors, or Conflict with or Obstruct an Air Quality Plan: By its nature, air pollution is largely a cumulative impact. The implementation of plans and projects within the Sacramento Valley Air Basin would contribute to this impact on a cumulative basis. The emissions of an individual project may be individually limited but cumulatively considerable when taken in combination with past, present, and future development projects. All new development that would result in an increase in air pollutant emissions would contribute to cumulative construction air quality impacts. The nonattainment status of regional pollutants is a result of past and present development within the air basin, and this regional impact is a significant cumulative impact. The 2035 General Plan and CAP EIR determined that short-term construction and long-term operational criteria pollutant and precursor emissions from implementation of the General Plan (under either alternative) would exceed YSAQMD's thresholds of significance for ROG, NOX, and PM10, and that the cumulative scenario of additional development within the Sacramento Valley Air Basin would also generate additional construction-related criteria air pollutant and ozone precursor emissions. This was considered a cumulatively considerable contribution to a significant cumulative impact. As shown in Tables 3.3-2 and 3.3-4 above, construction-related criteria pollutant and precursor emissions from development within the WRTP Specific Plan Area and off-site improvement areas would exceed YSAQMD's thresholds of significance for ROG, NOX, and PM10 without mitigation and for PM10 with mitigation. In addition, as shown in Tables 3.3-3 and 3.3-5 above, long-term operational emissions associated with future land uses in the WRTP Specific Plan Area would exceed YSAQMD thresholds of significance for ROG, NOX, and PM10. Mitigation Measures 3.3-2a and 3.3-2b would reduce PM and ozone precursor emissions from

construction-related activities. However, PM10 emissions from construction activities would still exceed YSAQMD thresholds. Mitigation Measure 3.3-2c would reduce operational emissions of ROG and PM. In addition, WRTP Specific Plan Policy 2.2.3, Sustainability, in Chapter 2 of the WRTP Specific Plan requires new development be consistent with the objectives and targets of the City's Climate Action Plan (consistent with the 2035 General Plan Policies 2.C.2 and 2.L.2); this policy, along with compliance with YSAQMD Rules and Regulations and State regulations, will help to reduce short-term and long-term emissions, but it is not possible to determine at this time whether mitigation, WRTP Specific Plan policies, and compliance with local rules and regulations would reduce emissions to a less-than-significant level. As described in Impact 3.3-2 above, the nature of criteria pollutants is such that the emissions from an individual project cannot be directly identified as responsible for health impacts within any specific geographic location. As a result, attributing health risks at any specific geographic location to a single proposed project is not feasible. Nonetheless, the results of the Strategic Area Project Health Screening Tool have been presented for informational purposes and the modeling results support a conclusion that the proposed WRTP Specific Plan does not, on its own, lead to sizeable regional health effects from the emissions of criteria air pollutants and precursors. However, YSAQMD considers that if a project's impacts would be significant at the project-level, it could also be considered significant on a cumulative level. Even with all feasible mitigation, construction-related and operational emissions could still result in a net increase of ROG, NOX, and PM10 emissions. The implementation of regional and local development within the Sacramento Valley Air Basin would generate increased short-term construction and long-term operational emissions that may cumulatively exceed regional thresholds and conflict with or obstruct implementation of the applicable air quality plan. Even if emissions associated with implementation of the WRTP Specific Plan and off-site improvement areas are reduced to levels that are below YSAQMD thresholds, the WRTP Specific Plan would still contribute to increased overall emissions throughout the Sacramento Valley Air Basin. There is no additional feasible mitigation available that would avoid these impacts. The WRTP Specific Plan could make a cumulatively considerable contribution to significant cumulative air quality impacts.

Exposure of Sensitive Receptors to Substantial Pollutant Concentrations: Exposure of sensitive receptors to substantial pollutant concentrations, such as TACs and CO generally occurs on a localized rather than regional basis. As discussed in Impact 3.3-3 above, implementation of the WRTP Specific Plan would not expose sensitive receptors to substantial concentrations of CO. Because site-specific details of development are not known at the present time and construction at the WRTP Specific Plan Area and off-site improvement areas could occur in phases adjacent to existing and future sensitive receptors, implementation of Mitigation Measures 3.3-3a, 3.3-3b and 3.3-3c are necessary to ensure impacts would be less than significant. Since there are no other known projects among those considered as part of this cumulative analysis that are both large enough and would involve construction in close enough proximity to these rural residences to result in TAC impacts, the cumulative contribution would be less than cumulatively considerable.

Other Emissions Such as Those Leading to Odors: Odor impacts are generally localized and do not combine with odor impacts in nearby jurisdictions to increase the severity of impacts. Implementation of Mitigation Measure 3.3-4 would avoid conflicts between potential land use-generated odor emissions and sensitive receptors. Therefore, the impact of exposing populations to substantial other emissions, such as those leading to odors, is less than cumulatively considerable. (Draft EIR, pp. 3.3-45 through 3.3-47.)

4. BIOLOGICAL RESOURCES

As demonstrated in Chapter 2 of the EIR, “Project Description,” the entire WRTP Specific Plan boundary falls within the area analyzed in the 2035 General Plan and CAP EIR, and land uses proposed in the WRTP Specific Plan are consistent with the development assumptions of the 2035 General Plan and CAP EIR. The proposed South Regional Pond would be adjacent to, but south of, the WRTP Specific Plan Area, and was not considered in the 2035 General Plan and CAP EIR. The proposed South Regional Pond area does not provide habitat for specialstatus plant species, contain any riparian habitat or other sensitive natural communities (alkali prairie habitat) identified in the 2035 General Plan and CAP EIR or other local or regional plans, nor provide habitat for burrowing owl. As detailed in the above analysis, development of the South Regional Pond would not result in any significant impacts not already addressed in the 2035 General Plan and CAP EIR with regard to development within the WRTP Specific Plan Area, or otherwise mitigable. The majority of the WRTP Specific Plan Area and the proposed off-site improvement areas consist of agricultural land that provides limited habitat values to most species; however, certain agricultural crops found in the WRTP Specific Plan Area and off-site improvement areas provide important habitat for the State-listed Swainson’s hawk, as well as other special-status wildlife species. Swainson’s hawk, the most vulnerable species that occurs in the WRTP Specific Plan Area, may be adversely affected by cumulative impacts through permanent loss of agricultural land that serves as foraging habitat for Swainson’s hawk and could reduce reproductive success. As discussed on pages 6-18 through 6-24 of the City’s 2035 General Plan and CAP EIR, this is a significant cumulative impact. However, successful implementation of mitigation, as described in the above impact analyses, and compliance with existing State and federal regulations, would ensure implementation of the proposed WRTP Specific Plan and offsite improvements would not have a cumulatively considerable contribution to the significant cumulative impact on Swainson’s hawk because these policies, mitigation, and regulations require that unavoidable loss of habitat for this species be fully compensated. Therefore, impacts associated with the loss of Swainson’s hawk and their habitats are less than cumulatively considerable. This analysis is consistent with the cumulative effect discussion (pages 6-23 to 6-24) of the 2035 General Plan and CAP EIR. (Draft EIR, p. 3.4-39.)

5. CLIMATE CHANGE, GREENHOUSE GAS EMISSIONS & ENERGY

Climate Change and Greenhouse Gas Emissions: GHG emissions typically persist in the atmosphere for extensive periods time—long enough to be dispersed globally and result in long-term global climate change and related impacts. As such, implementation of the WRTP Specific Plan will not, by itself, contribute significantly to climate change; however, cumulative emissions from many projects and plans all contribute to global GHG concentrations and the climate system. As such, impacts associated with GHG emissions are inherently cumulative; the discussion of the potential for implementation of the WRTP Specific Plan to generate GHG emissions is discussed above under “Impacts not Discussed Further,” finding that the WRTP Specific Plan is consistent with the City’s 2035 CAP, which was found under the 2035 General Plan and CAP EIR to result in less than cumulatively considerable generation of GHG emissions. This analysis considers the cumulative contribution of implementation of the City’s 2035 General Plan and CAP, inclusive of development under the WRTP Specific Plan, to the significant cumulative impact of climate change, and concludes that impacts are less than cumulatively considerable.

Energy As discussed in the cumulative analysis contained in the 2035 General Plan and CAP EIR (pages 6-26 to 6-28), Increased demand for electrical and natural gas supplies and infrastructure is a byproduct of all future land uses and development in the City of Woodland, Yolo County, and the region. Energy is consumed for heating, cooling, and electricity in homes and businesses; for public infrastructure and service operations; and for agriculture,

industry, and commercial uses. Each service provider is responsible for ensuring adequate provision of these utilities within their jurisdictional boundaries and would be responsible for upgrading their existing electrical and natural gas distribution systems or constructing new distribution systems to meet the demands of individual projects. Yolo County and the cities within the county implement general plans that include goals and policies to reduce energy demands through the use of design features, building materials, and building practices; encourage the use of renewable energy sources; promote land uses and patterns that would not cause wasteful, inefficient, and unnecessary consumption of energy; and ensure adequate electricity and natural gas and related distribution systems are available to meet energy demands. In addition, service providers encourage energy conservation through programs, such as offering rebates for installation of energy efficient appliances and lighting fixtures. The California Public Utilities Commission and California Energy Commission have roles in regulating energy supply and ensuring reliable and sufficient supplies as the state grows. The 2035 General Plan and CAP EIR determined that overall energy efficiency (energy demand per unit of development) would improve and cumulative development would not be expected to cause the inefficient, wasteful, or unnecessary consumption of energy, and found this impact to be less than cumulatively considerable. As noted above, transportation is, by far, the largest energy consuming sector in California, accounting for approximately 40 percent of all energy use in the state (U.S. Energy Information Administration 2020). Since transportation accounts for more energy consumption than heating, cooling, and powering of buildings, powering industry, or any other use, the overall efficiency of energy use in the region will depend importantly on the ability of local lead agencies to plan in a way that reduces travel demand. The 2035 General Plan and CAP EIR noted that SACOG's 2016 MTP/SCS demonstrates an increase in energy efficiency through 2035 in relation to transportation energy use – household generated VMT per capita is forecast to decrease by more than 8 percent and that SACOG also estimates that total VMT will decrease by almost 7 percent during the 2016 MTP/SCS planning period (SACOG 2016, Chapter 5B, page 91). Since regional transportation and building energy use will become more efficient over the SACOG MTP/SCS planning and City's planning horizon, the 2035 General Plan and CAP EIR determined there to be no significant cumulative impact. The WRTP Specific Plan Area was considered as part of the anticipated development under the 2035 General Plan Update. In addition, the off-site improvement areas, while not a part of the original WRTP Specific Plan Area, would consume energy during construction that is consistent with typical construction projects in the region, and would require minimal energy associated with maintenance and operations over time. The energy efficiency of the built environment and transportation has continued to increase since the adoption of the 2035 General Plan. As discussed above, the WRTP Specific Plan would comply with relevant State and local statutes and regulations related to energy efficiency, including the California Code of Regulations (CCR) Title 20, Building Energy Regulations, and Title 24, Energy Conservation Standards, as well as WRTP Specific Plan Design Standards and Design Guidelines in Chapter 3 of the WRTP Specific Plan developed to reduce energy demand of the WRTP Specific Plan Area and provide consistency with the General Plan and City's CAP. The California Green Building Standards Code is updated over time and in each instance, the energy efficiency standards are increased. Similar to the SACOG 2016 MTP/SCS, the 2020 MTP/SCS, lower VMT per capita is anticipated for the region, with a secondary result of reduced per-capita use of energy and fuel. Because regional transportation and building energy use will become more efficient between present and the SACOG MTP/SCS planning horizon, the regional planning efforts would result in a less-than-cumulatively considerable impact. Therefore, the WRTP Specific Plan is consistent with the 2035 General Plan and CAP EIR planning assumptions and cumulative scenario, and cumulative effects from implementing the WRTP Specific Plan in conjunction with development of related projects, with regard to the inefficient, wasteful, or unnecessary consumption of energy and conflict with or obstruction of plans for renewable energy or energy efficiency, would be less-than-cumulatively considerable. (Draft EIR, pp. 3.5-32 through 3.5-33.)

6. CULTURAL AND TRIBAL CULTURAL RESOURCES

Per the 2035 General Plan, no prehistoric resources have been formally recorded in Woodland, and evidence of early native peoples who occupied the area is scarce, therefore any artifacts or information is valuable. Cultural resources in the larger region generally consist of prehistoric sites, historical archaeological sites, historic-age buildings and structures, and isolated artifacts. During the 19th and 20th centuries, localized urbanization and intensive agricultural use in the region caused the destruction or disturbance of numerous prehistoric sites, while many structures now considered to be historic were erected. From the latter half of the 20th century to the present, prehistoric archaeological sites and historic structures have been disturbed and destroyed. During this period, the creation and enforcement of various regulations protecting cultural resources have substantially reduced the rate and intensity of these impacts. However, even with these regulations, cultural resources are still degraded or destroyed as cumulative development in the region proceeds. As detailed in Section 3.6.4 of the EIR with regard to the project-level analysis of implementation of the WRTP Specific Plan and off-site improvement areas, while mitigation has been imposed that would reduce impacts, there is still the potential to adversely affect unknown archaeological resource and human remains. As described in Section 6.1.3.6 of the General Plan and CAP EIR, these cultural resources impacts were considered significant and unavoidable. The proposed WRTP Specific Plan and the off-site SR 113/County Road 25A are within the City's Planning Area and therefore were included as part of the cumulative analysis contained in 2035 General Plan and CAP EIR, and there are no substantial changes to environmental conditions, regulatory updates, or the WRTP Specific Plan that require additional cumulative analysis or mitigation. Although the off-site South Regional Pond was not included within the 2035 General Plan and CAP EIR analysis, 2035 General Plan policies would be applicable to the South Regional Pond, similar to the WRTP Specific Plan Area. The policies of the 2035 General Plan and mitigation proposed in Section 4.6 of the 2035 General Plan and CAP EIR, "Cultural Resources," are relevant to the implementation of the WRTP Specific Plan Area and off-site improvements. These policies and mitigation, when coupled with cultural resources mitigation measures, will minimize the severity of significant impacts that may result from the discovery of undocumented subsurface cultural resources or unmarked historic-era or prehistoric Native American human burials; however, these impacts would not be entirely unavoidable, but could be mitigated to less than significant. Therefore, implementation of the WRTP Specific Plan and off-site improvements, in conjunction with development of related projects, would result in a less than cumulatively considerable contribution to the significant cumulative impact related to archaeological resources and human remains. (Draft EIR, p. 3.6-16.)

7. GEOLOGY, SOILS, MINERALS, AND PALEONTOLOGICAL RESOURCES

Seismic and Geologic Hazards: As discussed in the cumulative analysis contained in the 2035 General Plan and CAP EIR (page 6-30) (City of Woodland 2016b), construction of buildings associated with the projects considered in the 2035 General Plan and CAP EIR Cumulative Scenario would result in more construction with more potential exposure to geologic hazards such as seismic ground shaking, liquefaction, and construction in unstable soils. However, all development projects are required by law to comply with the CBC, which includes engineering practices that require special design and construction methods to reduce or eliminate hazards from geologic hazards including seismic ground shaking, liquefaction, and construction in unstable and expansive soils. Construction projects entitled by the City are subject to compliance with General Plan Policies, such as 8.A.1, 8.A.2, and 8.A.3, which are designed to reduce geologic hazards from construction. The 2035 General Plan and CAP EIR determined that cumulative effects related to seismic ground shaking; liquefaction; and geologic hazards related to unstable soils and expansive soils would be less-than-cumulatively considerable. Project applicants for future projects proposed under the WRTP Specific Plan are required by law to comply with the design and construction

requirements of the CBC, which includes engineering practices that require special design and construction methods to reduce or eliminate hazards from geologic hazards including seismic ground shaking, liquefaction, and construction in unstable and expansive soils. Project applicants for the off-site South Regional Pond are required to comply with the Yolo County permit and ordinance requirements, including Title 7, Building Regulations, of the Yolo County Code. The standards apply to transportation, storm drainage, sewer, wastewater pumping, water distribution, graywater distribution, underground pipelines, and other improvements, and are designed, in part to avoid impacts related to geologic and seismic constraints. Design and construction of the off-site SR 113/County Road 25A intersection improvements is regulated by Caltrans, and would comply with requirements contained in the Standard Plans and Specifications (Caltrans 2018) and the Highway Design Manual (Caltrans 2020). The proposed WRTP Specific Plan and the SR 113/County Road 25A interchange improvements are within the City's Planning Area and therefore were included as part of the cumulative analysis contained in 2035 General Plan and CAP EIR, and there are no substantial changes to environmental conditions, regulatory updates, or the WRTP Specific Plan that require additional cumulative analysis or mitigation. Although the off-site South Regional Pond is not within the City's Planning Area and therefore was not included within the 2035 General Plan and CAP EIR, design and construction of the South Regional Pond is regulated by the City's Engineering Standards: Design Standards, Standard Details and Construction Specifications (City of Woodland 2016a). Therefore, and consistent with the 2035 General Plan and CAP EIR, cumulative effects related to seismic ground shaking; liquefaction; and geologic hazards related to unstable soils and expansive soils from the WRTP Specific Plan and the associated off-site improvements, in conjunction with development of related projects, would be less-than-cumulatively considerable.

Soil Erosion: The 2035 General Plan and CAP EIR Cumulative Scenario (page 6-30) (City of Woodland 2016b) concluded that increased construction associated with the projects considered in the 2035 General Plan and CAP EIR Cumulative Scenario would result in an increased potential for soil erosion along with an increased potential for siltation of local drainages from sediment transport. All applicable projects are required to comply with the City of Woodland Stormwater Management Program and NPDES regulations, including construction site SWPPPs and BMPs designed to control soil erosion at each construction site. Projects must also comply with Chapter 15.12 of the City of Woodland Municipal Code (the City's Grading Ordinance), which requires a grading permit, a soils engineering report, and an engineering geology report specific to the project site, as required by Appendix Chapter 33 of the CBC, Section 3309. Projects must also comply with Chapter 8.08 of the City's Municipal Code, which regulates discharges into the municipal storm drain system, including compliance with applicable provisions of construction NPDES permit requirements. The 2035 General Plan and CAP EIR determined that effects from construction-related soil erosion would be less-than-cumulatively considerable. Project applicants for future projects proposed under the WRTP Specific Plan and supportive off-site infrastructure improvements are required to comply with CVRWQCB NPDES permit requirements and City General Plan policies. The proposed WRTP Specific Plan and the SR 113/County Road 25A interchange improvements are within the City's Planning Area and therefore were included as part of the cumulative analysis contained in 2035 General Plan and CAP EIR, and there are no substantial changes to environmental conditions, regulatory updates, or the WRTP Specific Plan that require additional cumulative analysis or mitigation. Although the off-site South Regional Pond is not within the City Planning Area and therefore was not included within the 2035 General Plan and CAP EIR, design and construction of the South Regional Pond is regulated by the CVRWQCB NPDES permit requirements. Therefore, and consistent with the 2035 General Plan and CAP EIR, cumulative soil erosion effects from construction of the WRTP Specific Plan and the associated off-site improvements, in conjunction with development of related projects, would be less-than-cumulatively considerable.

Paleontological Resources: The 2035 General Plan and CAP EIR Cumulative Scenario (page 6-31) (City of Woodland 2016b) concluded that increased construction could result in an increased potential for accidental damage to or destruction of unique paleontological resources. Since these resources are buried under the ground surface, it is difficult to predict the location of resources in the context of site planning, and therefore difficult to avoid in project designs. The 2035 General Plan and CAP EIR determined that this would be a significant cumulative impact. However, the City also determined that implementation of 2035 General Plan and CAP EIR Mitigation Measure 4.7-4 would reduce this impact to a level that is less-than-cumulatively considerable through a new implementation program that would require projects that propose earth-moving activities in paleontologically sensitive rock formations to provide construction worker personnel training prior to the start of construction activities, halt of work in the vicinity of any fossil specimen(s) uncovered, and prepare a recovery plan for any uncovered specimen(s). Because the SR 113/County Road 25A interchange would be constructed in Holocene-age deposits, this off-site improvement would not contribute to this regionally significant cumulative impact. Mitigation Measure 3.7-1 listed above, which would be implemented in the southern portion of the WRTP Specific Plan Area and the South Regional Pond (where paleontologically sensitive rock formations are located), incorporates guidance from General Plan and CAP EIR Mitigation Measure 4.7-4. This mitigation requires construction worker personnel training prior to the start of construction activities, halting of work in the vicinity of any fossil specimen(s) uncovered, and preparation of a recovery plan for any uncovered specimen(s). The proposed WRTP Specific Plan and the off-site SR 113/County Road 25A are within the City's Planning Area and therefore were included as part of the cumulative analysis contained in 2035 General Plan and CAP EIR, and there are no substantial changes to environmental conditions, regulatory updates, or the WRTP Specific Plan that require additional cumulative analysis or mitigation. Although the off-site South Regional Pond is not within the City Planning Area and therefore was not included within the 2035 General Plan and CAP EIR, Mitigation Measure 3.7-1 would reduce impacts to unique paleontological resources to a less-than-significant level at the South Regional Pond, similar to the WRTP Specific Plan Area. Therefore, and consistent with the 2035 General Plan and CAP EIR, impacts to unique paleontological resources from implementation of the WRTP Specific Plan and the associated off-site improvements, in conjunction with development of related projects, would be less-than-cumulatively considerable with mitigation. (Draft EIR, pp. 3.7-15 through 3.7-17.)

8. HAZARDOUS AND HAZARDOUS MATERIALS

The proposed WRTP Specific Plan was included as part of the hazard materials and toxics cumulative analysis contained in Chapter 4.8 of 2035 General Plan and CAP EIR. The proposed South Regional Pond would be adjacent to, but south of, the Specific Plan Area, and was not considered in the 2035 General Plan and CAP EIR. There are no substantial changes to environmental conditions, regulatory updates, or the WRTP Specific Plan that require additional cumulative analysis or mitigation. The 2035 General Plan and CAP EIR (pages 6-31 and 6-32) (City of Woodland 2016b) determined that for the topics evaluated in this hazardous materials and toxics analysis (routine transport use and disposal of hazardous materials, accidental spills of hazardous materials, construction on a site included on the Cortese List, handle hazardous materials within one-quarter mile of a school, airport safety hazards for public-use airports, emergency access, or wildland fire hazard), the related projects considered in the cumulative analysis are site-specific and therefore would not combine to create cumulatively significant impacts in and of themselves. The 2035 General Plan and CAP EIR further determined that although an increase in routine use, transportation, and disposal of hazardous materials, as well as handling of hazardous materials near existing or proposed schools, development of sites on the Cortese List, public airport hazards, and wildland fire hazards would occur, existing federal, State, and local regulations create and enforce standards for these activities regardless of the amount or scale of use and therefore no cumulative impact would occur. Implementation of the proposed off-site

SR 113/CR 25A interchange improvements are regulated by Caltrans, which has formal procedures that are followed to reduce human health and ecological risks from the handling of disposal of hazardous materials and the reuse of soils contaminated with aerially-deposited lead (Caltrans 2018, DTSC 2016b). Implementation of the WRTP Specific Plan could result in human health and ecological risks from exposure to known hazardous materials that are present in the WRTP Specific Plan Area during construction activities. Previously unknown hazardous materials, in the form of underground storage tanks, could be encountered at the off-site South Regional Pond during construction. Implementation of the WRTP Specific Plan could also result in the handling of hazardous materials within one-quarter mile of a school. However, implementing Mitigation Measures 3.8-1 and 3.8-2 would reduce the impacts of the WRTP Specific Plan and the off-site South Regional Pond to a less-than-significant level. Hazardous materials impacts would be site-specific. Implementation of the WRTP Specific Plan and the off-site improvements (with mitigation measures incorporated) in conjunction with development of related projects would not present a public health and safety hazard to people or the environment, and therefore the cumulative contribution of the WRTP Specific Plan and the off-site improvements would be less-than-cumulatively considerable. Implementation of the WRTP Specific Plan and the off-site improvements would result in a less-than-significant impact related to airport hazards from development of buildings approximately 1.4 miles from the runway at the privately owned and operated Medlock Field airport. The WRTP Specific Plan would be constructed at the southwestern edge of the Woodland city limits. Other future development at the same distance from Medlock Field in the adjacent Spring Lake development would also result in a less-than-cumulatively considerable contribution to Medlock Field airport hazards for the same reasons as the WRTP Specific Plan (i.e., buildings would not exceed FAA height restrictions, large new bodies of water that would retain water for long periods of times that could attract wildlife would not be created, and new nighttime lighting would not be mistaken for airport lighting and/or cause glare in the eyes of airplane pilots). The other future cumulative projects would be located more than 2 miles from Medlock Field. Furthermore, the WRTP Specific Plan requires that street lighting conform to the City's Engineering Standards and other types of lighting conform to the City's Community Design Standards. In addition, Caltrans requires that high-mast light standards be shielded and direct the lighting downward. The WRTP Specific Plan does not allow building heights that could present a height hazard to Medlock Field. Therefore, impacts related to airport hazards from implementation of the WRTP Specific Plan and the off-site improvements in conjunction with development of related projects would be less-than-cumulatively considerable. (Draft EIR, pp. 3.8-23 through 3.8-24.)

9. HYDROLOGY, FLOODING, AND WATER QUALITY

Water Quality Standards, Erosion And Sedimentation, Operational Stormwater Runoff, Conveyance Capacity, Flooding, Pollutants, And Regional Basin Planning: As discussed in the cumulative analysis contained in the 2035 General Plan and CAP EIR (page 6-32) (City of Woodland 2016b), short-term construction and long-term operation of the urban development projects considered in the 2035 General Plan and CAP EIR Cumulative Scenario have the potential to generate impacts related to violation of water quality standards, erosion and sedimentation, construction-related water quality impacts, and alteration of drainages resulting in on-site and/or off-site downstream flooding. The proposed South Regional Pond would be adjacent to, but south of, the Specific Plan Area, and was not considered in the 2035 General Plan and CAP EIR. However, all development projects are required to comply with the SWRCB's statewide NPDES stormwater permit for general construction activity, other necessary site-specific WDRs or waivers under the PorterCologne Act, the Storm Drainage Facilities Master Plan Update and Preliminary Engineering (City of Woodland 2006a), the Technical Guidance Manual for Stormwater Quality Control Measures (City of Woodland 2006b), the Engineering Standards: Design Standards, Standard Details and Construction Specifications (City of Woodland 2016a), and the Post-Construction Standards Plan (City

of Woodland 2015). The treatment component of the City's Phase II MS4 NPDES permit requires that all of the runoff generated by the design storm event from impermeable surfaces be treated on site. All development projects are also required to comply with applicable General Policies such as Goal 5.I and Policies 5.I.1, 5.I.3, 5.I.4, 5.I.5, 5.I.7, and 7.A.4. All of these state and local regulatory controls are designed to improve short-term and long-term water quality, reduce on-site and downstream erosion and sedimentation, and reduce alteration of drainage patterns leading to localized flooding. The 2035 General Plan and CAP EIR determined that cumulative effects related to water quality, erosion, and alteration of drainages would be less-than-cumulatively considerable. Project applicants for future projects proposed under the WRTP Specific Plan and the off-site South Regional Pond, are required to comply with the State and local regulatory controls listed above, and Caltrans is required to comply with the terms and conditions of the SWRCB's NPDES permit and the Caltrans Highway Design Manual, all of which are designed to improve short-term and long-term water quality, and reduce on-site and downstream erosion and sedimentation to comply with regional planning in the Water Quality Control Plan for the Sacramento and San Joaquin River Basins (CVRWQCB 2018). Furthermore, implementation of Mitigation Measure 3.9-1 would require preparation of additional storm drainage analysis to determine the new developable acreage (in terms of stormwater drainage) that can be mitigated with current infrastructure and to identify the required infrastructure improvements required to accommodate full development of the WRTP Specific Plan Area. The storm drainage analysis would be reviewed and approved by the Cit. Building permits for development beyond the identified currently developable acreage will only be approved with confirmation that the required storm drainage and water quality treatment infrastructure is in place. Design and construction of the off-site SR 113/County Road 25A intersection improvements is regulated by Caltrans, and would comply with requirements contained in the Standard Plans and Specifications (Caltrans 2018) and the Highway Design Manual (Caltrans 2020), as well as the Caltrans NPDES permit issued by SWRCB (2015). The proposed WRTP Specific Plan and the off-site SR 113/County Road 25A interchange improvements were included as part of the cumulative analysis contained in the 2035 General Plan and CAP EIR, and there are no substantial changes to environmental conditions, regulatory updates, or the WRTP Specific Plan that require additional cumulative analysis or mitigation. Therefore, cumulative effects from implementing the WRTP Specific Plan in conjunction with development of related projects related to water quality, erosion and sedimentation, and operational stormwater runoff, conveyance capacity, flooding, pollutants, and regional basin planning would be less-than-cumulatively considerable.

Groundwater Recharge, Groundwater Supplies, and Regional Sustainable Groundwater Management: As discussed in the cumulative analysis contained in the 2035 General Plan and CAP EIR (page 6-33) (City of Woodland 2016b), development throughout the region would add impervious areas, which, depending on the specific location of such development, could adversely affect groundwater recharge. Therefore, projects in the region that are developed in areas of substantial groundwater recharge could result in a cumulatively significant impact. However, the City does not contain any areas of substantial groundwater recharge, such as groundwater recharge banks or active stream channels. Furthermore, most of the soils in the City are loams and clays, which typically have low infiltration rates. Finally, the City's Phase II MS4 permit requirements, the Technical Guidance Manual for Stormwater Quality Control Measures (City of Woodland 2006b), the Engineering Standards: Design Standards, Standard Details and Construction Specifications (City of Woodland 2016a), the Post-Construction Standards Plan (City of Woodland 2015), and General Plan Policy 5.I.4 require that all new urban development incorporate LID features which could have the potential to locally, and likely minimally, increase groundwater recharge through the construction of infiltrative storm drainage facilities. The 2035 General Plan and CAP EIR determined that these requirements would result in a less-than-cumulatively considerable contribution to a significant cumulative impact from reduction in groundwater recharge. However, the 2035 General Plan and CAP

EIR also found that, although the City of Woodland has supported efforts to reduce water demand through conservation and other measures and surface water supplied by the Woodland-Davis Clean Water Agency's Regional Water Treatment Facility is the primary source of drinking water within the City's Planning Area, groundwater would still be used to supplement surface water supplies and could account for up to 30 percent of total demand in dry years. Therefore, the 2035 General Plan and CAP EIR determined that future development in the City's Planning Area could result in increased water demand that exceeds supply beyond the year 2035, due to lack of detailed planning beyond that time. Therefore, the 2035 General Plan and CAP EIR determined that future projects within the Planning Area would result in a cumulatively considerable contribution to the need for increased water supply, and that this impact was potentially significant and unavoidable. The WRTP Specific Plan Area does not contain any active stream channels and most of the WRTP Specific Plan Area soils are rated by NRCS (2020) as hydrologic Group C (slow infiltration rate). Furthermore, project applicants for future projects proposed under the WRTP Specific Plan and the off-site South Regional Pond are required to comply with the same regulatory controls listed above including development of LID stormwater features. Caltrans is required to comply with the terms and conditions of the SWRCB's NPDES permit, and the Caltrans Highway Design Manual, both of which include operational stormwater design. The Yolo Subbasin Groundwater Agency is in the process of preparing a GSP, which will be completed by January 1, 2022 as required by DWR (Yolo Subbasin Groundwater Agency 2020). Because development of the WRTP Specific Plan Area with urban land uses and the SR 113/County Road 25A interchange are planned as part of the City's General Plan, they will be included as part of regional planning efforts for the Sacramento Valley Groundwater Basin – Yolo Subbasin. The GSP will incorporate regionally planned existing and future development throughout the Yolo Subbasin, including all of the projects considered in this cumulative analysis. The GSP is required by law to include projects that would be implemented on both a local and regional basis to improve groundwater sustainability, if the results of groundwater modeling performed for the GSP determine that future demand would exceed supply. The City of Woodland is a member of the GSA, and therefore is actively involved in groundwater sustainability planning. The proposed WRTP Specific Plan was included as part of the cumulative analysis contained in 2035 General Plan and CAP EIR, and there are no substantial changes to environmental conditions, regulatory updates, or the WRTP Specific Plan that require additional cumulative analysis or mitigation. Therefore, cumulative effects from implementing the WRTP Specific Plan in conjunction with development of related projects related to substantial interference with groundwater recharge, depletion of groundwater supplies, or interference with regional groundwater sustainability planning would be less-than-cumulatively considerable. (Draft EIR, pp. 3.9-23 through 3.9-25.)

10. LAND USE AND PLANNING, POPULATION AND HOUSING

Cumulative development within the region would result in a significant change in land use, and individual projects would need to be considered in context of their compliance with adopted land use plans. Plans with which compliance may be analyzed include general plans and regional transportation plans. For the WRTP Specific Plan, appropriate plans to consider include Yolo County's General Plan, the Woodland General Plan, and the Sacramento Area Council of Governments' (SACOG) Metropolitan Transportation Plan/Sustainable Communities Strategy (MTP/SCS). The proposed WRTP Specific Plan is required to be consistent with the 2035 General Plan. The WRTP Specific Plan is one of three subareas designated by the City of Woodland General Plan 2035 within the Specific Plan 1 (SP1) new growth area. The MTP/SCS is a long-range transportation plan that also includes analysis of greenhouse gas (GHG) emissions associated with passenger vehicle travel. The SACOG MTP/SCS identifies different community types, including "Developing Communities," a designation that includes the WRTP Specific Plan Area. The EIR comprehensively addresses direct and indirect impacts associated with buildout of the WRTP Specific Plan, including various topics that are also addressed in planning documents. There are no additional

impacts related to population, employment, or housing not already fully addressed in a topic-specific section of the EIR. As is true for the 2035 General Plan and CAP EIR, for the WRTP Specific Plan, there is no significant cumulative impact. For the purposes of analysis, the EIR assumes the development of approximately 1,600 new dwelling units, 2.2 million square feet of non-residential building space, and 5,000 employees, along with 17.6 acres of parks and other types of open space. Implementation of the proposed WRTP Specific Plan would directly facilitate population growth in the area through the construction of homes and could indirectly facilitate population growth through the development of employment opportunities, which may lead to additional housing demand. Population growth, by itself, is not an environmental impact. However, the direct and indirect effects, such as housing and infrastructure needs that are related to population growth, can lead to physical environmental effects, the impacts of which are considered throughout the topic-specific technical sections of the EIR. Population growth could result in significant cumulative impacts if population growth were to exceed estimates in the regional plans. However, the development assumptions for the WRTP Specific Plan are within the envelope created by the General Plan, and there is no impact related to population growth that is not fully addressed throughout the EIR in other sections. There is no significant cumulative impact. (Draft EIR, p. 3.10-35.)

11. NOISE AND VIBRATION

As discussed in the cumulative analysis contained in the 2035 General Plan and CAP EIR (pages 6-37) (City of Woodland 2016) noise is generally a localized impact that does not have regional or cumulative considerations. Noise sources associated with past, present, and future development in the region include construction equipment, landscape and building maintenance activities, agricultural equipment and activities, mechanical equipment, solid waste collection, parking lots, commercial, office, and industrial activities, and residential, school, and recreation activities and events. Noise sources that are adjacent to one another could combine to increase cumulative noise levels. However, consistent with the analysis provided in the 2035 General Plan and CAP EIR, stationary noise sources within the WRTP Specific Plan Area would not generally combine with noise sources outside of the WRTP Specific Plan Area to create a cumulative increase in stationary noise. Although ambient noise is increasing in urbanized areas over time as a result of increased development, but there are no cumulative sources of stationary noise in proximity to the WRTP Specific Plan Area and, therefore, there is no significant cumulative impact with regard to stationary noise sources. However, as described in the 2035 General Plan and CAP EIR (pages 6-37 through 6-43), regional development under the cumulative scenario would generate and attract vehicular travel along roadways located throughout the region, including within and near the City's Planning Area, which would combine with traffic associated with development in the Planning Area to increase vehicular traffic noise in areas directly adjacent to travel ways. As described in Section 3.11.4 of the EIR, future development under the WRTP Specific Plan would result in traffic levels that would increase noise levels along existing and future roadways. The 2035 General Plan and CAP EIR found that, even with implementation of all feasible measures in the form of policies and Implementation Programs in the 2035 General Plan, new development would result in a cumulatively significant and unavoidable contribution to the significant cumulative impact related to long-term transportation noise levels. The proposed WRTP Specific Plan Area is within the City's Planning Area and was included as part of the cumulative analysis contained in 2035 General Plan and CAP EIR. As shown in Table 3.11-9, traffic on future roadways within the WRTP Specific Plan Area and existing roadways adjacent to the WRTP Specific Plan Area is expected to increase with implementation of the WRTP Specific Plan and result in an increase in traffic-related noise levels up to 6 dB compared to Existing plus Approved Projects conditions. The increases of 5 to 6 dB would only occur along CR 25A from East of SR 113 NB Ramps to East of SR 113 NB Ramps and from SR 113 NB Ramps to Road A. However, no existing noise sensitive uses would be located along this segment of CR 25 A under the buildout condition of the WRTP Specific Plan Area. Traffic noise increases of less than perceptible level

of 3 dB would occur along the roadways planned within the WRTP Specific Plan Area. Also, as shown, traffic noise for the Existing plus Approved Projects Plus WRTP Specific Plan condition would range from 60 to 69 dB at 50 feet, which would not exceed the City's noise standards of 70 dB, as shown in Table 3.11-6, for all noise sensitive uses. Therefore, this impact is considered less than cumulatively considerable. (Draft EIR, p. 3.11-33.)

12. PUBLIC SERVICES AND RECREATION

POLICE AND FIRE SERVICES: The 2035 General Plan and CAP EIR (page 6-39) (City of Woodland 2016) noted that public services are generally provided by local governments and/or special districts for areas within their jurisdiction and are not provided on a regional basis. For this reason, the 2035 General Plan and CAP EIR determined fire and police protection services have less than significant cumulative impacts. The City of Woodland Police Department expects to meet increased demand for services through increased staffing rather than new facilities. The 2035 General Plan and CAP EIR determined additional fire stations would be required to meet demand from future growth. Because the City maintains its own fire department facilities, the construction of additional facilities would not combine with effects in neighboring communities to create cumulative impacts. The 2035 General Plan includes policies to ensure that sufficient facilities and services are provided to serve additional growth. These policies and programs apply to any level of development, and therefore would mitigate potential impacts from development of new facilities and the cumulative impact would be less than significant. As described above, the project applicants for future projects proposed under the WRTP Specific Plan would comply with 2035 General Plan policies that require review of project designs by the Woodland Fire Department and Woodland Police Department and implementation recommended conditions of approval, as well as provide funding to ensure fire and police protection personnel and equipment is provided to meet increased demand for fire and police protection services. In addition, individual development projects would incorporate California Fire Code and City standards into project designs to reduce the dependence on fire department equipment and personnel by reducing fire hazards. The WRTP Specific Plan's contribution to impacts related to increased fire and police protection services and facilities would be less than cumulatively considerable. Thus, no additional CEQA review is required.

PUBLIC EDUCATION SERVICES The 2035 General Plan and CAP EIR (page 6-39) (City of Woodland 2016) noted that public schools are provided by school districts to areas within their jurisdictions. While districts may have cross-jurisdictional boundaries, school services are still provided at the local, rather than regional, level. For this reason school services have less-than-significant cumulative impacts. The 2035 General Plan and CAP EIR found that future growth would increase the student population, creating additional need for public schools. However, implementation of General Plan policies would reduce the impacts related to school services by encouraging coordination with WJUSD and other educational institutions regarding future school sites. The WJUSD operates within the City of Woodland and serves all development in the City, so the construction of additional facilities would not combine with effects in neighboring communities to create cumulative impacts in the region. Therefore, the 2035 General Plan and CAP EIR determined that the future growth would have a less than cumulatively considerable contribution to this impact. The WRTP Specific Plan would generate approximately 376 new elementary school students (grades K–6), 104 middle school students (grades 7–8), and 222 high school students (grades 9–12) (Table 3.12-5). The WRTP Specific Plan proposes a new elementary school in the area zoned for medium density residential, south of Parkland Avenue and east of Road B. Prior to the construction of this school, students within the WRTP Specific Plan Area would attend Tafoya Elementary School, Woodland Prairie Elementary School, Douglass Middle School, and Pioneer High School, all of which are operating below capacity (Table 3.12-2, as revised in Chapter 3, "Errata," of this Final EIR). The proposed WRTP Specific Plan would pay the State-mandated school impact fees to the WJUSD that are being levied at the time of development.

The California Legislature has declared that payment of the State-mandated school impact fee is deemed to be full and adequate mitigation under CEQA (California Government Code Section 65996); therefore, the WRTP Specific Plan's cumulative impacts related to increased demand for school facilities and services would be less than cumulatively considerable. Thus, no additional CEQA review is required. Depending on the timing of future development within the WRTP Specific Plan Area, future students could potentially be bused or driven to schools within the WJUSD boundaries, resulting in indirect cumulative impacts related to transportation, such as air pollutant emissions, greenhouse gas emissions, and transportation noise. The environmental effects from construction and operation of the WRTP Specific Plan, including proposed school facilities and transportation related to an increased student population associated with proposed residential development, are evaluated throughout the individual environmental topic area sections in the EIR, as well as the cumulative impact analyses contained in each topic area of the EIR. There are no other known environmental effects associated with park facilities or services that are beyond the impacts disclosed in the relevant environmental topic area sections of the EIR. Thus, no additional CEQA review is required.

PARKS AND RECREATION The 2035 General Plan and CAP EIR (page 6-44) (City of Woodland 2016) noted that counties, cities, and special districts in the region each have their own parkland ratios and standards and are responsible for providing parkland to meet the local demand. Although an increase in regional population could increase demand for parks and recreation facilities and services, these local jurisdictions have authority over land use, set and implement level of service standards, and determine the siting and timing of public service projects. Therefore, the 2035 General Plan and CAP EIR determined that regional parks and recreation impacts would be cumulatively less than significant in and of themselves. The 2035 General Plan and CAP EIR also found that future growth in the City would likely require new park/recreation facilities to achieve the same parkland ratio. However, implementation of relevant policies in the 2035 General Plan related to parkland ratios and funding agreements would reduce environmental impacts, resulting in a less-than-cumulatively considerable contribution to regional parks and recreation impacts. Finally, the 2035 General Plan and CAP EIR determined that construction of any additional parks/recreational facilities in the City would not combine with effects in neighboring communities to create cumulative impacts. The WRTP Specific Plan includes the creation of new on-site parks and recreational facilities, as well as project impact fees, as required by the City. As described above, the WRTP Specific Plan would comply with all 2035 General Plan policies related to the design and construction of new parks and recreational facilities, resulting in a less-than-cumulatively considerable contribution to regional parks and recreation impacts. The environmental effects from construction and operation of the WRTP Specific Plan, including proposed recreational facilities, are evaluated throughout the individual environmental topic area sections in the EIR, as well as the cumulative impact analyses contained in each topic area of the EIR. There are no other known environmental effects associated with park facilities or services that are beyond the impacts disclosed in the relevant environmental topic area sections of the EIR. Therefore, construction of the new parks/recreational facilities proposed in the WRTP Specific Plan would not combine with effects in neighboring communities to create cumulative impacts. Thus, no additional CEQA review is required. (Draft EIR, pp. 3.12-19 through 3.12-21.)

13. TRANSPORTATION AND CIRCULATION

The 2035 General Plan and CAP EIR (pages 6-44 through 6-46) (City of Woodland 2016) analyzed cumulative impacts to transportation and circulation based on regional growth projections identified in the Sacramento Area Council of Governments' 2016 Metropolitan Transportation Plan/Sustainable Communities Strategy (MTP/SCS). The proposed WRTP Specific Plan was included as part of the cumulative analysis contained in Chapter 6 of the 2035 General Plan and CAP EIR.

PROGRAMS, PLANS, ORDINANCES, AND POLICIES ADDRESSING THE CIRCULATION SYSTEM, INCLUDING TRANSIT, ROADWAY, BICYCLE, AND PEDESTRIAN FACILITIES The General Plan determined that new growth in the region is not expected to conflict with applicable plans, ordinances, or policies establishing measures of effectiveness for the performance. In addition the potential for hazards due to a design feature or incompatible use, inadequate emergency access, and impacts to bicycle and pedestrian facilities, the vehicular roadway network and transit, was determined to be less than cumulatively considerable under the 2035 General Plan and Cap EIR. As described above, the Specific Plan will modify the existing transportation network generally to expand existing facilities or to construct new facilities to accommodate planned population and employment growth. Draft street cross-sections for the Specific Plan include all of the bicycle facilities as identified in the 2035 General Plan. Also, with respect to pedestrian facilities, the Specific Plan identifies sidewalks on all streets within the project site, on the north side of CR 25A (southern project boundary), and on both sides of Parkland Avenue. Sidewalks and paths on streets within the project site range from 4.5 to 10 feet in width. The proposed road network for the project is consistent with the functional classification and street typology identified in the General Plan, and the Land Use Plan Layout and street cross-sections for the Specific Plan include all the roadway network facilities as identified in the 2035 General Plan. Furthermore, implementation of Mitigation Measures 3.13-1a and 3.13-1b would require a pro-rata contribution to transit service so that it is provided to the Specific Plan Area in the future and require for on-site planning of transit stops to ensure adequate provision of transit to serve the WRTP Specific Plan Area. These transportation and circulation elements of the Specific Plan are consistent with the 2035 General Plan and the regional transportation and circulation planning to connect the Specific Plan Area to the surrounding communities. The proposed Specific Plan and the off-site SR 113/County Road 25A interchange improvements were included as part of the cumulative analysis contained in the 2035 General Plan and CAP EIR, and there are no substantial changes to environmental conditions, regulatory updates, or the Specific Plan that require additional cumulative analysis or mitigation. Therefore, cumulative effects from implementing the Specific Plan in conjunction with development of related projects related to the potential to conflict with a program, plan, ordinance, or policy addressing the circulation system, including transit, roadway, bicycle, and pedestrian facilities would be less-than-cumulatively considerable.

Consistency with CEQA Guidelines Section 15064.3(b) The 2035 General Plan and CAP EIR evaluated VMT associated with buildout of the General Plan, including the Specific Plan Area, but the metric was not used to evaluate potential impacts under CEQA, as the CEQA guidelines implementing SB 743 were not implemented until after the adoption of the 2035 General Plan. Under SB 375 (Chapter 728, Statutes of 2008), the California Air Resources Board is responsible for issuing greenhouse gas targets to metropolitan planning organizations that reduce vehicle emissions, consistent with State climate goals, by a future planning horizon compared to an established baseline. SB 375 requires each metropolitan planning organizations to adopt a sustainable communities strategy (SCS) or alternative planning strategy (APS) that shows how a land use/transportation scenario will achieve the assigned greenhouse gas target. The current adopted SACOG 2020 MTP/SCS for the region is for the years 2020 to 2040. For the 2020 MTP/SCS, California Air Resources Board assigned SACOG a target of 19 percent per-capita GHG emissions reduction. The MTP/SCS indicates that VMT per capita in the SACOG region, which dipped significantly during the Great Recession, has increased starting in 2011. The MTP/SCS projects a 10-percent reduction in VMT per capita by 2040 for the SACOG region. As discussed above, the WRTP Specific Plan is consistent with the 2035 General Plan land use program and circulation network, and includes a TDM/VMT Program and funding to achieve the 10 percent VMT reduction required for new projects in General Plan Policy 3.A.4. The WRTP Specific Plan would be consistent with the City's VMT reduction targets and land use planning in alignment with the intent of SB 743, and there are no impacts that are peculiar to the WRTP Specific Plan that

were not addressed in the 2035 General Plan and CAP EIR. Therefore, the Specific Plan Area's VMT will not contribute to regional impacts, and impacts would be less than cumulatively considerable.

Substantially Increase Hazards or Result in Inadequate Emergency Access The 2035 General Plan determined that cumulative effects related to increasing hazards due to design features, incompatible uses, or inadequate emergency access would be less than cumulatively considerable. The cumulative environment does not change the conclusions and analysis discussed in the project-specific analysis above. The City's land uses and transportation networks have been comprehensively planned through the Specific Plan process to conform to the City's Engineering Standards: Design Standards, Standard Details and Construction Specifications (2016), and establish appropriate and safe designs. Therefore, cumulative effects from implementing the Specific Plan in conjunction with development of related projects related to increasing transportation network hazards or resulting in inadequate emergency access would be less than cumulatively considerable.

14. UTILITIES

WATER SUPPLY The 2035 General Plan and CAP EIR (pages 6-46 and 6-47) (City of Woodland 2016) analyzed cumulative impacts to water supply based on regional growth projections identified in the Sacramento Area Council of Governments' 2016 Metropolitan Transportation Plan/Sustainable Communities Strategy (MTP/SCS). The 2035 General Plan and CAP EIR noted that future growth in the region would result in increased water demand. Because available supply is dictated by water purveyor sources and purveyors who may have different demands, water supplies, water rights, and water quality challenges, the impacts on water supply related to implementation of the Sacramento Area Council of Governments' 2016 MTP/SCS at the regional level are considered cumulatively potentially significant in the 2016 MTP/SCS EIR. As discussed in the 2035 General Plan and CAP EIR, the City of Woodland has supported efforts to reduce water demand through conservation and other measures, which will lessen the demand for new water treatment facilities. Nevertheless, the City has not undertaken analysis of the availability of water supply beyond the population anticipated from implementation of the General Plan through 2035. Therefore, the 2035 General Plan and CAP EIR determined it is possible the water demand from cumulative growth for the region may exceed supply. Because the City has not analyzed the water supply for cumulative growth for the region and cannot state with any certainty what impact on water supply new development will have, the 2035 General Plan and CAP EIR determined that new development would make a cumulatively potentially significant and unavoidable contribution to the potentially significant cumulative impact. As described above, the project applicants for future projects proposed under the WRTP Specific Plan would comply with 2035 General Plan and CAP policies, Implementation Programs, and Actions that require implementation of water conservation and preparation of water supply assessments. In addition, a reclaimed water system would be installed to meet landscape irrigation demands for medians, parks, and greenways to further reduce potable water demands. In all year types, if demand cannot be met from surface water alone, the City plans to meet any additional demand through groundwater pumping. As shown in the Table 3.14-1, water supply is projected to be sufficient to meet demand through 2035 in all water years. The water supply demands for the WRTP Specific Plan Area were accounted for in water demand projections contained in the City's UWMP and evaluated in the 2035 General Plan and CAP EIR (City of Woodland 2016, West Yost Associates 2016). The WRTP Specific Plan proposes land uses consistent with those in the 2035 General Plan and, therefore, assumed for the City's UWMP. Therefore, sufficient water supplies would be available to meet the demands of the WRTP Specific Plan as well as existing and future development within the City's service area through 2035. As noted, the UWMP assessed water demand and supply using land use assumptions in the 2035 General Plan, with which the WRTP Specific Plan is consistent. Therefore, water demand would be the same, if not less than due to continued conservation measures, as analyzed in the 2035 General

Plan and CAP EIR. The 2035 General Plan and CAP EIR concluded that that water demand under the cumulative scenario may exceed demand and determined this to be a cumulatively considerable contribution to a significant and unavoidable impact. Proposed development under the WRTP Specific Plan is consistent with development assumptions in the 2035 General Plan and would contribute to this impact. There are no cumulative impacts related to water supply that are peculiar to the WRTP Specific Plan Area that were not addressed in the 2035 General Plan and CAP EIR and, as provided by CEQA Guidelines Section 15183 (f), no additional cumulative analysis is required.

WASTEWATER TREATMENT FACILITIES The 2035 General Plan and CAP EIR (page 6-47) (City of Woodland 2016) analyzed cumulative impacts to wastewater treatment facilities based on regional growth projections identified in the 2016 MTP/SCS. The 2035 General Plan and CAP EIR noted that growth in the region is expected to increase demand for wastewater management services because of increased amounts of wastewater effluent. Increased population from cumulative growth may result in the need for construction of new facilities for utilities and service systems. This was identified as a potentially significant impact in the 2016 MTP/SCS EIR, and thus has a potentially significant cumulative impact. Future growth in the City would result in increased development and therefore greater amounts of wastewater effluent. As discussed above, the future capacity of the WPCF could serve up to 105,000 residents and is sufficient to serve growth projected under the 2035 General Plan. Policy 5.F.1 of the 2035 General Plan ensures that sufficient public facilities and services would be available to serve new development. Policy 5.H.1 requires “that increased wastewater treatment facility capacity is available to serve planned urban development within the Planning Area consistent with this General Plan.” This policy applies to all levels of development and therefore provides mitigation for increased demand for wastewater treatment associated with future development. Therefore, the 2035 General Plan and CAP EIR concluded that future development would have a less than cumulatively considerable contribution to the potentially significant cumulative impact. As stated above, the hydraulic capacity of the City’s WPCF is expected to meet the City’s projected needs through 2035, including the needs of the WRTP Specific Plan. In addition, the City has reduced residential and commercial wastewater design sanitary sewer flow rate assumptions for the WRTP Specific Plan Area (Cunningham Engineering 2020c). Therefore, the WPCF would have adequate capacity to treat wastewater flows generated by the WRTP Specific Plan, as well as future development within the WPCF service area. The 2035 General Plan and CAP EIR concluded that Policy 5.H.1 provides mitigation for increased demand for wastewater treatment associated with future development and determined that future development under the 2035 General Plan would have a less than cumulatively considerable contribution to a significant and unavoidable impact. Proposed development under the WRTP Specific Plan is consistent with development assumptions in the 2035 General Plan and the Public Facilities Financing Plan will demonstrate how the infrastructure requirements and the associated costs are reasonably balanced throughout each segment of development and ensures that sufficient public facilities and services would be available to serve new development, consistent with General Plan policy.. There are no cumulative impacts related to water supply that are peculiar to the WRTP Specific Plan Area that were not addressed in the 2035 General Plan and CAP EIR and, as provided by CEQA Guidelines Section 15183(f), no additional cumulative analysis is required.

SOLID WASTE The 2035 General Plan and CAP EIR (page 6-47) (City of Woodland 2016) analyzed cumulative impacts to solid waste disposal based on regional growth projections identified in the 2016 MTP/SCS. The 2035 General Plan and CAP EIR noted that growth in the region is expected to increase demand for solid waste management and recycling due to an increase in the amount of solid waste generated and requiring disposal. Any new landfill would be required to comply with relevant federal, State, and local statutes and regulations related to permitting and operation prior to construction and operation. This is identified as less than significant in the 2016

MTP/SCS EIR, and thus has a less than significant cumulative impact. The 2035 General Plan and CAP EIR concluded that impacts related to construction and operation of new landfills in the region would be cumulatively less than significant. The 2035 General Plan and 2035 CAP EIR determined that the Yolo County Central Landfill's disposal capacity is sufficient to absorb solid waste generated by future development, as well as projected increases from population growth in the rest of the County. Furthermore, the 2035 General Plan and 2035 CAP include policies to reduce solid waste disposal needs through encouraging the development of regional and community-based recycling facilities and secondary resource businesses, and through the promotion of waste reduction measures to Woodland residents and businesses. Therefore, the 2035 General Plan and CAP EIR concluded that future development would have a less than cumulatively considerable contribution to the potentially significant cumulative impacts related to solid waste disposal. As discussed above, the project applicants for future projects proposed under the WRTP Specific Plan would comply with all statutes and regulations related to solid waste. Compliance with the CalGreen Code, the City's Construction and Demolition Debris Recycling and Diversion Ordinance, AB 1826, the City's Recyclable Materials Ordinance, City General Plan policies, and other City recycling programs would ensure that sufficient capacity at the Yolo County Central Landfill would continue be available to accommodate solid-waste disposal needs for future development. There are no cumulative impacts related to solid waste that are peculiar to the WRTP Specific Plan Area that were not addressed in the 2035 General Plan and CAP EIR and, as provided by CEQA Guidelines Section 15183(f), no additional cumulative analysis is required. (Draft EIR, pp. 3.14-19 through 3.14-21.)

VI. PROJECT ALTERNATIVES

When a lead agency has determined that, even with the adoption of all feasible mitigation measures, a proposed project would still cause one or more significant environmental effects that cannot be substantially lessened or avoided, the agency, prior to approving the project as mitigated, must first determine whether, with respect to such impacts, there remain any project alternatives that are both environmentally superior and feasible within the meaning of CEQA. An alternative may be “infeasible” if it fails to fully promote the lead agency’s underlying goals and objectives with respect to the project.

When significant effects are identified in the EIR for the project, CEQA Guidelines Section 15126.6 requires the EIR to consider and discuss alternatives to the proposed actions as a way of avoiding the significant effects. Subdivision (a) states:

An EIR shall describe a range of reasonable alternatives to the project, or to the location of the project, which would feasibly attain most of the basic objectives of the project but would avoid or substantially lessen any of the significant effects of the project, and evaluate the comparative merits of the alternatives. An EIR need not consider every conceivable alternative to a project. Rather it must consider a reasonable range of potentially feasible alternatives that will foster informed decision making and public participation. An EIR is not required to consider alternatives which are infeasible. The Lead Agency is responsible for selecting a range of project alternatives for examination and must publicly disclose its reasoning for selecting those alternatives. There is no ironclad rule governing the nature or scope of the alternatives to be discussed other than the rule of reason.

Subdivision (b) states the purpose of the alternatives analysis is to discuss alternatives to the project or its location that are capable of avoiding or substantially lessening any significant effects of the project, even if the alternatives would impede, to some degree, the attainment of the project objectives or if the alternative or alternative location would be more costly.

Subdivision (c) describes the selection process for a range of reasonable alternatives and states that the range must include those that could feasibly accomplish most of the project’s basic objectives and could avoid or substantially lessen one or more of the significant effects. The EIR must briefly describe the rationale for selecting the alternatives and identify alternatives that were considered by the lead agency but rejected as infeasible and briefly explain the agency’s reasons underlying that determination. Factors that may be used to eliminate alternatives from consideration include an alternative’s failure to meet most of the basic project objectives, infeasibility, or the inability to avoid significant environmental effects. Thus, the range of alternatives is governed by a “rule of reason” that requires the EIR to set forth only those alternatives necessary to allow a reasoned choice. The EIR must include enough information about each alternative to allow meaningful evaluation, analysis, and comparison with the Project. Alternatives are limited to ones that would avoid or substantially lessen any of the significant effects of the project. Of those alternatives, the EIR need examine only the ones that the lead agency determines could feasibly attain most of the basic project objectives.

Under CEQA, “(f)feasible means capable of being accomplished in a successful manner within a reasonable period of time, taking into account economic, environmental, legal, social, and technological factors” (CEQA Guidelines Section 15364.) The concept of feasibility permits agency decision-makers to consider the extent to which an

alternative is able to meet some or all of a project's objectives. In addition, the definition of feasibility encompasses desirability to the extent that an agency's determination of infeasibility represents a reasonable balancing of competing economic, environmental, social, and technological factors.

Section 15126.6(f) of the CEQA Guidelines provides a discussion of factors that can be taken into account in determining the feasibility of alternatives. These factors include:

- ▶ Project objectives;
- ▶ Avoid or substantially lessen significant effects;
- ▶ Site suitability;
- ▶ Other plans or regulatory limitations;
- ▶ Economic viability;
- ▶ Availability of infrastructure;
- ▶ Jurisdictional boundaries/regional context;
- ▶ Property ownership and control; and
- ▶ Other reasons for rejecting as infeasible (e.g., effects cannot be reasonably ascertained or implementation is remote and speculative).

In accordance with CEQA Guidelines Section 15126.6, a reasonable range of alternatives to the proposed project are described in Section 4 of the EIR and summarized below. The project objectives, which informed the development of alternatives, are provided in Section II.A.2 of this document.

A. ALTERNATIVES CONSIDERED AND REJECTED FROM DETAILED ANALYSIS

Section 15126.6(c) of the CEQA Guidelines specifies that an EIR should (1) identify alternatives that were considered by the lead agency but were eliminated from detailed consideration because they were determined to be infeasible during the scoping process; and (2) briefly explain the reasons underlying the lead agency's determination. Among the factors that may be used to eliminate alternatives from detailed consideration in an EIR are: (i) failure to meet most of the basic project objectives; (ii) infeasibility; and/or (iii) inability to avoid significant environmental impacts.

The following alternatives were considered but rejected as part of the environmental analysis for the project:

1. OFF-SITE DEVELOPMENT ALTERNATIVE

This alternative would envision the Specific Plan Area in continued agricultural use, while density and nonresidential development intensity would be increased in undeveloped portions of the Spring Lake Specific Plan Area, other Specific Plan areas (including SP-1B, -1C, and -3), and infill opportunity areas within the City.

While this alternative may reduce the level of impacts identified in the EIR associated with the Specific Plan Area itself, it would shift impacts associated with ground disturbance and new construction to other parts of the City's Planning Area. This alternative would not fulfill project objectives related to creating a centralized hub supporting strategic new employment within immediate proximity to complementary uses, as well as gathering places and new housing to support day-to-day needs of businesses, their clients, and their employees. In addition, the applicant would have no control over the multiple properties that would be required to accommodate this level of development. Therefore, the Off-site Development Alternative was rejected since it is infeasible, and since it would largely shift rather than reduce impacts.

2. ALTERNATIVES ANALYZED IN THE EIR

The alternatives selected for further detailed review within the EIR focus on alternatives that could the project's significant environmental impacts, while still meeting most of the basic project objectives. Those alternatives include:

NO PROJECT ALTERNATIVES

CEQA Guidelines (Section 1526.6[e]) requires consideration of a no-project alternative that represents the existing conditions, as well as what would reasonably be expected to occur in the foreseeable future if the project were not approved. The no-project alternative could take two forms: one, as a scenario in which urban development does not occur at all within SP-1A and existing conditions within SP-1A persist; or two, a scenario in which development still occurs, consistent with the framework for SP-1A prescribed by the 2035 General Plan and City's planning efforts.

As the Specific Plan Area is planned for development ("SP-1A") under the 2035 General Plan, and the Specific Plan Area is a key element of the development framework envisioned in the 2035 General Plan, it is not considered likely that a no-development scenario would persist well into the future. However, in order to provide the most complete set of information for decision makers, the no-development scenario has been included and analyzed as a no-project alternative.

Alternative 1: No Project (No Development) Alternative

The purpose of this alternative is to allow decision makers to compare the impacts of approving the proposed project with the impacts of not approving the proposed project. This alternative envisions that the proposed W RTP Specific Plan is not approved and development under the 2035 General Plan occurs elsewhere within the City of Woodland.

The Specific Plan Area is currently used for agricultural production, consisting of row crops and pasture, with one existing home and a barn associated with agricultural activities. The No-Project (No Development) Alternative assumes continued agricultural use throughout the Specific Plan Area, and increased residential density and nonresidential development intensity in undeveloped portions of the Spring Lake Specific Plan Area, other specific plan areas of the City (including SP-1B, -1C, -2, and -3), and infill opportunity areas within the City. This alternative also assumes no implementation of off-site improvements (i.e., the Caltrans Improvement Area and South Regional Pond).

Alternative 1 (No Project, No Development) Impacts

- ▶ **AESTHETICS AND VISUAL RESOURCES:** Alternative 1 envisions continued agricultural production within the Specific Plan Area and off-site proposed South Regional Pond area. With the continuation of existing agricultural uses, it is likely that no visual change would occur, or that any future activities permitted under the zoning and designation such as the construction of minor outbuildings or farming facilities or changes in agricultural operations would not entail a significant change in the visual character of the project site. No damage to scenic vistas or scenic resources within a state scenic highway would occur. There would be no additional sources of light or glare.
- ▶ **AGRICULTURE AND FORESTRY RESOURCES:** Based on analysis of the Yolo County Important Farmland map, approximately 346 acres of Prime Farmland exists within the Specific Plan Area and the approximately 4-acre proposed South Regional Pond area is also considered Prime Farmland. This land within the Specific Plan Area would be directly and permanently converted to urban uses and the approximately four acres south of CR 25A and west of the Specific Plan Area would be directly and permanently converted to a detention basin. Alternative 1 envisions continued agricultural production within the Specific Plan Area and off-site proposed South Regional Pond area. There would be no loss of farmland or conversion of agricultural land to non-agricultural urban uses, and no conflict with existing on-site or off-site agricultural operations.
- ▶ **AIR QUALITY:** Under Alternative 1, the Specific Plan Area would continue to be used for agricultural uses and the off-site South Regional Pond would not be constructed. Existing air pollutant emissions associated with agricultural activities would still occur under Alternative 1. However, since no urban construction or development would occur, the amount of construction-related air pollutants that would be generated under Alternative 1 would be substantially reduced as compared to the proposed WRTP Specific Plan. Operational generation of criteria air pollutants and precursors, as well as exposure to toxic air contaminants, would also be reduced compared to the proposed WRTP Specific Plan.
- ▶ **BIOLOGICAL RESOURCES:** Because no development would occur under Alternative 1, no impacts to wildlife and their habitats would occur. The users of the land would be required to comply with all applicable State and federal regulations that prohibit impacts to special-status animals and their habitats.
- ▶ **CLIMATE CHANGE, GREENHOUSE GAS EMISSIONS, AND ENERGY:** Under Alternative 1, the Specific Plan Area would continue to be used for agricultural uses and the off-site South Regional Pond would not be constructed. Existing greenhouse gas emissions and energy consumption associated with agricultural activities would still occur under Alternative 1. However, since no urban construction or development would occur, the amount of construction-related greenhouse gas emissions that would be generated and energy that would be consumed under Alternative 1 would be substantially reduced as compared to the proposed WRTP Specific Plan. Operational generation of greenhouse gas emissions and energy consumption would also be reduced compared to the proposed WRTP Specific Plan.
- ▶ **CULTURAL AND TRIBAL CULTURAL RESOURCES:** Although investigations of the proposed WRTP Specific Plan Area did not identify known significant cultural resources present in the WRTP Specific Plan Area, the broader area does have an elevated sensitivity for archaeological resources, due to the long-standing Native American inhabitation and past historical agricultural and settlement uses. It is reasonable to assume that the area may contain resources not yet identified but that would qualify as archaeological resources under CEQA. Continued agricultural uses, consistent with current land use, on the existing parcels would not meet

the definition of a “project” under CEQA and, therefore, a mitigation monitoring plan would not be implemented. However, all property owners would still be required to comply with Section 7050.5 of the Health and Safety Code, which governs the treatment of human remains. In addition, Section 5097.98 of the California Public Resources Code prevents any person from obtaining or possessing Native American artifacts or human remains taken from a grave or cairn. Because Alternative 1 would entail continued agricultural uses, a very small amount of earth-moving activities would occur as compared to the proposed WRTP Specific Plan. Therefore, the potential for adverse impacts to cultural and tribal cultural resources would be substantially lower.

- ▶ **GEOLOGY, SOILS, MINERALS, AND PALEONTOLOGICAL RESOURCES:** Alternative 1 would entail continued agricultural uses. Thus, no site-specific geotechnical reports or grading and erosion control plans would be prepared. A records search indicated that no paleontological resources have been recorded from the Specific Plan Area. Because the southern portion of the Specific Plan Area is composed of a mixture of the Riverbank and Modesto Formations, a paleontologically sensitive rock formation, fossils may be present under the ground surface in this area. Because Alternative 1 would entail continued agricultural, a very small amount of earth-moving activities would occur as compared to the proposed WRTP Specific Plan. Furthermore, ground disturbance associated with continued agricultural activities would not be deep enough to affect any undiscovered subsurface paleontological resources. Therefore, the potential for adverse impacts to paleontological resources would be substantially lower compared to the proposed WRTP Specific Plan.
- ▶ **HAZARDS AND HAZARDOUS MATERIALS:** Since Alternative 1 would entail the continuation of existing agricultural land uses, the potential for accidental spills of hazardous materials associated with construction activities or construction workers exposure to hazardous materials would be greatly reduced. Based on the Phase II screening-level pesticide assessment for soils in the Specific Plan area and off-site proposed South Regional Pond site, residual metal (arsenic) and agricultural pesticides in the off-site improvement areas would not represent a human health or environmental hazard. Ongoing pesticide use could be expected on-site and on the adjacent agricultural lands. Agricultural chemical use represents a potential source of environmental contamination that could pose a human health and environmental hazard during future activities. However, agricultural operations would be required to follow applicable local, State, and federal regulations for the use, storage, and transport of hazardous materials, as well as comply with appropriate Yolo County Agricultural Weights and Measures Department regulations for environmental protections. Therefore, the potential impacts associated with hazards and hazardous materials under Alternative 1 would be reduced relative to the WRTP Specific Plan.
- ▶ **HYDROLOGY, FLOODING, AND WATER QUALITY:** Under Alternative 1, agricultural production and related activities would continue similar to existing conditions. Specific measures required under the proposed WRTP Specific Plan to address water quality (a grading and erosion control plan, a stormwater pollution prevention plan, a drainage plan, and a best management practice and water quality maintenance plan) would not be implemented for agricultural production—which would allow the use of fertilizers and pesticides. While the City does not have any information to suggest that on-site agricultural operations have or will cause water quality issues, it is possible that agriculture can negatively affect water quality, even when done properly, due to nutrient loads from fertilizer, toxic fecal coliform from animal waste, or increased erosion and runoff. Agricultural uses would be required to comply with appropriate Yolo County Agricultural Weights and Measures Department regulations for environmental protections Under Alternative 1, continued agricultural uses would continue to allow irrigation water and stormwater to percolate through the soil to the aquifer.

Therefore, Alternative 1 would reduce impacts associated with depletion of groundwater supplies and the increase in surface water runoff as compared to the proposed WRTP Specific Plan.

- ▶ **LAND USE PLANNING, POPULATION, AND HOUSING:** The use of the Specific Plan Area for continued agricultural uses would not affect population or housing. Similar to the proposed Specific Plan, Alternative 1 would not displace substantial numbers of existing people or housing, induce substantial unplanned population growth, or divide an established community. Unlike the proposed Specific Plan, continuation of agricultural uses under Alternative 1 would not require annexation of the Specific Plan Area into the City, nor would it require amending the City's Zoning Ordinance. However, the City of Woodland 2035 General Plan identifies the Specific Plan Area as "SP-1A," a new growth area within the City. Alternative 1 would not promote development within the Specific Plan Area consistent with the City's 2035 General Plan, and would not accommodate residential and employment growth anticipated within the City's Planning Area and in support of the City's Regional Housing Needs Assessment of the Sacramento Area Council of Governments. Therefore, Alternative 1 would be inconsistent with the City's primary land use planning tool, the 2035 General Plan.
- ▶ **NOISE AND VIBRATION:** Under Alternative 1, noise associated with the use of agricultural equipment would continue throughout the Specific Plan Area and the proposed off-site South Regional Pond area, and could potentially increase or change in type, depending on any changes in agricultural activities, including a change in crops or farming techniques, or other activities that would be permitted under the current zoning and designations. Under the proposed WRTP Specific Plan, agricultural activity, and associated noise and vibration, could also continue on undeveloped areas within the Specific Plan Area. However, with the assumed development under the proposed WRTP Specific Plan, on- and offsite construction and operational noise and vibration would be substantially higher than with Alternative 1. Thus, impacts from noise and vibration under Alternative 1 would be reduced as compared to the proposed WRTP Specific Plan.
- ▶ **PUBLIC SERVICES AND RECREATION** Alternative 1, which would entail continued agriculture and related uses, would have only a minor, negligible effect related to the provision of law enforcement and fire protection, and no impact on education. In addition, Alternative 1 would not result in the increased use of existing parks or recreational facilities or require the construction or expansion of parks or recreational facilities. However, as opposed to implementation of the proposed WRTP Specific Plan, implementation of Alternative 1 would not include the contribution of funds toward the Woodland Sports Park. This would not result in any increase in an environmental impact relevant to CEQA, but would be a reduced benefit under Alternative 1 as compared to the WRTP Specific Plan.
- ▶ **TRANSPORTATION AND CIRCULATION:** Assuming that agricultural operations would continue consistent with existing operations, no increase in travel demand would occur and no conflicts with transportation-related policies would occur. The development of multimodal transit hub would not occur and would not provide additional alternative transportation services that would otherwise serve the surrounding neighborhoods, such as the Spring Lake Specific Plan Area and future development of the other Specific Plan areas within the City. This would be a reduced benefit under Alternative 1 as compared to the proposed WRTP Specific Plan.
- ▶ **UTILITIES:** Alternative 1 would not increase the demand for water, wastewater service and treatment, electrical services, natural gas services, and communications services. Currently there are six agricultural wells in use in the Specific Plan Area – four wells are located north of CR 25A and two wells are located south of CR 25A. It is anticipated that these wells would continue to provide water to serve continued agricultural production under

Alternative 1. Unlike the proposed W RTP Specific Plan, Alternative 1 would not require the construction of water supply conveyance facilities or wastewater collection and conveyance facilities. Overall, impacts related to utilities would be reduced under Alternative 1 compared to the Specific Plan

Ability of Alternative 1 to Meet Project Objectives

This alternative would not meet any of the basic project objectives since it would not create a centralized hub for research and technology to connect the growing U.C. Davis and Sacramento regions. There would be no new advanced technology-related jobs or related training to allow for the expanding number of Woodland residents and college graduates from the Woodland Community College and throughout the region to live and work in the community.

Findings for Project Alternative 1

The City Council specifically rejects Alternative 1 on the ground that Alternative 1 does not meet the proposed project's objectives. This alternative would not meet any of the basic project objectives since it would not create a centralized hub for research and technology to connect the growing UC Davis and Sacramento regions. There would be no new advanced technology-related jobs or related training to allow for the expanding number of Woodland residents and college graduates from the Woodland Community College and throughout the region to live and work in the community.

Alternative 2: No Project (Development) Alternative

The purpose of this alternative is to allow decision makers to compare the impacts of approving the proposed project with the impacts of not approving the proposed project. This alternative envisions that the proposed W RTP Specific Plan is not approved, but that development would occur within the Specific Plan Area as directed by the 2035 General Plan for SP-1A, but not as designed under the W RTP Specific Plan.

The No-Project (Development) Alternative assumes development within SP-1A in a manner that, like the proposed W RTP Specific Plan, is consistent with the 2035 General Plan and that has a density, layout, and mix of uses more consistent with a typical business park development with supporting land uses in proximity to a highway interchange. As detailed in the 2035 General Plan Policy 2.L.2, SP-1A is to be developed as "as a mixed-use residential district anchored by a research and technology business park in the Southern Gateway area at CR 25A and SR 113." The General Plan directs a specific plan to "concentrate the highest intensity of development within and in close proximity to the business park area, with lower-density, largely residential uses to the north." Consistent with this policy, this No-Project (Development) Alternative assumes the business park would be concentrated in the southwestern portion of the Specific Plan Area near the interchange of SR 113 and CR 25A. The business park is assumed to be developed in a campus-like setting, as described in the 2035 General Plan, and include larger lots with two- to three-story buildings and large parking lots. Also consistent with General Plan direction to focus higher-intensity development around the highway interchange, this alternative includes increased highway commercial acreage. As defined by General Plan Policy 2.L.2, the highest density housing would be close to the business park area, with lower-density residential uses in the northern portion of the Specific Plan Area. The mobility hub proposed as a part of the W RTP Specific Plan is not a part of this alternative. The village center and associated park and residential development proposed as a part of the W RTP Specific Plan is not included under this alternative and, rather than high-density residential with a community commercial overlay along CR 25A, this land would include additional business park and highway commercial uses. The Specific Plan Area would still accommodate

approximately 1,600 residential dwelling units and 2.2 million square feet of non-residential uses. However, in order to support the residential units, the high-density residential land uses would be provided in relatively larger blocks surrounding the business park land uses and the single-family land use acreage would be reduced compared to that proposed under the WRTP Specific Plan.

Alternative 2 (No Project, Development) Impacts

- ▶ **AESTHETICS AND VISUAL RESOURCES:** Alternative 2 envisions that development would occur as directed by the 2035 General Plan for SP-1A, but not as designed under the WRTP Specific Plan. As with implementation of the proposed WRTP Specific Plan, farmland within the WRTP Specific Plan Area and off-site improvement areas would be converted to urban land uses from implementation of Alternative 2. Development under this alternative would also adhere to policies consistent with the 2035 General Plan policies developed to limit the impact on visual character and quality from development within the City's Planning Area. Development within SP-1A under this alternative would include larger parcels in the business park area with two- to three-story buildings and large parking lots to serve businesses, higher-intensity development around the highway interchange, increased highway commercial acreage to serve through-traffic in the area. The high-density residential land uses would be provided in relatively larger blocks surrounding the business park land uses and the single-family acreage would be reduced compared to that proposed in the WRTP Specific Plan. Similar to the proposed WRTP Specific Plan, this No-Project (Development) Alternative would result in a substantial change to the existing visual character from agricultural cropland to a mix of urban land uses, and would still add to the overall amount of lighting and glare in the City. However, the shift in the land use mix under this Alternative compared to the WRTP Specific Plan may also result in increased roadway signage in support of the business park and highway commercial land uses, larger parking lots to support business park land uses and associated parking and circulation, and reduced low-density residential areas; these changes could ultimately somewhat reduce continuity in scale, form, or overall visual character between SP-1A and the adjacent Spring Lake Specific Plan Area and increased sources of light and glare compared to development under the proposed WRTP Specific Plan.
- ▶ **AGRICULTURE AND FORESTRY RESOURCES:** Alternative 2 would involve approximately the same amount of development as the proposed WRTP Specific Plan. Similar to the proposed WRTP Specific Plan, implementation of Alternative 2 would permanently convert an estimated 350 acres of agricultural farmland, including Prime Farmland, to nonagricultural uses. In addition, as with the proposed WRTP Specific Plan, Alternative 2 would locate residential uses adjacent to existing on-site and offsite agricultural lands, resulting in potential conflicts between agricultural and urban land uses.
- ▶ **AIR QUALITY:** Alternative 2 would involve approximately the same amount of development as the proposed WRTP Specific Plan, but with a different mix and layout. As with the proposed WRTP Specific Plan, Alternative 2 would involve the temporary generation of criteria air pollutants and precursors resulting from construction activities throughout the Specific Plan Area and off-site improvement areas. Constructing Alternative 2 could also expose sensitive receptors to substantial pollutant concentrations during construction, as well as during operations due to the creation of new sources such as at commercial truck docking areas. Overall, short-term construction-related impacts and the potential for exposure to substantial localized pollutant concentrations would be similar compared to the proposed WRTP Specific Plan. Under Alternative 2, relatively fewer daily needs would be met through walking, bicycling, and transit since commercial uses would be focused in the southwestern edge of the Specific Plan Area and oriented to motorists, and since the mobility hub

proposed as a part of the WRTP Specific Plan would not be a component of this alternative. Overall, the shift in development within the Specific Plan Area would increase air pollutant emissions from land use development under Alternative 2 compared to that of the proposed WRTP Specific Plan.

- ▶ **BIOLOGICAL RESOURCES:** Alternative 2 would entail the same amount of development as the proposed WRTP Specific Plan, but with a different mix, layout, and density. Similar to the proposed WRTP Specific Plan, Alternative 2 could potentially result in the loss of suitable nesting and foraging habitat for Swainson's hawk, white-tailed kite, burrowing owl, and other raptors; loss and disturbance of potential nesting and foraging habitat for common migratory birds; removal of elderberry shrub(s) that serve as potential habitat for valley elderberry longhorn beetle and larvae; loss of existing structures, orchard trees, and other trees that may support breeding pallid bats or western red bats; loss and degradation of State or federally protected wetlands. Similar to the proposed WRTP Specific Plan, mitigation measures would be required to reduce or off-set potential impacts in accordance with the Yolo Habitat Conservation Plan/Natural Community Conservation Plan and State and federal regulations. Impacts related to the loss and disturbance of foraging and nesting habitat for special-status wildlife, and to the loss and degradation of State or federally protected wetlands, would be similar in type and extent as under the proposed WRTP Specific Plan since the area envisioned for development would be the same.
- ▶ **CLIMATE CHANGE, GREENHOUSE GAS EMISSIONS, AND ENERGY:** Alternative 2 would involve approximately the same amount of development as the proposed WRTP Specific Plan. As with the proposed WRTP Specific Plan, Alternative 2 would involve the temporary generation of greenhouse gas emissions and use of fuel as a result of construction activities throughout the Specific Plan Area and off-site improvement areas. Operations under Alternative 2 would provide for relatively fewer daily needs would be met through walking, bicycling, and transit since commercial uses would be focused in the southwestern edge of the Specific Plan Area and oriented to motorists, and since the mobility hub proposed as a part of the WRTP Specific Plan would not be a component of this alternative, thereby increasing greenhouse gas emissions and fuel consumption associated with vehicle use, which is the biggest source of emissions for development of the Specific Plan Area and the City as a whole. In addition, this Alternative may not include the same emphasis on energy conservation and sustainability as emphasized in the guiding principles of the proposed WRTP Specific Plan. Overall, the shift in development within the Specific Plan Area would increase greenhouse gas emissions and energy consumption from land use development under Alternative 2 compared to that of the proposed WRTP Specific Plan.
- ▶ **CULTURAL AND TRIBAL CULTURAL RESOURCES:** Alternative 2 would entail the same amount of ground disturbance as the proposed WRTP Specific Plan and would be subject to the same regulations protecting cultural resources. Therefore, the potential for adverse impacts to cultural and tribal cultural resources would be similar.
- ▶ **GEOLOGY, SOILS, MINERALS, AND PALEONTOLOGICAL RESOURCES:** Alternative 2 would result in a similar amount of development as the proposed WRTP Specific Plan. Although the layout and specific land uses would be different under Alternative 2 compared to the proposed WRTP Specific Plan, the area of ground disturbing activities would be similar and therefore the impacts would be similar.
- ▶ **HAZARDS AND HAZARDOUS MATERIALS:** Alternative 2 would result in a similar amount of development as the WRTP Specific Plan and in the same location as the WRTP Specific Plan. Although the

layout and specific land uses would be different under Alternative 2, the associated potential hazards and use of hazardous materials would be the same. New land uses would require the routine use, transport, and disposal of hazardous material and waste and may increase exposure to risk of hazards. Construction activities may also generate hazardous materials and waste, such as fuels and oils from construction equipment and vehicles. Workers and members of the public could be exposed to hazards during construction activities from accidental releases of hazardous materials. However, like the proposed WRTP Specific Plan, Alternative 2 would be subject to the federal, State, and local requirements associated with the use, transport and disposal of hazardous materials and waste. Therefore, the potential for impacts related to hazards and hazardous materials would be similar under Alternative 2 as to the proposed WRTP Specific Plan.

- ▶ **HYDROLOGY, FLOODING, AND WATER QUALITY:** Alternative 2 would result in similar development as the proposed WRTP Specific Plan. Construction and grading activities associated with implementation of Alternative 2 have the potential to cause temporary and short-term increased erosion and sedimentation, similar to the proposed WRTP Specific Plan. The same State and local regulations and best management practices would be required of development under Alternative 2 as the proposed WRTP Specific Plan. As with the proposed WRTP Specific Plan, before new urban development can proceed, a grading and drainage plan must be submitted to the City Department of Public Works that must incorporate stormwater pollution control as well as storm drainage design features to control increased runoff from new development, as well as comply with other City and State requirements pertaining to urban runoff and water quality. As compared to the proposed WRTP Specific Plan, Alternative 2 may result in increased impervious surface area associated with more expansive business park building and parking lot footprints and lack of passive green space, including 'The Yard,' the 11-acre park within the heart of the Specific Plan Area as envisions under the WRTP Specific Plan. Therefore, the peak discharge flows and rate of stormwater runoff generated within the Specific Plan Area would be slightly increased. Thus, Alternative 2 could increase potential effects related to groundwater recharge and increased surface runoff compared to the proposed WRTP Specific Plan.
- ▶ **LAND USE PLANNING, POPULATION, AND HOUSING:** Alternative 2 would result in new development throughout the same are as that under the proposed WRTP Specific Plan. This Alternative assumes development within the Specific Plan Area in a manner that is consistent with the 2035 General Plan and that has a density, layout, and mix of uses more consistent with a typical business park development with supporting land uses in proximity to a highway interchange. Similar to the proposed WRTP Specific Plan, this development would not displace substantial numbers of existing people or housing, induce substantial unplanned population growth, or divide an established community. In addition, as with the proposed WRTP Specific Plan, Alternative 2 would require the annexation of the Specific Plan Area into the City and amendment of the City's Zoning Ordinance. Therefore, Alternative 2 would be consistent with the City's 2035 General Plan, and impacts related to land use, population, and housing under Alternative 2 would be similar to the proposed WRTP Specific Plan.
- ▶ **NOISE AND VIBRATION:** Alternative 2 would result in new development throughout the same are as that under the proposed WRTP Specific Plan. This Alternative assumes development within the Specific Plan Area in a manner that is consistent with the 2035 General Plan and that has a density, layout, and mix of uses more consistent with a typical business park development with supporting land uses in proximity to a highway interchange. As with the proposed WRTP Specific Plan, Alternative 2 would involve the temporary and short-term noise and vibration resulting from demolition and construction activities. In addition, future operational uses within the WRTP Specific Plan Area could generate noise and vibration in proximity to existing or future

noise sensitive receptors, similar to conditions under the proposed WRTP Specific Plan. Overall, impacts would be similar compared to the proposed WRTP Specific Plan.

- ▶ **PUBLIC SERVICES AND RECREATION:** Alternative 2 would result in new development throughout the same are as that under the proposed WRTP Specific Plan. This Alternative assumes development within the Specific Plan Area in a manner that is consistent with the 2035 General Plan and that has a density, layout, and mix of uses more consistent with a typical business park development with supporting land uses in proximity to a highway interchange, but likely to accommodate approximately the same number of residential dwelling units and non-residential square feet. As such, the project's law enforcement, fire protection, public school services, and parks and recreational services needs would be similar to the proposed WRTP Specific Plan. Overall, impacts would be similar compared to the proposed WRTP Specific Plan.
- ▶ **TRANSPORTATION AND CIRCULATION:** Alternative 2 would generate travel demand associated with construction and operations of future development of the Specific Plan Area. This Alternative assumes development within the Specific Plan Area in a manner that is consistent with the 2035 General Plan and that has a density, layout, and mix of uses more consistent with a typical business park development with supporting land uses in proximity to a highway interchange, but likely to accommodate approximately the same number of residential dwelling units and non-residential square feet. Alternative 2 would involve the temporary and short-term generation of trips during demolition and construction activities – since development would be similar in overall scale to the proposed WRTP Specific Plan, constructionrelated trips are anticipated to be similar. The land use layout may not accommodate non-vehicular transportation through multi-use trails and proximity of complementary land uses that is provided by the proposed WRTP Specific Plan, thereby increasing operational-related travel demand compared to that of the proposed WRTP Specific Plan. In addition, this Alternative may not be subject to the same Comprehensive Transportation Demand Management/Vehicle Miles Traveled Reduction Program (TDM/VMT Program), developed as part of and detailed in Section 6.2.3, “Subsequent Implementation Documents/Analysis,” of the WRTP Specific Plan. While the City may require a similar program to ensure consistency with the General Plan, it may be that this alternative would require off-site, net reductions in VMT if the requisite VMT reductions cannot feasibly be met due to the density, mix, and layout of this alternative. Overall, Alternative 4 is anticipated to generate a similar level of net VMT compared to the proposed Specific Plan, and impacts would be similar to the proposed Specific Plan.
- ▶ **UTILITIES:** Alternative 2 would result in new development throughout the same are as that under the proposed WRTP Specific Plan. This Alternative assumes a different land use mix and layout than the proposed WRTP Specific Plan Area, but in a manner that is consistent with the 2035 General Plan and likely to accommodate approximately the same number of residential dwelling units and non-residential square feet as the proposed WRTP Specific Plan. As with the proposed WRTP Specific Plan, Alternative 2 would still require the construction of water supply conveyance facilities and wastewater collection and conveyance facilities to serve the Specific Plan Area. Development under this Alternative would be subject to the same service and improvement standards, and state and federal laws and regulations as the proposed WRTP Specific Plan. As such, the project's utility requirements would be similar to the proposed WRTP Specific Plan and impacts would be similar compared to the proposed WRTP Specific Plan.

Ability of Alternative 2 to Meet Project Objectives

This alternative would meet land use requirements as defined by the 2035 General Plan, but may not as effectively meet the project objectives developed as guiding principles through the City's detailed planning process for the overarching vision of development within the Specific Plan Area. The business park may still accommodate and attract innovation and technology-related industry. However, it may not provide social gathering spaces for employees, residents, and visitors to connect, recreate, and relax in proximity to their place or work and residence. In addition, the housing mix would include a greater proportion of high-density residential, provided in larger blocks surrounding the business park land uses, which may result in less "seamless transitions," as sought by the project objectives. Finally, the circulation plan could still accommodate well-designed complete streets and pedestrian and bicycle facilities; however, relatively fewer daily needs would be met through walking, bicycling, and transit since commercial uses would be focused in the southwestern edge of the Specific Plan Area and oriented to motorists, and since the mobility hub proposed as a part of the W RTP Specific Plan is not a component of this alternative. The business park and highway commercial land uses, larger parking lots to support business park land uses and associated parking and circulation, and reduced low-density residential areas; these changes could ultimately somewhat reduce continuity in scale, form, or overall visual character between SP-1A and the adjacent Spring Lake Specific Plan Area and increased sources of light and glare compared to development under the proposed W RTP Specific Plan.

Findings for Project Alternative 2

The City Council specifically rejects Alternative 2 on the ground that it does not meet the proposed project's objectives. This alternative would meet land use requirements as defined by the 2035 General Plan, but may not as effectively meet the project objectives developed as guiding principles through the City's detailed planning process for the overarching vision of development within the Specific Plan Area. The business park may still accommodate and attract innovation and technology-related industry. However, it may not provide social gathering spaces for employees, residents, and visitors to connect, recreate, and relax in proximity to their place or work and residence. In addition, the housing mix would include a greater proportion of high-density residential, provided in larger blocks surrounding the business park land uses, which may result in less "seamless transitions," as sought by the project objectives. Finally, the circulation plan could still accommodate well-designed complete streets and pedestrian and bicycle facilities; however, relatively fewer daily needs would be met through walking, bicycling, and transit since commercial uses would be focused in the southwestern edge of the Specific Plan Area and oriented to motorists, and since the mobility hub proposed as a part of the W RTP Specific Plan is not a component of this alternative. In addition, Alternative 2 would be less feasible compared to the proposed Specific Plan based on the reduction in land for lower-density residential development and the increase in capacity for higher-density development. The balance between housing types and densities in the proposed Specific Plan allows for the collection of fees adequate to provide for the required infrastructure needed to serve the planned development. The scenario envisioned under Alternative 2 would make it infeasible, at least in the near-term, to collect fees in amounts required to support the necessary infrastructure for the Specific Plan.

Alternative 3: Reduced Mobile-Source Emissions and Proximity Between Emissions Sources and Sensitive Land Uses

Alternative 3 would have similar overall amount of development as the proposed Specific Plan, but would shift the land use mix so that destination land uses are balanced and mixed within residential areas to facilitate pedestrian and bicycle access for future residents.

This alternative would adjust the layout, mix, and density of land uses in order to allow a greater number of trips within the Specific Plan Area to occur on foot, by bicycle, or via transit, as well as minimize industrial and warehouse uses in proximity to residential land uses.

This alternative would have a greater proportion of relatively compact housing types focused around the central core (Village Center) of the Specific Plan Area, would remove inclusion of the highway commercial land use designation and would also disperse the retail and commercial services throughout the planned residential neighborhoods so that almost all future residents would be within walking distance (approximately ¼ mile) of these destinations, thereby increasing non-vehicular trips and reducing vehicle trip distances. In addition, the research and technology park land uses would be primarily developed with office uses (which could still accommodate research and technology-related uses, as well as other office-based uses). Permitted land uses for warehousing, storage, distribution, and logistics, agricultural or seed processing, packaging and manufacturing, agricultural production, and brewery/distillery, all of which are likely to attract diesel-powered truck trips, would be limited to the southwestern and southern extremities of the Specific Plan Area, farthest from planned open space and residential land uses. The light and medium industrial uses would remain in the southern extremity of the Specific Plan Area, since these uses have relatively low employment densities and have greater potential to include substantial on-site emissions sources, but office uses, like retail and commercial services, would be located near the residential areas.

Having increased housing density around the central core area could encourage a greater portion of trips on foot and via bicycle from residential areas. The presence of complementary commercial and retail land uses in greater proximity to the residential areas of the Specific Plan Area would make them relatively more accessible by foot or bike. Limiting high truck trip generating land uses, such as warehousing, storage, distribution, and logistics, and agricultural or seed processing, packaging and manufacturing, to the southern extremity of the Specific Plan Area would minimize the potential for the presence of substantial emissions sources in proximity to sensitive receptors.

The intent of this alternative is to decrease single-passenger vehicle use and related criteria air pollutant emissions and establish a greater level of separation between residential and non-residential emissions sources, and reduce associated adverse physical environmental effects.

Alternative 3 Impacts

- ▶ **AESTHETICS AND VISUAL RESOURCES:** Alternative 3 would include similar development as the proposed WRTP Specific Plan. As with implementation of the proposed WRTP Specific Plan, farmland within and immediately south (for the proposed South Regional Pond) of the WRTP Specific Plan Area would be converted to urban land uses from implementation of Alternative 3. However, the WRTP Specific Plan Area and the off-site improvement areas are of moderate visual quality and do not represent scenic vistas. While the specific density and mix of land uses may vary somewhat under Alternative 3 compared to the proposed WRTP Specific Plan, and the development of structures and new lighting throughout the WRTP Specific Plan Area would still generate new sources of light and glare. As such, the type of aesthetics impacts would be similar to those of the proposed WRTP Specific Plan. Alternative 3 would alter existing views of, and from, the WRTP Specific Plan Area. Although development under Alternative 3 would also adhere to the WRTP Specific Plan Design Standards and Design Guidelines contained in Chapter 3 of the proposed WRTP Specific Plan, development under Alternative 3 would still result in conversion of agricultural land to urban environment, which, like the proposed WRTP Specific Plan, would substantially alter the visual character of the WRTP

Specific Plan Area from both public and private viewing locations. In addition, just as with the proposed WRTP Specific Plan, Alternative 3 would include the construction of new buildings with reflective surfaces that could cause daytime glare and would create new sources of additional nighttime lighting. Alternative 3 would still include the WRTP Specific Plan Design Standards and Design Guidelines contained in Chapter 3 of the proposed WRTP Specific Plan, that further detail requirements within various land use designations to avoid light spillover and glare into surrounding areas and reduce night sky pollution from new light sources. However, as with the proposed WRTP Specific Plan, implementation of Alternative 3 would still add to the overall amount of lighting and glare in the City, specifically within and around the WRTP Specific Plan Area.

- ▶ **AGRICULTURE AND FORESTRY RESOURCES:** Alternative 3 would involve approximately the same amount of development as the proposed WRTP Specific Plan. Similar to the proposed WRTP Specific Plan, implementation of Alternative 3 would permanently convert an estimated 350 acres of agricultural farmland, including Prime Farmland, to nonagricultural uses. In addition, as with the proposed Specific Plan, Alternative 3 would locate residential uses adjacent to existing on-site and off-site agricultural lands, resulting in potential conflicts between agricultural and urban land uses.
- ▶ **AIR QUALITY:** As with the proposed WRTP Specific Plan, Alternative 3 would involve the temporary generation of criteria air pollutants and precursors resulting from construction activities throughout the WRTP Specific Plan Area and offsite improvement areas. Constructing Alternative 3 could also expose sensitive receptors to substantial pollutant concentrations during construction as well as during operations due to the creation of new stationary emissions sources and potential concentrated mobile sources, such as at commercial truck docking areas. Overall, short-term construction-related impacts and the potential for exposure to substantial localized pollutant concentrations would be similar compared to the proposed WRTP Specific Plan. Development under Alternative 3 would include a greater proportion relatively compact housing types focused around the central core (Village Center) of the WRTP Specific Plan Area, would remove inclusion of the highway commercial land use designation and would also disperse the retail and commercial services throughout the planned residential neighborhoods, with the intent to increase non-vehicular trips and reducing vehicle trip distances. In addition, the research and technology park land uses would be primarily developed with office uses (which could still accommodate research and technology-related uses, as well as other office-based uses). Permitted land uses for warehousing, storage, distribution, and logistics, agricultural or seed processing, packaging and manufacturing, agricultural production, brewery/distillery, and general light and medium industrial uses, all of which are likely to attract diesel-powered truck trips, would be limited to the southwestern and southern extremities of the WRTP Specific Plan Area, farthest from planned open space and residential land uses; these uses have greater potential to include substantial on-site emissions sources. Having increased housing density around the central core area, and presence of complementary commercial and retail land uses in greater proximity to the residential areas of the WRTP Specific Plan Area, could encourage a greater portion of trips on foot and via bicycle. Limiting high truck trip generating land uses and land uses that typically include substantial pollutant-generating sources to the southern extremity of the WRTP Specific Plan Area would minimize the potential for the presence of substantial emissions sources in proximity to sensitive receptors. Overall, the shift in development within the WRTP Specific Plan Area would reduce air pollutant emissions from land use development under Alternative 3 compared to that of the proposed WRTP Specific Plan.
- ▶ **BIOLOGICAL RESOURCES:** Alternative 3 would include the same amount of development as the proposed WRTP Specific Plan. Similar to the proposed WRTP Specific Plan, Alternative 3 could potentially result in the

loss of suitable nesting and foraging habitat for Swainson's hawk, white-tailed kite, burrowing owl, and other raptors; loss and disturbance of potential nesting and foraging habitat for common migratory birds; removal of elderberry shrub(s) that serve as potential habitat for valley elderberry longhorn beetle and larvae; loss of existing structures, orchard trees, and other trees that may support breeding pallid bats or western red bats; loss and degradation of State or federally protected wetlands. As with implementation of the proposed WRTP Specific Plan, Mitigation Measures 3.4-1a, 3.4-1b, 3.4-1c, and 3.4-2a would reduce significant impacts on raptors and other birds to a less-than-significant level because these measures would ensure that these species are not disturbed during nesting and would also ensure that Swainson's hawk foraging habitat would be preserved at the appropriate ratio of habitat value lost, consistent with the conservation strategy of the Yolo Habitat Conservation Plan/Natural Community Conservation Plan. Implementing Mitigation Measure 3.4-3 would reduce potentially significant impacts on valley elderberry longhorn beetle to a less-than-significant level because all elderberry shrubs would be mapped and impacts would be avoided and, if impacts cannot be avoided, compensatory mitigation will be required. Implementation of Mitigation Measure 3.4-4 would reduce potentially significant impacts on bat roosts and special status bat species to a less-than-significant level because it would ensure that project construction would not result in bat mortality or abandonment and loss of young. Finally, implementation of Mitigation Measure 3.3-5 would reduce potentially significant impacts on potential jurisdictional water features to a less-than-significant level because implementation of the BMPs, and permit conditions, and mitigation requirements will avoid, minimize, and mitigate for impacts on jurisdictional waters. Impacts related to the loss and disturbance of foraging and nesting habitat for special-status wildlife, and to the loss and degradation of State or federally protected wetlands, would be similar in type and extent as under the proposed WRTP Specific Plan since the area envisioned for development would be the same.

- ▶ **CLIMATE CHANGE, GREENHOUSE GAS EMISSIONS, AND ENERGY:** As with the proposed WRTP Specific Plan, Alternative 3 would involve the generation of greenhouse gas emissions and energy consumption from temporary construction activities throughout the Specific Plan Area and off-site improvement areas. Alternative 3 would have similar overall amount of development as the proposed Specific Plan. As such, the construction-related impacts associated with greenhouse gas emissions and energy use would be similar to those under the proposed WRTP Specific Plan. As it relates to long-term operational emissions and energy consumption, Alternative 3 would have a greater proportion of relatively compact housing types focused around the central core (Village Center) of the WRTP Specific Plan Area, would remove inclusion of the highway commercial land use designation, and would also disperse the retail and commercial services throughout the planned residential neighborhoods so that almost all future residents would be within walking distance (approximately ¼ mile) of these destinations; the land use mix and layout for this Alternative would reduce dependence on passenger vehicles, increase non-vehicular trips, and reduce vehicle trip distances, thereby reducing greenhouse gas emissions and fuel consumption from mobile sources compared to the proposed WRTP Specific Plan. Overall, the shift in development within the WRTP Specific Plan Area would reduce greenhouse emissions and fuel use from land use development under Alternative 3 compared to that of the proposed WRTP Specific Plan.
- ▶ **CULTURAL AND TRIBAL CULTURAL RESOURCES:** Alternative 3 would entail the same amount of ground disturbance as the proposed WRTP Specific Plan and would be subject to the same regulations protecting cultural resources. Therefore, the potential for adverse impacts to cultural and tribal cultural resources would be similar.

- ▶ **GEOLOGY, SOILS, MINERALS, AND PALEONTOLOGICAL RESOURCES:** Alternative 3 would result in a similar amount of development as the proposed WRTP Specific Plan. Although the layout and specific land uses would be different under Alternative 3 compared to the proposed WRTP Specific Plan, the area of ground disturbing activities would be similar. The same mitigation measures identified for the proposed WRTP Specific Plan would also be available to Alternative 3, such as incorporating recommendations from sitespecific geotechnical reports, grading and erosion control plans, and preservation of paleontological resources if encountered during construction.
- ▶ **HAZARDS AND HAZARDOUS MATERIALS:** Alternative 3 would result in a similar amount of development as the proposed WRTP Specific Plan and in the same location as the proposed WRTP Specific Plan. Although the layout and specific land uses would be different under Alternative 3 compared to the proposed WRTP Specific Plan, the associated potential hazards and use of hazardous materials would be the same. New land uses would require the routine use, transport, and disposal of hazardous material and waste and may increase exposure to risk of hazards. Construction activities may also generate hazardous materials and waste, such as fuels and oils from construction equipment and vehicles. Workers and members of the public could be exposed to hazards during construction activities from accidental releases of hazardous materials. However, like the proposed WRTP Specific Plan, Alternative 3 would be subject to the federal, State, and local requirements associated with the use, transport and disposal of hazardous materials and waste. In addition, the same mitigation measures identified for the proposed WRTP Specific Plan would also be available to Alternative 3, such as identifying potentially hazardous materials; preparing and implementing a site management plan that specifies remediation activities and procedures to appropriately identify, stockpile, handle, reuse, and/or remove and dispose of hazardous materials. Therefore, the potential for impacts related to hazards and hazardous materials would be similar under Alternative 3 as to the proposed WRTP Specific Plan.
- ▶ **HYDROLOGY, FLOODING, AND WATER QUALITY:** Alternative 3 would result in similar development as the proposed WRTP Specific Plan. Construction and grading activities associated with implementation of Alternative 3 have the potential to cause temporary and short-term increased erosion and sedimentation, similar to the proposed Specific Plan. As with the proposed Specific Plan, before new urban development can proceed, a grading and drainage plan must be submitted to the City Department of Public Works that must incorporate stormwater pollution control as well as storm drainage design features to control increased runoff from new development, as well as comply with other City and State requirements pertaining to urban runoff and water quality. The same State and local regulations and best management practices would be required of development under Alternative 3 as the proposed Specific Plan. In addition, mitigation strategies identified for the proposed Specific Plan could also apply to this alternative, such as a storm drainage analysis and identification and implementation of additional storm drainage infrastructure to support full buildout of the WRTP Specific Plan Area including appropriately sized pipelines and detention basins, along with the appropriate low impact development (LID) features and water quality best management practices, that are specifically engineered to ensure that WRTP Specific Plan Area and off-site improvement area flows are conveyed such that flooding does not occur and to provide appropriate water quality treatment. Thus, Alternative 3 would result in similar effects related to hydrology, flooding, and water quality compared to the proposed WRTP Specific Plan.
- ▶ **LAND USE PLANNING, POPULATION, AND HOUSING:** Alternative 3 would result in new development throughout the same are as that under the proposed WRTP Specific Plan. The land use layout would be shifted under this Alternative compared to the proposed WRTP Specific Plan, but would be generally consistent with the General Plan vision for this Specific Plan Area. Similar to the proposed WRTP Specific Plan, this

development would not displace substantial numbers of existing people or housing, induce substantial unplanned population growth, or divide an established community. In addition, as with the proposed WRTP Specific Plan, Alternative 3 would require the annexation of the Specific Plan Area into the City and amendment of the City's Zoning Ordinance. Therefore, Alternative 3 would be consistent with the City's 2035 General Plan, and impacts related to land use, population, and housing under Alternative 3 would be similar to the proposed Specific Plan.

- ▶ **NOISE AND VIBRATION:** Alternative 3 would adjust the layout, mix and density of the anticipated land uses within the Specific Plan Area in a manner than would encourage a greater portion of trips on foot and via bicycle, rather than by passenger vehicle, as well as limit high truck trip generating land uses to the southern extremity of the Specific Plan Area. This is anticipated to reduce per-unit travel demand (VMT) compared to the proposed WRTP Specific Plan and increase separation between residential receptors and truck-traffic, thereby reducing associated transportation noise. Transportation-related noise impacts associated with the proposed WRTP Specific Plan are primarily a concern as it relates to existing higher-volume roadways, such as along County Road 25A and State Route 113. As with the proposed WRTP Specific Plan, future development of new noise-sensitive land uses could occur within areas that are currently exposed to noise from transportation sources (e.g., west of SR 113). Therefore, while this alternative would reduce the generation of and exposure to some transportation noise, noise sensitive uses would still be affected by transportation noise. In addition, as with the proposed WRTP Specific Plan, Alternative 3 would involve the temporary and short-term noise and vibration resulting from demolition and construction activities. Overall, impacts would be similar compared to the proposed WRTP Specific Plan.
- ▶ **PUBLIC SERVICES AND RECREATION:** Since Alternative 3 would accommodate a similar amount of development and in the same Specific Plan Area and the proposed WRTP Specific Plan, but with an alternative site design. As such, the project's law enforcement, fire protection, public school services, and parks and recreational services needs would be similar to the proposed WRTP Specific Plan. In addition, with the changes to land use under this alternative, the fee contribution of the Specific Plan toward the expansion of the Woodland Sports Park may be different. In addition, since both Alternative 3 and the proposed WRTP Specific Plan would be required to comply with applicable requirements and pay applicable development impact fees, the impact on public services and recreation would be similar under Alternative 3 as the proposed WRTP Specific Plan.
- ▶ **TRANSPORTATION AND CIRCULATION:** As with the proposed WRTP Specific Plan, Alternative 3 would generate travel demand during construction and long-term operations. Alternative 3 would involve the temporary and short-term generation of trips during demolition and construction activities – since this alternative is very similar in overall scale to the proposed WRTP Specific Plan, construction-related trips are anticipated to be similar, as well. Mitigation Measure 3.13-2 would also be available to this Alternative to reduce potential impacts to the roadway network from construction-related vehicles to a less-than-significant level. Compared to the proposed WRTP Specific Plan, Alternative 3 would increase housing density around the Village Center. Alternative 3 would also include retail, commercial, and park land uses dispersed within the planned residential neighborhoods so that almost all future residents would be within walking distance (approximately ¼ mile) of these destinations. Finally, the employment generating land use within the Research and Technology Park would be somewhat less focused specifically on research and technology uses, and would accommodate a broader set of office-based uses to focus the additional employment opportunities on the job needs of local residents of Woodland, who may otherwise be commuting longer distances to similar jobs. Having density around the central core area slightly higher than with the proposed WRTP Specific Plan could

encourage a greater portion of trips on foot and via bicycle from residential areas. The presence of complementary commercial and retail land uses in proximity to the residential areas of the WRTP Specific Plan Area would make walking, biking, and transit more feasible, as well as reduce the length of vehicular trips to these destination uses. As with the proposed WRTP Specific Plan, Alternative 3 would enhance opportunities for greater use of transit and more walking and bicycling in the future. Therefore, similar to the proposed WRTP Specific Plan, Alternative 3 would not conflict with adopted policies, plans, or programs for bicycle, transit, or pedestrian facilities, nor would it adversely affect performance or safety of such facilities. The land layout would be shifted under this Alternative compared to the proposed WRTP Specific Plan, but would be generally consistent with the General Plan vision for this Specific Plan Area. Alternative 3 incorporates a land use mix and layout that could increase opportunities for walking and biking between destinations within the WRTP Specific Plan Area, thereby reducing operational VMT compared to the proposed WRTP Specific Plan. In addition, implementation of the Specific Plan under Alternative 3 would also be subject to the same or similar standards as the proposed WRTP Specific Plan, including a Comprehensive Transportation Demand Management/Vehicle Miles Traveled Reduction Program (TDM/VMT Program), as detailed in Section 6.2.3, “Subsequent Implementation Documents/Analysis,” of the WRTP Specific Plan. Overall, Alternative 3 incorporates a land use mix and layout that could further reduce operational VMT compared to the proposed WRTP Specific Plan and impacts would be reduced compared to the proposed WRTP Specific Plan.

- ▶ **UTILITIES:** As with the proposed WRTP Specific Plan, Alternative 3 would still require the construction of water supply conveyance facilities and wastewater collection and conveyance facilities to serve the WRTP Specific Plan Area. In addition, Mitigation Measures 3.14-1 and 3.14-2, applicable to the proposed WRTP Specific Plan for long-term planning purposes, would also be applicable to Alternative 3, ensuring water supply conveyance and wastewater infrastructure improvements are designed and sized to provide adequate service to the WRTP Specific Plan Area. In addition, physical impacts associated with construction and operations of utilities, such as new collection and conveyance facilities, are evaluated throughout the EIR and accounted for in the evaluation of alternatives for each resource area in this chapter of the EIR. As such, there is no impact beyond those comprehensively considered throughout the other sections of the EIR. Impacts related to utilities would be similar under Alternative 3 compared to the proposed WRTP Specific Plan.

Ability of Alternative 3 to Meet Project Objectives

This alternative would meet the majority of the basic project objectives, providing for the new technology-focused employment center, supported by a mixed-use town center and with nearby housing. However, dispersion of the retail and commercial services in the proposed residential neighborhoods would reduce the service opportunities in the central village hub to serve the day-to-day needs of businesses, their clients, and their employees. Similarly, distributing retail and commercial services throughout the residential areas rather than within and around the Village Center would diminish the role of the proposed Village Center as the central gathering for surrounding businesses and related employees. Similarly, the lack of highway commercial would limit the range of uses to support day-to-day needs of businesses, their clients, and their employees in favor of commercial uses that are more directed to serving the needs of Woodland residents. The increased housing density would shift the range of housing options for the Research and Technology Park employees to live and work close by and “move up” within the same neighborhood as families grow; while high- and low-density housing would be similar to the Specific Plan, medium-density residential development would be more limited under this Alternative. Finally, shifting the research and technology park to more office-based employment and limiting some of the permitted uses to the southern portion of the Specific Plan Area could potentially segregate related uses if, for example, future employers within

the Specific Plan require both office operations, as well as storage, distribution, or logistics, that would need to be located in different parts of the Specific Plan Area. This could conflict with the project objective to facilitate “[f]lexibility in design and implementation...allowing businesses to respond to market demand through phasing of construction and the ability to offer a variety of building types and sizes.”

Findings for Project Alternative 3

This alternative would meet the majority of the basic project objectives, providing for the new technology-focused employment center, supported by a mixed-use town center and with nearby housing. However, dispersion of the retail and commercial services in the proposed residential neighborhoods would reduce the service opportunities in the central village hub to serve the day-to-day needs of businesses, their clients, and their employees. The feasibility of dispersed retail and commercial uses throughout the plan area would be strained given the relatively limited number of residential rooftops in the plan area necessary to support small pockets of neighborhood retail. It is anticipated that the success of the mixed-use town center will be dependent on both residential and business users and therefore should remain centrally clustered between the two primary uses in the plan area. Therefore, the distribution of retail and commercial uses throughout the Specific Plan Area would make Alternative 3 less feasible compared to the proposed Specific Plan.

Distributing retail and commercial services throughout the residential areas rather than within and around the Village Center would diminish the role of the proposed Village Center as the central gathering for surrounding businesses and related employees. This could conflict with the project objective related to providing a Gathering Place.

Further, the lack of highway commercial would limit the range of uses to support day-to-day needs of businesses, their clients, and their employees in favor of commercial uses that are more directed to serving the needs of Woodland residents proximate to the plan area. This feature of Alternative 3 would mean that this alternative would have a reduced capacity for fulfilling the project objective that calls for “[c]omplementary uses within immediate proximity to the business park, including hotel, commercial, employee-serving retail and recreational opportunities will support day-to-day needs of businesses, their clients, and their employees.”

The increased housing density would shift the range of housing options for the Research and Technology Park employees to live and work close by and “move up” within the same neighborhood as families grow; while high- and low-density housing would be similar to the Specific Plan under Alternative 3, medium-density residential development, a desirable and relatively more affordable product type currently in short supply in Woodland, would be more limited under this Alternative.

Finally, shifting the research and technology park to more office-based employment and limiting some of the permitted uses to the southern portion of the Specific Plan Area could potentially segregate related uses if, for example, future employers within the Specific Plan require both office operations, as well as storage, distribution, or logistics, that would need to be located in different parts of the Specific Plan Area. This could conflict with the project objective to facilitate “[f]lexibility in design and implementation...allowing businesses to respond to market demand through phasing of construction and the ability to offer a variety of building types and sizes,” and would significantly inhibit the plan area’s ability to attract advanced manufacturing, biotech, life science and other research and technology-based companies which require integrated and proximate business activities and spaces often including storage and light industrial operations.

Alternative 4: Utilize Open Space as an Environmental Buffer

This alternative would provide an alternative site design. Residential uses would be located at least 500 feet from SR 113 to provide additional buffer distance between sensitive receptors and mobile sources of emissions along SR 113. Open space or vegetated buffers would be implemented between potential sources of substantial air pollutant emissions and sensitive receptors, in accordance with recommendations of the California Air Resources Board (ARB) Air Quality and Land Use Handbook: A Community Health Perspective (2005). Urban development of land uses, other than open space, along the Urban Limit Line would be set back at least 300 feet (500 feet if residential) to provide for an agricultural buffer in compliance with General Plan Policy 7.C.5. Passive open space would be designated at biologically sensitive areas to minimize impacts to biological features and provide additional buffer to sensitive habitat types from surrounding urban development, including a 165-foot setback from the elderberry shrub (valley elderberry longhorn beetle habitat) located along the western boundary the Specific Plan Area and a 300-foot buffer from the northern boundary of the Specific Plan Area to avoid burrowing owl complexes just outside this boundary. The use of shade trees, or similar vegetation that would support local wildlife while also providing air quality and noise mitigating benefits, would be maximized throughout the circulation network and between different land uses; existing native oak trees, such as the row of valley oak trees along the southwestern half of the Specific Plan Area, would also be maintained. Housing densities would be increased slightly, and retail and commercial space may be reduced, so that the overall number of dwelling units is maintained, while the amount of open space is increased.

The intent of this alternative is to maintain the desired buffer distance between the built environment and surrounding agricultural lands and minimize adverse impacts to biological resources, while also decreasing exposure to adverse air pollutant emissions and noise conditions for future users of the Specific Plan Area.

Alternative 4 Impacts

- **AESTHETICS AND VISUAL RESOURCES:** Alternative 4 would include similar development as the proposed WRTP Specific Plan, but arranged differently within the WRTP Specific Plan Area and with increased open space along the northern, western, and southern boundaries of the WRTP Specific Plan Area, and maintaining the planned greenbelt along Harry Lorenzo Avenue. This will increase the distance between existing viewpoints and new sources of light and glare from new development within the WRTP Specific Plan Area. However, the WRTP Specific Plan Area would still be converted from cultivated agricultural land to urban development, simply with additional open space around and throughout the WRTP Specific Plan Area. Development under Alternative 4 would also be subject to the same standards as the proposed Specific Plan and Alternative 3, including the City's Engineering Standards: Design Standards, Standard Details and Construction Specifications (City of Woodland 2016a) and the Design Standards and Design Guidelines contained in Chapter 3 of the proposed WRTP Specific Plan. As such, the type and extent of aesthetics impacts would be similar to those of the proposed WRTP Specific Plan. Development under Alternative 4 would still result in conversion of agricultural land to urban environment, which, like the proposed WRTP Specific Plan, would substantially alter the visual character of the WRTP Specific Plan Area from both public and private viewing locations. The additional use of open space around and throughout the WRTP Specific Plan Area under Alternative 4 would reduce the potential for spillover of new sources of lighting and glare on adjacent properties. However, like the proposed WRTP Specific Plan, Alternative 4 would alter existing views of, and from the WRTP Specific Plan Area, and would substantially alter the visual character of the WRTP Specific Plan Area from both public and private

viewing locations. In addition, just as with the proposed WRTP Specific Plan, Alternative 4 would bring sources of nighttime lighting and could construct facilities with reflective surfaces that could cause glare. This would increase ambient nighttime lighting and daytime glare in the vicinity of the WRTP Specific Plan Area, similar to the proposed WRTP Specific Plan. However, with the preservation of additional open space and existing oak trees, the impact would be reduced compared to the proposed WRTP Specific Plan.

- **AGRICULTURE AND FORESTRY RESOURCES:** Alternative 4 would include similar development as the proposed WRTP Specific Plan, but arranged differently within the WRTP Specific Plan Area. Implementation of Alternative 4 would still permanently convert an estimated 350 acres of agricultural farmland, including Prime Farmland, to nonagricultural uses. Unlike the proposed Specific Plan, Alternative 4 would preclude non-residential development within 300 feet, and residential development within 500 feet, of the Urban Limit Line. This buffer distance would exceed the requirements set under General Plan Policy 7.C.5, and would support increased separation between agricultural pesticide application and future users of the WRTP Specific Plan Area, as recommended by the Yolo County Agricultural Commissioner depending on the form of pesticide application at adjacent agricultural lands. This would reduce the potential for conflict with existing offsite agricultural operations. However, conflicts could still occur between agricultural and urban land uses, particularly in areas where the development edge is adjacent to ongoing agricultural operations on undeveloped portions of the WRTP Specific Plan Area.
- **AIR QUALITY:** Alternative 4 would include the same type of development as the proposed WRTP Specific Plan, but with a slightly smaller development footprint, due to increased open space. This increase in open space would reduce construction-related emissions under Alternative 4 compared to the proposed WRTP Specific Plan. However, because potential future on-site receptors are unknown at this time, it is reasonable to assume that construction activities associated with buildout under Alternative 4 could still expose sensitive receptors to substantial pollutant concentrations during construction. As with implementation of the proposed WRTP Specific Plan, construction-related emissions would be substantially reduced with implementation of Mitigation Measures 3.3-2a, 3.3-2b, and 3.3-2c. As it relates to long-term operational emissions, the use of increased open space as an environmental buffer around future on-site sensitive receptors, such as along the western perimeter of the WRTP Specific Plan Area adjacent to State Route 113, would reduce potential health risks associated with localized air pollutant concentrations and nearby sensitive receptors. The increased use of open space and vegetation can help to disperse localized air pollutants and reduce exposure of sensitive receptors. As with the proposed WRTP Specific Plan, development under Alternative 4 would include commercial and light-industrial land uses, which are more likely to generate substantial toxic air contaminant (TACs) emissions from stationary and manufacturing processes. Land use and development under Alternative 4 would be subject to conformance with the permitted uses, the site development regulations, and development standards and design guidelines as outlined in Chapters 2 and 3 of the proposed WRTP Specific Plan. As with the proposed WRTP Specific Plan, adherence to the WRTP Specific Plan Design Standards and Design Guidelines would reduce the potential for exposure of sensitive receptors to substantial pollutant concentrations. Unlike the proposed WRTP Specific Plan, Alternative 4 would specifically implement buffer distances between sensitive land uses and sources of TACs, as provided by the CARB Air Quality and Land Use Handbook: A Community Health Perspective (2005). In addition, the increased use of open space between substantial pollutant sources and sensitive receptors and adherence to CARB-recommended distances between TAC sources and sensitive receptors would further reduce potential impacts under Alternative 4 as compared to the proposed WRTP Specific Plan. However, due to uncertainty associated with specific development within the WRTP

Specific Plan Area, it is still possible that development of commercial or light-industrial land uses under Alternative 4 could generate substantial TAC emissions at a level that could impact nearby sensitive receptors. The same mitigation measures available to the WRTP Specific Plan would also be available to Alternative 4, including Mitigation Measure 3.3-2d to reduce operational emissions, and Mitigation Measures 3.3-3b and 3.3-3c to further reduce the risk of exposure to substantial pollutant concentrations. Overall, Alternative 4 would be anticipated to reduce emissions generated during construction and operational phases, and reduce proximity between sensitive receptors and substantial emissions sources compared to the proposed WRTP Specific Plan.

- **BIOLOGICAL RESOURCES:** Alternative 4 include a similar mix of land uses as the proposed WRTP Specific Plan, but with an alternative site design that would maintain certain biologically sensitive vegetated areas and increase the use of open space throughout the WRTP Specific Plan Area. Passive open space would be designated at biologically sensitive areas to minimize impacts to biological features and provide additional buffer to sensitive habitat types from surrounding urban development, including a 165-foot setback from the identified elderberry shrub (valley elderberry longhorn beetle habitat) located along the western boundary the WRTP Specific Plan Area and a 300-foot buffer from the northern boundary of the Specific Plan Area to avoid burrowing owl complexes just outside this boundary. The use of shade trees, or similar vegetation would be maximized throughout the circulation network and between different land uses. The row of existing native valley oak trees along the southwestern half of the WRTP Specific Plan Area would be maintained. The increased open space, maintenance of existing trees, and avoidance of other existing known biologically sensitive habitat as described above would reduce impacts to biologically sensitive wildlife and habitat as compared to the proposed WRTP Specific Plan. However, development within the WRTP Specific Plan Area may not be able to avoid all potentially sensitive habitat, as 306 of the 350-acre WRTP Specific Plan Area is cultivated land that may provide suitable foraging habitat for Swainson's hawk, white-tailed kite, and burrowing owl. In addition, construction activities throughout the WRTP Specific Plan Area could occur where there are unknown elderberry shrubs that serve as potential habitat for valley elderberry longhorn beetle and larvae, or in proximity to existing trees that may serve as nesting habitat and the nearby activity could disturb potential nesting activity. Conversion of the cultivated land within the WRTP Specific Plan Area could still potentially result in the loss or disturbance of suitable foraging and nesting habitat for Swainson's hawk, white-tailed kite, burrowing owl, and other raptors; loss and disturbance of potential nesting and foraging habitat for common migratory birds; removal of elderberry shrub; loss or disturbance of existing structures, orchard trees and other trees that may support breeding pallid bats or western red bats; loss and degradation of State or federally protected wetlands. As with implementation of the proposed WRTP Specific Plan and Alternative 3, Mitigation Measures 3.4-1a, 3.4-1b, 3.4- 1c, and 3.4-2a would reduce significant impacts on raptors and other birds to a less-than-significant level because these measures would ensure that these species are not disturbed during nesting and would also ensure that Swainson's hawk foraging habitat would be preserved at the appropriate ratio of habitat value lost, consistent with the conservation strategy of the Yolo Habitat Conservation Plan/Natural Community Conservation Plan. Implementing Mitigation Measure 3.4-3 would reduce potentially significant impacts on valley elderberry longhorn beetle to a less-than-significant level because all elderberry shrubs would be mapped and impacts would be avoided and if impacts cannot be avoided, compensatory mitigation will be required. Implementation of Mitigation Measure 3.4-4 would reduce potentially significant impacts on bat roosts and special status bat species to a less-thansignificant level because it would ensure that project construction would not result in bat mortality or abandonment and loss

of young. Finally, implementation of Mitigation Measure 3.3-5 would reduce potentially significant impacts on potential jurisdictional water features to a less-than-significant level because implementation of the BMPs, and permit conditions, and mitigation requirements will avoid, minimize, and mitigate for impacts on jurisdictional waters. Impacts related to the loss and disturbance of forging and nesting habitat for special-status wildlife, and to the loss and degradation of State or federally protected wetlands, would be similar in type as under the proposed WRTP Specific Plan, but would be reduced since the area envisioned for development would be reduced and specifically designed to avoid known biologically sensitive wildlife and habitat to the extent feasible.

- **CLIMATE CHANGE, GREENHOUSE GAS EMISSIONS, AND ENERGY:** Alternative 4 would include the same type of development as the proposed WRTP Specific Plan, but with a slightly smaller development footprint than the proposed WRTP Specific Plan due to increased open space. This increase in open space would reduce construction-related greenhouse gas emissions and energy use under Alternative 4. As it relates to long-term operational emissions and energy consumption, similar to Alternative 3, the additional open space under Alternative 4 would generate minimal greenhouse gas emissions and consume minimal energy compared to equivalent developed land uses under the proposed WRTP Specific Plan, and higher-density development typically results in increased energy efficiencies. Alternative 3 would thereby reduce the associated direct and indirect operational air pollutant emissions within the Specific Plan Area.
- **CULTURAL AND TRIBAL CULTURAL RESOURCES:** Alternative 4 would entail similar development and related ground disturbance as the proposed WRTP Specific Plan, but with preservation of biologically sensitive habitat and increased open space. In addition, ground disturbing activities under Alternative 4 would be subject to the same regulations protecting cultural resources as under the proposed WRTP Specific Plan. However, the preservation of existing sensitive biological habitat and increased open space acreage under Alternative 4 would result in less earthmoving activities and therefore reduced potential for accidental disturbance of unknown cultural and tribal cultural resources compared to the proposed WRTP Specific Plan.
- **GEOLOGY, SOILS, MINERALS, AND PALEONTOLOGICAL RESOURCES:** Alternative 4 would entail similar development and related ground disturbance as the proposed WRTP Specific Plan, but with preservation of biologically sensitive habitat and increased open space. In addition, the same mitigation measures identified for the proposed WRTP Specific Plan would also be available to Alternative 4, such as incorporating recommendations from site-specific geotechnical reports, grading and erosion control plans, and preservation of paleontological resources if encountered during construction. However, the preservation of existing sensitive biological habitat and increased open space acreage under Alternative 4 would result in less earthmoving activities and therefore reduced potential for accidental disturbance of unknown paleontological resources compared to the WRTP Specific Plan.
- **HAZARDS AND HAZARDOUS MATERIALS:** Similar to Alternative 3, Alternative 4 would involve the similar mix of uses and same location as the proposed WRTP Specific Plan, but with increased open space. Therefore, as with Alternative 3, the potential for impacts related to hazards and hazardous materials would be similar to the proposed WRTP Specific Plan.
- **HYDROLOGY, FLOODING, AND WATER QUALITY:** Alternative 4 would provide for a similar mix of land use development as the proposed WRTP Specific Plan, but with increased open space. Construction

and grading activities associated with implementation of Alternative 4 have the potential to cause temporary and short-term increased erosion and sedimentation, similar to the proposed WRTP Specific Plan. As with the proposed WRTP Specific Plan, before new urban development can proceed, a grading and drainage plan must be submitted to the City Department of Public Works that must incorporate stormwater pollution control, as well as storm drainage design features to control increased runoff from new development, as well as comply with other City and State requirements pertaining to urban runoff and water quality. The same State and local regulations and best management practices would be required of development under Alternative 4 as the proposed WRTP Specific Plan. Mitigation strategies identified for the proposed WRTP Specific Plan could also apply to this alternative, such as a storm drainage analysis and identification and implementation of additional storm drainage infrastructure to support full buildout of the WRTP Specific Plan Area, including appropriately sized pipelines and detention basins, along with the appropriate LID features and water quality best management practices, specifically engineered to ensure that WRTP Specific Plan Area and off-site improvement area flows are conveyed such that flooding does not occur and to provide appropriate water quality treatment. Alternative 4 would include a greater amount of open space than the proposed WRTP Specific Plan, and therefore reduce the amount of impervious surfaces and decrease the peak discharge flow and rate of stormwater runoff generated within the WRTP Specific Plan Area. Thus, Alternative 4 would also reduce potential effects related to groundwater recharge and increased surface runoff compared to the proposed WRTP Specific Plan.

- **LAND USE PLANNING, POPULATION, AND HOUSING:** Alternative 4 would result in new development throughout the WRTP Specific Plan Area with a similar land use mix as under the proposed Specific Plan, but with increase acreage dedicated to open space. Similar to the proposed WRTP Specific Plan, this development would not displace substantial numbers of existing people or housing, induce substantial unplanned population growth, or divide an established community. In addition, as with the WRTP Specific Plan, Alternative 4 would require the annexation of the WRTP Specific Plan Area into the City and amendment of the City's Zoning Ordinance. Alternative 4 would provide for the new growth within this Specific Plan Area as envisioned under the 2035 General Plan. Therefore, Alternative 4 would be consistent with the City's 2035 General Plan, and impacts related to land use, population, and housing under Alternative 4 would be similar to the proposed WRTP Specific Plan.
- **NOISE AND VIBRATION:** Alternative 4 would decrease the amount of land provided for low- and medium-density residential development compared to the proposed WRTP Specific Plan and increase the acreage dedicated to open space. As with the proposed WRTP Specific Plan, Alternative 4 would involve the temporary and short-term noise and vibration resulting from demolition and construction activities. In addition, future operational uses within the WRTP Specific Plan Area could still generate noise and vibration in proximity to existing or future noise sensitive receptors, similar to conditions under the proposed WRTP Specific Plan. However, Alternative 4 would also include a buffer between future residential development within the WRTP Specific Plan Area and existing sources of noise, specifically State Route 113. Future development of new noise-sensitive land uses could occur under the proposed WRTP Specific Plan within areas that are currently exposed to noise from transportation sources (e.g., west of SR 113). The buffer provided under Alternative 4 would be 500 feet between SR 113 and residential development; as detailed in noise modeling conducted for the City's 2035 General Plan, which is still applicable and accounted for development of the WRTP Specific Plan Area, the distance to the 70-decibel traffic noise contour from SR 113 south of East Gibson Road with implementation of the General Plan was determined to be between 257 and 281 feet, depending on the alternative. Therefore, a buffer of 500 feet

would reduce traffic noise levels to an acceptable level less than 70 decibels for future sensitive receptors. Therefore, impacts associated with transportation noise would be reduced compared to the proposed WRTP Specific Plan.

- **PUBLIC SERVICES AND RECREATION:** Since Alternative 4 would accommodate a similar amount of development and in the same Specific Plan Area and the proposed WRTP Specific Plan, but with an alternative site design. As such, the project's law enforcement, fire protection, public school services, and parks and recreational services needs would be similar to the proposed WRTP Specific Plan. Since the mix of uses would be similar to the WRTP Specific Plan, it is reasonable to assume that the fee contribution toward the expansion of the Woodland Sports Park would apply under this alternative, as well, in addition to the planned parks and open space, thereby exceeding the parkland goal. In addition, since both Alternative 4 and the proposed WRTP Specific Plan would be required to comply with applicable requirements and pay applicable development impact fees, the impact on public services and recreation would be similar under Alternative 4 as the proposed WRTP Specific Plan.
- **TRANSPORTATION AND CIRCULATION:** As with the proposed WRTP Specific Plan, Alternative 4 would generate travel demand during construction and long-term operations. As with the proposed WRTP Specific Plan, Alternative 4 would involve the temporary and short-term generation of trips during demolition and construction activities – since this alternative is very similar in overall scale to the proposed WRTP Specific Plan, construction-related trips are anticipated to be similar, as well. Alternative 4 would include the same type of development as the proposed WRTP Specific Plan, but with a slightly smaller development footprint than the proposed WRTP Specific Plan due to increased acreage dedicated to open space. The land layout would be shifted under this Alternative compared to the proposed WRTP Specific Plan, but would be generally consistent with the General Plan vision for this Specific Plan Area and accommodate the same amount of residential and non-residential development. Similar to the proposed WRTP Specific Plan, Alternative 4 would not conflict with adopted policies, plans, or programs for bicycle, transit, or pedestrian facilities, nor would it adversely affect performance or safety of such facilities. In addition, implementation of the Specific Plan under Alternative 4 would also be subject to the same or similar standards as the proposed WRTP Specific Plan, including a Comprehensive Transportation Demand Management/Vehicle Miles Traveled Reduction Program (TDM/VMT Program), as detailed in Section 6.2.3, “Subsequent Implementation Documents/Analysis,” of the WRTP Specific Plan. Overall, Alternative 4 is anticipated to generate a similar level of VMT compared to the proposed WRTP Specific Plan, and impacts would be similar to the proposed WRTP Specific Plan.
- **UTILITIES:** Alternative 4 would increase the acreage dedicated to open space within the WRTP Specific Plan Area as compared to the land use plan under the proposed WRTP Specific Plan. This could result in a minor increase in potable water demand and green waste generation for maintenance and security of additional open space. However, this would be offset by the reduced water demand and solid waste generation that would result from increased density of residential development, which would have reduced individual landscaped area per dwelling unit. As with the proposed WRTP Specific Plan, Alternative 4 would still require the construction of water supply conveyance facilities and wastewater collection and conveyance facilities to serve the WRTP Specific Plan Area. Mitigation Measures 3.14-1 and 3.14-2, applicable to the proposed WRTP Specific Plan for long-term planning purposes, would also be applicable to Alternative 4, ensuring water supply conveyance and wastewater infrastructure improvements are designed and sized to provide adequate service to the WRTP Specific Plan Area. In addition, physical

impacts associated with construction and operations of utilities, such as new collection and conveyance facilities, are evaluated throughout the EIR and accounted for in the evaluation of alternatives for each resource area in this chapter of the EIR. As such, there is no impact beyond those comprehensively considered throughout the other sections of the EIR. Impacts related to utilities would be generally similar under Alternative 4 compared to the proposed W RTP Specific Plan.

Ability of Alternative 4 to Meet Project Objectives

This alternative would meet the majority of the basic project objectives, however, as an envisioned technology hub to serve research and technology companies, the increase in passive open space would not serve the anticipated occupants as effectively as the centralized active outdoor gathering spaces envisioned as a part of the proposed Specific Plan. In addition, the increased housing density would reduce the range of housing options for the Research and Technology Park employees to live and work close by and “move up” within the same neighborhood as families grow.

Findings for Project Alternative 4

This alternative would meet the majority of the basic project objectives, however, as an envisioned technology hub to serve research and technology companies, the increase in passive open space would not serve the anticipated occupants as effectively as the centralized active outdoor gathering spaces envisioned as a part of the proposed Specific Plan. Expanding and segregating open space to the periphery of the plan area would likely result in the reduction of centralized and coalescing green space and trail systems within the project in order to feasibly accommodate the envisioned diversity, density, and number of residential housing units in the plan area. Segregation of open space works in opposition to a key plan policy of *integrating* a greenbelt/trail system that provides recreational and transportation benefits for residents and employees of the Plan Area. Similarly, the loss of centralized green space would impede the plan area policy of promoting an atmosphere of collaboration and innovation through a mix of land uses...with an engaging public realm. The open space concept under Alternative 4 would not fulfill the project objective related to providing a central Gathering Space to the same extent as under the proposed Specific Plan.

In addition, the increased housing density would reduce the range of housing options for the Research and Technology Park employees to live and work close by and “move up” within the same neighborhood as families grow. Alternative 4 would not fulfill the project objective under the heading, “New Neighborhoods / Seamless Transitions” to the same extent as would occur under the proposed Specific Plan.

Furthermore, the costs associated with developing and maintaining additional open space within the plan area without significantly increasing the number of residential units envisioned by the General Plan would considerably strain the economic feasibility of the project and would substantially increase the ongoing annual tax burden of future plan area residents. Alternative 4, then, would be infeasible. Alternative 4 would be less feasible compared to the proposed Specific Plan based on the reduction in land for lower-density residential development and the increase in higher-density development. The balance between housing types and densities in the proposed Specific Plan allows for the collection of fees adequate to provide for the required infrastructure needed to serve the planned development. The scenario envisioned under Alternative 4 would make it infeasible, at least in the near-term, to collect fees in amounts required to support the necessary infrastructure for the Specific Plan.

3. ENVIRONMENTALLY SUPERIOR ALTERNATIVE

CEQA requires that, among the alternatives, an “environmentally superior” alternative be identified and that the reasons for such selection be disclosed. The environmentally superior alternative is the alternative that would generate the fewest or least severe adverse impacts. As shown in Table 4-1 of the Draft EIR, Alternative 1 would have the greatest number of reduced impacts. Therefore, Alternative 1 would be the Environmentally Superior Alternative. This alternative provides the greatest reduction in potential environmental effects of the proposed project. Other than this No-Project Alternative, Alternative 4 would provide the most benefit relative to reducing environmental effects compared to the proposed WRTP Specific Plan.

However, as explained below, even though Alternative 4 is the environmentally superior alternative (other than the No Project Alternative) the City Council has determined that Alternative 4 is infeasible as that term is defined under CEQA.

4. FINDINGS FOR PROJECT ALTERNATIVES

The City Council may reject an alternative that it considers undesirable from a policy standpoint, provided that such a decision reflects a reasonable balancing of various “economic, social, and other factors.” Based on impacts identified in the EIR and throughout this findings document, the City Council finds that adoption and implementation of the WRTP Specific Plan as approved, is the most desirable, feasible, and appropriate project, and rejects other alternatives and other combinations and/or variations of alternatives as infeasible.

VII. STATEMENT OF OVERRIDING CONSIDERATIONS

As set forth in the preceding sections, the City of Woodland City Council's approval of the WRTP Specific Plan will result in significant adverse environmental effects that cannot be avoided even with the adoption of all feasible mitigation measures, and there are no feasible alternatives which would mitigate or substantially lessen the impacts. Despite the occurrence of these effects, however, the City Council chooses to approve the WRTP Specific Plan due to the economic, social, and other benefits that will render the significant effects acceptable.

Pursuant to Public Resources Code Section 21081(b) and Guidelines Section 15093, the City of Woodland has balanced the benefits of the Specific Plan against the unavoidable adverse impacts and has included all feasible mitigation measures in the EIR. The City has also examined alternatives to the Specific Plan and determined and adoption and implementation of the proposed Specific Plan is the most desirable, feasible, and appropriate action.

The City Council determines that the EIR identified and discussed significant effects that may occur as a result of implementation of the Specific Plan. By implementing the EIR mitigation measures, as adopted by the City Council's Resolution, these effects can be mitigated to a level of less than significant except for the unavoidable significant impacts discussed below. The City Council finds that it has made a reasonable and good faith effort to eliminate or substantially mitigate the potential impacts resulting from implementation of the Specific Plan. The City Council also finds that, except for the proposed Specific Plan, all other alternatives set forth in the EIR are infeasible because they would prohibit or reduce the realization of the Specific Plan objectives and/or specific economic, social, or other benefits that the City Council finds outweigh any environmental benefits of the alternatives.

In making this Statement of Overriding Considerations in support of the findings of fact and the Specific Plan, the City Council finds that the environmental effects of the Specific Plan have been reduced to the extent feasible by the mitigation measures, that it has considered the information contained in the Final EIR, as well as the public testimony and record in proceedings in which the WRTP Specific Plan were considered, and that the benefits, as discussed further below, outweigh the potential unavoidable adverse impacts and render those potential adverse potential environmental impacts acceptable based upon the City Council's overriding considerations.

A. BENEFITS OF THE PROPOSED PROJECT AND A STATEMENT OF OVERRIDING CONSIDERATIONS

The City of Woodland has independently reviewed the information in the EIR and the record of proceedings, made a reasonable and good faith effort to eliminate or substantially lessen the impacts resulting from the Specific Plan to the extent feasible.

In the judgment of the City Council, the Specific Plan and its general benefits outweigh its unavoidable significant effects. It is the position of the City Council that any one of these reasons is sufficient to justify approval of the Specific Plan. Thus, even if a court were to conclude that not every reason is supported by substantial evidence, the City Council would stand by its determination that each individual reason is sufficient. The substantial evidence supporting the various benefits can be found in the preceding findings, which are incorporated by reference into this section, and in the documents found in the Record of Proceedings, as defined in Section IV of this document. The City Council finds that adoption and implementation of the Specific Plan would provide economic, social, legal, and other considerable benefits.

Economic Development. The WRTP Specific Plan implements General Plan Policy 2.D.2, Food and Agriculture Industry Cluster. This policy establishes the City’s intent to “[d]evelop Woodland into a premier food and agriculture industry cluster by providing appropriate infrastructure, adequate land with compatible land uses, and by supporting research and innovation.” The Specific Plan would also implement General Plan Policy 2.D.3 Technology Sector, which calls for the City to “[g]row the technology sector in Woodland by leveraging the research strength at UC Davis” and to “[e]stablish business parks in the Southern Gateway at CR 25 and SR 113 and along CR 102.” The City is adopting the Specific Plan to provide opportunities for new companies to locate within the city, and provide a high quality technology park campus for existing companies in Woodland to expand. Companies locating in the Specific Plan Area will in turn offer high paying career opportunities for Woodland residents – at full buildout, the City estimates that the Specific Plan could accommodate up to 4,000 new high paying biotech jobs in the community. The Specific Plan allows the City to advance the Project Objectives, including innovation – a state-of-the-art innovation center campus for technology, research and development, and office uses; flexibility – to allow businesses to respond to market demand through phasing of construction and the ability to offer a variety of building types and sizes; technology transfer and talent attraction – provide a context for collaboration with University of California, Davis (UC Davis) and Woodland Community College, along with associated business start-ups; and business partnerships – take advantage of synergies related to complementary existing and thriving seed, food, and agricultural-based industries currently located and doing business in and around Woodland (Draft EIR, pages 2-2 through 2-6). As explained in Chapter 4 of the City’s General Plan, Economic Development, there is a thriving and diverse agricultural economy in Woodland and Yolo County and also a concentration of agriculture and bio- and nanotechnology research activities (City of Woodland General Plan, Chapter 4, pages 4-5 through 4-9).

The Specific Plan would also implement General Plan Policy 2.K.2, Business Parks, which establishes that the City will “[p]romote the development of master-planned business parks that bolster Woodland’s established agriculture and emerging technology industries and promote the city’s prominence as a major center of economic activity in Yolo County.” Similar to the discussion above, the Specific Plan will provide an innovation campus in close proximity to UC Davis specialized in the development, transfer, and commercialization of technology and research.

The Specific Plan would help to realize General Plan Goal 4.E to “Promote Job Growth and Diversification in Woodland” and “[p]romote expansion, attraction, and formation of jobs in Woodland across diverse economic sectors,” including growth in the “knowledge economy, which is based on production and services of knowledge-intensive activities, such as technological or scientific advances and professional services” (General Plan, Chapter 4, page 4-22). By providing a variety of property and building sizes with complementary uses in a favorable location, the City also intends to implement General Plan Policy 4.E.1 Job Expansion through Business Expansion, which establishes that the City will “[e]ncourage the expansion and attraction of diverse businesses and industries that create and increase the quality and amount of stable, year-round jobs available locally.” General Plan Policy 4.D.1 Business Expansion and Attraction Program is also related to the Specific Plan, committing the City to “[p]eriodically update and continue to administer the City’s programs aimed at expanding existing businesses and attract new businesses to Woodland, particularly in the food, agriculture, and biotech industries.”

Housing. In addition to the economic activity accommodated within the Specific Plan Area, the City has also provided for a diverse range of housing options, consistent with the Project Objectives established as a part of the EIR to establish “[d]iverse, high quality and attractive new neighborhoods and housing options, including single and multi-family residential units and mixed-used projects will allow Tech Park employees to live and work close by and ‘move up’ within the same neighborhood as families grow or nests are emptied” (Draft EIR, page 2-6). The

Specific Plan accommodates approximately 1,600 housing units of a variety of product types and densities. Medium- and higher-density housing and residential product types are generally more affordable by design due to smaller unit and/or lot sizes as compared to tradition low-density suburban neighborhoods. Approximately two-thirds of the residential units developed within the Specific Plan Area will be medium- and high-density housing types (an estimated 600 and 500 units respectively), including small-lot detached single-family homes, duplexes, townhomes, and apartments or loft-style development. The Specific Plan's residential zoning designations, including minimum-density requirements, will ensure the Specific Plan Area provides a diversity of housing options. The Specific Plan Area is additionally subject to the City's Affordable Housing Ordinance, which outlines obligations around housing affordability and buyer income restrictions for a percentage of housing units developed within the Specific Plan Area.

Jobs-Housing Balance. The Specific Plan will also implement General Plan Policy 2.D.1 Jobs/Housing Relationship by promoting and supporting a mix of residential, commercial, and light industrial development within the city. The Specific Plan will help Woodland maintain a 1:1 jobs to housing ratio citywide, reducing the need for commute trips and overall vehicle miles traveled (VMT), and reducing dependence on single occupancy vehicle trips.

Leader in Sustainability. Projects within the Plan Area will further the City's Climate Action Plan goals and help establish local examples of environmentally sustainable projects. Specific Plan Area development will be required by the City to employ sustainable design principles, minimizing impacts of the Specific Plan implementation on the environment. Sustainable building design, the use of low-impact materials and construction techniques, on-site water management and planning features that reduce commute trips and vehicle miles traveled will carry through the Specific Plan. Consistent with General Plan Policy 2.L.2, all projects within the Specific Plan Area shall strive to meet net zero energy consumption through the incorporation of conservation measures above Title 24 standards and shall, at minimum, demonstrate consistency with California Green Building Standards (CalGreen) Tier 1 standards. The Specific Plan will utilize City recycled water for public landscaping. Pollinator friendly planting and maintenance practices will be integrated into each development site's landscaping, in addition to native and drought tolerant plant species. Projects developed within the Specific Plan will install electric vehicle (EV) charging capable facilities in all residential garages and commercial parking lots. The City anticipates that all residential products (single-family homes and apartments) will be 100 percent electric, reducing greenhouse gas emissions compared to a scenario involving natural gas. The mix of housing types and the mix of uses in proximity, along with the pedestrian and bicycle system is intended to allow residents to reach employment, services, retail, and recreational opportunities without the need for a vehicle, reducing associated air pollutant emissions and greenhouse gas emissions, as well as increasing active transportation opportunities and improving public health.

VIII. CONCLUSION

The City prepared the Final EIR pursuant to CEQA and the CEQA Guidelines. The City Council has independently determined that the Final EIR fully and adequately addresses the impacts and mitigation measures of the WRTP Specific Plan. The alternatives identified and considered in the Final EIR meet the test of “reasonable” analysis, and this consideration provides the City Council with important information from which to make an informed decision. Both the Planning Commission and City Council held public hearings. Substantial evidence in the record from those meetings and other sources demonstrates various benefits and considerations including economic, legal, social, technological, and other benefits that the City would achieve from the implementation of the WRTP Specific Plan. The City Council has balanced these project benefits and considerations against the significant and unavoidable environmental impacts that would result from the proposed project and has concluded that those impacts are outweighed by the WRTP Specific Plan benefits. Upon balancing the environmental risk and countervailing WRTP Specific Plan benefits, the City Council has concluded that the benefits that the City will derive from the implementation of the project outweigh those environmental risks. The City Council hereby determines that the above-described WRTP Specific Plan benefits override the significant and unavoidable environmental impacts of the proposed project.

In sum, the City Council finds that any residual or remaining effects on the environment resulting from adoption and implementation of the WRTP Specific Plan are acceptable due to the benefits set forth in this Statement of Overriding Considerations.

**DEVELOPMENT AGREEMENT
(Beeman South—Woodland Research and Technology Park)**

DEVELOPMENT AGREEMENT BETWEEN

CITY OF WOODLAND

and

**BULLSEYE LAND COMPANY, LLC, A CALIFORNIA LIMITED LIABILITY
COMPANY and ANNE ELIZABETH BEEMAN, AN INDIVIDUAL**

DEVELOPMENT AGREEMENT NO. __

This Development Agreement (hereinafter “Agreement”) is entered into effective on the date it is recorded with the Yolo County Recorder (hereinafter the “Effective Date”) by and among the City of Woodland, a California municipal corporation (hereinafter “CITY”), and Bullseye Land Company, LLC, a California limited liability company and Anne Elizabeth Beeman, an individual (collectively, hereinafter “OWNER”):

RECITALS

WHEREAS, CITY is authorized to enter into binding development agreements with persons having legal or equitable interests in real property for the development of such property, pursuant to Section 65864 et seq. of the Government Code; and

WHEREAS, OWNER has requested CITY to enter into a development agreement and proceedings have been taken in accordance with the rules and regulations of CITY; and

WHEREAS, by electing to enter into this Agreement, CITY shall bind future City Councils of CITY by the obligations specified herein and limit the future exercise of certain governmental and proprietary powers of CITY; and

WHEREAS, the terms and conditions of this Agreement have undergone extensive review by CITY and the City Council and have been found to be fair, just and reasonable; and

WHEREAS, the best interests of the citizens of the CITY and the public health, safety and welfare will be served by entering into this Agreement; and

WHEREAS, all of the procedures of the California Environmental Quality Act have been met with respect to the Project and the Agreement in that the City certified a Final Environmental Impact Report for the Woodland Research and Technology Park Specific Plan (the “Final EIR”), which Specific Plan Area includes the Project, and which was fully analyzed as part of the Final EIR; and

WHEREAS, OWNER has jointly filed an application with other adjacent property owners for, and the City Council has approved, the Woodland Research and Technology Park Specific Plan (the “Specific Plan”), governing the development of the Property; and

WHEREAS, this Agreement and the Project are consistent with the CITY’s General Plan and the Specific Plan applicable thereto; and

WHEREAS, all actions taken and approvals given by CITY have been duly taken or approved in accordance with all applicable legal requirements for notice, public hearings, findings, votes, and other procedural matters; and

WHEREAS, development of the Property in accordance with this Agreement will provide substantial benefits to CITY and will further important policies and goals of CITY; and

WHEREAS, this Agreement will eliminate uncertainty in planning and provide for the orderly development of the Property, ensure progressive installation of necessary improvements, provide for public services appropriate to the development of the Project, and generally serve the purposes for which development agreements under Sections 65864 et seq of the Government Code are intended; and

WHEREAS, OWNER has incurred and will in the future incur substantial costs in order to assure development of the Property in accordance with this Agreement; and

WHEREAS, OWNER has incurred and will in the future incur substantial costs in excess of the generally applicable requirements in order to assure vesting of legal rights to develop the Property in accordance with this Agreement.

AGREEMENT

NOW, THEREFORE, in consideration of the above recitals and of the mutual covenants hereinafter contained and for other good and valuable consideration, the receipt and sufficiency of which is hereby acknowledged, the parties agree as follows:

1. DEFINITIONS AND EXHIBITS.

1.1 Definitions. The following terms when used in this Agreement shall be defined as follows:

1.1.1 “Agreement” means this Development Agreement.

1.1.2 “CITY” means the City of Woodland, a municipal corporation, organized and existing pursuant to the laws of the State of California.

1.1.3 “Capital Improvement Plan” or “CIP” means the Capital Improvement Plan adopted by the City Council for the Specific Plan by Resolution No. _____, as it may be amended from time to time by the CITY.

1.1.4 “Development” means the improvement of the Property for the purposes of completing the structures, improvements and facilities comprising the Project including, but not limited to: grading; the construction of infrastructure and public facilities related to the Project whether located within or outside the Property; the construction of buildings and structures; and the installation of landscaping. “Development” does not include the maintenance, repair, reconstruction or redevelopment of any building, structure, improvement or facility after the construction and completion thereof.

1.1.5 “Development Approvals” means all permits and other entitlements for use subject to approval or issuance by CITY in connection with development of the Property including, but not limited to:

(a) the Woodland Research and Technology Park Specific Plan, as it may be amended from time to time;

- (b) tentative and final subdivision maps, including large and small lot mapping, and parcel maps;
- (c) conditional use permits, design review approvals and plot plans;
- (d) zoning;
- (e) grading and building permits.

1.1.6 “Development Exaction” means any requirement of CITY in connection with or pursuant to any Land Use Regulation or Development Approval for the dedication of easements, land, the construction of improvements or public facilities, or the payment of fees in order to lessen, offset, mitigate or compensate for the impacts of development on the environment or other public interests.

1.1.7 “Development Impact Fee” means a monetary exaction other than a tax or special assessment, whether established for a broad class of projects by legislation of general applicability or imposed on a specific project on an ad hoc basis, that is charged by a local agency to the applicant in connection with approval of a development project for the purpose of defraying all or a portion of the cost of public facilities related to the development project, but does not include park “in lieu” fees specified in Government Code Section 66477, fees for processing applications for governmental regulatory actions or approvals, fees collected under development agreements adopted pursuant to Article 2.5 of the Government Code (commencing with Section 65864) of Chapter 4. “Development Impact Fee” shall not include processing fees and charges imposed by CITY to cover the estimated actual costs to CITY of processing applications for Development Approvals or for monitoring compliance with any Development Approvals granted or issued, including, without limitation, fees for zoning variances; zoning changes; use permits; building inspections; building permits; filing and processing applications and petitions filed with the local agency formation commission or conducting preliminary proceedings or proceedings under the Cortese-Knox-Hertzberg Local Government Reorganization Act of 2000, Division 3 (commencing with Section 56000) of Title 5 of the Government Code; the processing of maps under the provisions of the Subdivision Map Act, Division 2 (commencing with Section 66410) of Title 7 of the Government Code; or planning services under the authority of Chapter 3 (commencing with Section 65100) of Division 1 of Title 7 of the Government Code, fees and charges as described in Sections 51287, 56383, 57004, 65104, 65456, 65863.7, 65909.5, 66013, 66014, and 66451.2 of the Government Code, Sections 17951, 19132.3, and 19852 of the Health and Safety Code, Section 41901 of the Public Resources Code, and Section 21671.5 of the Public Utilities Code, as such codes may be amended or superseded, including by amendment or replacement. OWNER understands and agrees that the RTIF as defined herein is not a Development Impact Fee but is instead a fee that is charged pursuant to and in accordance with the terms of this Agreement.

1.1.8 “Development Plan” means the development of the Property consistent with the Land Use Zoning Exhibit for the Woodland Research and Technology Park attached hereto and incorporated as Exhibit “C”, which development shall be consistent with the Subsequent Development Approvals and the Existing Land Use Regulations.

1.1.9 “Effective Date” means the date that the ordinance approving this Agreement becomes effective.

1.1.10 “Existing Land Use Regulations” means all Land Use Regulations in effect on the Effective Date.

1.1.11 “General Plan” means the General Plan 2035 adopted on May 16, 2017 by Resolution No. 6836.

1.1.12 “Improvement” or “Improvements” means those public improvements required to support the development of the Project as described in the Capital Improvement Plan for the Specific Plan.

1.1.13 “Improvements Outside Specific Plan Area” means any Improvement that OWNER is required to construct pursuant to the CIP and its Infrastructure Phasing Plan that is located on land outside of the Specific Plan Area.

1.1.14 “Land Use Regulations” means all ordinances, resolutions, codes, rules, regulations and official policies of CITY governing the development and use of land, including, without limitation, the permitted use of land, the density or intensity of use, subdivision requirements, timing and phasing of development, the maximum height and size of proposed buildings, the provisions for reservation or dedication of easements or land for public purposes, and the design, improvement and construction standards and specifications applicable to the development of the Property. “Land Use Regulations” does not include any CITY ordinance, resolution, code, rule, regulation or official policy, governing:

- (a) the conduct of businesses, professions, and occupations;
- (b) taxes and assessments;
- (c) the control and abatement of nuisances;
- (d) the granting of encroachment permits and the conveyance of similar rights and interests which provide for the use of or the entry upon public property;
- (e) the exercise of the power of eminent domain.

1.1.15 “Maintenance CFD” shall have the meaning as set forth in Section 5.3.1 of this Agreement.

1.1.16 “Mortgagee” means a mortgagee of a mortgage, a beneficiary under a deed of trust or any other security-device lender, and their successors and assigns.

1.1.17 “Offsite Property” has the meaning set forth in Section 3.11 of this Agreement.

1.1.18 “OWNER” means the persons and entities listed as OWNER on page 1 of this Agreement and their permitted successors in interest to all or any part of the Property.

1.1.19 “Project” means the development of the Property contemplated by the Specific Plan and the Development Plan as such Development Plan may be further defined, enhanced or modified pursuant to the provisions of this Agreement.

1.1.20 “Property” means the real property described on Exhibit “A” and shown on Exhibit “B” to this Agreement.

1.1.21 “Public Infrastructure Reimbursement Rules” means the “Public Infrastructure Reimbursement Rules for the Woodland Research and Technology Park Specific Plan,” attached hereto as Exhibit “J” and incorporated herein by this reference.

1.1.22 “Reservations of Authority” means the rights and authority excepted from the assurances and rights provided to OWNER under this Agreement and reserved to CITY under Section 3.9 of this Agreement.

1.1.23 “Specific Plan” means that certain specific plan adopted by the City Council by Resolution No. ___, and entitled, “Woodland Research and Technology Park Specific Plan.”

1.1.24 “Specific Plan Area” means those properties that are located within the geographic boundaries of the Specific Plan.

1.1.25 “Subdivision Map Act” means Government Code Section 66410 et seq., as it may be amended from time to time.

1.1.26 “Subsequent Development Approvals” means all Development Approvals required subsequent to the Effective Date in connection with development of the Property.

1.1.27 “Subsequent Land Use Regulations” means any Land Use Regulations adopted and effective after the Effective Date of this Agreement.

1.2 Exhibits. The following documents are attached to, and by this reference made a part of, this Agreement:

Exhibit “A” — Legal Description of the Property.

Exhibit “B” — Map showing Property and its location.

Exhibit “C” — Development Plan.

Exhibit “D” — Infrastructure Phasing Rules.

Exhibit “E” — WRTP CIP Modification

Exhibit “F” — Master Planning and Design Obligations

Exhibit “G” — Public Dedications

Exhibit “H” — WRTP Affordable Housing Plan

Exhibit “I” — Maintenance Services

Exhibit “J” — Public Infrastructure Reimbursement Rules

Exhibit “K” — W RTP Project Fees

Exhibit “L” — Form of Assignment and Assumption Agreement

Exhibit “M” — Form of Partial Assignment and Assumption Agreement

2. GENERAL PROVISIONS.

2.1 Binding Effect of Agreement. The Property is hereby made subject to this Agreement. Development of the Property is hereby authorized and shall be carried out only in accordance with the terms of this Agreement.

2.2 Ownership of Property. OWNER represents and covenants that it is the owner of the fee simple title to the Property or a portion thereof, or has the right to acquire fee simple title to the Property or a portion thereof from the current owner(s) thereof. To the extent OWNER does not own fee simple title to the Property, OWNER shall obtain written consent from the current fee owner of the Property agreeing to the terms of this Agreement and the recordation thereof.

2.3 Term. The term of this Agreement shall commence on the Effective Date, and shall continue for an initial period of twenty-five (25) years thereafter unless this term is modified or extended pursuant to the provisions of this Agreement. OWNER may elect to extend the Term by up to two successive five (5) year terms (for a total maximum Term of thirty-five (35) years) by providing CITY written notice no later than thirty (30) days prior to the date the Term would otherwise expire. The initial term and, if applicable any extension, shall be referred to herein as the “Term.” Any tentative map approved by CITY for the Property shall have a duration (i) eight (8) years during which period no application to extend the expiration date of any tentative map need be filed, plus the Community Development Director is hereby authorized to grant two extensions of two (2) years each at the Community Development Director’s sole discretion, without further approval by the Planning Commission or City Council, plus (ii) such time extensions authorized by state law currently or in the future.

2.4 Assignment.

2.4.1 Right to Assign. OWNER shall have the right to sell, transfer or assign the Property in whole or in part (provided that no such partial transfer shall violate the Subdivision Map Act, Government Code Section 66410 et seq.), to any person, partnership, limited liability company, joint venture, firm or corporation at any time during the term of this Agreement; provided, however, that any such sale, transfer or assignment shall include the assignment and assumption of the rights, duties and obligations arising under or from this Agreement and be made in strict compliance with the following conditions precedent:

(a) No sale, transfer or assignment of any right or interest under this Agreement shall be made unless made together with the sale, transfer or assignment of all or a part of the Property.

(b) Concurrent with any such sale, transfer or assignment, or within fifteen (15) business days thereafter, OWNER shall notify CITY's City Manager, in writing, of such sale, transfer or assignment and shall provide CITY with (1) an executed agreement, in the form attached hereto as Exhibit "L" or in an alternative form reasonably acceptable to CITY, by the purchaser, transferee or assignee and providing therein that the purchaser, transferee or assignee expressly and unconditionally assumes all the duties and obligations of OWNER under this Agreement with respect to the portion of the Property so sold, transferred or assigned; and (2) the payment of the applicable processing charge to cover the CITY's review and consideration of such sale, transfer or assignment.

Any sale, transfer or assignment not made in strict compliance with the foregoing conditions shall constitute a default by OWNER under this Agreement. Notwithstanding the failure of any purchaser, transferee or assignee to execute the agreement required by Paragraph (b) of this Subsection 2.4.1, the burdens of this Agreement shall be binding upon such purchaser, transferee or assignee, but the benefits of this Agreement shall not inure to such purchaser, transferee or assignee until and unless such agreement is executed. The City Manager shall have the authority to review, consider and either approve, conditionally approve, or deny any proposed sale, transfer or assignment that is not made in compliance with this section 2.4.

2.4.2 Release of Transferring Owner. Notwithstanding any sale, transfer or assignment, a transferring OWNER shall continue to be obligated under this Agreement unless such transferring OWNER is given a release in writing by CITY, which release shall be provided by CITY upon the full satisfaction by such transferring OWNER of the following conditions:

(a) OWNER no longer has a legal or equitable interest in all or any portion of the Property sold, transferred, or assigned.

(b) OWNER is not then in default under this Agreement.

(c) OWNER has provided CITY with the notice and executed agreement required under Paragraph (b) of Subsection 2.4.1 above.

(d) The purchaser, transferee or assignee provides CITY with security equivalent to any security previously provided by OWNER to secure performance of its obligations hereunder.

2.4.3 Effect of Assignment and Release of Obligations. In the event of a sale, transfer or assignment pursuant to the provisions of Section 2.4.2 above:

(a) The assignee shall be liable for the performance of all obligations of OWNER with respect to transferred property, but shall have no obligations with respect to the portions of the Property, if any, not transferred (the "Retained Property").

(b) The owner of the Retained Property shall be liable for the performance of all obligations of OWNER with respect to Retained Property, but shall have no further obligations with respect to the transferred property.

(c) The assignee's exercise, use and enjoyment of the Property or portion thereof shall be subject to the terms of this Agreement to the same extent as if the assignee were the OWNER.

2.4.4 Subsequent Assignment. Any subsequent sale, transfer or assignment after an initial sale, transfer or assignment shall be made only in accordance with and subject to the terms and conditions of this Section 2.4.

2.4.5 Termination of Agreement with Respect to Individual Lots Upon Sale to Public and Completion of Construction. The provisions of Subsection 2.4.1 shall not apply to the sale or lease (for a period longer than one year) of any lot which has been finally subdivided and is individually (and not in "bulk") sold or leased to a member of the public or other ultimate user. Notwithstanding any other provisions of this Agreement, this Agreement shall terminate with respect to any lot and such lot shall be released and no longer be subject to this Agreement without the execution or recordation of any further document upon satisfaction of both of the following conditions:

(a) The lot has been finally subdivided and individually (and not in "bulk") sold or leased (for a period longer than one year) to a member of the public or other ultimate user; and,

(b) A certificate of occupancy has been issued for a building on the lot, and the fees set forth under Section 4 of this Agreement have been paid.

2.4.6 Partial Assignment and Assumption. CITY and OWNER agree OWNER may partially assign its obligations and rights under this Agreement, and all amendments hereto, to a purchaser, transferee or assignee of a lot, which has been subdivided subject to provisions of a partial assignment and assumption agreement in the form attached hereto as Exhibit "M" or in an alternative form as reasonably approved by CITY. Any such complete and executed partial assignment and assumption of this Agreement shall be submitted to CITY for approval pursuant to Section 2.4.1 of this Agreement. Within fifteen (15) days following such complete submittal, CITY shall review, and if the above conditions are satisfied, may approve the partial assignment and release and notify the purchaser, transferee or assignee in writing thereof. No such release approved pursuant to this Subsection 2.4.6 shall cause, or otherwise affect, a release of OWNER from the duties and obligations under this Agreement that are retained by OWNER and excluded from the transfer or assignment.

2.5 Amendment or Cancellation of Agreement. This Agreement may be amended or cancelled in whole or in part by either party or successor in interest only in the manner provided for in Government Code Sections 65865.1 or 65868 or as set forth in this Agreement. Any amendment of this Agreement, which amendment has been requested by OWNER, shall be considered by the CITY only upon the payment of the applicable processing charge. This provision shall not limit any remedy of CITY or OWNER as provided by this Agreement. For

purposes of this section, the term “successor in interest” shall mean any person having a legal or equitable interest in the whole of the Property, or any portion thereof as to which such person wishes to amend or cancel this Agreement as applied to the portion of the Property owned by that successor in interest. The procedure for proposing and adopting an amendment to, or cancellation of, in whole or in part, this Agreement shall be the same as the procedure for adopting and entering into this Agreement in the first instance. Notwithstanding the foregoing sentence, if the CITY initiates the proposed amendment to, or cancellation of, in whole or in part, this Agreement, CITY shall first give notice to the OWNER of its intention to initiate such proceedings at least sixty (60) days in advance of the giving the public notice of intention to consider the amendment or cancellation. CITY and OWNER acknowledge and agree that this Agreement can only be amended or cancelled by mutual agreement of the CITY and OWNER or relevant successor in interest.

2.6 Minor Modification. Upon the written application of OWNER, minor modifications and changes to the Development Plan may be approved by the City Manager without the need to amend this Development Agreement. A minor/administrative modification to the Specific Plan as described in Section 7.4.1 of the Specific Plan shall not require an amendment to this Development Agreement. It is also contemplated by CITY and OWNER that OWNER may, from time to time, seek Additional Development Approvals. Any such Development Approvals are contemplated by CITY and OWNER as being within the scope of this Agreement as long as they are consistent with the Land Use Regulations and shall, upon approval by CITY, constitute Development Approvals as referenced herein. The parties agree that any such modifications or additional Development Approvals shall not constitute an amendment to this Agreement nor require an amendment to this Agreement. Other changes to the Development Agreement shall be processed in accordance with the City’s Municipal Code and applicable state law.

2.7 Termination. This Agreement shall be deemed terminated and of no further effect upon the occurrence of any of the following events:

- (a) Expiration of the stated term of this Agreement as set forth in Section 2.3.
- (b) Entry of a final judgment setting aside, voiding or annulling the adoption of the ordinance approving this Agreement.
- (c) The adoption of a referendum measure overriding or repealing the ordinance approving this Agreement.
- (d) Completion of the Project in accordance with the terms of this Agreement including issuance of all required occupancy permits, completion of all required Improvements as required herein and acceptance by CITY or applicable public agency of all required dedications.
- (e) Termination of this Agreement based on any default of OWNER and following the termination proceedings required as set forth in this Agreement.

Termination of this Agreement shall not constitute termination of any other land use entitlements approved for the Property. Upon the termination of this Agreement, no party

shall have any further right or obligation hereunder except with respect to any obligation to have been performed prior to such termination or with respect to any default in the performance of the provisions of this Agreement which has occurred prior to such termination or with respect to any obligations which are specifically set forth as surviving this Agreement. Upon such termination, any Development Impact Fees or RTIF paid pursuant to Section 4.2 of this Agreement by OWNER to CITY for residential units on which construction has not yet begun shall be refunded to OWNER by CITY.

2.8 Notices.

(a) As used in this Agreement, “notice” includes, but is not limited to, the communication of notice, request, demand, approval, statement, report, acceptance, consent, waiver, appointment or other communication required or permitted hereunder.

(b) All notices shall be in writing and shall be considered given either: (i) when delivered in person, including, without limitation, by courier, to the recipient named below; or (ii) on the date of delivery shown on the return receipt, after deposit in the United States mail in a sealed envelope as either registered or certified mail with return receipt requested, and postage and postal charges prepaid, and addressed to the recipient named below. All notices shall be addressed as follows:

If to CITY:

City of Woodland
300 First Street
Woodland, CA 95695
Attn: City Manager
Telephone: (530) 661-5800
Email: ken.hiatt@cityofwoodland.org

Copy to:

Best, Best & Krieger, LLP
500 Capitol Mall, Suite 1700
Sacramento, CA 95814
Attn: City Attorney
Telephone: (916) 325-4000
Email: ethan.walsh@bbklaw.com

If to OWNER:

Bullseye Land Company, LLC and Anne Elizabeth Beeman
P.O. Box 120
Woodland, CA 95695

(c) Either party may, by notice given at any time, require subsequent notices to be given to another person or entity, whether a party or an officer or representative of a party,

or to a different address, or both. Notices given before actual receipt of notice of change shall not be invalidated by the change.

3. DEVELOPMENT OF THE PROPERTY.

3.1 Rights to Develop. Subject to the terms of this Agreement including the Reservations of Authority, OWNER shall have a vested right to develop the Property in accordance with, and to the extent of, the Specific Plan. The Project shall remain subject to all Subsequent Development Approvals required to complete the Project as contemplated by the Development Plan. OWNER shall not be required to enter into a subsequent development agreement in order to develop the Property. Except as otherwise provided in this Agreement, the permitted uses of the Property, the density and intensity of use, the maximum height and size of proposed buildings, and provisions for reservation and dedication of easements or land for public purposes shall be those set forth in the Specific Plan and this Agreement. OWNER does not have an affirmative obligation to develop the Property, but if the Property is developed it shall be developed according to the Development Approvals.

3.2 Effect of Agreement on Land Use Regulations. Except as otherwise provided under the terms of this Agreement including the Reservations of Authority, the rules, regulations and official policies governing permitted uses of the Property, the density and intensity of use of the Property, the maximum height and size of proposed buildings, and the design, improvement and construction standards and specifications applicable to development of the Property shall be in accordance with the Existing Land Use Regulations. In connection with any Subsequent Development Approval, CITY shall exercise discretion in the same manner that it exercises discretion under its police powers including the Reservations of Authority set forth herein; provided, however, that such discretion shall not prevent development of the Property for the uses and to the density or intensity of development set forth in this Agreement.

3.3 Timing of Development. The parties acknowledge that OWNER cannot at this time predict when or the rate at which phases of the Property will be developed. Such decisions depend upon numerous factors which are not within the control of OWNER, such as market orientation and demand, interest rates, absorption, completion and other similar factors. Since the California Supreme Court held in Pardee Construction Co. v. City of Camarillo, (1984) 37 Cal.3d 465, that the failure of the parties therein to provide for the timing of development resulted in a later adopted initiative restricting the timing of development to prevail over such parties' agreement, it is the parties' intent to cure that deficiency by acknowledging and providing that OWNER shall have the right to develop the Property in such order and at such rate and at such times as OWNER deems appropriate within the exercise of its subjective business judgment. Notwithstanding the foregoing, the phasing of the Project shall be conducted in accordance with the Phasing Rules as defined in Section 3.5 of this Agreement and the Infrastructure Phasing Plan submitted and approved in the manner more specifically described in Section 3.5 of this Agreement. Except as may be specifically provided elsewhere in this Agreement, OWNER has no affirmative obligation to commence development of the Property or to develop it at a specified rate. No modification of the City's ordinances, resolutions, policies, rules, or regulations adopted after the Effective Date whether by regulatory action, Council vote, voter initiative or otherwise, which purport to cap, prohibit or otherwise limit development

and/or the rate of development over time or to govern the sequence of development of land within the Specific Plan Area, shall apply to the Property.

3.4 Density Transfer Requirements. OWNER and CITY agree to the following requirements which guide unit yield assumptions within Residential Development Zones (“RDZ”) that are designated in the Specific Plan, and the process by which residential densities are established and, if permitted by the Community Development Director, transferred to other RDZ’s.

(a) Residential unit yields within each of six RDZs shall be those established by the Exhibit 6-1 and Table 6.1 in the Specific Plan. RDZ boundaries generally follow property lines for the Property and property owned by other property owners in the Specific Plan Area as existed at the time of Specific Plan approval.

(b) When any portion or all of an RDZ is mapped/subdivided (large or small lot), unit yields/densities shall be determined and allocated across the entire RDZ effected, and shall meet the Density Requirements outlined in Section 6.5.3 in the Specific Plan.

(c) OWNER may develop up to the assigned number of units within the RDZ at densities permitted by the Specific Plan for the underlying zoning (LDR, MDR, HDR).

(d) OWNER may request an increase in units up to 10 percent above the assigned units within the RDZ, subject to CEQA consistency review.

(e) If an RDZ is developed *under* the assigned number of units, an RTIF fee make up shall be required in amount necessary so that OWNER pays the RTIF fee equal to the amount required for the assigned number of units, unless at time of tentative map, an alternate RDZ picks up the unit deficit, subject to CITY approval and provided that the owner of the property located outside the RDZ enters into a written agreement to the satisfaction of the CITY that it shall adjust the density of its property to ensure consistency with the overall residential yields for the Specific Plan Area.

(f) If an RDZ is developed *over* assigned units, overage units must be removed from an alternate RDZ at tentative map, subject to CITY approval and provided that the owner of the property located outside the RDZ enters into a written agreement to the satisfaction of the CITY that it shall adjust the density of its property to ensure consistency with the overall residential yields for the Specific Plan Area.

(g) Except for the provisions stated above, the CITY has sole authority to approve the reallocation of units or to add units within each RDZ.

(h) If OWNER proposes land use changes or an increase in the number of units, then the City will reallocate units or add units within each RDZ and fees shall be updated with a nexus study and if necessary updates to the Public Facilities Financing Plan and the CIP.

3.5 Requirement for Public Infrastructure Improvements/Infrastructure Phasing Plan. Development of the Property is contingent in part on the construction of certain area-wide infrastructure improvements in accordance with certain Infrastructure Phasing Rules established

by the City for the Specific Plan Area, as attached hereto as Exhibit “D” (the “Phasing Rules”), and incorporated herein by this reference. OWNER agrees to comply with the Phasing Rules in the payment for and construction of Improvements as required for development of the Specific Plan Area.

3.5.1 Concurrent with the submission of the first tentative subdivision map, OWNER shall submit to the City an Infrastructure Phasing Plan for the Property, which shall be consistent with the Phasing Rules, for review and approval by the City Engineer. Tentative map submissions to create large parcels for financing purposes, which lots could not be developed without further subdivision, would not trigger this requirement. City Engineer shall confirm that the Infrastructure Phasing Plan is consistent with this Development Agreement, the Specific Plan, the CIP, the Phasing Rules, and all applicable tentative or final subdivision or parcel map conditions. In the event the Infrastructure Phasing Plan is consistent with the requirements described herein the City Engineer shall approve the Infrastructure Phasing Plan. If it is not consistent with such requirements the City Engineer shall indicate in writing which inconsistencies must be corrected in order for the Infrastructure Phasing Plan to be approved. The City will not approve a tentative subdivision map for any portion of the Property until an Infrastructure Phasing Plan is approved in accordance with this Section 3.5.1 and the Phasing Rules. Given the possible timing of different tentative maps proceeding in the same time period or the possibility that someone with a tentative map may decide to delay development of their property, it is likely that multiple tentative maps could have the same infrastructure requirements. Given the financing constraints of the Specific Plan that require the LDR and MDR units to construct most of the infrastructure in the Plan Area, it is imperative that every development with LDR or MDR units meet the development agreement requirement of constructing 150% or 130%, as applicable, of their RTIF infrastructure burden in accordance with the Phasing Rules. The City Engineer therefore has the authority to add replacement infrastructure conditions to an already approved tentative map (to meet the development agreement requirement of constructing 150% or 130% as applicable) if that tentative map is conditioned to construct improvements that have already been constructed. The City Engineer shall follow the same rules outlined in Exhibit D to determine the replacement infrastructure conditions. If the City anticipates multiple tentative maps may proceed with obligations to construct the same infrastructure, the City Engineer may list an alternative infrastructure requirement at the time of tentative map approval. If the City does not list an alternative infrastructure requirement, then the City still has the authority to require replacement infrastructure conditions. OWNER agrees that it will comply with the requirements to construct such replacement or alternative infrastructure as appropriate, and shall coordinate with CITY and other property owners within the Specific Plan Area in conjunction with the implementation of such replacement or alternative infrastructure requirements.

3.5.2 The OWNER shall construct public infrastructure improvements within the Specific Plan Area consistent with the Infrastructure Phasing Plan as approved by the City Engineer. City’s obligation to issue building permits for the Project shall be conditioned on construction of the public improvements consistent with the approved Infrastructure Phasing Plan and the Phasing Rules, which in some cases could restrict the cumulative number of building permits issued within the Specific Plan Area until certain public improvements are complete or until security has been provided for the required improvements in accordance with a public improvement agreement entered into by and between CITY and OWNER.

3.5.3 OWNER shall be eligible for fee credits for the RTIF to be paid pursuant to this Development Agreement and reimbursement from future development within the Specific Plan Area for public infrastructure improvements constructed pursuant to and in accordance with this Development Agreement. Such fee credits and reimbursement shall be provided in accordance with Section 4.2.5 of this Agreement, the Public Infrastructure Reimbursement Rules and the Financing Plan prepared for the Specific Plan, as approved by City Council and as it may be updated from time to time.

3.6 Changes and Amendments. The parties acknowledge that development of the Project will require Subsequent Development Approvals including but not limited to approval of tentative and final subdivision maps for large and small parcels and design review for development of new uses on the Property. As necessary or appropriate, OWNER shall apply for Subsequent Development Approvals and CITY shall process and act on such application in accordance with the Existing Land Use Regulations, except as otherwise provided by this Agreement including the Reservations of Authority. Unless otherwise required by law, as determined in CITY's reasonable discretion, Subsequent Development Approvals shall be deemed "minor" and not require an amendment to this Agreement provided such approvals do not:

- (a) Alter the permitted uses of the Property as a whole; or,
- (b) Increase the density or intensity of use of the Property as analyzed under the Specific Plan CEQA document, which may include limited adjustments as authorized by the City; or,
- (c) Increase the maximum height and size of permitted buildings beyond what is permissible under the Specific Plan; or,
- (d) Delete a requirement for the reservation or dedication of easements or land for public purposes within the Property as a whole; or,
- (e) Constitute a project requiring a subsequent or supplemental environmental impact report pursuant to Section 21166 of the Public Resources Code.

3.7 Reservations of Authority.

3.7.1 Limitations, Reservations and Exceptions. Notwithstanding any other provision of this Agreement, the CITY shall not be prevented from applying new rules, regulations and policies upon the OWNER, nor shall a development agreement prevent the CITY from denying or conditionally approving any subsequent development project application on the basis of such new rules, regulations and policies where the new rules, regulations and policies consist of the following:

- (a) Processing fees and charges of every kind and nature imposed by CITY to cover the costs of processing applications for Development Approvals or for monitoring compliance with any Development Approvals.

(b) Procedural regulations relating to hearing bodies, petitions, applications, notices, findings, records, hearings, reports, recommendations, appeals and any other matter of procedure.

(c) Regulations, policies, and rules governing engineering and construction standards and specifications applicable to public and private improvements, including all uniform codes adopted by the CITY and any local amendments to those codes adopted by the CITY; provided, however, that, OWNER shall have a vested right to develop the Property in accordance with, and to the extent of, the standards and specifications that are expressly identified in the Specific Plan. Further, for the first ten (10) years following the Effective Date, the City shall not implement a change to the City's engineering standards and specifications that would result in an increase to the cost of construction of the required public improvements for a subdivision located within the Property by more than 2% of the estimated cost of the public improvements prior to such change.

(d) Regulations imposing Development Exactions; provided, however, that no subsequently adopted Development Impact Fees or fees levied pursuant to the terms of this Agreement shall be applicable to development of the Property except for those Project Fees set forth in Exhibit K to this Agreement, which Project Fees may be increased from time to time in accordance with applicable State law, or as contemplated in this Agreement.

(e) Regulations which may conflict with this Agreement or the Development Plan but which are reasonably necessary to protect the public health and safety. To the extent possible, any such regulations shall be applied and construed so as to provide OWNER with the rights and assurances provided under this Agreement.

(f) Regulations which do not conflict with those rules, regulations and policies set forth in this Agreement or the Development Plan. Any regulation, whether adopted by initiative or otherwise, limiting the rate or timing of development of the Property shall be deemed to conflict with the Development Plan and shall therefore not be applicable to the development of the Property.

(g) Regulations which may conflict with this Agreement or the Development Plan, but to which the OWNER consents in writing.

3.7.2 Subsequent Development Approvals. This Agreement shall not prevent CITY, in acting on Subsequent Development Approvals, from applying Subsequent Land Use Regulations which do not conflict with this Development Agreement or the Specific Plan in the form in effect on the Effective Date of this Development Agreement, nor shall this Agreement prevent CITY from denying or conditionally approving any Subsequent Development Approval on the basis of the Existing Land Use Regulations or any Subsequent Land Use Regulation not in conflict with the Specific Plan.

3.7.3 Modification or Suspension by State or Federal Law. In the event that State or Federal laws or regulations, enacted after the Effective Date of this Agreement, prevent or preclude compliance with one or more of the provisions of this Agreement, such provisions of this Agreement shall be modified or suspended as may be necessary to comply with such State or

Federal laws or regulations, provided, however, that this Agreement shall remain in full force and effect to the extent it is not inconsistent with such laws or regulations and to the extent such laws or regulations do not render such remaining provisions impractical to enforce. In the event OWNER alleges that such State or Federal laws or regulations preclude or prevent compliance with one or more provisions of this Agreement, and the CITY does not agree, the OWNER may, at its sole cost and expense, seek declaratory relief (or other similar non-monetary remedies); provided, however, that nothing contained in this Section 3.7.3 shall impose on CITY any monetary liability for contesting such declaratory relief (or other similar non-monetary relief).

3.7.4 Intent. The parties acknowledge and agree that CITY is restricted in its authority to limit its police power by contract and that the foregoing limitations, reservations and exceptions are intended to reserve to CITY all of its police power which cannot be so limited. This Agreement shall be construed, contrary to its stated terms if necessary, to reserve to CITY all such power and authority which cannot be restricted by contract.

3.8 Public Works. If OWNER is required by this Agreement to construct any public works facilities which will be dedicated to CITY or any other public agency upon completion, and if required by applicable laws to do so, OWNER shall perform such work in the same manner and subject to the same requirements as would be applicable to CITY or such other public agency should it have undertaken such construction.

3.9 Acquisition of Offsite Real Property Interests. In any instance where OWNER is required pursuant to the Infrastructure Phasing Plan to construct any Improvements Outside Specific Plan Area, OWNER shall at its sole cost and expense provide or cause to be provided, the real property interests necessary for the construction of such public improvements (the "Offsite Property"). In the event OWNER is unable, after exercising reasonable efforts, including, but not limited to, the rights under Sections 1001 and 1002 of the Civil Code, to acquire the Offsite Property necessary for the construction of the Improvements Outside Specific Plan Area, and if so instructed by OWNER and upon OWNER'S provision of adequate security for costs CITY may reasonably incur, CITY agrees to use reasonable and diligent good faith efforts to acquire the Offsite Property from the owner or owners of record by negotiation to the extent permitted by law and consistent with this Agreement. If CITY is unable to acquire the Offsite Property by negotiation within sixty (60) days after OWNER's written request, CITY shall, in accordance with the procedures established by law, use its power of eminent domain to acquire the Offsite Property at a public hearing noticed and conducted in accordance with California Code of Civil Procedure Section 1245.235 for the purpose of considering the adoption of a resolution of necessity concerning the Offsite Property, subject to the conditions set forth in this Section 3.9. The CITY and OWNER acknowledge that the timelines set forth in this Section 3.9 represent the maximum time periods which CITY and OWNER reasonably believe will be necessary to complete the acquisition of any Offsite Property. CITY agrees to use reasonable good faith efforts to complete the actions described within lesser time periods, to the extent that it is reasonably able to do so, consistent with the legal constraints imposed upon CITY. OWNER shall pay all costs associated with such acquisition or condemnation proceedings. This section 3.9 is not intended by the parties to impose upon the OWNER an enforceable duty to acquire land or construct any public improvements on land not owned by OWNER, except to the extent that the OWNER elects to proceed with the development of the Project, and then only in accordance with valid conditions imposed by the CITY upon the development of the Project

under the Subdivision Map Act or other legal authority. CITY and OWNER acknowledge and agree that Government Code Section 66462.5 shall apply to the installation of public improvements on Offsite Property. CITY and OWNER further agree that the parties may explore alternative options for the required Improvements Outside Specific Plan Area, including but not limited to relocating to an alternative site, prior to proceeding with condemnation.

3.9.1 Owner's Option to Terminate Proceedings. CITY shall provide written notice to OWNER no later than fifteen (15) days prior to making an offer to the owner of the Offsite Property. At any time within that fifteen (15) day period, OWNER may, at its option, notify CITY that it wants CITY to cease all acquisition proceedings with respect to the Offsite Property, whereupon CITY shall cease such proceedings. CITY shall provide written notice to OWNER no later than fifteen (15) days prior to the date of the hearing on CITY'S intent to consider the adoption of a resolution of necessity as to any Offsite Property. At any time within that fifteen (15) day period, OWNER may, at its option, notify CITY that it wants CITY to cease condemnation proceedings, whereupon CITY shall cease such proceedings. If OWNER does not notify CITY to cease condemnation proceedings within said fifteen (15) day period, then the CITY may proceed to consider and act upon the Offsite Property resolution of necessity. If CITY adopts such resolution of necessity, then CITY shall diligently institute condemnation proceedings and file a complaint in condemnation and seek an order of immediate possession with respect to the Offsite Property.

3.9.2. Acquisition of Offsite Real Property Interests within Specific Plan Area. CITY and OWNER acknowledge that for improvements located outside of OWNER's Property but within the Specific Plan Area, the other property owners are required to dedicate property needed for public infrastructure to be constructed by OWNER pursuant to the terms of the other property owners' development agreements, including, without limitation, Section 3 of the Public Infrastructure Reimbursement Rules. Even if the property is not included in the CIP, the rules set forth in Section 3 of the Public Infrastructure Reimbursement Rules shall be followed. Notwithstanding the foregoing, in the event that another property owner within the Specific Plan Area does not dedicate such property as required by their development agreement, CITY and OWNER may take the steps set forth in this Section 3.9 to acquire such property.

3.10 Regulation by Other Public Agencies. It is acknowledged by the parties that other public agencies not within the control of CITY possess authority to regulate aspects of the development of the Property separately from or jointly with CITY and this Agreement does not limit the authority of such other public agencies. CITY agrees to cooperate, at no cost to CITY, with OWNER in obtaining any required permits or compliance with the regulations of other public agencies provided such cooperation is not in conflict with any laws, regulations or policies of the CITY.

3.11 Utilities. The Project shall be connected to all utilities necessary to provide adequate water, sewer, gas, electric, and other utility service to the Project in accordance with all applicable laws and regulations.

3.12 Wastewater Treatment Capacity. CITY and OWNER agree that there is capacity in the CITY's wastewater treatment facility to serve: (1) existing residents and businesses that

are already hooked up to the facility; (2) anticipated residents and businesses through build-out of the City's existing General Plan; and (3) the Project. CITY and OWNER acknowledge and agree that reserving this capacity for the Project, such that sewer hookups shall be available at such time as they are needed as the Project builds out, is a material element of the consideration provided by CITY to OWNER in exchange for the benefits provided to CITY under this Agreement. The Parties recognize the availability of sufficient sewer capacity may be affected by regulatory or operational constraints that are not within the CITY's discretion. To the extent the availability of sewer capacity is within the CITY's discretion (e.g., whether to extend sewer service to areas *not* currently within the CITY's service area), CITY shall not approve providing such capacity to areas currently outside the CITY's service area if this approval would prevent or delay the ability of the CITY to provide sewer hookups to the Project as the Project requires hook-ups or connections. This provision shall not affect the CITY's ability to provide sewer service within its service boundaries or within the existing CITY boundaries as they exist on the effective date of this Agreement, and as to such connections, the Parties requesting sewer service shall be connected on a first come first served basis. OWNER shall pay the applicable connection charge in effect pursuant to City-wide ordinance at the time of building permit issuance. OWNER acknowledges that connection charges may increase substantially over time and that the cost to comply with the CITY's National Pollution Discharge Elimination System ("NPDES") permit, as may be approved from time to time during the term of this Agreement, may be substantial.

3.13 Water Availability. CITY and OWNER agree that the CITY's has adequate water availability to serve: (1) existing residents and businesses that are already connected to CITY's water system; (2) anticipated residents and businesses through build-out of the City's existing General Plan; and (3) the Project. CITY and OWNER acknowledge and agree that reserving this capacity for the Project, such that water connections shall be available at such time as they are needed as the Project builds out, is a material element of the consideration provided by CITY to OWNER in exchange for the benefits provided to CITY under this Agreement. The Parties recognize the availability of sufficient water availability may be affected by environmental, regulatory or operational constraints that are not within the CITY's discretion. To the extent the availability of water is within the CITY's discretion (e.g., whether to extend water service to areas *not* currently within the CITY's service area), CITY shall not approve providing such capacity to areas currently outside the CITY's service area if this approval would prevent or delay the ability of the CITY to provide water connections to the Project as the Project requires water connections. This provision shall not affect the CITY's ability to provide water service within its service boundaries or within the existing CITY boundaries as they exist on the effective date of this Agreement, and as to such connections, the Parties requesting water service shall be connected on a first come first served basis. OWNER shall pay the applicable connection charge in effect pursuant to City-wide ordinance at the time of building permit issuance. OWNER acknowledges that connection charges may increase substantially over time.

3.14 Right to Farm. OWNER acknowledges and shall comply with the requirements of Woodland Municipal Code Chapter 9.52, "Right to Farm", including but not limited to the requirements to record deed restrictions against property located within 500 feet of agricultural land or agricultural operations in any deed transferring any right, title or interest in the Property or any portion thereof, as more specifically set forth in Section 9.52.060 of the Woodland Municipal Code.

4. PUBLIC BENEFITS.

4.1 Intent. The parties acknowledge and agree that development of the Property will result in substantial public needs which will not be fully met by the Development Plan and further acknowledge and agree that this Agreement confers substantial private benefits on OWNER which should be balanced by commensurate public benefits. Accordingly, the parties intend to provide consideration to the public to balance the private benefits conferred on OWNER by providing more fully for the satisfaction of the public needs resulting from the Project. Significant public benefits provided by OWNER pursuant to the terms of this Agreement include but are not limited to construction of or contribution to the construction portions of the Yard and greenbelt areas as contemplated by the Specific Plan, funding and constructing public infrastructure for the Specific Plan Area, contribution to the construction of the regional interchange project at State Route 113, and the provision of affordable housing within the Project.

4.2 Development Impact Fees and RTIF.

4.2.1 Amount and Components of Development Impact Fees. OWNER shall pay the Development Impact Fees listed in Exhibit “K”, W RTP Project Fees and other fees, attached hereto and incorporated herein by this reference. OWNER shall not be required to pay newly enacted Development Impact Fees or other fees that are not listed in Exhibit “K” in conjunction with the Project. The Development Impact Fee and other fee amounts to be paid by OWNER shall be the amounts that are in effect at the time such amounts are due. Nothing contained in this Agreement shall affect the ability of the CITY to amend the amounts of existing Development Impact Fees or other fees as permitted by State law, except that OWNER and CITY agree that new fee categories cannot be added to this project without mutual written agreement amending this Agreement. Additionally, nothing contained in this Agreement shall affect the ability of other public agencies that are not controlled by CITY to impose and amend, from time to time, Development Impact Fees established or imposed by such other public agencies, even though such Development Impact Fees may be collected by CITY.

4.2.2 Research and Technology Infrastructure Fee. In addition to all Development Impact Fees which shall be paid by OWNER, OWNER shall pay the Research and Technology Park Infrastructure Fee (the “RTIF”) as established by the City Council and as may be updated from time to time in accordance with this Agreement and other development agreements entered into by and between the City and OWNERS within the Specific Plan Area. The RTIF shall be paid by OWNER in the amounts as established pursuant to that certain Woodland Research and Technology Park Development Impact Fee Nexus Study dated July 2023, prepared by Economic and Planning Systems, Inc. (the “RTIF Report”), which is incorporated herein by this reference, subject to annual adjustment as set forth in the RTIF Report, and further subject to periodic updates to the RTIF report as provided for herein. OWNER acknowledges and agrees that the RTIF is established pursuant to this and other development agreements entered into by and between OWNER and other property owners within the Specific Plan Area for specified land uses in a manner so as to help ensure the completion of the public facilities contemplated by the Specific Plan and the feasibility of all proposed land uses within the Specific Plan Area. Accordingly, OWNER agrees as follows:

(a) OWNER understands, acknowledges and agrees that the RTIF is calculated to ensure sufficient funding to complete the Improvements contemplated by the Specific Plan as a whole, but that some land uses, including certain residential uses, will pay RTIF in excess of their proportionate share of the total cost of those public facilities in order to facilitate the build out of other land uses contemplated within the Specific Plan. OWNER hereby agrees to pay such fees in the amounts and the manner set forth in this Agreement and the RTIF Report, as it may be updated from time to time, to provide the public benefits that will be derived from successful development of all land uses in the Specific Plan Area.

(b) OWNER and City further acknowledge and agree that portions of the RTIF shall be updated prior to issuance of the first building permit for the Project based on more detailed engineering work that will be conducted on the improvements included in the Capital Improvement Plan. Such modifications are described in Exhibit E, "WRTP CIP Modification", attached hereto and incorporated herein by this reference. Following the completion of the modifications described in Exhibit E, the City shall update the RTIF to account for such modifications. OWNER hereby agrees and consents to such modifications of the RTIF, provided that the allocation of such fees is consistent with the methodology utilized in the RTIF Report.

(c) OWNER and CITY further acknowledge and agree that certain projects that are to be funded by the RTIF are intended in whole or in part to address impacts created by development in the Spring Lake Specific Plan Area located adjacent to the Specific Plan Area that includes the Property. These projects have been included in the projects to be funded by the RTIF as a form of equitable swap in exchange for certain projects constructed by developers in the Spring Lake Specific Plan that partially benefit the Specific Plan Area that includes the Property. OWNER acknowledges and explicitly consents to the inclusion of such projects in the calculation of the RTIF and acknowledges that the RTIF may be used to fund such projects. OWNER further acknowledges and agrees that it OWNER shall not be eligible for reimbursement from property owners or developers of property located within the Spring Lake Specific Plan Area for any projects that are funded by the RTIF.

(d) OWNER and CITY further acknowledge and agree that for properties that are designated in the Land Use section of the Specific Plan as Village Center Mixed Use (VCMU), in the event that the ground floor development fronting Road B is developed for a non-residential use, and OWNER constructs upper floor residential units, above the non-residential buildings fronting Road B, OWNER shall not be required to pay the RTIF on any such upper floor residential units. Further, for properties that are designated in the Land Use section of the Specific Plan as High Density Residential with Community Commercial Overlay (HDR/CCO), in the event that (1) the total unit yield for Residential Development Zone ("RDZ") 6 as set forth in Table 6.1 of the Specific Plan has been constructed and occupied by residents, and (2) OWNER constructs upper floor residential units above the non-residential buildings fronting Road B which upper floor residential units are in excess of the required total unit yield for RDZ 6, OWNER shall not be required to pay the RTIF on any such upper floor residential units.

4.2.3 Time of Payment. The Development Impact Fees and RTIF shall be paid to CITY prior to the issuance of building permits for each residential unit. Notwithstanding the

foregoing, deferral of the payment of any RTIF fees may be granted pursuant to a separate agreement approved by CITY pursuant to CITY's deferred impact fee policy for non-residential development, if applicable. At CITY's discretion, CITY shall be allowed to defer RTIF fees to Certificate of Occupancy provided that the fee paid is the fee in effect on the date it is paid. Payment of RTIF fees shall be subject to the provisions of credits as provided for in this Agreement and the Public Infrastructure Reimbursement Rules.

4.2.4 Minimum RTIF Fees. OWNER specifically agrees that for each Low Density Residential unit developed in a LDR or VCLDR zone shall pay, at a minimum, the RTIF fee that is established for the 2,000-3,000 square foot unit, even for those units that are less than 2,000 square feet. OWNER further agrees that for each Medium Density Residential unit developed in a MDR or VCMDR zone shall pay, at a minimum, the RTIF fee that is established for the 1,000-2,000 square foot unit, even for those units that are less than 1,000 square feet..

4.2.5 Credits. OWNER shall be entitled to credit against the fees required pursuant to Subsection 4.2.1 and 4.2.2 for the dedication of easements, land and/or the construction of improvements required pursuant to this Agreement, the CIP, the Public Infrastructure Reimbursement Rules, the Phasing Rules, OWNER's Infrastructure Phasing Plan and the applicable Subdivision Agreements/Tentative Map conditions for the Project. OWNER shall not receive credits for Improvements constructed pursuant to this Agreement in an amount greater than the Engineer's estimate of the cost of such improvements as set forth in the CIP, adjusted on an annual basis by the Construction Cost Index as published from time to time by the Engineering News-Record ("CCI"). Similarly, OWNER shall receive credits toward the RTIF for land dedicated to the CITY for public infrastructure improvements based on the costs for such land as set forth in the CIP, adjusted on an annual basis by CCI. The Public Infrastructure Reimbursement Rules provides further detail on the terms pursuant to which OWNER will receive credits and reimbursement for dedication of easements, land and construction of Improvements in conjunction with the development of the Property, and OWNER acknowledges and agrees that it is subject to and shall comply with the Public Infrastructure Reimbursement Rules.

4.3 Responsibility for Funding Master Planning and Design Documents and CIP Modification Work. OWNER shall be required to fund the cost of certain Master Plans and the design of certain public improvements, as more specifically set forth in Exhibit "F" ("**Master Planning and Design Obligations**"), attached hereto and incorporated herein by this reference, and to fund the cost of the analysis and consideration of the proposed modifications to the CIP as described in Section 4.2.2(b) and Exhibit "E" ("**CIP Modification Work**"). Such funding shall be provided by OWNER and other property owners in the Specific Plan Area at the times as required by this Agreement, including the Public Infrastructure Reimbursement Rules and the Phasing Rules. Except as otherwise set forth in the Master Planning and Design Obligations, the Master Plans and the design documents and the CIP Modification Work are the cumulative responsibility of the owners of property within the Specific Plan Area, and to the extent the OWNER is required to pay more than its proportionate share of the cost of any of such Master Plans and design documents or CIP Modification Work, OWNER shall be eligible for reimbursement from other property owners within the Specific Plan Area pursuant to the terms of the Public Infrastructure Reimbursement Rules. CITY and OWNER shall cooperate in the preparation of these documents.

4.4 Dedications for Public Improvements. OWNER agrees to dedicate to CITY certain property to be used for public facilities and improvements as more specifically set forth in Exhibit “G” (“**Public Dedications**”), attached hereto and incorporated herein by this reference. Such dedications shall be made by OWNER at the times as required by this Agreement and the Phasing Rules so as to provide dedications when needed for the extension of infrastructure or public amenities for the Project and other development in the Specific Plan Area. These dedications may be required ahead of development of OWNER’s Property. OWNER may be eligible for credits and, if applicable, reimbursement from other property owners within the Specific Plan Area for the dedications required by this Agreement if the real property to be dedicated is included in the CIP and reflected in the RTIF. Credit or reimbursement for such real property shall be provided as set forth in Section 4.2.5 of this Agreement, which credits and reimbursements shall be paid in accordance with the Public Infrastructure Reimbursement Rules. Real property that is set forth in Exhibit “G” but is not included in the CIP and reflected in the RTIF shall not be eligible for credit or reimbursement from other property owners or the RTIF. If real property is needed for temporary drainage of agricultural runoff prior to the full implementation of the storm drainage system reflected in the CIP, then the dedicating property owner shall dedicate the drainage easement to the developing land owner without compensation consistent with the timing of other public dedications in this agreement. CITY and OWNER acknowledge and agree that the property that must be dedicated to CITY may be modified from time to time through updates to the CIP after approval of this Agreement or in conjunction with the processing of subdivision maps for the Property. OWNER shall make such dedications in accordance with the CIP as it may be modified from time to time, in accordance with the timing for dedication as set forth in the approved Infrastructure Phasing Plan and Exhibit G.

4.5 Responsibility for Construction of Public Improvements.

4.5.1 Timely Construction of Public Infrastructure. As part of the development of the Project, OWNER shall be required to construct portions of certain area wide infrastructure that will serve the Specific Plan Area. Such infrastructure shall be the infrastructure that will be required pursuant to the Infrastructure Phasing Plan that shall be developed by OWNER pursuant to Section 3.5.1 of this Agreement. OWNER shall be responsible for the timely construction and completion of all Improvements required for the Project in accordance with the Infrastructure Phasing Plan and any and all tentative subdivision map conditions. All required Improvements for each Subdivision Map, shall be completed and operational prior to City approval of the final subdivision map, unless OWNER enters into a Public Improvement Agreement with the City for such Improvements and provides adequate security for such improvements in accordance with the Subdivision Map Act and Woodland Municipal Code Chapter 16.52, as it may be amended from time to time, in which case such Improvements shall be constructed within the times provided in the Public Improvement Agreement.

4.5.2 Reimbursement for Public Infrastructure. Upon completion of the Improvements for an applicable portion of the development of the Property as required pursuant to this Agreement, CITY and OWNER shall enter into a reimbursement agreement that will provide for reimbursement of OWNER to the extent that the Engineers estimate of the cost of such improvements as set forth in the CIP (and adjusted by CCI) exceeds the amount of the RTIF applicable to the applicable portion of the Property developed by OWNER. Such reimbursement

agreement shall be consistent with the Public Infrastructure Reimbursement Rules and the Phasing Rules. In the event OWNER/Developer builds MPFP projects, they are eligible for reimbursement consistent with the policies in the City's MPFP fee program and the City's MPFP administrative guidelines.

4.6 Parks Impact Fee. OWNER agrees that it shall pay the Parks Impact Fee adopted for the Specific Plan Area in the amount of \$9,279 per single family unit or \$6,959 per multi-family unit (as of January 1, 2023), which fee shall be adjusted on an annual basis by CCI. OWNER shall not be eligible to receive credits toward the Parks Impact Fee for dedication of park acreage or greenbelts or for construction of park or green belt improvements within the Specific Plan Area.

4.7 Affordable Housing. OWNER will comply with the requirements of Chapter 15.18 of the Woodland Municipal Code (the "Affordable Housing Ordinance") through the implementation of the Affordable Housing Plan for the Specific Plan (the "**WRTP Affordable Housing Plan**"), which is attached hereto as Exhibit "H" and incorporated herein by this reference. In the event of any inconsistencies between the Affordable Housing Ordinance and the WRTP Affordable Housing Plan, the WRTP Affordable Housing Plan shall apply to the Project.

4.8 Supplemental School Fee. OWNER acknowledges that Costalotta Partners, LLC, the owners of the "Beeman North" property will be entering into good faith negotiations with Woodland Joint Unified School District ("WJUSD") for the potential purchase of property to be used as a school campus. OWNER will participate in good faith negotiations involving the payment of a supplemental school fee towards the construction of facilities that provide capacity for students generated by the Specific Plan. OWNER agrees that if a supplemental fee shall be paid by OWNER, then such supplemental fee shall be deposited with the City of Woodland at the time of building permit issuance, placed in a segregated account, and held by City for future payment to WJUSD for the construction of the WRTP elementary school, or as otherwise specified in the School Site Purchase and Sale Agreement. In the event WJUSD does not proceed with construction of a school at the School Site, or other project(s) specified in the School Site Purchase and Sale Agreement by issuance of the 800th residential building permit in the Specific Plan Area, then the supplemental fee funds may be used by the City to construct public improvements included in the CIP, as it may be amended from time to time, at the discretion of the City

4.9 Dedication of Land for Business Incubator Property. Within the first 500,000 square feet of non-residential construction, OWNER shall set aside land sufficient for the construction of no less than 30,000 square feet of research and technology space dedicated to the support of new technology-based companies, such as start-up/business incubator space or academic-industry collaboration space. CITY and OWNER shall work together to determine an appropriate operator for such space, and upon such determination, the research and technology land shall be dedicated to such operator at no cost.

4.10 Right to Continue Use of Agricultural Well. CITY and OWNER understand and acknowledge that there exists within the Specific Plan Area agricultural wells that provide irrigation for certain other property that remains in agricultural use. The Parties

agree that OWNER may operate any such agricultural wells owned by OWNER to serve agricultural uses on OWNER's property or other property, provided that such use must be in compliance with all applicable federal, state and local laws, including but not limited to the Yolo Subbasin Groundwater Sustainability Plan adopted by the Yolo Subbasin Groundwater Agency, and any regulations or directives promulgated thereunder. OWNER shall be solely responsible to retain any and all property interests necessary for continuing operation of any such agricultural well, and for ensuring compliance with all applicable laws and regulations, as well as the Groundwater Sustainability Plan.

4.11 Abandonment of County Road 100A. OWNER shall work with the California Department of Transportation ("CalTrans"), Yolo County and CITY to take such steps as are necessary to abandon County Road 100A, which is located adjacent to OWNER's Property. OWNER shall, at no cost or expense to CITY, and with no credits or reimbursements through this Agreement or the Public Infrastructure Reimbursement Rules, ensure that such public right of way or private access easements are provided to ensure that any and all properties that would be landlocked as a result of the abandonment of County Road 100A have adequate access to public roads from their property, and OWNER, in conjunction with its neighboring property owner that also fronts County Road 100A, shall be responsible to secure all necessary approvals, consents and actions as necessary to effectuate the abandonment of County Road 100A. OWNER shall work expeditiously to accomplish this provision in a timely manner.

4.12 Build to Rent Development. OWNER agrees that neither it nor any successor or assign to this Agreement shall develop single family residences in the Low Density Residential, Village Center Low Density Residential, Village Center Medium Density Residential or Medium Density Residential zones located north of Marston Drive in the Specific Plan Area as shown on the Development Plan attached hereto as Exhibit "C", as a "build to rent single family development". For purposes of this Agreement, a "build to rent single family development" is a single family residential subdivision or a portion of such subdivision that is built for the purpose of renting, rather than selling the constructed homes.

5. FINANCING OF PUBLIC IMPROVEMENTS.

5.1 Financing Districts or Alternative Mechanisms. If deemed appropriate, CITY and OWNER will cooperate in the formation of any special assessment district, community facilities district or alternate financing mechanisms to pay for the construction and/or maintenance and operation of public infrastructure facilities or Improvements required as part of this Agreement, the CIP and the approved Infrastructure Phasing Plan, provided, however, that to the extent that a district or alternative financing mechanism is established for the purpose of bonding to raise funds for construction of infrastructure or payment of fees, the boundaries of such district will be limited to separate improvement areas that correspond with the boundaries of the tentative map (or tentative maps) within each Infrastructure Phasing Plan. The RTIF fees generated from the improvement area may be used to fund any improvement in the CIP. Such improvement areas shall be shown in the Infrastructure Phasing Plan approved by the City pursuant to this Development Agreement. CITY also agrees that, to the extent any such district or other financing entity is formed and sells bonds in order to finance such Improvements, OWNER may receive credits for the RTIF to be paid by OWNER, and may be reimbursed to the extent that OWNER spends funds or dedicates land for the establishment of public improvements that are

included in the CIP, provided that such fee credits and reimbursements must be in conformance with the Public Infrastructure Reimbursement Rules and any individual reimbursement agreements entered into by and between CITY and OWNER. Notwithstanding the foregoing, it is acknowledged and agreed by the parties that nothing contained in this Agreement shall be construed as requiring CITY or the City Council to form any such district or to issue and sell bonds. If bonds are sold then the proceeds of those bonds shall be used to reimburse the public improvements that are listed in the CIP and required by the conditions of the associated development.

CITY agrees to use reasonable efforts to develop and implement such financing mechanisms subject to applicable public hearing and election requirements of applicable State and, if tax-exempt bonds are to be issued, federal law, the existing regulations and the customary and reasonable industry standards for the development of such financings. OWNER and CITY acknowledge and agree that the establishment of a financing district and the issuance of bonds supported by the special taxes are dependent on many factors that are not known at this time. The viability of the financing, the amount of special taxes for debt service, and available bond proceeds will be dependent on several factors existing at the time the bonds are sold, including, but not limited to, the financial markets, interest on tax exempt financings, housing market, value of homes in the area, absorption rates for home sales in the area, bond underwriting criteria and ratings by bond-rating agencies. Fee credits that are generated from bond sales shall remain with the land that they were bonded against and can be used as a credit against RTIF fee payments. These fee credits cannot be sold or transferred.

CITY and OWNER acknowledge the infrastructure costs needed to support the project are substantial and may compromise the feasibility or timely build out of the Project and its associated benefits. CITY and OWNER further acknowledge this is especially the case for the development of residential units in the MDR and HDR zones. As such, both parties agree to work cooperatively to identify and pursue external funding sources, multiple financing strategies and tools to defray project infrastructure improvement costs. Further, the City anticipates that adjustments to the Specific Plan and associated approvals may be needed in the future, and the City will conduct further evaluation of the Specific Plan, CIP and City fee program after Specific Plan approval to determine what adjustments are appropriate.

5.2 Sports Park Community Facilities District. OWNER acknowledges the existence of the Spring Lake Community Facilities District (“**Sports Park CFD**”) which was created pursuant to the Mello-Roos Community Facilities Act, as set forth in Government Code Section 53311 *et seq.* for the purpose of funding the ongoing operation of the Woodland Sports Park, which provides regional park facilities that will serve the Property. OWNER voluntarily consents to and prior to recordation of each small lot final subdivision map or large lot map (for High Density and Mixed Use Residential units) for the Project shall take whatever affirmative action it needs to take on its part to ensure that all portions of the Project and Property that are designated as Low Density Residential, Village Center Low Density Residential, Medium Density Residential, Village Center Medium Density Residential and High Density Residential (including units above Village Center Mixed Use and Community Commercial Overlay for which such small lot final subdivision map or large lot map - for High Density and Mixed Use Residential units) is recorded is subject to the assessments of the Sports Park CFD, which includes without limitation, voting to annex to said Sports Park CFD.

5.3 Maintenance Community Facilities District(s).

5.3.1 Formation, Consent, Waiver, and Benefit. No building permits shall be issued for the residential units or commercial development provided for in the first subdivision map for the Project until a Community Facilities District has been formed for the purpose of funding public services and maintenance costs associated with the Project for services identified in Exhibit I or the Property has been annexed into such a Community Facilities District that has already been formed to fund public services and maintenance costs for the Specific Plan Area (the “**Maintenance CFD**”), or OWNER participates in the formation of an equivalent funding mechanism for public services and maintenance purpose in a form satisfactory to the City Engineer. OWNER consents to and shall cooperate in such formation or annexation of the Maintenance CFD or the formation of an equivalent financing mechanism for maintenance and services purposes. OWNER also consents to the levy of such special taxes or assessments as are necessary to fund the maintenance and service obligations described herein, pursuant to and consistent with the requirements of this Agreement, Government Code Section 53111, et seq., and the City's Capital Financing and Debt Management Policy, adopted by City Council on June 20, 2017 and incorporated herein by this reference.

5.3.2 Annexation of Subsequent Phases. No building permits shall be issued for subsequent phases of the Project until the such phase is annexed into the Maintenance CFD or an equivalent funding mechanism for public services and maintenance costs has been established for such subsequent phase in accordance with Section 5.3.1.

5.3.3 Uses of Funds Collected. The Maintenance CFD will fund maintenance of certain landscaping, public improvements and public facilities as more specifically set forth in Exhibit “I”, attached hereto and incorporated herein by this reference (“**Maintenance Services**”).

5.4 Maximum Effective Tax Rate. CITY and OWNER agree that the maximum effective tax rate for assessor’s parcels within the Property from all applicable financing districts, including without limitation, any financing districts established as contemplated in Section 5.1 of this Agreement, the Sports Park CFD, the Maintenance CFD and any CFD or Assessment District established pursuant to the Statewide Community Infrastructure Program, may not exceed one and 8/10 percent (1.8%) of the reasonably expected value of the parcel with planned vertical improvements determined at the time of approval of the applicable financing district and the Rate and Method of Apportionment.

6. REVIEW FOR COMPLIANCE.

6.1 Periodic and Special Reviews.

6.1.1 Time for and Initiation of Periodic Review. The CITY shall review this Agreement as determined by the City, in order to ascertain the good faith compliance by OWNER with the terms of this Agreement. OWNER shall submit an Annual Monitoring Report to CITY, in a form acceptable to the City Manager, along with any applicable processing charge, within ten (10) days after each anniversary date of the Effective Date of this Agreement. Within thirty (30) days after the receipt of the Annual Monitoring Report, CITY shall either issue a notice of continuing compliance or a notice of non-compliance and a notice of CITY’s intent to

conduct a Special Review pursuant to Sections 6.1.2 through 6.1.6. Issuance of a notice of continuing compliance may be issued by the City Manager or his designee. The cost of this review shall be funded by the OWNER on a time and materials basis.

6.1.2 Initiation of Special Review. A special review may be called either by agreement of the parties or by unilateral initiation by the CITY in one or more of the following ways:

- (a) Recommendation of the Community Development Director;
- (b) Affirmative vote of at least four (4) members of the Planning Commission; or
- (c) Affirmative vote of at least three (3) members of the City Council.

6.1.3 Notice of Special Review. The City Manager shall begin the special review proceeding by giving notice to OWNER that the CITY intends to undertake a special review of this Agreement. Such notice shall be given at least ten (10) days in advance of the time at which the matter will be considered by the Planning Commission.

6.1.4 Public Hearing. The Planning Commission shall conduct a hearing at which OWNER must demonstrate good faith compliance with the terms of this Agreement. The burden of proof on this issue shall be on OWNER.

6.1.5 Findings upon Public Hearing. The Planning Commission shall determine, upon the basis of substantial evidence, whether OWNER has, for the period under review, complied in good faith with the terms and conditions of this Agreement.

6.1.6 Procedure upon Findings.

(a) If the Planning Commission finds and determines on the basis of substantial evidence that OWNER has complied in good faith with the terms and conditions of this Agreement, during the period under review, the review for that period shall be concluded.

(b) If the Planning Commission finds and determines on the basis of substantial evidence that OWNER has not complied in good faith with the terms and conditions of this Agreement, during the period under review, the Planning Commission may recommend to the City Council to modify or terminate this Agreement.

(c) OWNER may appeal a determination pursuant to paragraph (b) to the City Council in accordance with CITY's rules for consideration of appeals in zoning matters generally.

6.2 Proceedings Upon Modification or Termination. If, upon a finding under Section 6.1.6(b), CITY determines to proceed with modification or termination of this Agreement, CITY shall give written notice to OWNER of its intention so to do. The notice shall be given at least ten (10) calendar days prior to the scheduled hearing and shall contain:

- (a) The time and place of the hearing;
- (b) A statement as to whether or not CITY proposes to terminate or to modify the Agreement; and,
- (c) Such other information CITY considers necessary to inform OWNER of the nature of the proceeding.

6.3 Hearing on Modification or Termination. At the time and place set for the hearing on modification or termination, OWNER shall be given an opportunity to be heard. OWNER shall be required to demonstrate good faith compliance with the terms and conditions of this Agreement. The burden of proof on this issue shall be on OWNER. If the City Council finds, based upon substantial evidence in the administrative record, that OWNER has not complied in good faith with the terms or conditions of the Agreement, the City Council may terminate or modify this Agreement and impose such conditions to the action it takes as it considers necessary to protect the interests of the CITY. The decision of the City Council shall be final, subject only to judicial review pursuant to Section 1094.5 of the Code of Civil Procedure.

6.4 Certificate of Agreement Compliance. If, at the conclusion of a Periodic or Special Review, OWNER is found to be in compliance with this Agreement, CITY shall, upon written request by OWNER, issue a Certificate of Agreement Compliance ("Certificate") to OWNER stating that after the most recent Periodic or Special Review and based upon the information known or made known to the Community Development Director and City Council that (1) this Agreement remains in effect and (2) OWNER is not in default. The Certificate shall be in recordable form, shall contain information necessary to communicate constructive record notice of the finding of compliance, shall state whether the Certificate is issued after a Periodic or Special Review and shall state the anticipated date of commencement of the next Periodic Review. OWNER may record the Certificate with the County Recorder.

Whether or not the Certificate is relied upon by assignees or other transferees or OWNER, CITY shall not be bound by a Certificate if a default existed at the time of the Periodic or Special Review, but was concealed from or otherwise not known to the Community Development Director or City Council.

7. DEFAULT AND REMEDIES.

7.1 Remedies in General. It is acknowledged by the parties that CITY would not have entered into this Agreement if it were to be liable in damages under this Agreement, or with respect to this Agreement or the application thereof.

In general, each of the parties hereto may pursue any remedy at law or equity available for the breach of any provision of this Agreement, except that CITY shall not be liable in damages to OWNER, or to any successor in interest of OWNER, or to any other person, and OWNER covenants not to sue for damages or claim any damages:

- (a) For any breach of this Agreement or for any cause of action which arises out of this Agreement; or

(b) For the taking, impairment or restriction of any right or interest conveyed or provided under or pursuant to this Agreement; or

(c) Arising out of or connected with any dispute, controversy or issue regarding the application or interpretation or effect of the provisions of this Agreement.

7.2 Specific Performance. The parties acknowledge that money damages and remedies at law generally are inadequate and specific performance and other non-monetary relief are particularly appropriate remedies for the enforcement of this Agreement and should be available to all parties for the following reasons:

(a) Money damages are unavailable against CITY as provided in Section 7.1 above.

(b) Due to the size, nature and scope of the project, it may not be practical or possible to restore the Property to its natural condition once implementation of this Agreement has begun. After such implementation, OWNER may be foreclosed from other choices it may have had to utilize the Property or portions thereof. OWNER has invested significant time and resources and performed extensive planning and processing of the Project in agreeing to the terms of this Agreement and will be investing even more significant time and resources in implementing the Project in reliance upon the terms of this Agreement, and it is not possible to determine the sum of money which would adequately compensate OWNER for such efforts.

7.3 Release. Except for non-damage remedies, including the remedy of specific performance and judicial review as provided for in Sections 7.2 and 6.3, respectively, OWNER, for itself, its successors and assignees, hereby releases the CITY, its officers, agents and employees from any and all claims, demands, actions, or suits of any kind or nature arising out of any liability, known or unknown, present or future, including, but not limited to, any claim or liability, based or asserted, pursuant to Article I, Section 19 of the California Constitution, the Fifth Amendment of the United States Constitution, or any other law or ordinance which seeks to impose any other liability or damage, whatsoever, upon the CITY because it entered into this Agreement or because of the terms of this Agreement.

7.4 Termination of Agreement for Default of OWNER. Subject to the provisions contained in Subsection 6.3 herein, in addition to the remedy of specific performance as set forth in Section 7.2, CITY may terminate this Agreement for any failure of OWNER to perform any material duty or obligation of OWNER under this Agreement, or to comply in good faith with the terms of this Agreement (hereinafter referred to as “default”); provided, however, CITY may terminate this Agreement pursuant to this Section only after providing written notice to OWNER of default setting forth the nature of the default and the actions, if any, required by OWNER to cure such default and, where the default can be cured, OWNER has failed to take such actions and cure such default within 60 days after the effective date of such notice or, in the event that such default cannot be cured within such 60 day period but can be cured within a longer time, has failed to commence the actions necessary to cure such default within such 60 day period and to diligently proceed to complete such actions and cure such default.

7.5 Termination of Agreement for Default of CITY. OWNER may terminate this Agreement only in the event of a default by CITY in the performance of a material term of this Agreement and only after providing written notice to CITY of default setting forth the nature of the default and the actions, if any, required by CITY to cure such default and, where the default can be cured, CITY has failed to take such actions and cure such default within 60 days after the effective date of such notice or, in the event that such default cannot be cured within such 60 day period but can be cured within a longer time, has failed to commence the actions necessary to cure such default within such 60 day period and to diligently proceed to complete such actions and cure such default.

8. THIRD PARTY LITIGATION.

8.1 General Plan Litigation. CITY has determined that this Agreement is consistent with its General Plan, as such called General Plan exists as of the Effective Date ("General Plan"), and that the General Plan meets all requirements of law. OWNER has reviewed the General Plan and concurs with CITY's determination.

CITY shall have no liability in damages under this Agreement for any failure of CITY to perform under this Agreement or the inability of OWNER to develop the Property as contemplated by the Development Plan of this Agreement as the result of a judicial determination that on the Effective Date, or at any time thereafter, the General Plan, or portions thereof, are invalid or inadequate or not in compliance with law.

8.2 Third Party Litigation Concerning Agreement. OWNER shall defend, at its expense, including attorneys' fees, indemnify, and hold harmless CITY, its agents, officers and employees from any claim, action or proceeding against CITY, its agents, officers, or employees to attack, set aside, void, or annul the approval of this Agreement or the approval of any permit granted pursuant to this Agreement. CITY shall promptly notify OWNER of any such claim, action or proceeding, and CITY shall cooperate in the defense. If CITY fails to promptly notify OWNER of any such claim, action or proceeding, or if CITY fails to cooperate in the defense, OWNER shall not thereafter be responsible to defend, indemnify, or hold harmless CITY. CITY may in its discretion participate in the defense of any such claim, action or proceeding.

8.3 Indemnity. In addition to the provisions of 8.2 above, OWNER shall indemnify and hold CITY, its officers, agents, employees and independent contractors free and harmless from any liability whatsoever, based or asserted upon any act or omission of OWNER, its officers, agents, employees, subcontractors and independent contractors, for property damage, bodily injury, or death (OWNER's employees included) or any other element of damage of any kind or nature, relating to or in any way connected with or arising from the activities contemplated hereunder, including, but not limited to, the study, design, engineering, construction, completion, failure and conveyance of the public improvements, save and except claims for damages arising through the sole active negligence or sole willful misconduct of CITY. OWNER shall defend, at its expense, including attorneys' fees, CITY, its officers, agents, employees and independent contractors in any legal action based upon such alleged acts or omissions. CITY may in its discretion participate in the defense of any such legal action.

8.4 Environment Assurances. OWNER shall indemnify and hold CITY, its officers, agents, and employees free and harmless from any liability, based or asserted, upon any act or omission of OWNER, its officers, agents, employees, subcontractors, predecessors in interest, successors, assigns and independent contractors for any violation of any federal, state or local law, ordinance or regulation relating to industrial hygiene or to environmental conditions on, under or about the Property, including, but not limited to, soil and groundwater conditions, and OWNER shall defend, at its expense, including attorneys' fees, CITY, its officers, agents and employees in any action based or asserted upon any such alleged act or omission. CITY may in its discretion participate in the defense of any such action.

8.5 Reservation of Rights. With respect to Sections 8.2, 8.3 and 8.4 herein, CITY reserves the right to either (1) approve the attorney(s) which OWNER selects, hires or otherwise engages to defend CITY hereunder, which approval shall not be unreasonably withheld, or (2) conduct its own defense, provided, however, that OWNER shall reimburse CITY forthwith for any and all reasonable expenses incurred for such defense, including attorneys' fees, upon billing and accounting therefor.

8.6 Survival. The provisions of this Sections 8.1 through 8.6, inclusive, shall survive the termination of this Agreement.

9. MORTGAGEE PROTECTION.

The parties hereto agree that this Agreement shall not prevent or limit OWNER, in any manner, at OWNER's sole discretion, from encumbering the Property or any portion thereof or any improvement thereon by any mortgage, deed of trust or other security device securing financing with respect to the Property. CITY acknowledges that the lenders providing such financing may require certain Agreement interpretations and modifications and agrees upon request, from time to time, to meet with OWNER and representatives of such lenders to negotiate in good faith any such request for interpretation or modification. CITY will not unreasonably withhold its consent to any such requested interpretation or modification provided such interpretation or modification is consistent with the intent and purposes of this Agreement. Any Mortgagee of the Property shall be entitled to the following rights and privileges:

(a) Neither entering into this Agreement nor a breach of this Agreement shall defeat, render invalid, diminish or impair the lien of any mortgage on the Property made in good faith and for value, unless otherwise required by law.

(b) The Mortgagee of any mortgage or deed of trust encumbering the Property, or any part thereof, which Mortgagee, has submitted a request in writing to the CITY in the manner specified herein for giving notices, shall be entitled to receive written notification from CITY of any default by OWNER in the performance of OWNER's obligations under this Agreement.

(c) If CITY timely receives a request from a mortgagee requesting a copy of any notice of default given to OWNER under the terms of this Agreement, CITY shall provide a copy of that notice to the Mortgagee within ten (10) days of sending the notice of default to

OWNER. The Mortgagee shall have the right, but not the obligation, to cure the default during the remaining cure period allowed such party under this Agreement.

(d) Any Mortgagee who comes into possession of the Property, or any part thereof, pursuant to foreclosure of the mortgage or deed of trust, or deed in lieu of such foreclosure, shall take the Property, or part thereof, subject to the terms of this Agreement. Notwithstanding any other provision of this Agreement to the contrary, no Mortgagee shall have an obligation or duty under this Agreement to perform any of OWNER's obligations or other affirmative covenants of OWNER hereunder, or to guarantee such performance; provided, however, that to the extent that any covenant to be performed by OWNER is a condition precedent to the performance of a covenant by CITY, the performance thereof shall continue to be a condition precedent to CITY's performance hereunder, and further provided that any sale, transfer or assignment by any Mortgagee in possession shall be subject to the provisions of Section 2.4 of this Agreement.

10. MISCELLANEOUS PROVISIONS.

10.1 Recordation of Agreement. This Agreement and any amendment or cancellation thereof shall be recorded with the Yolo County Recorder by the City Clerk within ten (10) days of CITY's entry into this Agreement, as required by Section 65868.5 of the Government Code. If the parties to this Agreement or their successors in interest amend or cancel this Agreement as provided for herein and in Government Code Section 65868, or if the CITY terminates or modifies the agreement as provided for herein and in Government Code Section 65865.1 for failure of the applicant to comply in good faith with the terms or conditions of this Agreement, the City Clerk shall have notice of such action recorded with the Yolo County Recorder.

10.2 Entire Agreement. This Agreement sets forth and contains the entire understanding and agreement of the parties, and there are no oral or written representations, understandings or ancillary covenants, undertakings or agreements which are not contained or expressly referred to herein. No testimony or evidence of any such representations, understandings or covenants shall be admissible in any proceeding of any kind or nature to interpret or determine the terms or conditions of this Agreement.

10.3 Severability. If any term, provision, covenant or condition of this Agreement shall be determined invalid, void or unenforceable, the remainder of this Agreement shall not be affected thereby to the extent such remaining provisions are not rendered impractical to perform taking into consideration the purposes of this Agreement. Notwithstanding the foregoing, the provision of the Public Benefits set forth in Section 4 of this Agreement, including but not limited to the payment of the fees set forth therein, are essential elements of this Agreement and CITY would not have entered into this Agreement but for such provisions, and therefore in the event such provisions are determined to be invalid, void or unenforceable, this entire Agreement shall be null and void and of no force and effect whatsoever.

10.4 Interpretation and Governing Law. This Agreement and any dispute arising hereunder shall be governed and interpreted in accordance with the laws of the State of California. This Agreement shall be construed as a whole according to its fair language and common meaning to achieve the objectives and purposes of the parties hereto, and the rule of

construction to the effect that ambiguities are to be resolved against the drafting party shall not be employed in interpreting this Agreement, all parties having been represented by counsel in the negotiation and preparation hereof.

10.5 Section Headings. All section headings and subheadings are inserted for convenience only and shall not affect any construction or interpretation of this Agreement.

10.6 Singular and Plural. As used herein, the singular of any word includes the plural.

10.7 Joint and Several Obligations. Subject to Section 2.4, if at any time during the term of this Agreement the Property is owned, in whole or in part, by more than one owner, all obligations of such owners under this Agreement shall be joint and several, and the default of any such owner shall be the default of all such owners. Notwithstanding the foregoing, no owner of a single lot which has been finally subdivided and sold to such owner as a member of the general public or otherwise as an ultimate user shall have any obligation under this Agreement except as provided under Section 4 hereof.

10.8 Time of Essence. Time is of the essence in the performance of the provisions of this Agreement as to which time is an element.

10.9 Waiver. Failure by a party to insist upon the strict performance of any of the provisions of this Agreement by the other party, or the failure by a party to exercise its rights upon the default of the other party, shall not constitute a waiver of such party's right to insist and demand strict compliance by the other party with the terms of this Agreement thereafter.

10.10 No Third Party Beneficiaries. This Agreement is made and entered into for the sole protection and benefit of the parties and their successors and assigns. No other person shall have any right of action based upon any provision of this Agreement.

10.11 Force Majeure. Neither party shall be deemed to be in default where failure or delay in performance of any of its obligations under this Agreement is caused by floods, earthquakes, other Acts of God, fires, wars, riots or similar hostilities, strikes and other labor difficulties beyond the party's control, (including the party's employment force), government regulations, court actions (such as restraining orders or injunctions), or other causes beyond the party's control. If any such events shall occur, the term of this Agreement and the time for performance by either party of any of its obligations hereunder may be extended by the written agreement of the parties for the period of time that such events prevented such performance, provided that the term of this Agreement shall not be extended under any circumstances for more than five (5) years.

10.12 Mutual Covenants. The covenants contained herein are mutual covenants and also constitute conditions to the concurrent or subsequent performance by the party benefited thereby of the covenants to be performed hereunder by such benefited party.

10.13 Successors in Interest. The burdens of this Agreement shall be binding upon, and the benefits of this Agreement shall inure to, all successors in interest to the parties to this Agreement. All provisions of this Agreement shall be enforceable as equitable servitudes and constitute covenants running with the land. Each covenant to do or refrain from doing some act

hereunder with regard to development of the Property: (a) is for the benefit of and is a burden upon every portion of the Property; (b) runs with the Property and each portion thereof; and, (c) is binding upon each party and each successor in interest during ownership of the Property or any portion thereof.

10.14 Counterparts. This Agreement may be executed by the parties in counterparts, which counterparts shall be construed together and have the same effect as if all of the parties had executed the same instrument.

10.15 Jurisdiction and Venue. Any action at law or in equity arising under this Agreement or brought by a party hereto for the purpose of enforcing, construing or determining the validity of any provision of this Agreement shall be filed and tried in the Superior Court of the County of Yolo, State of California, and the parties hereto waive all provisions of law providing for the filing, removal or change of venue to any other court.

10.16 Project as a Private Undertaking. It is specifically understood and agreed by and between the parties hereto that the development of the Project is a private development, that neither party is acting as the agent of the other in any respect hereunder, and that each party is an independent contracting entity with respect to the terms, covenants and conditions contained in this Agreement. No partnership, joint venture or other association of any kind is formed by this Agreement. The only relationship between CITY and OWNER is that of a government entity regulating the development of private property and the owner of such property.

10.17 Further Actions and Instruments. Each of the parties shall cooperate with and provide reasonable assistance to the other to the extent contemplated hereunder in the performance of all obligations under this Agreement and the satisfaction of the conditions of this Agreement. Upon the request of either party at any time, the other party shall promptly execute, with acknowledgment or affidavit if reasonably required, and file or record such required instruments and writings and take any actions as may be reasonably necessary under the terms of this Agreement to carry out the intent and to fulfill the provisions of this Agreement or to evidence or consummate the transactions contemplated by this Agreement. The City Manager may delegate his or her powers and duties under this Agreement to the Community Development Director or other management level employee of the CITY. CITY shall cooperate in good faith with OWNER in the implementation of the Development of the Property to support successful development of each of the allowed land uses in the Specific Plan Area. The City acknowledges that OWNER has made and will be required to make additional investments to implement the Plan. This Agreement provides assurance to OWNER that the City will cooperate and assist in completion of the annexation process. City agrees that it will accept, in good faith, for processing, review and action, including but not limited to all applications for lot line adjustments, large lot subdivision maps, zoning, special permits, development permits, tentative maps, subdivision maps or other entitlements for use of the Property in accordance with the General Plan and this Agreement.

10.18 Eminent Domain. No provision of this Agreement shall be construed to limit or restrict the exercise by CITY of its power of eminent domain.

10.19 Agent for Service of Process. In the event OWNER is not a resident of the State of California or it is an association, partnership or joint venture without a member, partner or joint venturer resident of the State of California, or it is a foreign corporation, then in any such event, OWNER shall file with the Community Development Director, upon its execution of this Agreement, a designation of a natural person residing in the State of California, giving his or her name, residence and business addresses, as its agent for the purpose of service of process in any court action arising out of or based upon this Agreement, and the delivery to such agent of a copy of any process in any such action shall constitute valid service upon OWNER. If for any reason service of such process upon such agent is not feasible, then in such event OWNER may be personally served with such process out of this County and such service shall constitute valid service upon OWNER. OWNER is amenable to the process so served, submits to the jurisdiction of the Court so obtained and waives any and all objections and protests thereto.

10.20 Estoppel Certificate. Within thirty (30) days following a written request by any of the parties, the other party shall execute and deliver to the requesting party a statement certifying that (i) either this Agreement is unmodified and in full force and effect or there have been specified (date and nature) modifications to the Agreement, but it remains in full force and effect as modified; and (ii) either there are no known current uncured defaults under this Agreement or that the responding party alleges that specified (date and nature) defaults exist. The statement shall also provide any other reasonable information requested. The failure to timely deliver this statement shall constitute a conclusive presumption that this Agreement is in full force and effect without modification except as may be represented by the requesting party and that there are no uncured defaults in the performance of the requesting party, except as may be represented by the requesting party. OWNER shall pay to CITY all costs incurred by CITY in connection with the issuance of estoppel certificates under this Section 10.20 prior to CITY's issuance of such certificates.

10.21 Authority to Execute. The person or persons executing this Agreement on behalf of OWNER warrants and represents that he or she/they have the authority to execute this Agreement on behalf of his or her/their corporation, partnership or business entity and warrants and represents that he or she/they has/have the authority to bind OWNER to the performance of its obligations hereunder.

IN WITNESS WHEREOF, the parties hereto have executed this Development Agreement on the day and year set forth below.

INFRASTRUCTURE PHASING RULES

In order to proceed with development of their property, each owner within the Woodland Research and Technology Park Specific Plan Area is required by the Development Agreement entered into with the City to submit to City and obtain approval of an Infrastructure Phasing Plan (“Phasing Plan”) for each phase of development prior to approval of a tentative subdivision map for the property included in such phase. Owners are not required to seek approval of a Phasing Plan as described herein until they or their successor in interest to the Development Agreement apply for a tentative subdivision map for all or a portion of their property. The Phasing Plan must be consistent with these Infrastructure Phasing Rules (the “Rules”). For these Rules, all references to LDR also includes VCLDR and all references to MDR also includes VCMDR.

Each Phasing Plan shall ensure that the Improvements required for the development of the Property consistent with the Development Plan shall be completed prior to or concurrently with the development of the Property in accordance with the Phasing Plan for the Property. The Improvements included in the Plan must be supported by engineering studies that are based on sound engineering judgment and the technical studies and documents that provide support for the adoption of the Specific Plan.

The City and all property owners within the Specific Plan Area anticipate that the residential units in the LDR and MDR zones of the Specific Plan will be developed early in the overall build out of the Specific Plan Area, and generally prior to the development of high density residential and commercial development contemplated by the Specific Plan. In order to ensure that the Improvements required for the development of the Specific Plan Area are constructed in a manner that will serve that early development in a functional manner and ensure that there is not a delay in the provision of necessary infrastructure, each Plan that includes residential units in an LDR or MDR zone must construct infrastructure that is equal in value, based on the Engineer’s Estimate of Costs set forth in the CIP (as amended and adjusted for CCI) to not less than 145% or more than 150% of the RTIF (excluding the RTIF administration category) required to be paid for LDR units and not less than 125% or more than 130% of the RTIF (excluding the RTIF administration category) required to be paid for MDR units (based on the then current RTIF at the time the Phasing Plan was approved) for the residential units that are to be constructed in the LDR and/or MDR zones as part of such phase. .

The infrastructure to be counted toward the 150% or 130%, as applicable, of total value shall not include any dedications of right of way required to be made by the Owner or future developer of the Property. Such dedications, which shall be made as conditions on the applicable tentative subdivision map, shall be subject to reimbursement from future development in accordance with the Public Infrastructure Reimbursement Rules if the right of way is included in the CIP.

Each Phasing Plan that includes residential units in a LDR and/or MDR zone shall include all Improvements required for the development of the property included in the applicable phase, plus additional backbone and off-site improvements as determined to be appropriate for

the applicable phase in consultation with the City Engineer. In determining the backbone and off-site improvements to be included in the Plan, Developer and City shall work to design, fund and construct the following improvements as determined by the City Engineer:

- The Developer shall obtain approval from the City Engineer for improvement plans and shall provide improvement security in amounts consistent with the requirements Government Code Section 66499-66499.10 for all improvements set forth in the Plan prior to or concurrently with recordation of the first final subdivision map for the phase covered by the Plan.
- The City may, at its discretion, require additional on-site Improvements as part of the phase that are not specifically included in the engineering analysis for the applicable phase, but are deemed appropriate by the City Engineer, in consultation with Owner's Engineer for such development (e.g., traffic calming measures, left turn lanes for the benefit of bicycle and pedestrian safety, design requirements for roundabouts).
- In order to facilitate the construction of non-residential development, the first Plan including LDR or MDR units submitted to and approved by City shall include the extension of underground utilities to the Road B/County Road 25A ("CR 25A") intersection. This Plan shall also include the construction of Road A and Road B south of CR 25A, and Road G between Road A and Road B. Alternatively, the Owner may instead propose to construct non-residential infrastructure on the north side of CR 25A, and City may, in its sole discretion, allow for this alternative to be included in the first Plan rather than the extension of roads south of CR 25A.
- The Plan for the first 500 residential units¹ to be developed cumulatively in the MDR and LDR zones in the Specific Plan shall require the Owner to provide sufficient funding to design and construct the CR 25A/State Route 113 ("SR 113") interchange. Each of the first five hundred units shall contribute toward the CR 25A/State Route 133 ("SR 113") interchange according to the following formula:
Per unit contribution = project cost * 1.2 * 0.53/500 units
The project cost is the amount listed in the CIP with an annual adjustment by CCI
The 1.2 factor provides an extra contingency amount to make sure the project is adequately funded
0.53 is the cost share for the WRTP as reflected in the CIP
The first 350 units shall make this contribution at building permit. Any units from 351-500 shall make this contribution at final map.
The Owner may elect to perform a traffic study in order to defer the collection of project funds and the timing of construction. The City Engineer shall review the results of the traffic study and determine the timing of the collection of project funds and the timing of construction.
- The Plan that includes the 600th residential unit shall include the completion of Road B between CR 25A and Parkland.
- The Plan that includes the 750th residential unit shall include the mobility hub improvements if they have not been constructed previously.

¹ All references to the number of residential units in these Phasing Rules refer to the cumulative number of residential units developed in the LDR and MDR zones of the Specific Plan. Residential units in other zones are not counted toward the threshold number of residential units triggering various public improvements as set forth in these Rules.

- The Parkland Ave Overcrossing abutment fill slope, dirt placement, compaction to CalTrans standards and stabilization must be included in the Plan that includes the first storm drainage pond.
- Any phase that will include the cumulative approval of more than 450 residential units must include construction of at least 1/3 of the Yard park improvements.
- The Plan for any phase of development of land that accesses Marston Drive must provide for the construction of a connection of Marston Avenue to CR 25A from either Road D or Road B if such a connection was not previously constructed, to ensure that any development that accesses Marston Avenue will be able to connect to the CR 25A/SR 113 interchange without traveling through the Spring Lake Specific Plan Area.
- The Plan for the first phase of development of land north of Parkland Avenue must provide for the construction of at least one eastbound lane and one westbound lane of Parkland Avenue between Road B and Harry Lorenzo Avenue.
- Greenbelts and park infrastructure that is included on the eastern and northern edges of the Specific Plan shall be included with the phase that includes any adjacent development. Further, any phase that includes residential development adjacent to a greenbelt shall include improvement of that greenbelt area within the Plan for that phase of development.
- The City may, at its option, require Owner to construct the Improvements described in the approved Plan or City may construct such improvements itself. Responsibility for construction of the improvements shall be indicated in the approved Plan. In the event the City constructs some or all of the Improvements included in the Plan, Owner shall be required to pay the full cost of the Improvements (or Owner's proportionate share of the cost, as indicated in the Plan), even if the reimbursement available through the RTIF is less than the actual cost of constructing the improvements.
- The City may, at its discretion, reject a Plan that includes partially constructed infrastructure. In the alternative, the City may reduce the amount of reimbursement that Owner may receive based on a determination by the City Engineer of the estimated additional costs that will be incurred by future developers to complete such infrastructure, which costs would not be incurred if the infrastructure was completed as a single project. Such determination shall be made in accordance with the Public Infrastructure Reimbursement Rules.
- Certain infrastructure improvements included in the CIP are not triggered by specific development and are not required based on a specific number of units (e.g., Gateway Monuments and enhanced landscaping). Those improvements shall be included in Plans in consultation with the City as needed to comply with the requirement to provide Improvements equal to 150% of the applicable phase's RTIF obligation for LDR units and 130% for MDR units.
- City may, at its discretion, delay the timing of infrastructure such that it falls to a future developer, then that future developer waives the right to contest the change in infrastructure requirements.
- All Improvements that are included in the CIP must be funded, constructed, or the Owner shall have entered into a public improvement agreement and provided the required security for such Improvements prior to recordation of the final subdivision map that includes the final residential units to be developed in the LDR and MDR zones.

EXHIBIT E

WRTP CAPITAL IMPROVEMENT PLAN MODIFICATIONS

It is understood that the following CIP items will need additional work after Specific Plan approval in order to provide a more accurate project cost for the CIP and fee program. The following items shall be investigated further so that the CIP and the fee program can be updated prior to the issuance of the first building permit in the Specific Plan. The CIP shall be updated consistent with the review and update of all of these items prior to the approval of the first phasing plan. These items need to be updated prior to first tentative map and phasing plan (because of right of way and cost implications). Tentative Map submissions to create large parcel maps do not trigger this requirement if they do not allow for development of LDR, VCLDR, MDR, or VCMDR residential units. The City shall enter into the contracts required to complete the work required to complete the following items with funding provided by the Owner and other property owners within the Specific Plan Area. OWNER and CITY agree that the City's staff time and legal expenses will be paid from the administrative portion of the RTIF.

- The CIP was developed assuming that the existing cross section for CR 25A can be reused for the future alignment of this roadway. If this is not true then there could be significant additional costs added to the CIP. Applicant to perform preliminary design work to verify horizontal and vertical alignment and update the cost estimate for CR 25A.

- Applicant to obtain survey information for Parkland Ave OC design to verify the amount of fill material needed for the abutment fill section. This information is also needed to set the right of way footprint for the abutment.

- The interchange footprint needs to be verified and included in the CIP update and in the dedication exhibit.

- The Miscellaneous segment of the CIP needs to be broken down in more detail by location so that the City can determine which developer to reimburse for what work.

- The Greenbelts, Parks and Ponds section of the CIP needs to be broken down in more detail by location so that the City can determine which developer to reimburse for what work.

- The development team will need to perform earthwork testing to determine if the pond excavation can be used as abutment fill material. Abutment backfill estimate to consider meeting Caltrans specifications. Surveying to be performed to determine quantities more accurately. If this earthwork testing is not performed, then the cost estimates shall be increased to account for off-hauling of the pond material and importing of the abutment material.

- Section N-N needs to be updated to account for modifications associated with the CR 25A/SR 113 interchange plans. The north side of section N-N and O-O will be modified to construct the landscaping and sidewalk. The south side of section N-N and O-O will not have a sidewalk (unless required by Caltrans).

-Review whether to add a sound wall to the CIP on the north side of CR 25A from the eastern edge of the Specific Plan to Road D.

-HCP/Ag mitigation to be included in the off site projects (if it applies).

-The size of roundabouts needs to be reviewed and approved by City staff prior to the update of the CIP and the dedication exhibit update.

-The City plans to change the name of County Road 25A (name is still not determined). The cost estimate will include the changes to any signs as part of the interchange project or the improvements to CR 25A.

-Subject to Caltrans approval, the City may choose to add minor landscaping improvements on the east side of SR 113 adjacent to the W RTP (planting/watering of trees and/or planting vines on the sound wall).

-The development team shall update unit costs in the CIP prior to updating the RTIF fee. The most recent cost estimate for the interchange will be included in the CIP update and the RTIF update.

EXHIBIT F

MASTER PLANNING AND DESIGN OBLIGATIONS

OWNER agrees that it will provide funding for certain master planning and design efforts that are required as part of the Specific Plan. These master planning and design efforts are required by the Specific Plan to be completed prior to the issuance of certain development approvals within the Specific Plan collectively, and as a result, certain developers within the Specific Plan may fund these master planning and design efforts in order to proceed with development and seek reimbursement from the other property owners within the Specific Plan Area pursuant to the Public Infrastructure Reimbursement Rules. In the event that other property owners have funded any of the master planning and design efforts set forth below, OWNER shall provide reimbursement for OWNER's proportionate share of the costs of such master planning and design efforts pursuant to the Public Infrastructure Reimbursement Rules. OWNER and CITY agree that the City's staff time and legal expenses will be paid from the administrative portion of the RTIF.

The master planning and design efforts are as follows:

- Master Parks Plan for Design of "The Yard" park as described in Section 6.2.3 of the Specific Plan. The Master Parks Plan for the Yard shall be consistent with and shall include the amenities set forth in the concept plan for The Yard that is attached to the CIP and will include a master plan level of design for The Yard. The Master Parks Plan shall be funded by contributions by OWNER and/or other property owners within the Specific Plan Area. The Master Parks Plan must be complete prior to the approval of the first tentative subdivision map or any other Subsequent Development Approval within the Specific Plan Area (excepting development of the Business Incubator property as set forth in the Development Agreement or development of affordable housing on a land dedication site as set forth in the WRTP Affordable Housing Plan). Tentative Map submissions to create large parcel maps do not trigger this requirement if they do not allow for the development of LDR, VCLDR, MDR or VCMDR residential units .
- Comprehensive Planting and Street Tree Palette. OWNER and other property owners within the Specific Plan Area shall fund the preparation of a comprehensive planting and street tree palette for both private and public landscaping improvements within the Specific Plan Area as more particularly described in Section 6.2.3 of the Specific Plan. This effort shall also include guidance on street furnishings, street lighting palettes and the conceptual design of Gateway monuments at the intersections of Road 25A and Road B and Road B and Marston Road. The Planting and Street Tree Palette shall be funded by contributions by OWNER and/or other property owners within the Specific Plan Area. The Planting and Street Tree Palette must be complete prior to the approval of the first tentative subdivision map or any other Subsequent Development Approval within the Specific Plan Area (excepting development of the Business Incubator property as set forth in the Development Agreement or development of affordable housing on a land dedication site as set forth in the WRTP Affordable Housing Plan).

- TDM/VMT Program. OWNER and other property owners shall fund the preparation of a Comprehensive Transportation Demand Management/Vehicle Miles Traveled Reduction Program (“TDM/VMT Program”) that shall (1) establish transportation strategies, programs, facilities or services for the purpose of VMT reduction and (2) provide specific VMT reduction strategies that all property owners/tenants shall be required to implement through individual Project-level TDM Plans consistent with the TDM/VMT Program. The TDM/VMT Program is more particularly described in Section 6.2.3 of the Specific Plan. The measures included in the TDM/VMT Program shall in combination achieve a 10 percent reduction in Plan Area VMT per capita compared to baseline conditions by 2035. The TDM/VMT Program shall be funded by contributions by OWNER and/or other property owners within the Specific Plan Area. The TDM/VMT Program must be complete prior to the approval of the first tentative subdivision map or any other Subsequent Development Approval within the Specific Plan Area. Prior to or as a condition of approval of OWNER’s first tentative subdivision map for the Property, OWNER must demonstrate to the satisfaction of CITY that a funding mechanism has been established to the satisfaction of CITY that will provide sufficient funding on an on-going basis to implement and maintain the Project-level TDM Plan or Plans for the Property.
- Infrastructure Study Report. OWNER and the other property owners within the Specific Plan Area shall fund the preparation of an Infrastructure Study Report which shall include the following items:
 - sound wall layout
 - signal interconnect exhibit
 - right of way dedication exhibit
 - greenway dedication exhibit
 - the yard exhibit and cost estimate
 - mobility hub exhibit and cost estimate
 - CFD map showing what will be maintained
 - Map and description for wells and pipes
 - Technical memos including correspondence (if necessary) and appendices (storm drainage, sewer, water, traffic etc)

EXHIBIT G
PUBLIC DEDICATIONS

NOTES:

1. THIS EXHIBIT IS BASED ON BEST AVAILABLE INFORMATION AT THE TIME OF PREPARATION. IN ALL CASES THE REQUIREMENTS OF THE WOODLAND RESEARCH AND TECHNOLOGY PARK SPECIFIC PLAN TAKE PRECEDENCE. IT SHOULD BE ASSUMED THAT FURTHER ADJUSTMENT FOR ACTUAL GREENWAY AND PARK DEDICATION MAY BE REQUIRED. DISTANCES ARE APPROXIMATE AND SUBJECT TO CHANGE WITH FORMAL BOUNDARY SURVEY(S) AND/OR DESIGN. ANY CHANGE IN GREENWAY DIMENSIONS TO BE CONSISTENT WITH ACREAGE IN SPECIFIC PLAN.
3. PROPERTY LINES BASED ON RECORD INFORMATION. ACTUAL PROPERTY LINE LOCATIONS MAY CHANGE UPON FIELD SURVEYING.

LEGEND:

-  GREENWAY AREA
-  AREA OUTSIDE MASTER PLAN
-  SEE DETENTION POND NOTE #1
-  SEE DETENTION POND NOTE #2
-  DIMENSIONS OF WIDENED AREAS AT KEY INTERSECTIONS TO BE DETERMINED WITH TENTATIVE MAPPING
-  EXISITING PROPERTY LINE
-  EXISITING RIGHT OF WAY
-  AREA TO BE DEDICATED AS STREET RIGHT OF WAY OR EASEMENT

DETENTION POND NOTES:

1. PROPOSED DETENTION POND - DIMENSIONS SUBJECT TO CHANGE BASED ON FINAL STORM WATER CALCULATIONS AND TENTATIVE MAP LAYOUT.
2. PROPOSED DETENTION POND - DIMENSIONS SUBJECT TO CHANGE BASED ON FINAL STORM WATER CALCULATIONS.

EXHIBIT H

WOODLAND RESEARCH AND TECHNOLOGY PARK AFFORDABLE HOUSING PLAN

1. All residential development in the Woodland Research and Technology Park Specific Plan Area is subject to the Affordable and Inclusionary Housing obligations as set forth in the City of Woodland's Affordable Housing Ordinance (Woodland Municipal Code Chapter 15.16) as modified by this Plan to ensure the inclusion of Affordable Housing within the Specific Plan Area. Provisions of this Plan that specifically apply in the Specific Plan Area and are not otherwise set forth in the Affordable Housing Ordinance are specified as being "Specific to WRTP".
2. **Specific to WRTP** – A minimum of 160 units within the Specific Plan Area at build out of the Specific Plan are planned to be constructed and rented at an affordable rent or sold at an affordable housing cost to low income households. The payment of in-lieu fees is anticipated to provide supplemental funding to support the construction of these units. Further, a minimum of 279 units in the Specific Plan Area (inclusive of 160 units for low income households) shall be constructed at or above 30du/ac consistent with the requirements of the City's Housing Element. The requirements set forth below are intended to implement these goals.
3. Inclusionary Obligation – Consistent with the City of Woodland's Affordable Housing Ordinance all development within the Specific Plan Area must meet the following affordable housing requirement either through the construction and sale/rental of affordable units, or one of the alternative compliance methods set forth in this policy:
 - a. In all **For-Sale** projects of at least 10 units in size, 10% of new for-sale units shall be affordable to low income households.
 - b. Calculations of required affordable units that result in a fraction of a **For-Sale** unit shall be rounded up to the nearest whole unit.
 - c. Ten percent (10%) of all **multifamily rental units** shall be affordable to low income households.
 - d. These requirements shall apply to all **multifamily rental projects** of at least 20 units. Projects with fewer than 20 units are exempt from affordable housing requirements.
 - e. Calculations of required affordable **multifamily rental** units that result in a fraction of a unit shall be rounded up to the nearest whole unit.
 - f. **Specific to WRTP** – Residential units that are developed within the Village Center Mixed Use Zone are exempt from the requirements of this Policy and the Affordable Housing Ordinance.

4. In-Lieu Fees – Consistent with the requirements of the City of Woodland’s Affordable Housing Ordinance:
- a. Owner is permitted to pay in-lieu fees to satisfy all or a part of the Owner’s affordable housing obligation as set forth in Section 3 of this Plan, except that in those instances where Owner is required pursuant to section 5.b below to make a land dedication as part of Owner’s satisfaction of this Plan and the Affordable Housing Ordinance, Owner must first make the required land dedication and may only pay in-lieu fees to the extent that there is a remaining obligation after the land dedication is complete.
 - b. **Specific to WRTP** – In-lieu fee shall be paid at the following rates (which rates shall be adjusted by the City annually by the Construction Cost Index as published from time to time by the Engineering News-Record):
 - i. \$3.00/sf on all market rate Low Density Residential units
 - ii. \$2.50/sf on all market rate Medium Density Residential units
 - iii. \$2.00/sf on all market rate High Density Residential units
 - c. **Specific to WRTP** – In-lieu fees collected within the WRTP Specific Plan Area shall first be prioritized to support the construction of the required 160 low income affordable units within the Specific Plan Area. City will explore development of a program specific to the WRTP pursuant to which developers of property may receive credits toward their in-lieu fee obligations for the amounts being spent for public infrastructure in excess of their RTIF obligations. Under the contemplated program future RTIF funds would be deposited into the City’s housing trust fund rather than being used to reimburse or provide RTIF credits to developers. Any such program, if adopted, will provide considerations to ensure that in-lieu fees are available on a time-frame as needed to develop the affordable housing units contemplated by this Affordable Housing Plan. The priority focus of the program should be to incentivize the construction of MDR units. Any program adopted should ensure that the housing trust fund does not have more RTIF credits that can reasonably be used by affordable housing developers.
5. Land Dedication - In accordance with the City of Woodland’s Affordable Housing Ordinance:
- a. A developer of property located within the Medium Density Residential (MDR), Village Center Medium Density Residential (VCMDR) or High Density Residential (HDR) zone(s), may be allowed to make an irrevocable offer of dedication to the City or its designee of sufficient land to satisfy the affordability requirement. Any land dedication site shall be consistent with the requirements for land dedication **Specific to WRTP:** Land within the Low Density Residential (LDR) or

Village Center Low Density Residential (VCLDR) zones may not be dedicated to the City for purpose of meeting the Owner's affordable housing obligations.

- b. **Specific to WRTP** – Concurrently with the recordation of the first final subdivision map for properties designated as Urban Village North or South, High Density Residential in the Specific Plan, the Owner of such property shall dedicate a parcel of a minimum size of two and one half acres (unless the City, in its sole discretion, agrees to a smaller site based on a special housing need, or because the another High Density Residential parcel of greater than two and one-half acres was previously dedicated to affordable housing in the Specific Plan Area that would provide for greater than 80 units of affordable housing) to a non-profit or for-profit affordable housing developer, which developer must be approved by the City in its sole discretion, for the construction of an affordable rental housing project. The City may, at its discretion, allow the Owner to make an irrevocable offer of dedication of the parcel directly to the City in the event that the City has not approved an affordable housing developer at the time of recordation of the first final subdivision map for the applicable property. The dedicated parcel is not required to be located within the Property governed by this Development Agreement, provided that the parcel meets the requirements below, is located within the Specific Plan Area, and is designated for High Density Residential. The dedicated site must additionally conform with the following requirements:
 - i. The dedicated parcel shall be of a sufficient size and configuration to accommodate/provide a minimum of 80 residential units consistent with all applicable zoning and Specific Plan requirements (provided, however, that in the event that a prior land dedication site has been developed with greater than 80 units affordable to low income households, the City, may in its sole discretion approve a site that will provide a lesser number of residential units, so long as the minimum number of units will still allow for 160 total low income affordable housing units within the Specific Plan Area.
 - ii. Prior to acceptance of the offer of dedication by the affordable housing developer or City, as applicable, the dedicated parcel shall be fully improved with, or bonds shall be provided to ensure the construction of, infrastructure, frontage improvements (i.e., curb, gutter, walk), paved street access, utility (i.e., water, gas, sewer and electric) service connections stubbed to the property lines, and other such off-site improvements as may be necessary for development of the required affordable units or as required by the City.
- c. An owner who dedicates a land dedication parcel pursuant to this Section 5 shall receive credit toward its inclusionary obligation for HDR project(s) based on the appraised FMV of the land dedication site. In-lieu fee credits may not be

transferred to other lower density zones without separate City approval, in City's sole discretion. The value of the site will be treated as equivalent to a payment of affordable housing in-lieu fees based on the rates set forth in Section 4.b. Any remaining affordable housing obligation shall be provided in the form of affordable housing in-lieu fees paid as set forth in Section 4.b or through the construction of affordable units within the Project.

EXHIBIT I

MAINTENANCE SERVICES TO BE FUNDED BY MAINTENANCE CFD

Following improvements shall be maintained with funding to be established through the Maintenance CFD

- Landscape maintenance for any parks, landscaped medians, and greenbelts located within the Specific Plan Area, including but not limited to sidewalks, play equipment, lighting, and irrigation
- Tree-related services for all street trees within the Specific Plan Area, including tree inspections, planting, watering, re-staking, mulching and weeding, fertilization, insect and disease control, pruning, and hazardous tree removal.
- Maintenance of the improvements included as part of any detention pond/open space areas within the Specific Plan Area, including walking paths and other amenities included with the detention pond
- Fair share cost for maintenance of any storm drainage features downstream of the Specific Plan Area, including but not limited to the following:
 - East Regional Pond
 - North Regional Pond
 - County Road 25A Channel
 - Outfall Channel and Outfall Channel Outlet Structure
 - Farmers Central Drainage Channel
 - Any drainage features conveying storm drainage between the features listed above
- Lighting and landscape maintenance for one-half of the Pedestrian Overcrossing. The City will designate the portion of the Pedestrian Overcrossing funded by the Maintenance CFD at its discretion in conformance with all applicable law..
- Lighting and landscape maintenance, including any enhanced landscaping/public art/entry monument at the roundabouts, for which the City is responsible on the east side of the State Route 113/County Road 25A interchange. The specific area in the interchange funded by the Maintenance CFD shall be determined by the City at its discretion in conformance with all applicable law.
- Lighting and landscape maintenance for the east side of the future Parkland Avenue Overcrossing.
- Maintenance of traffic signals and street lights within the Specific Plan Area
- Funding of requirements identified in the Transportation Demand Management (TDM) plan, VMT, and Transit Program, as being funded through the Maintenance CFD.
- Maintenance of Specific Plan Area multi-use pedestrian/bike paths, sound walls, street furniture, public art, entry monument/enhanced landscaping, and mobility hub/transit
- Maintenance of any landscaping on the east side of SR 113 adjacent to the project limits of the WRTP.

EXHIBIT J

PUBLIC INFRASTRUCTURE REIMBURSEMENT RULES

PUBLIC INFRASTRUCTURE REIMBURSEMENT RULES FOR THE WOODLAND RESEARCH AND TECHNOLOGY PARK SPECIFIC PLAN

1. Construction of Public Infrastructure and Dedication of Land Owned by Owner.

a. Parties agree that each Owner shall, for the collective benefit of all Owners in the Specific Plan Area (1) dedicate such real property located on their property that is required for public infrastructure as set forth in the Capital Improvement Program (the “CIP”) and (2) design and construct public infrastructure required to serve the Specific Plan Area in accordance with the requirements of their respective development agreements, infrastructure phasing plans, tentative subdivision maps and public improvement agreements. Owners dedicating real property for public infrastructure projects included in the CIP and reflected in the RTIF and/or constructing such public infrastructure shall receive RTIF fee credits and reimbursement pursuant to the terms of these rules and the Individual Reimbursement Agreements to be entered into by and between individual Owners and the City, as more specifically described herein.

b. Prior to dedication of real property for public infrastructure projects included in the CIP and reflected in the RTIF and/or commencement of construction of any public infrastructure as required pursuant to an approved infrastructure phasing plan, and pursuant to the CIP the Owner shall enter into an individual reimbursement agreement in a form approved by the City Attorney. The individual reimbursement agreement shall establish the manner in which the Property Owner will solicit bids for construction of the public infrastructure, administer the applicable contracts, document costs incurred in connection with the public infrastructure work, and shall more specifically establish the manner in which the Owner shall receive fee credits and reimbursement for such construction work, as well as any dedication of real property associated with such construction work. The terms of the individual reimbursement agreement shall be consistent with these Reimbursement Rules.

2. Master Planning and Design Work.

a. Owners are collectively responsible pursuant to the terms of their respective development agreements for funding the analysis and consideration of certain modifications to the CIP as more specifically described in each Development Agreement as Exhibit E (the “CIP Modification Work”) and certain master planning and design work as is more specifically described in each Development Agreement as Exhibit F (the “Master Planning and Design Work”).

b. Owners agree that the first Owner to submit an application to the City for a tentative subdivision map within the Specific Plan Area shall provide advance funding for all CIP Modification Work and Master Planning and Design Work described in each Development Agreement as Exhibits E and F. Prior to submission of an application for such first tentative subdivision map, the applicable Owner shall enter into an advance funding agreement with the City in a form as approved by the City Attorney for the cost of such CIP Modification and Master Planning and Design Work, and shall continue to fund such costs through completion of the work. All CIP Modification and Master Planning and Design Work described in Exhibits E and F must be completed prior to City approval of the first tentative subdivision map or other discretionary development approval for property within the Specific Plan Area. The Owner that funds the CIP modification work and the master planning and design work shall be eligible for reimbursement from other Owners in accordance with the terms of the respective Development Agreements and as set forth in Section 4(h) of this Exhibit. The CIP Modification and Master Planning and Design Work shall be conducted by the City, unless the City directs the Owner to contract for such work directly with the applicable consultants.

3. Dedication of Land for Public Infrastructure Constructed by Others..

a. Owners acknowledge and agree that their respective properties will not develop at the same time, and that initial development in the Specific Plan will require certain backbone infrastructure such as public right of way, public utility easements, stormwater detention facilities and other facilities that will be necessary for that initial development to proceed. Therefore, there is a likelihood that the Owners developing their property first will require one or more other Owners to dedicate right of way, easements, rights of access and egress and/or fee title to property (the "Dedication Property") for public infrastructure required under the Specific Plan in order for the first Owner to complete the public infrastructure required under its infrastructure phasing plan and applicable public improvement agreement.

b. In order to ensure the orderly and efficient construction of public infrastructure to serve the entirety of the Specific Plan Area, each Owner agrees that in the event that Dedication Property within the boundaries of one Owner is required by the approved infrastructure phasing plan of another Owner, the first Owner (for purposes of this Section, the "Dedicating Property Owner") shall dedicate such required Dedication Property to the City in accordance with the terms and conditions of these rules.

c. At such time that the City and the Owner planning to construct public infrastructure on the Dedication Property (for purposes of this Section, the "Constructing Property Owner") determine that the Dedicating Property Owner's Dedication Property will be required, the City shall notify the

Dedicating Property Owner, and shall request rights of access and egress to the Dedicating Property Owner's property as necessary to prepare any surveys or other analysis as necessary or appropriate to effectuate the transfer of the Dedication Property. Upon receipt of such notification, the Dedicating Property Owner shall grant rights of access and egress to their property at no cost other than the amount paid through the RTIF program, subject to an access agreement with terms as reasonably agreed to between City and Dedicating Property Owner, to complete such survey work and additional analysis required for such dedication.

d. The City shall thereafter submit to the Dedicating Property Owner the documentation required for the granting of such Dedication Property as well as any temporary construction easements and rights of access and egress as required to complete the construction of the public infrastructure, and the Dedicating Property Owner shall execute such documentation, in recordable form as applicable, and return to the City for recordation. Said documentation shall be delivered to the City in a reasonable time frame with the goal being within ten (10) days of the date of receipt by Dedicating Property Owner of such documentation. Failure by the Dedicating Property Owner to execute and deliver the documentation within thirty (30) days of receipt by Dedicating Property Owner shall be a material default under the terms of the Development Agreement and the City may bring an action for specific performance to compel the dedication of the required lands in accordance with this Section. Prior to initiating litigation, the City shall enter into an advance funding agreement with the Constructing Property Owner to fund the cost of such litigation.

4. Fee Credits and Reimbursement for Costs Incurred by Owners.

a. Each Owner shall be entitled to fee credits and reimbursement for construction of public infrastructure, for the dedication of Property for construction of public infrastructure by other Owners, for dedication of real property upon which they construct public infrastructure, and CIP Modification and Master Planning and Design Work funded by an Owner as set forth in the respective Development Agreements.

b. Valuation of Construction Costs. Owners may receive credit and reimbursement for the lesser of the cost established for public infrastructure as set forth in the Schedule of Costs contained in the CIP, subject to any modification that may be made by and in the sole discretion of the City Engineer or designee, or the actual cost of construction of the applicable public improvements. For purposes of determining the cost of the public improvements in comparison to the amounts in the CIP, the Owner may group the calculation of all improvements constructed with the same tentative map, constructed during the same time period and submitted for City documentation at the same time. The valuation for the cost of such construction work shall be established based on the valuations contained in the CIP (as will be amended from time to time and as

updated annually based on the Construction Cost Index (“CCI”)) at the time the Owner awards the construction contract for the applicable public improvement. If construction is not completed in the same calendar year as the contract is awarded, then the CIP valuation may be increased by up to one year of CCI (in addition to any other changes to the CIP that may have occurred between contract award and July 1 of the following year). If the Owner requests credit and reimbursement in the same year that the contract is awarded (either through this subsection b. or through subsection f. below), then they shall not be eligible for the additional year of CCI. Following completion of the applicable public improvements, the Owner shall provide to the City Engineer or designee documentation of actual construction costs for the applicable public improvements. Credit and reimbursement shall be provided based on the lesser of the CIP valuation established at the time of contract award (and if applicable as amended by one year of CCI), or actual costs documented by the Owner. Soft costs associated with the applicable public improvement shall be valued based on valuations contained in the CIP, except that the City has the discretion to request documentation of the soft costs actually incurred by Property Owner, and may value such soft costs based on the costs actually incurred if they are less than the values set forth in the CIP. In the event that a Owner constructs a portion of public infrastructure in a manner that will increase the costs to future Owners that will be required to complete such infrastructure as determined by the City Engineer, the City has the discretion to reduce the valuation of the completed improvement in an amount equal to the City Engineer’s estimate of the increased cost to such future Owner. Examples of this reduced reimbursement include but are not limited to: the partial construction of a road that would make the remaining portion less efficient to construct or the realignment of utilities such that the unbuilt segment is deeper or has a longer distance to travel. City shall have final approval authority regarding whether a particular cost will be approved as a credited cost under these rules, which approval shall not be unreasonably withheld.

c. Valuation of Real Property Dedicated for Public Use. To determine the value of real property to be dedicated by each Owner, the City shall use the value of such property set forth in the Schedule of Costs contained in the CIP (as will be adjusted from time to time based on the Construction Cost Index as published by the Engineering News-Record (“CCI”) through City annual updates to the CIP) for the applicable dedicated real property interests on the date that such dedicated real property is accepted by the City. This applies whether such real property is dedicated for public infrastructure constructed by the dedicating Owner or is property dedicated for improvements to be constructed by other Owners.

d. Valuation of CIP Modification and Master Planning and Design Work. The City will determine the value of CIP Modification and Master Planning and Design Work completed by each Owner as follows: In the event that the City completes CIP Modification and Master Planning and Design Work

required of the Owner, the valuation for that work shall be established on the date that the funds for such work are deposited with the City. In the event that the Owner completes certain CIP Modification and Master Planning and Design Work, the valuation for that work shall be established on the date that the Owner executes a contract for such CIP Modification and Master Planning and Design Work, provided that the Owner shall not be eligible for reimbursement until the work is complete and accepted or approved by the City, as applicable. All contracts (including contract amendments) entered into directly by the Owner for CIP Modification and Master Planning and Design Work must be reviewed by the City and approved in writing prior to contract execution (or contract amendment execution) in order to be eligible for reimbursement. The City shall notify the Owners of the total amount of such costs at such time that the valuation for such costs is established and that amount shall be added to the Reimbursement Account for the Owner funding such costs. Thereafter, the costs will be annually adjusted as set forth in paragraph e. below.

e. Annual Adjustments to Valuations. The outstanding amount of costs incurred by each Owner shall be determined and maintained by City as a “Credit/Reimbursement Account” for each Owner. The balance of each Credit/Reimbursement Account shall be adjusted annually by a percentage amount equal to the Construction Cost Index as published from time to time by the Engineering News-Record Twenty City Index or other index adopted by the City Council (“CCI”) at the same time and by the same percentage that the City adjusts the RTIF. The value of the outstanding costs shall only be adjusted when and if the RTIF is adjusted, and in the event, or any reason, the City does not adjust the RTIF in a given year, the outstanding value of any outstanding costs contained in a Credit/Reimbursement Account similarly shall not be adjusted. Notwithstanding the foregoing, the balance associated with any public improvements constructed by an Owner shall not be adjusted by CCI until such time that the public improvements are accepted by the City, after which the City shall adjust such balances in accordance with this paragraph.

f. Fee Credits. Each Owner shall receive fee credits against its overall RTIF obligation equal to the total value of the construction of the RTIF public infrastructure funded by Owner and dedication of real property by the Owner. Owners will not receive fee credits for the costs of CIP Modification and Master Planning and Design Work. Those costs will be reimbursed pursuant to the terms described in paragraph h, below. Fee credits will be applied toward Owner’s RTIF obligations so long as Owner has available fee credits, except that such credits shall not be applied toward the portion of the RTIF that is attributable to administration costs (the “Administration Portion”). The Administration Portion of the RTIF shall be paid at the time of building permit issuance, and shall be accounted for by the City separately from the remainder of the RTIF. Upon application of any fee credit to units to be constructed by Owner, Owner’s Credit/Reimbursement Account will be reduced in the amount of the fee credit. Fee credits that are based on dedication of real property shall be

available to be used by Owner only after the real property dedication is accepted by the City. Fee credits that are based on construction of public infrastructure shall be available to be used by Owner only after the public infrastructure has been accepted by the City and the City Engineer or designee has verified the costs incurred by Owner for such infrastructure. Notwithstanding the foregoing, Owners may request authorization to utilize fee credits for the construction of public infrastructure prior to acceptance of such public infrastructure by the City, provided that the City will only authorize the utilization of fee credits prior to completion one time for each public infrastructure project. The authorized fee credit shall be limited to 85% of the value of the public infrastructure as set forth in the CIP at the time of Property Owner's request, excluding values in the CIP for soft costs and contingency. Any such request for fee credits prior to acceptance of the applicable partially completed public infrastructure shall be made in writing, and approved by the City in writing based on the sole discretion of the City Engineer. The City Engineer shall verify that the requested amount of fee credits is justified based on the amount of completed infrastructure, including testing of infrastructure. Each Owner that funds the design and construction for the CR 25A/SR 113 interchange shall receive fee credits at the time of payment to the City. Further, the City may collect RTIF funding for other specific capital improvement projects to be constructed by the City. If the City collects RTIF funding from a Owner for a specific capital improvement project as contemplated herein, the Owner shall receive fee credits at the time of payment to the City.

g. Reimbursement Process for Public Infrastructure and Real Property Dedication. Reimbursement will be paid on a "first in, first out" basis, with the first public infrastructure and/or real property accepted by the City eligible for the first reimbursement payments from available RTIF; (excluding the portion of the RTIF attributable to Administration Portion of the RTIF), and subsequent construction and/or dedications being eligible for reimbursement in the chronological order in which they are accepted by the City. In the event that there is not available RTIF to reimburse the Owner at the time the public infrastructure and/or real property is accepted by City, the reimbursements shall be paid as RTIF funds become available.

h. Reimbursement Process for CIP Modification and Master Planning and Design Costs. Reimbursement for CIP Modification and Master Planning and Design Work costs incurred by an Owner shall be paid from the Administration Portion of the RTIF collected by the City. The City will provide reimbursement to the Owners that incur such CIP Modification and Master Planning and Design Work costs pursuant to an individual reimbursement agreement to be entered into by and between City and Owner that will establish the amount of reimbursement available to the Owner, and subject to the terms of these Reimbursement Rules. Reimbursement for the CIP Modification and Master Planning and Design Work costs will be paid on a "first in, first out" basis, with the first CIP Modification and Master Planning and Design Work accepted or approved by the City eligible for the first reimbursement payments

from the available Administration Portion of the RTIF, and subsequent CIP Modification and Master Planning and Design Work being eligible for reimbursement in the chronological order in which the work is accepted or approved by the City. In the event that there is not available Administration Portion of the RTIF to reimburse the Owner at the time the CIP Modification and Master Planning and Design Work is accepted or approved by City, the reimbursements shall be paid as the Portion of the RTIF becomes available. The City's Director of Administrative Services will determine, in their sole discretion, when sufficient funding from the Administration Portion of the RTIF is available for reimbursement, taking into account other costs required to be paid from the Administration Portion of the RTIF, such as City Attorney or staff costs.

i. City Will Reimburse Only From Cash Available. City shall only reimburse Owners from cash that is available for such reimbursement from CFD bond proceeds, cash payments made pursuant to agreements entered into with other Property Owners to fund the costs of such public improvements, or proceeds of RTIF payments. Reimbursement shall be limited to available CFD bond proceeds or funds obtained from other Owners. Nothing in this Agreement obligates, or shall be deemed to obligate, City to use General Fund monies or any other source of City revenues to satisfy any Owner's claim for reimbursement. City's obligation to reimburse Owner pursuant to this Agreement shall be limited to CFD bond proceeds or other funds actually received by City from other owners in accordance with the terms of existing agreements and procedures. Owners acknowledge and agree that the City shall collect RTIF funding for specific capital improvement projects to be constructed by the City, including but not limited to the CR 25A/SR 113 Interchange Project. The funding the City receives toward the CR 25A/SR 113 Interchange Project or any other RTIF funded capital improvement project to be constructed by the City will not be available for reimbursement to Property Owners. Following completion of the CR 25A/SR 113 Interchange Project, the City will review whether an adjustment to the CIP and fee program for the RTIF is possible, based on the amount of funding available at that time.

EXHIBIT K

WRTP PROJECT FEES

CITY shall collect any of the following fees based on the project conditions of approval, the WRTP approval documents and as defined in this Exhibit K. The fees set forth herein do not include fees imposed by other agencies, such as the County of Yolo or Woodland Joint Unified School District. Actual fee amounts owed by OWNER will be the then-current amounts of such fees at the time they are paid by OWNER. All fees are subject to annual Construction Cost Increases (CCI) and may be subject to increases based on City evaluation of the various fee programs in accordance with applicable State law, or with regard to the RTIF, in accordance with the Development Agreement and the RTIF Report. The Engineering News-Record Twenty City Index or other index adopted by the City Council shall be used for the calculation of CCI.

Development Impact Fees for the following categories and amounts are shown as of September 2023. The Administrative Guidelines in effect on the date of the approval of this Agreement shall be used for the duration of this Agreement.

Development Impact Fee	Greenfield SFD (Single Family Dwelling)	Greenfield MFU (Multi-family Unit)
General City	\$1,005	\$755
Fire	\$3,406	\$2,042
Library	\$628	\$471
Police	\$823	\$616
Wastewater	\$7,524	\$5,642
Water Capacity Fee	\$6,174	\$4,630*
Parks & Recreational Facilities	\$9,279	\$6,959
Roads	\$9,915	\$4,063
Admin Fee (.75%)	\$291	\$189
Storm Drainage Facilities	\$0	\$0
Total	\$39,045	\$25,367
Storm drainage is \$0 for the WRTP, as it is all paid in the RTIF. Water fee is reduced (to 75% of the SF rate) for multifamily. *Water Capacity Fee will be determined by meter size		

Other fees include all fees identified in this Agreement or conditions of approval which are linked to final map approval or issuance of a building permit, as follows:

- RTIF fees for the cost of the backbone infrastructure to the Woodland Research and Technology Park plan area (September 2023 fees) are as listed in Attachment No. 1 to this Exhibit.
- Habitat Conservation Obligation. Before any ground-disturbing activities, the City will require project proponent/s to submit the Yolo HCP/NCCP *Application Form* for non-member agency projects and *Member Agency Reporting Form* for member agency projects, as applicable, and pay applicable fees to the Yolo Habitat Conservancy as specified in the appropriate form.
- Affordable Housing. All residential projects are subject to the Citywide Affordable Housing

Ordinance (WMC Chapter 15.16) which requires a 10 percent inclusionary housing obligation, except where modified by the W RTP Project Development Agreement (Exhibit H). Applicants shall comply with their inclusionary obligation through on site construction of affordable units, through the payment of in-lieu fees, and/or through land dedication as specified in Exhibit H. The current in-lieu fees are as follows: for LDR \$3.00/building sq ft, for MDR \$2.50/building sq ft and for HDR \$2.00/building sq ft

- Conversion of Prime Agricultural Land. Project applicants for future projects proposed within the W RTP Specific Plan Area are required to comply with Woodland Municipal Code Chapter 15.33, which requires replacement of Prime Farmland at a 1:1 ratio. In addition, the South Regional Pond development area is subject to the County's agricultural conservation ordinance (Section 8-2.404 and Section 8.2-405 of the Yolo County Code), which requires replacement of Prime Farmland at a ratio of three acres of conserved farmland to one acre of converted land and replacement of other types of farmland at a ratio of two acres to one; small projects of less than 20 acres may pay an in-lieu fee rather than conserve farmland directly.
- Fair Share Cost of public facilities, services and improvements as determined by the City of Woodland nexus study (MPFP fee triggered at building permit)
- Public transit capital fee of \$311 for LDR, \$212 for MDR and \$159 for HDR. This fee will be used to pay for the construction of transit capital improvements.
- Installation of or payment of fees consistent with the City's Public Art Ordinance.
- Tentative Map processing shall be paid on a time and materials basis based on the City's current liability account procedures (at the time of project application).
- With regard to Engineering fees: Plan Check fees shall be 3% of the value of the improvements or as modified based on the engineering fees in effect at time of Development Agreement approval. At the City's option, inspection fees will be paid for on a time and materials basis or on a fee basis per the engineering fees in effect at the time of Development Agreement approval.
- Building permit fees, planning fees, fire department fees and all other development processing fees not mentioned in this Exhibit will be those fees in effect at the time the various documents are submitted to the City for approval; provided that the Property shall only be subject to City fees to the extent they existed at the time this Agreement was approved by City Council. City has disclosed and Owner has acknowledged that City may during the term of this Agreement adopt new and different City-wide processes and labels for processing development approvals and development processing fees. Owner will comply with changes as they apply to the Property, provided that in no case shall such changes adversely affect or modify Owner's rights under this Agreement, nor shall such changes increase the total costs payable by Owner for development processing fees above what would have been charged for the applicable development approvals immediately prior to such change, without a mutually agreed amendment to this Agreement.
- If any fees are modified or new fees are created based on County, State or Federal requirements (or in response to County, State and Federal requirements), then those fees shall be paid based on the fees in effect at the time the various documents are submitted to the City for approval, provided that any increased cost to Owner shall be limited to the costs related to County, State and Federal requirements). If any building fees are modified or new fees are created based on the International Code Council (ICC) or similarly used resources in the building industry, then those fees shall be paid based on the fees in effect at the time the various documents are submitted to the City for approval.

FORM OF ASSIGNMENT AND ASSUMPTION AGREEMENT

RECORDING REQUESTED BY AND
WHEN RECORDED MAIL TO:

Attention: _____

Space Above this Line Reserved for Recorder's Use

**ASSIGNMENT AND ASSUMPTION
OF DEVELOPMENT AGREEMENT**

THIS ASSIGNMENT AND ASSUMPTION OF DEVELOPMENT AGREEMENT (this “**Assignment**”) is made effective as of _____, 20__ (the “**Effective Date**”), by and between _____, L.P., a California limited partnership (“**Assignor**”), and _____, L.P., a California limited partnership (“**Assignee**”).

RECITALS

A. The City of Woodland (“**City**”) adopted Ordinance Number ____ on _____, 20__, authorizing entry into that certain Development Agreement by and between the City of Woodland (the “**City**”) and Assignor, dated on or about _____ (the “**Development Agreement**”), as Document No. ____ - _____ in the Official Records of the County Recorder for Yolo County, California (the “**Official Records**”). The Development Agreement as used herein shall mean, refer to, and include the Development Agreement, as well as any exhibits, addenda, operating memoranda, implementation agreements, amendments, and attachments thereto (which are hereby incorporated herein by this reference) as well as other documents expressly incorporated by reference in the Development Agreement. Capitalized terms not defined herein shall have the meanings ascribed to them in the Development Agreement.

B. The Development Agreement grants certain rights, duties, and obligations with respect to the development and improvement of certain real property in the City of Woodland, County of Yolo, State of California, as more particularly described in **Exhibit “A”** attached hereto and incorporated herein (the “**Property**”) as more particularly set forth in the Development Agreement (the “**Development Agreement Rights, Duties and Obligations**”).

C. Paragraph 2.4 of the Development Agreement describes the process for assignment of the Development Agreement Rights, Duties and Obligations.

D. Assignor desires to assign to Assignee, and Assignee desires to accept and assume, each and all of Assignor’s Development Agreement Rights, Duties and Obligations.

AGREEMENT

NOW THEREFORE, for good and valuable consideration, the receipt and adequacy of which are hereby acknowledged, Assignor and Assignee hereby agree as follows:

1. Assignment. Effective as of the date of recordation of this Assignment, Assignor hereby assigns to Assignee all of the Development Agreement Rights, Duties and Obligations.

2. Acceptance and Assumption. Effective as of the date of recordation of this Assignment, Assignee hereby accepts the foregoing assignment of the Development Agreement Rights, Duties and Obligations from Assignor and unconditionally assumes and agrees to perform each and all of the duties, covenants, and obligations comprising the Development Agreement Rights, Duties and Obligations, first arising from and after the date of recordation of this Assignment pursuant to the Development Agreement (collectively, the “**Assumed Obligations**”).

3. Assignor Not Released. Assignor and Assignee acknowledge and agree that, pursuant to Section 2.4.2 of the Development Agreement, Assignor shall continue to be obligated under the Development Agreement unless and until Assignor is given a release in writing by the City.

4. Assignee Address. The principal address of Assignee for purposes of the Development Agreement is as follows:

Attention: _____

E-mail: _____

5. Miscellaneous.

(a) This Assignment shall be determined in accordance with and governed by the laws of the State of California.

(b) This Assignment may be executed in counterparts, each of which shall be deemed an original and which, when taken together, shall constitute a complete instrument.

(c) Each party agrees to perform any further acts, and to execute and deliver any further documents that may be reasonably necessary or required to carry out the intent and provisions of this Assignment and the transactions contemplated hereby.

(d) This Assignment shall bind and inure to the benefit of the respective heirs, personal representatives, grantees, successors, and assigns of the parties hereto.

IN WITNESS WHEREOF, the parties hereto have caused this Assignment to be signed by their duly authorized officers as of the day and year first written above.

FORM OF PARTIAL ASSIGNMENT AND ASSUMPTION AGREEMENT

RECORDING REQUESTED BY AND
WHEN RECORDED MAIL TO:

Attention: _____

Space Above this Line Reserved for Recorder's Use

**PARTIAL ASSIGNMENT AND ASSUMPTION
OF DEVELOPMENT AGREEMENT**

THIS PARTIAL ASSIGNMENT AND ASSUMPTION OF DEVELOPMENT AGREEMENT (this "**Assignment**") is made effective as of _____, 20__ (the "**Effective Date**"), by and between _____, a _____ ("**Assignor**"), and _____, a _____ ("**Assignee**").

RECITALS

A. The City of Woodland ("**City**") adopted Ordinance Number ____ on _____, 20__, authorizing entry into that certain Development Agreement by and between the City of Woodland (the "**City**") and Assignor, dated on or about _____, (the "**Development Agreement**") which was recorded on _____, 20__, as Document No. ____ - _____ in the Official Records of the County Recorder for Yolo County, California (the "**Official Records**"). The Development Agreement as used herein shall mean, refer to, and include the Development Agreement, as well as any exhibits, addenda, operating memoranda, implementation agreements, amendments, and attachments thereto (which are hereby incorporated herein by this reference) as well as other documents expressly incorporated by reference in the Development Agreement. Capitalized terms not defined herein shall have the meanings ascribed to them in the Development Agreement.

B. The Development Agreement grants certain rights, duties, and obligations with respect to the development and improvement of certain real property in the City of Woodland, County of Yolo, State of California, as more particularly described in **Exhibit "A"** attached hereto and incorporated herein (the "**Entire Property**"), including, without limitation, with respect to the property described in attached **Exhibit "B"** (the "**Transferred Property**") as more particularly set forth in the Development Agreement (the "**Development Agreement Rights, Duties and Obligations**").

C. Paragraph 2.4.6 of the Development Agreement describes the process for the partial assignment of the Development Agreement Rights, Duties and Obligations.

D. Assignor desires to assign to Assignee, and Assignee desires to accept and assume, each and all of Assignor's Development Agreement Rights, Duties and Obligations as they pertain and relate to the Transferred Property.

AGREEMENT

NOW THEREFORE, for good and valuable consideration, the receipt and adequacy of which are hereby acknowledged, Assignor and Assignee hereby agree as follows:

6. Assignment. Effective as of the date of recordation of this Assignment, Assignor hereby assigns to Assignee all of the Development Agreement Rights, Duties and Obligations relating or pertaining to the Transferred Property.

7. Acceptance and Assumption. Effective as of the date of recordation of this Assignment, Assignee hereby accepts the foregoing assignment of the Development Agreement Rights, Duties and Obligations from Assignor and unconditionally assumes and agrees to perform each and all of the duties, covenants, and obligations comprising the Development Agreement Rights, Duties and Obligations relating or pertaining to the Transferred Property, first arising from and after the date of recordation of this Assignment pursuant to the Development Agreement (collectively, the "**Assumed Obligations**").

8. Assignor Not Released. Assignor and Assignee acknowledge and agree that, pursuant to Section 2.4.6 of the Development Agreement, Assignor shall continue to be obligated under the Development Agreement unless and until Assignor is given a release in writing by the City.

9. Assignee Address. The principal address of Assignee for purposes of the Development Agreement is as follows:

Attention: _____
E-mail: _____

10. Miscellaneous.

(a) This Assignment shall be determined in accordance with and governed by the laws of the State of California.

(b) This Assignment may be executed in counterparts, each of which shall be deemed an original and which, when taken together, shall constitute a complete instrument.

(c) Each party agrees to perform any further acts, and to execute and deliver any further documents that may be reasonably necessary or required to carry out the intent and provisions of this Assignment and the transactions contemplated hereby.

(d) This Assignment shall bind and inure to the benefit of the respective heirs, personal representatives, grantees, successors, and assigns of the parties hereto.

IN WITNESS WHEREOF, the parties hereto have caused this Assignment to be signed by their duly authorized officers as of the day and year first written above.

DEVELOPMENT AGREEMENT
(Costalotta Partners, LLC—Woodland Research and Technology Park)

DEVELOPMENT AGREEMENT BETWEEN
CITY OF WOODLAND
and
COSTALOTTA PARTNERS, LLC, A CALIFORNIA LIMITED LIABILITY
COMPANY, ETC.

DEVELOPMENT AGREEMENT NO. ____

This Development Agreement (hereinafter “Agreement”) is entered into effective on the date it is recorded with the Yolo County Recorder (hereinafter the “Effective Date”) by and among the City of Woodland, a California municipal corporation (hereinafter “CITY”), and COSTALOTTA PARTNERS, LLC, a California limited liability company (hereinafter “OWNER”):

RECITALS

WHEREAS, CITY is authorized to enter into binding development agreements with persons having legal or equitable interests in real property for the development of such property, pursuant to Section 65864 et seq. of the Government Code; and

WHEREAS, OWNER has requested CITY to enter into a development agreement and proceedings have been taken in accordance with the rules and regulations of CITY; and

WHEREAS, by electing to enter into this Agreement, CITY shall bind future City Councils of CITY by the obligations specified herein and limit the future exercise of certain governmental and proprietary powers of CITY; and

WHEREAS, the terms and conditions of this Agreement have undergone extensive review by CITY and the City Council and have been found to be fair, just and reasonable; and

WHEREAS, the best interests of the citizens of the CITY and the public health, safety and welfare will be served by entering into this Agreement; and

WHEREAS, all of the procedures of the California Environmental Quality Act have been met with respect to the Project and the Agreement in that the City certified a Final Environmental Impact Report for the Woodland Research and Technology Park Specific Plan (the “Final EIR”), which Specific Plan Area includes the Project, and which was fully analyzed as part of the Final EIR; and

WHEREAS, OWNER has jointly filed an application with other adjacent property owners for, and the City Council has approved, the Woodland Research and Technology Park Specific Plan (the “Specific Plan”), governing the development of the Property; and

WHEREAS, this Agreement and the Project are consistent with the CITY’s General Plan and the Specific Plan applicable thereto; and

WHEREAS, all actions taken and approvals given by CITY have been duly taken or approved in accordance with all applicable legal requirements for notice, public hearings, findings, votes, and other procedural matters; and

WHEREAS, development of the Property in accordance with this Agreement will provide substantial benefits to CITY and will further important policies and goals of CITY; and

WHEREAS, this Agreement will eliminate uncertainty in planning and provide for the orderly development of the Property, ensure progressive installation of necessary improvements, provide for public services appropriate to the development of the Project, and generally serve the purposes for which development agreements under Sections 65864 et seq of the Government Code are intended; and

WHEREAS, OWNER has incurred and will in the future incur substantial costs in order to assure development of the Property in accordance with this Agreement; and

WHEREAS, OWNER has incurred and will in the future incur substantial costs in excess of the generally applicable requirements in order to assure vesting of legal rights to develop the Property in accordance with this Agreement.

AGREEMENT

NOW, THEREFORE, in consideration of the above recitals and of the mutual covenants hereinafter contained and for other good and valuable consideration, the receipt and sufficiency of which is hereby acknowledged, the parties agree as follows:

1. DEFINITIONS AND EXHIBITS.

1.1 Definitions. The following terms when used in this Agreement shall be defined as follows:

1.1.1 “Agreement” means this Development Agreement.

1.1.2 “CITY” means the City of Woodland, a municipal corporation, organized and existing pursuant to the laws of the State of California.

1.1.3 “Capital Improvement Plan” or “CIP” means the Capital Improvement Plan adopted by the City Council for the Specific Plan by Resolution No. _____, as it may be amended from time to time by the CITY.

1.1.4 “Development” means the improvement of the Property for the purposes of completing the structures, improvements and facilities comprising the Project including, but not limited to: grading; the construction of infrastructure and public facilities related to the Project whether located within or outside the Property; the construction of buildings and structures; and the installation of landscaping. “Development” does not include the maintenance, repair, reconstruction or redevelopment of any building, structure, improvement or facility after the construction and completion thereof.

1.1.5 “Development Approvals” means all permits and other entitlements for use subject to approval or issuance by CITY in connection with development of the Property including, but not limited to:

(a) the Woodland Research and Technology Park Specific Plan, as it may be amended from time to time;

- (b) tentative and final subdivision maps, including large and small lot mapping, and parcel maps;
- (c) conditional use permits, design review approvals and plot plans;
- (d) zoning;
- (e) grading and building permits.

1.1.6 “Development Exaction” means any requirement of CITY in connection with or pursuant to any Land Use Regulation or Development Approval for the dedication of easements, land, the construction of improvements or public facilities, or the payment of fees in order to lessen, offset, mitigate or compensate for the impacts of development on the environment or other public interests.

1.1.7 “Development Impact Fee” means a monetary exaction other than a tax or special assessment, whether established for a broad class of projects by legislation of general applicability or imposed on a specific project on an ad hoc basis, that is charged by a local agency to the applicant in connection with approval of a development project for the purpose of defraying all or a portion of the cost of public facilities related to the development project, but does not include park “in lieu” fees specified in Government Code Section 66477, fees for processing applications for governmental regulatory actions or approvals, fees collected under development agreements adopted pursuant to Article 2.5 of the Government Code (commencing with Section 65864) of Chapter 4. “Development Impact Fee” shall not include processing fees and charges imposed by CITY to cover the estimated actual costs to CITY of processing applications for Development Approvals or for monitoring compliance with any Development Approvals granted or issued, including, without limitation, fees for zoning variances; zoning changes; use permits; building inspections; building permits; filing and processing applications and petitions filed with the local agency formation commission or conducting preliminary proceedings or proceedings under the Cortese-Knox-Hertzberg Local Government Reorganization Act of 2000, Division 3 (commencing with Section 56000) of Title 5 of the Government Code; the processing of maps under the provisions of the Subdivision Map Act, Division 2 (commencing with Section 66410) of Title 7 of the Government Code; or planning services under the authority of Chapter 3 (commencing with Section 65100) of Division 1 of Title 7 of the Government Code, fees and charges as described in Sections 51287, 56383, 57004, 65104, 65456, 65863.7, 65909.5, 66013, 66014, and 66451.2 of the Government Code, Sections 17951, 19132.3, and 19852 of the Health and Safety Code, Section 41901 of the Public Resources Code, and Section 21671.5 of the Public Utilities Code, as such codes may be amended or superseded, including by amendment or replacement. OWNER understands and agrees that the RTIF as defined herein is not a Development Impact Fee but is instead a fee that is charged pursuant to and in accordance with the terms of this Agreement.

1.1.8 “Development Plan” means the development of the Property consistent with the Land Use Zoning Exhibit for the Woodland Research and Technology Park attached hereto and incorporated as Exhibit “C”, which development shall be consistent with the Subsequent Development Approvals and the Existing Land Use Regulations.

1.1.9 “Effective Date” means the date that the ordinance approving this Agreement becomes effective.

1.1.10 “Existing Land Use Regulations” means all Land Use Regulations in effect on the Effective Date.

1.1.11 “General Plan” means the General Plan 2035 adopted on May 16, 2017 by Resolution No. 6836.

1.1.12 “Improvement” or “Improvements” means those public improvements required to support the development of the Project as described in the Capital Improvement Plan for the Specific Plan.

1.1.13 “Improvements Outside Specific Plan Area” means any Improvement that OWNER is required to construct pursuant to the CIP and its Infrastructure Phasing Plan that is located on land outside of the Specific Plan Area.

1.1.14 “Land Use Regulations” means all ordinances, resolutions, codes, rules, regulations and official policies of CITY governing the development and use of land, including, without limitation, the permitted use of land, the density or intensity of use, subdivision requirements, timing and phasing of development, the maximum height and size of proposed buildings, the provisions for reservation or dedication of easements or land for public purposes, and the design, improvement and construction standards and specifications applicable to the development of the Property. “Land Use Regulations” does not include any CITY ordinance, resolution, code, rule, regulation or official policy, governing:

- (a) the conduct of businesses, professions, and occupations;
- (b) taxes and assessments;
- (c) the control and abatement of nuisances;
- (d) the granting of encroachment permits and the conveyance of similar rights and interests which provide for the use of or the entry upon public property;
- (e) the exercise of the power of eminent domain.

1.1.15 “Maintenance CFD” shall have the meaning as set forth in Section 5.3.1 of this Agreement.

1.1.16 “Mortgagee” means a mortgagee of a mortgage, a beneficiary under a deed of trust or any other security-device lender, and their successors and assigns.

1.1.17 “Offsite Property” has the meaning set forth in Section 3.11 of this Agreement.

1.1.18 “OWNER” means the persons and entities listed as OWNER on page 1 of this Agreement and their permitted successors in interest to all or any part of the Property.

1.1.19 “Project” means the development of the Property contemplated by the Specific Plan and the Development Plan as such Development Plan may be further defined, enhanced or modified pursuant to the provisions of this Agreement.

1.1.20 “Property” means the real property described on Exhibit “A” and shown on Exhibit “B” to this Agreement.

1.1.21 “Public Infrastructure Reimbursement Rules” means the “Public Infrastructure Reimbursement Rules for the Woodland Research and Technology Park Specific Plan,” attached hereto as Exhibit “J” and incorporated herein by this reference.

1.1.22 “Reservations of Authority” means the rights and authority excepted from the assurances and rights provided to OWNER under this Agreement and reserved to CITY under Section 3.9 of this Agreement.

1.1.23 “Specific Plan” means that certain specific plan adopted by the City Council by Resolution No. ___, and entitled, “Woodland Research and Technology Park Specific Plan.”

1.1.24 “Specific Plan Area” means those properties that are located within the geographic boundaries of the Specific Plan.

1.1.25 “Subdivision Map Act” means Government Code Section 66410 et seq., as it may be amended from time to time.

1.1.26 “Subsequent Development Approvals” means all Development Approvals required subsequent to the Effective Date in connection with development of the Property.

1.1.27 “Subsequent Land Use Regulations” means any Land Use Regulations adopted and effective after the Effective Date of this Agreement.

1.2 Exhibits. The following documents are attached to, and by this reference made a part of, this Agreement:

Exhibit “A” — Legal Description of the Property.

Exhibit “B” — Map showing Property and its location.

Exhibit “C” — Development Plan.

Exhibit “D” — Infrastructure Phasing Rules.

Exhibit “E” — WRTP CIP Modification

Exhibit “F” — Master Planning and Design Obligations

Exhibit “G” — Public Dedications

Exhibit “H” — WRTP Affordable Housing Plan

Exhibit “I” — Maintenance Services

Exhibit “J” — Public Infrastructure Reimbursement Rules

Exhibit “K” — W RTP Project Fees

Exhibit “L” — Form of Assignment and Assumption Agreement

Exhibit “M” — Form of Partial Assignment and Assumption Agreement

2. GENERAL PROVISIONS.

2.1 Binding Effect of Agreement. The Property is hereby made subject to this Agreement. Development of the Property is hereby authorized and shall be carried out only in accordance with the terms of this Agreement.

2.2 Ownership of Property. OWNER represents and covenants that it is the owner of the fee simple title to the Property or a portion thereof, or has the right to acquire fee simple title to the Property or a portion thereof from the current owner(s) thereof. To the extent OWNER does not own fee simple title to the Property, OWNER shall obtain written consent from the current fee owner of the Property agreeing to the terms of this Agreement and the recordation thereof.

2.3 Term. The term of this Agreement shall commence on the Effective Date, and shall continue for an initial period of twenty-five (25) years thereafter unless this term is modified or extended pursuant to the provisions of this Agreement. OWNER may elect to extend the Term by up to two successive five (5) year terms (for a total maximum Term of thirty-five (35) years) by providing CITY written notice no later than thirty (30) days prior to the date the Term would otherwise expire. The initial term and, if applicable any extension, shall be referred to herein as the “Term.” Any tentative map approved by CITY for the Property shall have a duration (i) eight (8) years during which period no application to extend the expiration date of any tentative map need be filed, plus the Community Development Director is hereby authorized to grant two extensions of two (2) years each at the Community Development Director’s sole discretion, without further approval by the Planning Commission or City Council, plus (ii) such time extensions authorized by state law currently or in the future.

2.4 Assignment.

2.4.1 Right to Assign. OWNER shall have the right to sell, transfer or assign the Property in whole or in part (provided that no such partial transfer shall violate the Subdivision Map Act, Government Code Section 66410 et seq.), to any person, partnership, limited liability company, joint venture, firm or corporation at any time during the term of this Agreement; provided, however, that any such sale, transfer or assignment shall include the assignment and assumption of the rights, duties and obligations arising under or from this Agreement and be made in strict compliance with the following conditions precedent:

(a) No sale, transfer or assignment of any right or interest under this Agreement shall be made unless made together with the sale, transfer or assignment of all or a part of the Property.

(b) Concurrent with any such sale, transfer or assignment, or within fifteen (15) business days thereafter, OWNER shall notify CITY's City Manager, in writing, of such sale, transfer or assignment and shall provide CITY with (1) an executed agreement, in the form attached hereto as Exhibit "L" or in an alternative form reasonably acceptable to CITY, by the purchaser, transferee or assignee and providing therein that the purchaser, transferee or assignee expressly and unconditionally assumes all the duties and obligations of OWNER under this Agreement with respect to the portion of the Property so sold, transferred or assigned; and (2) the payment of the applicable processing charge to cover the CITY's review and consideration of such sale, transfer or assignment.

Any sale, transfer or assignment not made in strict compliance with the foregoing conditions shall constitute a default by OWNER under this Agreement. Notwithstanding the failure of any purchaser, transferee or assignee to execute the agreement required by Paragraph (b) of this Subsection 2.4.1, the burdens of this Agreement shall be binding upon such purchaser, transferee or assignee, but the benefits of this Agreement shall not inure to such purchaser, transferee or assignee until and unless such agreement is executed. The City Manager shall have the authority to review, consider and either approve, conditionally approve, or deny any proposed sale, transfer or assignment that is not made in compliance with this section 2.4.

2.4.2 Release of Transferring Owner. Notwithstanding any sale, transfer or assignment, a transferring OWNER shall continue to be obligated under this Agreement unless such transferring OWNER is given a release in writing by CITY, which release shall be provided by CITY upon the full satisfaction by such transferring OWNER of the following conditions:

(a) OWNER no longer has a legal or equitable interest in all or any portion of the Property sold, transferred, or assigned.

(b) OWNER is not then in default under this Agreement.

(c) OWNER has provided CITY with the notice and executed agreement required under Paragraph (b) of Subsection 2.4.1 above.

(d) The purchaser, transferee or assignee provides CITY with security equivalent to any security previously provided by OWNER to secure performance of its obligations hereunder.

2.4.3 Effect of Assignment and Release of Obligations. In the event of a sale, transfer or assignment pursuant to the provisions of Section 2.4.2 above:

(a) The assignee shall be liable for the performance of all obligations of OWNER with respect to transferred property, but shall have no obligations with respect to the portions of the Property, if any, not transferred (the "Retained Property").

(b) The owner of the Retained Property shall be liable for the performance of all obligations of OWNER with respect to Retained Property, but shall have no further obligations with respect to the transferred property.

(c) The assignee's exercise, use and enjoyment of the Property or portion thereof shall be subject to the terms of this Agreement to the same extent as if the assignee were the OWNER.

2.4.4 Subsequent Assignment. Any subsequent sale, transfer or assignment after an initial sale, transfer or assignment shall be made only in accordance with and subject to the terms and conditions of this Section 2.4.

2.4.5 Termination of Agreement with Respect to Individual Lots Upon Sale to Public and Completion of Construction. The provisions of Subsection 2.4.1 shall not apply to the sale or lease (for a period longer than one year) of any lot which has been finally subdivided and is individually (and not in "bulk") sold or leased to a member of the public or other ultimate user. Notwithstanding any other provisions of this Agreement, this Agreement shall terminate with respect to any lot and such lot shall be released and no longer be subject to this Agreement without the execution or recordation of any further document upon satisfaction of both of the following conditions:

(a) The lot has been finally subdivided and individually (and not in "bulk") sold or leased (for a period longer than one year) to a member of the public or other ultimate user; and,

(b) A certificate of occupancy has been issued for a building on the lot, and the fees set forth under Section 4 of this Agreement have been paid.

2.4.6 Partial Assignment and Assumption. CITY and OWNER agree OWNER may partially assign its obligations and rights under this Agreement, and all amendments hereto, to a purchaser, transferee or assignee of a lot, which has been subdivided subject to provisions of a partial assignment and assumption agreement in the form attached hereto as Exhibit "M" or in an alternative form as reasonably approved by CITY. Any such complete and executed partial assignment and assumption of this Agreement shall be submitted to CITY for approval pursuant to Section 2.4.1 of this Agreement. Within fifteen (15) days following such complete submittal, CITY shall review, and if the above conditions are satisfied, may approve the partial assignment and release and notify the purchaser, transferee or assignee in writing thereof. No such release approved pursuant to this Subsection 2.4.6 shall cause, or otherwise affect, a release of OWNER from the duties and obligations under this Agreement that are retained by OWNER and excluded from the transfer or assignment.

2.5 Amendment or Cancellation of Agreement. This Agreement may be amended or cancelled in whole or in part by either party or successor in interest only in the manner provided for in Government Code Sections 65865.1 or 65868 or as set forth in this Agreement. Any amendment of this Agreement, which amendment has been requested by OWNER, shall be considered by the CITY only upon the payment of the applicable processing charge. This provision shall not limit any remedy of CITY or OWNER as provided by this Agreement. For

purposes of this section, the term “successor in interest” shall mean any person having a legal or equitable interest in the whole of the Property, or any portion thereof as to which such person wishes to amend or cancel this Agreement as applied to the portion of the Property owned by that successor in interest. The procedure for proposing and adopting an amendment to, or cancellation of, in whole or in part, this Agreement shall be the same as the procedure for adopting and entering into this Agreement in the first instance. Notwithstanding the foregoing sentence, if the CITY initiates the proposed amendment to, or cancellation of, in whole or in part, this Agreement, CITY shall first give notice to the OWNER of its intention to initiate such proceedings at least sixty (60) days in advance of the giving the public notice of intention to consider the amendment or cancellation. CITY and OWNER acknowledge and agree that this Agreement can only be amended or cancelled by mutual agreement of the CITY and OWNER or relevant successor in interest.

2.6 Minor Modification. Upon the written application of OWNER, minor modifications and changes to the Development Plan may be approved by the City Manager without the need to amend this Development Agreement. A minor/administrative modification to the Specific Plan as described in Section 7.4.1 of the Specific Plan shall not require an amendment to this Development Agreement. It is also contemplated by CITY and OWNER that OWNER may, from time to time, seek Additional Development Approvals. Any such Development Approvals are contemplated by CITY and OWNER as being within the scope of this Agreement as long as they are consistent with the Land Use Regulations and shall, upon approval by CITY, constitute Development Approvals as referenced herein. The parties agree that any such modifications or additional Development Approvals shall not constitute an amendment to this Agreement nor require an amendment to this Agreement. Other changes to the Development Agreement shall be processed in accordance with the City’s Municipal Code and applicable state law.

2.7 Termination. This Agreement shall be deemed terminated and of no further effect upon the occurrence of any of the following events:

- (a) Expiration of the stated term of this Agreement as set forth in Section 2.3.
- (b) Entry of a final judgment setting aside, voiding or annulling the adoption of the ordinance approving this Agreement.
- (c) The adoption of a referendum measure overriding or repealing the ordinance approving this Agreement.
- (d) Completion of the Project in accordance with the terms of this Agreement including issuance of all required occupancy permits, completion of all required Improvements as required herein and acceptance by CITY or applicable public agency of all required dedications.
- (e) Termination of this Agreement based on any default of OWNER and following the termination proceedings required as set forth in this Agreement.

Termination of this Agreement shall not constitute termination of any other land use entitlements approved for the Property. Upon the termination of this Agreement, no party

shall have any further right or obligation hereunder except with respect to any obligation to have been performed prior to such termination or with respect to any default in the performance of the provisions of this Agreement which has occurred prior to such termination or with respect to any obligations which are specifically set forth as surviving this Agreement. Upon such termination, any Development Impact Fees or RTIF paid pursuant to Section 4.2 of this Agreement by OWNER to CITY for residential units on which construction has not yet begun shall be refunded to OWNER by CITY.

2.8 Notices.

(a) As used in this Agreement, “notice” includes, but is not limited to, the communication of notice, request, demand, approval, statement, report, acceptance, consent, waiver, appointment or other communication required or permitted hereunder.

(b) All notices shall be in writing and shall be considered given either: (i) when delivered in person, including, without limitation, by courier, to the recipient named below; or (ii) on the date of delivery shown on the return receipt, after deposit in the United States mail in a sealed envelope as either registered or certified mail with return receipt requested, and postage and postal charges prepaid, and addressed to the recipient named below. All notices shall be addressed as follows:

If to CITY:

City of Woodland
300 First Street
Woodland, CA 95695
Attn: City Manager
Telephone: (530) 661-5800
Email: ken.hiatt@cityofwoodland.org

Copy to:

Best, Best & Krieger, LLP
500 Capitol Mall, Suite 1700
Sacramento, CA 95814
Attn: City Attorney
Telephone: (916) 325-4000
Email: ethan.walsh@bbklaw.com

If to OWNER:

Costalotta Partners, LLC
P.O. Box 120
Woodland, CA 95695

(c) Either party may, by notice given at any time, require subsequent notices to be given to another person or entity, whether a party or an officer or representative of a party, or to a different address, or both. Notices given before actual receipt of notice of change shall not be invalidated by the change.

3. DEVELOPMENT OF THE PROPERTY.

3.1 Rights to Develop. Subject to the terms of this Agreement including the Reservations of Authority, OWNER shall have a vested right to develop the Property in accordance with, and to the extent of, the Specific Plan. The Project shall remain subject to all Subsequent Development Approvals required to complete the Project as contemplated by the Development Plan. OWNER shall not be required to enter into a subsequent development agreement in order to develop the Property. Except as otherwise provided in this Agreement, the permitted uses of the Property, the density and intensity of use, the maximum height and size of proposed buildings, and provisions for reservation and dedication of easements or land for public purposes shall be those set forth in the Specific Plan and this Agreement. OWNER does not have an affirmative obligation to develop the Property, but if the Property is developed it shall be developed according to the Development Approvals.

3.2 Effect of Agreement on Land Use Regulations. Except as otherwise provided under the terms of this Agreement including the Reservations of Authority, the rules, regulations and official policies governing permitted uses of the Property, the density and intensity of use of the Property, the maximum height and size of proposed buildings, and the design, improvement and construction standards and specifications applicable to development of the Property shall be in accordance with the Existing Land Use Regulations. In connection with any Subsequent Development Approval, CITY shall exercise discretion in the same manner that it exercises discretion under its police powers including the Reservations of Authority set forth herein; provided, however, that such discretion shall not prevent development of the Property for the uses and to the density or intensity of development set forth in this Agreement.

3.3 Timing of Development. The parties acknowledge that OWNER cannot at this time predict when or the rate at which phases of the Property will be developed. Such decisions depend upon numerous factors which are not within the control of OWNER, such as market orientation and demand, interest rates, absorption, completion and other similar factors. Since the California Supreme Court held in Pardee Construction Co. v. City of Camarillo, (1984) 37 Cal.3d 465, that the failure of the parties therein to provide for the timing of development resulted in a later adopted initiative restricting the timing of development to prevail over such parties' agreement, it is the parties' intent to cure that deficiency by acknowledging and providing that OWNER shall have the right to develop the Property in such order and at such rate and at such times as OWNER deems appropriate within the exercise of its subjective business judgment. Notwithstanding the foregoing, the phasing of the Project shall be conducted in accordance with the Phasing Rules as defined in Section 3.5 of this Agreement and the Infrastructure Phasing Plan submitted and approved in the manner more specifically described in Section 3.5 of this Agreement. Except as may be specifically provided elsewhere in this Agreement, OWNER has no affirmative obligation to commence development of the Property or to develop it at a specified rate. No modification of the City's ordinances, resolutions, policies, rules, or regulations adopted after the Effective Date whether by regulatory action, Council vote,

voter initiative or otherwise, which purport to cap, prohibit or otherwise limit development and/or the rate of development over time or to govern the sequence of development of land within the Specific Plan Area, shall apply to the Property.

3.4 Density Transfer Requirements. OWNER and CITY agree to the following requirements which guide unit yield assumptions within Residential Development Zones (“RDZ”) that are designated in the Specific Plan, and the process by which residential densities are established and, if permitted by the Community Development Director, transferred to other RDZ’s.

(a) Residential unit yields within each of six RDZs shall be those established by the Exhibit 6-1 and Table 6.1 in the Specific Plan. RDZ boundaries generally follow property lines for the Property and property owned by other property owners in the Specific Plan Area as existed at the time of Specific Plan approval.

(b) When any portion or all of an RDZ is mapped/subdivided (large or small lot), unit yields/densities shall be determined and allocated across the entire RDZ effected, and shall meet the Density Requirements outlined in Section 6.5.3 in the Specific Plan.

(c) OWNER may develop up to the assigned number of units within the RDZ at densities permitted by the Specific Plan for the underlying zoning (LDR, MDR, HDR).

(d) OWNER may request an increase in units up to 10 percent above the assigned units within the RDZ, subject to CEQA consistency review.

(e) If an RDZ is developed *under* the assigned number of units, an RTIF fee make up shall be required in amount necessary so that OWNER pays the RTIF fee equal to the amount required for the assigned number of units, unless at time of tentative map, an alternate RDZ picks up the unit deficit, subject to CITY approval and provided that the owner of the property located outside the RDZ enters into a written agreement to the satisfaction of the CITY that it shall adjust the density of its property to ensure consistency with the overall residential yields for the Specific Plan Area.

(f) If an RDZ is developed *over* assigned units, overage units must be removed from an alternate RDZ at tentative map, subject to CITY approval and provided that the owner of the property located outside the RDZ enters into a written agreement to the satisfaction of the CITY that it shall adjust the density of its property to ensure consistency with the overall residential yields for the Specific Plan Area.

(g) Except for the provisions stated above, the CITY has sole authority to approve the reallocation of units or to add units within each RDZ.

(h) If OWNER proposes land use changes or an increase in the number of units, then the City will reallocate units or add units within each RDZ and fees shall be updated with a nexus study and if necessary updates to the Public Facilities Financing Plan and the CIP.

3.5 Requirement for Public Infrastructure Improvements/Infrastructure Phasing Plan. Development of the Property is contingent in part on the construction of certain area-wide

infrastructure improvements in accordance with certain Infrastructure Phasing Rules established by the City for the Specific Plan Area, as attached hereto as Exhibit “D” (the “Phasing Rules”), and incorporated herein by this reference. OWNER agrees to comply with the Phasing Rules in the payment for and construction of Improvements as required for development of the Specific Plan Area.

3.5.1 Concurrent with the submission of the first tentative subdivision map, OWNER shall submit to the City an Infrastructure Phasing Plan for the Property, which shall be consistent with the Phasing Rules, for review and approval by the City Engineer. Tentative map submissions to create large parcels for financing purposes, which lots could not be developed without further subdivision, would not trigger this requirement. City Engineer shall confirm that the Infrastructure Phasing Plan is consistent with this Development Agreement, the Specific Plan, the CIP, the Phasing Rules, and all applicable tentative or final subdivision or parcel map conditions. In the event the Infrastructure Phasing Plan is consistent with the requirements described herein the City Engineer shall approve the Infrastructure Phasing Plan. If it is not consistent with such requirements the City Engineer shall indicate in writing which inconsistencies must be corrected in order for the Infrastructure Phasing Plan to be approved. The City will not approve a tentative subdivision map for any portion of the Property until an Infrastructure Phasing Plan is approved in accordance with this Section 3.5.1 and the Phasing Rules. Given the possible timing of different tentative maps proceeding in the same time period or the possibility that someone with a tentative map may decide to delay development of their property, it is likely that multiple tentative maps could have the same infrastructure requirements. Given the financing constraints of the Specific Plan that require the LDR and MDR units to construct most of the infrastructure in the Plan Area, it is imperative that every development with LDR or MDR units meet the development agreement requirement of constructing 150% or 130%, as applicable, of their RTIF infrastructure burden in accordance with the Phasing Rules. The City Engineer therefore has the authority to add replacement infrastructure conditions to an already approved tentative map (to meet the development agreement requirement of constructing 150% or 130% as applicable) if that tentative map is conditioned to construct improvements that have already been constructed. The City Engineer shall follow the same rules outlined in Exhibit D to determine the replacement infrastructure conditions. If the City anticipates multiple tentative maps may proceed with obligations to construct the same infrastructure, the City Engineer may list an alternative infrastructure requirement at the time of tentative map approval. If the City does not list an alternative infrastructure requirement, then the City still has the authority to require replacement infrastructure conditions. OWNER agrees that it will comply with the requirements to construct such replacement or alternative infrastructure as appropriate, and shall coordinate with CITY and other property owners within the Specific Plan Area in conjunction with the implementation of such replacement or alternative infrastructure requirements.

3.5.2 The OWNER shall construct public infrastructure improvements within the Specific Plan Area consistent with the Infrastructure Phasing Plan as approved by the City Engineer. City’s obligation to issue building permits for the Project shall be conditioned on construction of the public improvements consistent with the approved Infrastructure Phasing Plan and the Phasing Rules, which in some cases could restrict the cumulative number of building permits issued within the Specific Plan Area until certain public improvements are

complete or until security has been provided for the required improvements in accordance with a public improvement agreement entered into by and between CITY and OWNER.

3.5.3 OWNER shall be eligible for fee credits for the RTIF to be paid pursuant to this Development Agreement and reimbursement from future development within the Specific Plan Area for public infrastructure improvements constructed pursuant to and in accordance with this Development Agreement. Such fee credits and reimbursement shall be provided in accordance with Section 4.2.5 of this Agreement, the Public Infrastructure Reimbursement Rules and the Financing Plan prepared for the Specific Plan, as approved by City Council and as it may be updated from time to time.

3.6 Conceptual Plan for HDR/CCO Properties. Prior to or concurrently with submission to CITY of OWNER's first application for a tentative subdivision map or other Subsequent Development Entitlement for the property bounded by Road B, County Road 25A, Road D and Road C following approval of this Agreement, OWNER shall submit to the City for approval, with a copy to Tammy Emery, Sole Trustee of the Spencer Revocable Living Trust Dated May 15, 1995 or the successor in interest to fee title to the property adjacent to the Property and owned by Tammy Emery at the time of recordation of this Agreement ("Spencer"), a conceptual plan to include a land use proposal for the portion of OWNER's Property and the Property owned by Spencer and designated as High Density Residential/Community Commercial Overlay ("HDR/CCO") in the Specific Plan, which conceptual plan shall include a description of the relationship between the two development types, including opportunities for shared access for the designated properties (from Roads B and/or C), circulation, and parking. Parking to serve the designated properties shall be located away from Road B, behind any buildings that front Road B. Such conceptual plan shall be subject to review and approval by the Community Development Director in consultation with CITY's traffic engineer to confirm consistency with the requirements with this Section, which approval shall not be unreasonably withheld. If the conceptual plan is submitted by Spencer and approved by the Community Development Director prior to submission of OWNER's first application for a tentative subdivision map or a referenced above, such approval shall satisfy OWNER's obligation under this Section.

3.7 Changes and Amendments. The parties acknowledge that development of the Project will require Subsequent Development Approvals including but not limited to approval of tentative and final subdivision maps for large and small parcels and design review for development of new uses on the Property. As necessary or appropriate, OWNER shall apply for Subsequent Development Approvals and CITY shall process and act on such application in accordance with the Existing Land Use Regulations, except as otherwise provided by this Agreement including the Reservations of Authority. Unless otherwise required by law, as determined in CITY's reasonable discretion, Subsequent Development Approvals shall be deemed "minor" and not require an amendment to this Agreement provided such approvals do not:

- (a) Alter the permitted uses of the Property as a whole; or,
- (b) Increase the density or intensity of use of the Property as analyzed under the Specific Plan CEQA document, which may include limited adjustments as authorized by the City; or,

(c) Increase the maximum height and size of permitted buildings beyond what is permissible under the Specific Plan; or,

(d) Delete a requirement for the reservation or dedication of easements or land for public purposes within the Property as a whole; or,

(e) Constitute a project requiring a subsequent or supplemental environmental impact report pursuant to Section 21166 of the Public Resources Code.

3.8 Reservations of Authority.

3.8.1 Limitations, Reservations and Exceptions. Notwithstanding any other provision of this Agreement, the CITY shall not be prevented from applying new rules, regulations and policies upon the OWNER, nor shall a development agreement prevent the CITY from denying or conditionally approving any subsequent development project application on the basis of such new rules, regulations and policies where the new rules, regulations and policies consist of the following:

(a) Processing fees and charges of every kind and nature imposed by CITY to cover the costs of processing applications for Development Approvals or for monitoring compliance with any Development Approvals.

(b) Procedural regulations relating to hearing bodies, petitions, applications, notices, findings, records, hearings, reports, recommendations, appeals and any other matter of procedure.

(c) Regulations, policies, and rules governing engineering and construction standards and specifications applicable to public and private improvements, including all uniform codes adopted by the CITY and any local amendments to those codes adopted by the CITY; provided, however, that, OWNER shall have a vested right to develop the Property in accordance with, and to the extent of, the standards and specifications that are expressly identified in the Specific Plan. Further, for the first ten (10) years following the Effective Date, the City shall not implement a change to the City's engineering standards and specifications that would result in an increase to the cost of construction of the required public improvements for a subdivision located within the Property by more than 2% of the estimated cost of the public improvements prior to such change.

(d) Regulations imposing Development Exactions; provided, however, that no subsequently adopted Development Impact Fees or fees levied pursuant to the terms of this Agreement shall be applicable to development of the Property except for those Project Fees set forth in Exhibit K to this Agreement, which Project Fees may be increased from time to time in accordance with applicable State law, or as contemplated in this Agreement.

(e) Regulations which may conflict with this Agreement or the Development Plan but which are reasonably necessary to protect the public health and safety. To the extent possible, any such regulations shall be applied and construed so as to provide OWNER with the rights and assurances provided under this Agreement.

(f) Regulations which do not conflict with those rules, regulations and policies set forth in this Agreement or the Development Plan. Any regulation, whether adopted by initiative or otherwise, limiting the rate or timing of development of the Property shall be deemed to conflict with the Development Plan and shall therefore not be applicable to the development of the Property.

(g) Regulations which may conflict with this Agreement or the Development Plan, but to which the OWNER consents in writing.

3.8.2 Subsequent Development Approvals. This Agreement shall not prevent CITY, in acting on Subsequent Development Approvals, from applying Subsequent Land Use Regulations which do not conflict with this Development Agreement or the Specific Plan in the form in effect on the Effective Date of this Development Agreement, nor shall this Agreement prevent CITY from denying or conditionally approving any Subsequent Development Approval on the basis of the Existing Land Use Regulations or any Subsequent Land Use Regulation not in conflict with the Specific Plan.

3.8.3 Modification or Suspension by State or Federal Law. In the event that State or Federal laws or regulations, enacted after the Effective Date of this Agreement, prevent or preclude compliance with one or more of the provisions of this Agreement, such provisions of this Agreement shall be modified or suspended as may be necessary to comply with such State or Federal laws or regulations, provided, however, that this Agreement shall remain in full force and effect to the extent it is not inconsistent with such laws or regulations and to the extent such laws or regulations do not render such remaining provisions impractical to enforce. In the event OWNER alleges that such State or Federal laws or regulations preclude or prevent compliance with one or more provisions of this Agreement, and the CITY does not agree, the OWNER may, at its sole cost and expense, seek declaratory relief (or other similar non-monetary remedies); provided, however, that nothing contained in this Section 3.8.3 shall impose on CITY any monetary liability for contesting such declaratory relief (or other similar non-monetary relief).

3.8.4 Intent. The parties acknowledge and agree that CITY is restricted in its authority to limit its police power by contract and that the foregoing limitations, reservations and exceptions are intended to reserve to CITY all of its police power which cannot be so limited. This Agreement shall be construed, contrary to its stated terms if necessary, to reserve to CITY all such power and authority which cannot be restricted by contract.

3.9 Public Works. If OWNER is required by this Agreement to construct any public works facilities which will be dedicated to CITY or any other public agency upon completion, and if required by applicable laws to do so, OWNER shall perform such work in the same manner and subject to the same requirements as would be applicable to CITY or such other public agency should it have undertaken such construction.

3.10 Acquisition of Offsite Real Property Interests. In any instance where OWNER is required pursuant to the Infrastructure Phasing Plan to construct any Improvements Outside Specific Plan Area, OWNER shall at its sole cost and expense provide or cause to be provided, the real property interests necessary for the construction of such public improvements (the "Offsite Property"). In the event OWNER is unable, after exercising reasonable efforts,

including, but not limited to, the rights under Sections 1001 and 1002 of the Civil Code, to acquire the Offsite Property necessary for the construction of the Improvements Outside Specific Plan Area, and if so instructed by OWNER and upon OWNER'S provision of adequate security for costs CITY may reasonably incur, CITY agrees to use reasonable and diligent good faith efforts to acquire the Offsite Property from the owner or owners of record by negotiation to the extent permitted by law and consistent with this Agreement. If CITY is unable to acquire the Offsite Property by negotiation within sixty (60) days after OWNER's written request, CITY shall, in accordance with the procedures established by law, use its power of eminent domain to acquire the Offsite Property at a public hearing noticed and conducted in accordance with California Code of Civil Procedure Section 1245.235 for the purpose of considering the adoption of a resolution of necessity concerning the Offsite Property, subject to the conditions set forth in this Section 3.10. The CITY and OWNER acknowledge that the timelines set forth in this Section 3.10 represent the maximum time periods which CITY and OWNER reasonably believe will be necessary to complete the acquisition of any Offsite Property. CITY agrees to use reasonable good faith efforts to complete the actions described within lesser time periods, to the extent that it is reasonably able to do so, consistent with the legal constraints imposed upon CITY. OWNER shall pay all costs associated with such acquisition or condemnation proceedings. This section 3.10 is not intended by the parties to impose upon the OWNER an enforceable duty to acquire land or construct any public improvements on land not owned by OWNER, except to the extent that the OWNER elects to proceed with the development of the Project, and then only in accordance with valid conditions imposed by the CITY upon the development of the Project under the Subdivision Map Act or other legal authority. CITY and OWNER acknowledge and agree that Government Code Section 66462.5 shall apply to the installation of public improvements on Offsite Property. CITY and OWNER further agree that the parties may explore alternative options for the required Improvements Outside Specific Plan Area, including but not limited to relocating to an alternative site, prior to proceeding with condemnation.

3.10.1 Owner's Option to Terminate Proceedings. CITY shall provide written notice to OWNER no later than fifteen (15) days prior to making an offer to the owner of the Offsite Property. At any time within that fifteen (15) day period, OWNER may, at its option, notify CITY that it wants CITY to cease all acquisition proceedings with respect to the Offsite Property, whereupon CITY shall cease such proceedings. CITY shall provide written notice to OWNER no later than fifteen (15) days prior to the date of the hearing on CITY'S intent to consider the adoption of a resolution of necessity as to any Offsite Property. At any time within that fifteen (15) day period, OWNER may, at its option, notify CITY that it wants CITY to cease condemnation proceedings, whereupon CITY shall cease such proceedings. If OWNER does not notify CITY to cease condemnation proceedings within said fifteen (15) day period, then the CITY may proceed to consider and act upon the Offsite Property resolution of necessity. If CITY adopts such resolution of necessity, then CITY shall diligently institute condemnation proceedings and file a complaint in condemnation and seek an order of immediate possession with respect to the Offsite Property.

3.10.2. Acquisition of Offsite Real Property Interests within Specific Plan Area. CITY and OWNER acknowledge that for improvements located outside of OWNER's Property but within the Specific Plan Area, the other property owners are required to dedicate property needed for public infrastructure to be constructed by OWNER pursuant to the terms of the other

property owners' development agreements, including, without limitation, Section 3 of the Public Infrastructure Reimbursement Rules. Even if the property is not included in the CIP, the rules set forth in Section 3 of the Public Infrastructure Reimbursement Rules shall be followed. Notwithstanding the foregoing, in the event that another property owner within the Specific Plan Area does not dedicate such property as required by their development agreement, CITY and OWNER may take the steps set forth in this Section 3.10 to acquire such property.

3.11 Regulation by Other Public Agencies. It is acknowledged by the parties that other public agencies not within the control of CITY possess authority to regulate aspects of the development of the Property separately from or jointly with CITY and this Agreement does not limit the authority of such other public agencies. CITY agrees to cooperate, at no cost to CITY, with OWNER in obtaining any required permits or compliance with the regulations of other public agencies provided such cooperation is not in conflict with any laws, regulations or policies of the CITY.

3.12 Utilities. The Project shall be connected to all utilities necessary to provide adequate water, sewer, gas, electric, and other utility service to the Project in accordance with all applicable laws and regulations.

3.13 Wastewater Treatment Capacity. CITY and OWNER agree that there is capacity in the CITY's wastewater treatment facility to serve: (1) existing residents and businesses that are already hooked up to the facility; (2) anticipated residents and businesses through build-out of the City's existing General Plan; and (3) the Project. CITY and OWNER acknowledge and agree that reserving this capacity for the Project, such that sewer hookups shall be available at such time as they are needed as the Project builds out, is a material element of the consideration provided by CITY to OWNER in exchange for the benefits provided to CITY under this Agreement. The Parties recognize the availability of sufficient sewer capacity may be affected by regulatory or operational constraints that are not within the CITY's discretion. To the extent the availability of sewer capacity is within the CITY's discretion (e.g., whether to extend sewer service to areas *not* currently within the CITY's service area), CITY shall not approve providing such capacity to areas currently outside the CITY's service area if this approval would prevent or delay the ability of the CITY to provide sewer hookups to the Project as the Project requires hook-ups or connections. This provision shall not affect the CITY's ability to provide sewer service within its service boundaries or within the existing CITY boundaries as they exist on the effective date of this Agreement, and as to such connections, the Parties requesting sewer service shall be connected on a first come first served basis. OWNER shall pay the applicable connection charge in effect pursuant to City-wide ordinance at the time of building permit issuance. OWNER acknowledges that connection charges may increase substantially over time and that the cost to comply with the CITY's National Pollution Discharge Elimination System ("NPDES") permit, as may be approved from time to time during the term of this Agreement, may be substantial.

3.14 Water Availability. CITY and OWNER agree that the CITY's has adequate water availability to serve: (1) existing residents and businesses that are already connected to CITY's water system; (2) anticipated residents and businesses through build-out of the City's existing General Plan; and (3) the Project. CITY and OWNER acknowledge and agree that reserving this capacity for the Project, such that water connections shall be available at such time as they are

needed as the Project builds out, is a material element of the consideration provided by CITY to OWNER in exchange for the benefits provided to CITY under this Agreement. The Parties recognize the availability of sufficient water availability may be affected by environmental, regulatory or operational constraints that are not within the CITY's discretion. To the extent the availability of water is within the CITY's discretion (e.g., whether to extend water service to areas *not* currently within the CITY's service area), CITY shall not approve providing such capacity to areas currently outside the CITY's service area if this approval would prevent or delay the ability of the CITY to provide water connections to the Project as the Project requires water connections. This provision shall not affect the CITY's ability to provide water service within its service boundaries or within the existing CITY boundaries as they exist on the effective date of this Agreement, and as to such connections, the Parties requesting water service shall be connected on a first come first served basis. OWNER shall pay the applicable connection charge in effect pursuant to City-wide ordinance at the time of building permit issuance. OWNER acknowledges that connection charges may increase substantially over time.

3.15 Right to Farm. OWNER acknowledges and shall comply with the requirements of Woodland Municipal Code Chapter 9.52, "Right to Farm", including but not limited to the requirements to record deed restrictions against property located within 500 feet of agricultural land or agricultural operations in any deed transferring any right, title or interest in the Property or any portion thereof, as more specifically set forth in Section 9.52.060 of the Woodland Municipal Code.

4. PUBLIC BENEFITS.

4.1 Intent. The parties acknowledge and agree that development of the Property will result in substantial public needs which will not be fully met by the Development Plan and further acknowledge and agree that this Agreement confers substantial private benefits on OWNER which should be balanced by commensurate public benefits. Accordingly, the parties intend to provide consideration to the public to balance the private benefits conferred on OWNER by providing more fully for the satisfaction of the public needs resulting from the Project. Significant public benefits provided by OWNER pursuant to the terms of this Agreement include but are not limited to construction of or contribution to the construction portions of the Yard and greenbelt areas as contemplated by the Specific Plan, funding and constructing public infrastructure for the Specific Plan Area, contribution to the construction of the regional interchange project at State Route 113, and the provision of affordable housing within the Project.

4.2 Development Impact Fees and RTIF.

4.2.1 Amount and Components of Development Impact Fees. OWNER shall pay the Development Impact Fees listed in Exhibit "K", W RTP Project Fees and other fees, attached hereto and incorporated herein by this reference. OWNER shall not be required to pay newly enacted Development Impact Fees or other fees that are not listed in Exhibit "K" in conjunction with the Project. The Development Impact Fee and other fee amounts to be paid by OWNER shall be the amounts that are in effect at the time such amounts are due. Nothing contained in this Agreement shall affect the ability of the CITY to amend the amounts of existing Development Impact Fees or other fees as permitted by State law, except that OWNER and

CITY agree that new fee categories cannot be added to this project without mutual written agreement amending this Agreement. Additionally, nothing contained in this Agreement shall affect the ability of other public agencies that are not controlled by CITY to impose and amend, from time to time, Development Impact Fees established or imposed by such other public agencies, even though such Development Impact Fees may be collected by CITY.

4.2.2 Research and Technology Infrastructure Fee. In addition to all Development Impact Fees which shall be paid by OWNER, OWNER shall pay the Research and Technology Park Infrastructure Fee (the “RTIF”) as established by the City Council and as may be updated from time to time in accordance with this Agreement and other development agreements entered into by and between the City and OWNERS within the Specific Plan Area. The RTIF shall be paid by OWNER in the amounts as established pursuant to that certain Woodland Research and Technology Park Development Impact Fee Nexus Study dated July 2023, prepared by Economic and Planning Systems, Inc. (the “RTIF Report”), which is incorporated herein by this reference, subject to annual adjustment as set forth in the RTIF Report, and further subject to periodic updates to the RTIF report as provided for herein. OWNER acknowledges and agrees that the RTIF is established pursuant to this and other development agreements entered into by and between OWNER and other property owners within the Specific Plan Area for specified land uses in a manner so as to help ensure the completion of the public facilities contemplated by the Specific Plan and the feasibility of all proposed land uses within the Specific Plan Area. Accordingly, OWNER agrees as follows:

(a) OWNER understands, acknowledges and agrees that the RTIF is calculated to ensure sufficient funding to complete the Improvements contemplated by the Specific Plan as a whole, but that some land uses, including certain residential uses, will pay RTIF in excess of their proportionate share of the total cost of those public facilities in order to facilitate the build out of other land uses contemplated within the Specific Plan. OWNER hereby agrees to pay such fees in the amounts and the manner set forth in this Agreement and the RTIF Report, as it may be updated from time to time, to provide the public benefits that will be derived from successful development of all land uses in the Specific Plan Area.

(b) OWNER and City further acknowledge and agree that portions of the RTIF shall be updated prior to issuance of the first building permit for the Project based on more detailed engineering work that will be conducted on the improvements included in the Capital Improvement Plan. Such modifications are described in Exhibit E, “WRTP CIP Modification”, attached hereto and incorporated herein by this reference. Following the completion of the modifications described in Exhibit E, the City shall update the RTIF to account for such modifications. OWNER hereby agrees and consents to such modifications of the RTIF, provided that the allocation of such fees is consistent with the methodology utilized in the RTIF Report.

(c) OWNER and CITY further acknowledge and agree that certain projects that are to be funded by the RTIF are intended in whole or in part to address impacts created by development in the Spring Lake Specific Plan Area located adjacent to the Specific Plan Area that includes the Property. These projects have been included in the projects to be funded by the RTIF as a form of equitable swap in exchange for certain projects constructed by developers in the Spring Lake Specific Plan that partially benefit the Specific Plan Area that

includes the Property. OWNER acknowledges and explicitly consents to the inclusion of such projects in the calculation of the RTIF and acknowledges that the RTIF may be used to fund such projects. OWNER further acknowledges and agrees that it OWNER shall not be eligible for reimbursement from property owners or developers of property located within the Spring Lake Specific Plan Area for any projects that are funded by the RTIF.

(d) OWNER and CITY further acknowledge and agree that for properties that are designated in the Land Use section of the Specific Plan as Village Center Mixed Use (VCMU), in the event that the ground floor development fronting Road B is developed for a non-residential use, and OWNER constructs upper floor residential units, above the non-residential buildings fronting Road B, OWNER shall not be required to pay the RTIF on any such upper floor residential units. Further, for properties that are designated in the Land Use section of the Specific Plan as High Density Residential with Community Commercial Overlay (HDR/CCO), in the event that (1) the total unit yield for Residential Development Zone (“RDZ”) 6 as set forth in Table 6.1 of the Specific Plan has been constructed and occupied by residents, and (2) OWNER constructs upper floor residential units above the non-residential buildings fronting Road B which upper floor residential units are in excess of the required total unit yield for RDZ 6, OWNER shall not be required to pay the RTIF on any such upper floor residential units.

4.2.3 Time of Payment. The Development Impact Fees and RTIF shall be paid to CITY prior to the issuance of building permits for each residential unit. Notwithstanding the foregoing, deferral of the payment of any RTIF fees may be granted pursuant to a separate agreement approved by CITY pursuant to CITY’s deferred impact fee policy for non-residential development, if applicable. At CITY’s discretion, CITY shall be allowed to defer RTIF fees to Certificate of Occupancy provided that the fee paid is the fee in effect on the date it is paid. Payment of RTIF fees shall be subject to the provisions of credits as provided for in this Agreement and the Public Infrastructure Reimbursement Rules.

4.2.4 Minimum RTIF Fees. OWNER specifically agrees that for each Low Density Residential unit developed in a LDR or VCLDR zone shall pay, at a minimum, the RTIF fee that is established for the 2,000-3,000 square foot unit, even for those units that are less than 2,000 square feet. OWNER further agrees that for each Medium Density Residential unit developed in a MDR or VCMDR zone shall pay, at a minimum, the RTIF fee that is established for the 1,000-2,000 square foot unit, even for those units that are less than 1,000 square feet..

4.2.5 Credits. OWNER shall be entitled to credit against the fees required pursuant to Subsection 4.2.1 and 4.2.2 for the dedication of easements, land and/or the construction of improvements required pursuant to this Agreement, the CIP, the Public Infrastructure Reimbursement Rules, the Phasing Rules, OWNER’s Infrastructure Phasing Plan and the applicable Subdivision Agreements/Tentative Map conditions for the Project. OWNER shall not receive credits for Improvements constructed pursuant to this Agreement in an amount greater than the Engineer’s estimate of the cost of such improvements as set forth in the CIP, adjusted on an annual basis by the Construction Cost Index as published from time to time by the Engineering News-Record (“CCI”). Similarly, OWNER shall receive credits toward the RTIF for land dedicated to the CITY for public infrastructure improvements based on the costs for such land as set forth in the CIP, adjusted on an annual basis by CCI. The Public Infrastructure

Reimbursement Rules provides further detail on the terms pursuant to which OWNER will receive credits and reimbursement for dedication of easements, land and construction of Improvements in conjunction with the development of the Property, and OWNER acknowledges and agrees that it is subject to and shall comply with the Public Infrastructure Reimbursement Rules.

4.3 Responsibility for Funding Master Planning and Design Documents and CIP Modification Work. OWNER shall be required to fund the cost of certain Master Plans and the design of certain public improvements, as more specifically set forth in Exhibit “F” (“**Master Planning and Design Obligations**”), attached hereto and incorporated herein by this reference, and to fund the cost of the analysis and consideration of the proposed modifications to the CIP as described in Section 4.2.2(b) and Exhibit “E” (**CIP Modification Work**). Such funding shall be provided by OWNER and other property owners in the Specific Plan Area at the times as required by this Agreement, including the Public Infrastructure Reimbursement Rules and the Phasing Rules. Except as otherwise set forth in the Master Planning and Design Obligations, the Master Plans and the design documents and the CIP Modification Work are the cumulative responsibility of the owners of property within the Specific Plan Area, and to the extent the OWNER is required to pay more than its proportionate share of the cost of any of such Master Plans and design documents or CIP Modification Work, OWNER shall be eligible for reimbursement from other property owners within the Specific Plan Area pursuant to the terms of the Public Infrastructure Reimbursement Rules. CITY and OWNER shall cooperate in the preparation of these documents.

4.4 Dedications for Public Improvements. OWNER agrees to dedicate to CITY certain property to be used for public facilities and improvements as more specifically set forth in Exhibit “G” (“**Public Dedications**”), attached hereto and incorporated herein by this reference. Such dedications shall be made by OWNER at the times as required by this Agreement and the Phasing Rules so as to provide dedications when needed for the extension of infrastructure or public amenities for the Project and other development in the Specific Plan Area. These dedications may be required ahead of development of OWNER’s Property. OWNER may be eligible for credits and, if applicable, reimbursement from other property owners within the Specific Plan Area for the dedications required by this Agreement if the real property to be dedicated is included in the CIP and reflected in the RTIF. Credit or reimbursement for such real property shall be provided as set forth in Section 4.2.5 of this Agreement, which credits and reimbursements shall be paid in accordance with the Public Infrastructure Reimbursement Rules. Real property that is set forth in Exhibit “G” but is not included in the CIP and reflected in the RTIF shall not be eligible for credit or reimbursement from other property owners or the RTIF. If real property is needed for temporary drainage of agricultural runoff prior to the full implementation of the storm drainage system reflected in the CIP, then the dedicating property owner shall dedicate the drainage easement to the developing land owner without compensation consistent with the timing of other public dedications in this agreement. CITY and OWNER acknowledge and agree that the property that must be dedicated to CITY may be modified from time to time through updates to the CIP after approval of this Agreement or in conjunction with the processing of subdivision maps for the Property. OWNER shall make such dedications in accordance with the CIP as it may be modified from time to time, in accordance with the timing for dedication as set forth in the approved Infrastructure Phasing Plan and Exhibit G.

4.5 Responsibility for Construction of Public Improvements.

4.5.1 Timely Construction of Public Infrastructure. As part of the development of the Project, OWNER shall be required to construct portions of certain area wide infrastructure that will serve the Specific Plan Area. Such infrastructure shall be the infrastructure that will be required pursuant to the Infrastructure Phasing Plan that shall be developed by OWNER pursuant to Section 3.5.1 of this Agreement. OWNER shall be responsible for the timely construction and completion of all Improvements required for the Project in accordance with the Infrastructure Phasing Plan and any and all tentative subdivision map conditions. All required Improvements for each Subdivision Map, shall be completed and operational prior to City approval of the final subdivision map, unless OWNER enters into a Public Improvement Agreement with the City for such Improvements and provides adequate security for such improvements in accordance with the Subdivision Map Act and Woodland Municipal Code Chapter 16.52, as it may be amended from time to time, in which case such Improvements shall be constructed within the times provided in the Public Improvement Agreement.

4.5.2 Reimbursement for Public Infrastructure. Upon completion of the Improvements for an applicable portion of the development of the Property as required pursuant to this Agreement, CITY and OWNER shall enter into a reimbursement agreement that will provide for reimbursement of OWNER to the extent that the Engineers estimate of the cost of such improvements as set forth in the CIP (and adjusted by CCI) exceeds the amount of the RTIF applicable to the applicable portion of the Property developed by OWNER. Such reimbursement agreement shall be consistent with the Public Infrastructure Reimbursement Rules and the Phasing Rules. In the event OWNER/Developer builds MPFP projects, they are eligible for reimbursement consistent with the policies in the City's MPFP fee program and the City's MPFP administrative guidelines.

4.6 Parks Impact Fee. OWNER agrees that it shall pay the Parks Impact Fee adopted for the Specific Plan Area in the amount of \$9,279 per single family unit or \$6,959 per multi-family unit (as of January 1, 2023), which fee shall be adjusted on an annual basis by CCI. OWNER shall not be eligible to receive credits toward the Parks Impact Fee for dedication of park acreage or greenbelts or for construction of park or green belt improvements within the Specific Plan Area.

4.7 Affordable Housing. OWNER will comply with the requirements of Chapter 15.18 of the Woodland Municipal Code (the "Affordable Housing Ordinance") through the implementation of the Affordable Housing Plan for the Specific Plan (the "**WRTP Affordable Housing Plan**"), which is attached hereto as Exhibit "H" and incorporated herein by this reference. In the event of any inconsistencies between the Affordable Housing Ordinance and the WRTP Affordable Housing Plan, the WRTP Affordable Housing Plan shall apply to the Project.

4.8 Reservation of School Site. OWNER shall reserve up to twelve (12) acres of the Property (with the exact amount determined at the discretion of WJUSD) for purchase by Woodland Joint Unified School District ("WJUSD") for the development of an elementary school campus (the "School Site"). Unless otherwise agreed to in a School Site Purchase and Sale Option Agreement between OWNER and WJUSD, the School Site shall be made available

to WJUSD for purchase until issuance of the 350th residential building permit in the Specific Plan Area or at such time as the school fees paid by OWNER and other property owners in the Specific Plan Area are sufficient to cover the land purchase costs for the School Site, whichever occurs sooner. The parties expect that WJUSD will prioritize use of school fees collected from development in the Specific Plan Area toward purchase of the School Site, should WJUSD determine that the School Site is needed. No later than 60 days after the execution of this Agreement, OWNER shall enter into good faith negotiations with WJUSD on a School Site Purchase and Sale Option Agreement. As part of the School Site Purchase and Sale Option Agreement, if WJUSD and OWNER agree that a supplemental fee shall be paid by OWNER towards construction of facilities that provide capacity for students generated by the Specific Plan, then such supplemental fee shall be deposited with the City of Woodland at the time of building permit issuance, placed in a segregated account, and held by City for future payment to WJUSD for the construction of a WRTP elementary school, or as otherwise specified in the School Site Purchase and Sale Option Agreement. In the event WJUSD does not proceed with construction of an elementary school at the School Site, or other project(s) specified in the School Site Purchase and Sale Option Agreement by issuance of the 800th residential building permit in the Specific Plan Area, then the supplemental fee funds may be used by the City to construct public improvements included in the CIP, as it may be amended from time to time, at the discretion of the City.

4.9 Dedication of Land for Business Incubator Property. Within the first 500,000 square feet of non-residential construction, OWNER shall set aside land sufficient for the construction of no less than 30,000 square feet of research and technology space dedicated to the support of new technology-based companies, such as start-up/business incubator space or academic-industry collaboration space. CITY and OWNER shall work together to determine an appropriate operator for such space, and upon such determination, the research and technology land shall be dedicated to such operator at no cost.

4.10 Right to Continue Use of Agricultural Well. CITY and OWNER understand and acknowledge that there exists within the Specific Plan Area agricultural wells that provide irrigation for certain other property that remains in agricultural use. The Parties agree that OWNER may operate any such agricultural wells owned by OWNER to serve agricultural uses on OWNER's property or other property, provided that such use must be in compliance with all applicable federal, state and local laws, including but not limited to the Yolo Subbasin Groundwater Sustainability Plan adopted by the Yolo Subbasin Groundwater Agency, and any regulations or directives promulgated thereunder. OWNER shall be solely responsible to retain any and all property interests necessary for continuing operation of any such agricultural well, and for ensuring compliance with all applicable laws and regulations, as well as the Groundwater Sustainability Plan.

4.11 Build to Rent Development. OWNER agrees that neither it nor any successor or assign to this Agreement shall develop single family residences in the Low Density Residential, Village Center Low Density Residential, Village Center Medium Density Residential or Medium Density Residential zones located north of Marston Drive in the Specific Plan Area as shown on the Development Plan attached hereto as Exhibit "C", as a "build to rent single family development". For purposes of this Agreement, a "build to rent single family development" is a

single family residential subdivision or a portion of such subdivision that is built for the purpose of renting, rather than selling the constructed homes.

5. FINANCING OF PUBLIC IMPROVEMENTS.

5.1 Financing Districts or Alternative Mechanisms. If deemed appropriate, CITY and OWNER will cooperate in the formation of any special assessment district, community facilities district or alternate financing mechanisms to pay for the construction and/or maintenance and operation of public infrastructure facilities or Improvements required as part of this Agreement, the CIP and the approved Infrastructure Phasing Plan, provided, however, that to the extent that a district or alternative financing mechanism is established for the purpose of bonding to raise funds for construction of infrastructure or payment of fees, the boundaries of such district will be limited to separate improvement areas that correspond with the boundaries of the tentative map (or tentative maps) within each Infrastructure Phasing Plan. The RTIF fees generated from the improvement area may be used to fund any improvement in the CIP. Such improvement areas shall be shown in the Infrastructure Phasing Plan approved by the City pursuant to this Development Agreement. CITY also agrees that, to the extent any such district or other financing entity is formed and sells bonds in order to finance such Improvements, OWNER may receive credits for the RTIF to be paid by OWNER, and may be reimbursed to the extent that OWNER spends funds or dedicates land for the establishment of public improvements that are included in the CIP, provided that such fee credits and reimbursements must be in conformance with the Public Infrastructure Reimbursement Rules and any individual reimbursement agreements entered into by and between CITY and OWNER. Notwithstanding the foregoing, it is acknowledged and agreed by the parties that nothing contained in this Agreement shall be construed as requiring CITY or the City Council to form any such district or to issue and sell bonds. If bonds are sold then the proceeds of those bonds shall be used to reimburse the public improvements that are listed in the CIP and required by the conditions of the associated development.

CITY agrees to use reasonable efforts to develop and implement such financing mechanisms subject to applicable public hearing and election requirements of applicable State and, if tax-exempt bonds are to be issued, federal law, the existing regulations and the customary and reasonable industry standards for the development of such financings. OWNER and CITY acknowledge and agree that the establishment of a financing district and the issuance of bonds supported by the special taxes are dependent on many factors that are not known at this time. The viability of the financing, the amount of special taxes for debt service, and available bond proceeds will be dependent on several factors existing at the time the bonds are sold, including, but not limited to, the financial markets, interest on tax exempt financings, housing market, value of homes in the area, absorption rates for home sales in the area, bond underwriting criteria and ratings by bond-rating agencies. Fee credits that are generated from bond sales shall remain with the land that they were bonded against and can be used as a credit against RTIF fee payments. These fee credits cannot be sold or transferred.

CITY and OWNER acknowledge the infrastructure costs needed to support the project are substantial and may compromise the feasibility or timely build out of the Project and its associated benefits. CITY and OWNER further acknowledge this is especially the case for the development of residential units in the MDR and HDR zones. As such, both parties agree to

work cooperatively to identify and pursue external funding sources, multiple financing strategies and tools to defray project infrastructure improvement costs. Further, the City anticipates that adjustments to the Specific Plan and associated approvals may be needed in the future, and the City will conduct further evaluation of the Specific Plan, CIP and City fee program after Specific Plan approval to determine what adjustments are appropriate.

5.2 Sports Park Community Facilities District. OWNER acknowledges the existence of the Spring Lake Community Facilities District (“**Sports Park CFD**”) which was created pursuant to the Mello-Roos Community Facilities Act, as set forth in Government Code Section 53311 *et seq.* for the purpose of funding the ongoing operation of the Woodland Sports Park, which provides regional park facilities that will serve the Property. OWNER voluntarily consents to and prior to recordation of each small lot final subdivision map or large lot map (for High Density and Mixed Use Residential units) for the Project shall take whatever affirmative action it needs to take on its part to ensure that all portions of the Project and Property that are designated as Low Density Residential, Village Center Low Density Residential, Medium Density Residential, Village Center Medium Density Residential and High Density Residential (including units above Village Center Mixed Use and Community Commercial Overlay for which such small lot final subdivision map or large lot map - for High Density and Mixed Use Residential units) is recorded is subject to the assessments of the Sports Park CFD, which includes without limitation, voting to annex to said Sports Park CFD.

5.3 Maintenance Community Facilities District(s).

5.3.1 Formation, Consent, Waiver, and Benefit. No building permits shall be issued for the residential units or commercial development provided for in the first subdivision map for the Project until a Community Facilities District has been formed for the purpose of funding public services and maintenance costs associated with the Project for services identified in Exhibit I or the Property has been annexed into such a Community Facilities District that has already been formed to fund public services and maintenance costs for the Specific Plan Area (the “**Maintenance CFD**”), or OWNER participates in the formation of an equivalent funding mechanism for public services and maintenance purpose in a form satisfactory to the City Engineer. OWNER consents to and shall cooperate in such formation or annexation of the Maintenance CFD or the formation of an equivalent financing mechanism for maintenance and services purposes. OWNER also consents to the levy of such special taxes or assessments as are necessary to fund the maintenance and service obligations described herein, pursuant to and consistent with the requirements of this Agreement, Government Code Section 53111, *et seq.*, and the City's Capital Financing and Debt Management Policy, adopted by City Council on June 20, 2017 and incorporated herein by this reference.

5.3.2 Annexation of Subsequent Phases. No building permits shall be issued for subsequent phases of the Project until the such phase is annexed into the Maintenance CFD or an equivalent funding mechanism for public services and maintenance costs has been established for such subsequent phase in accordance with Section 5.3.1.

5.3.3 Uses of Funds Collected. The Maintenance CFD will fund maintenance of certain landscaping, public improvements and public facilities as more specifically set forth in Exhibit “I”, attached hereto and incorporated herein by this reference (“**Maintenance Services**”).

5.4 Maximum Effective Tax Rate. CITY and OWNER agree that the maximum effective tax rate for assessor's parcels within the Property from all applicable financing districts, including without limitation, any financing districts established as contemplated in Section 5.1 of this Agreement, the Sports Park CFD, the Maintenance CFD and any CFD or Assessment District established pursuant to the Statewide Community Infrastructure Program, may not exceed one and 8/10 percent (1.8%) of the reasonably expected value of the parcel with planned vertical improvements determined at the time of approval of the applicable financing district and the Rate and Method of Apportionment.

6. REVIEW FOR COMPLIANCE.

6.1 Periodic and Special Reviews.

6.1.1 Time for and Initiation of Periodic Review. The CITY shall review this Agreement as determined by the City, in order to ascertain the good faith compliance by OWNER with the terms of this Agreement. OWNER shall submit an Annual Monitoring Report to CITY, in a form acceptable to the City Manager, along with any applicable processing charge, within ten (10) days after each anniversary date of the Effective Date of this Agreement. Within thirty (30) days after the receipt of the Annual Monitoring Report, CITY shall either issue a notice of continuing compliance or a notice of non-compliance and a notice of CITY's intent to conduct a Special Review pursuant to Sections 6.1.2 through 6.1.6. Issuance of a notice of continuing compliance may be issued by the City Manager or his designee. The cost of this review shall be funded by the OWNER on a time and materials basis.

6.1.2 Initiation of Special Review. A special review may be called either by agreement of the parties or by unilateral initiation by the CITY in one or more of the following ways:

- (a) Recommendation of the Community Development Director;
- (b) Affirmative vote of at least four (4) members of the Planning Commission; or
- (c) Affirmative vote of at least three (3) members of the City Council.

6.1.3 Notice of Special Review. The City Manager shall begin the special review proceeding by giving notice to OWNER that the CITY intends to undertake a special review of this Agreement. Such notice shall be given at least ten (10) days in advance of the time at which the matter will be considered by the Planning Commission.

6.1.4 Public Hearing. The Planning Commission shall conduct a hearing at which OWNER must demonstrate good faith compliance with the terms of this Agreement. The burden of proof on this issue shall be on OWNER.

6.1.5 Findings upon Public Hearing. The Planning Commission shall determine, upon the basis of substantial evidence, whether OWNER has, for the period under review, complied in good faith with the terms and conditions of this Agreement.

6.1.6 Procedure upon Findings.

(a) If the Planning Commission finds and determines on the basis of substantial evidence that OWNER has complied in good faith with the terms and conditions of this Agreement, during the period under review, the review for that period shall be concluded.

(b) If the Planning Commission finds and determines on the basis of substantial evidence that OWNER has not complied in good faith with the terms and conditions of this Agreement, during the period under review, the Planning Commission may recommend to the City Council to modify or terminate this Agreement.

(c) OWNER may appeal a determination pursuant to paragraph (b) to the City Council in accordance with CITY's rules for consideration of appeals in zoning matters generally.

6.2 Proceedings Upon Modification or Termination. If, upon a finding under Section 6.1.6(b), CITY determines to proceed with modification or termination of this Agreement, CITY shall give written notice to OWNER of its intention so to do. The notice shall be given at least ten (10) calendar days prior to the scheduled hearing and shall contain:

(a) The time and place of the hearing;

(b) A statement as to whether or not CITY proposes to terminate or to modify the Agreement; and,

(c) Such other information CITY considers necessary to inform OWNER of the nature of the proceeding.

6.3 Hearing on Modification or Termination. At the time and place set for the hearing on modification or termination, OWNER shall be given an opportunity to be heard. OWNER shall be required to demonstrate good faith compliance with the terms and conditions of this Agreement. The burden of proof on this issue shall be on OWNER. If the City Council finds, based upon substantial evidence in the administrative record, that OWNER has not complied in good faith with the terms or conditions of the Agreement, the City Council may terminate or modify this Agreement and impose such conditions to the action it takes as it considers necessary to protect the interests of the CITY. The decision of the City Council shall be final, subject only to judicial review pursuant to Section 1094.5 of the Code of Civil Procedure.

6.4 Certificate of Agreement Compliance. If, at the conclusion of a Periodic or Special Review, OWNER is found to be in compliance with this Agreement, CITY shall, upon written request by OWNER, issue a Certificate of Agreement Compliance ("Certificate") to OWNER stating that after the most recent Periodic or Special Review and based upon the information known or made known to the Community Development Director and City Council that (1) this Agreement remains in effect and (2) OWNER is not in default. The Certificate shall be in recordable form, shall contain information necessary to communicate constructive record notice of the finding of compliance, shall state whether the Certificate is issued after a Periodic or Special Review and shall state the anticipated date of commencement of the next Periodic Review. OWNER may record the Certificate with the County Recorder.

Whether or not the Certificate is relied upon by assignees or other transferees or OWNER, CITY shall not be bound by a Certificate if a default existed at the time of the Periodic or Special Review, but was concealed from or otherwise not known to the Community Development Director or City Council.

7. DEFAULT AND REMEDIES.

7.1 Remedies in General. It is acknowledged by the parties that CITY would not have entered into this Agreement if it were to be liable in damages under this Agreement, or with respect to this Agreement or the application thereof.

In general, each of the parties hereto may pursue any remedy at law or equity available for the breach of any provision of this Agreement, except that CITY shall not be liable in damages to OWNER, or to any successor in interest of OWNER, or to any other person, and OWNER covenants not to sue for damages or claim any damages:

(a) For any breach of this Agreement or for any cause of action which arises out of this Agreement; or

(b) For the taking, impairment or restriction of any right or interest conveyed or provided under or pursuant to this Agreement; or

(c) Arising out of or connected with any dispute, controversy or issue regarding the application or interpretation or effect of the provisions of this Agreement.

7.2 Specific Performance. The parties acknowledge that money damages and remedies at law generally are inadequate and specific performance and other non-monetary relief are particularly appropriate remedies for the enforcement of this Agreement and should be available to all parties for the following reasons:

(a) Money damages are unavailable against CITY as provided in Section 7.1 above.

(b) Due to the size, nature and scope of the project, it may not be practical or possible to restore the Property to its natural condition once implementation of this Agreement has begun. After such implementation, OWNER may be foreclosed from other choices it may have had to utilize the Property or portions thereof. OWNER has invested significant time and resources and performed extensive planning and processing of the Project in agreeing to the terms of this Agreement and will be investing even more significant time and resources in implementing the Project in reliance upon the terms of this Agreement, and it is not possible to determine the sum of money which would adequately compensate OWNER for such efforts.

7.3 Release. Except for non-damage remedies, including the remedy of specific performance and judicial review as provided for in Sections 7.2 and 6.3, respectively, OWNER, for itself, its successors and assignees, hereby releases the CITY, its officers, agents and employees from any and all claims, demands, actions, or suits of any kind or nature arising out of any liability, known or unknown, present or future, including, but not limited to, any claim or liability, based or asserted, pursuant to Article I, Section 19 of the California Constitution, the

Fifth Amendment of the United States Constitution, or any other law or ordinance which seeks to impose any other liability or damage, whatsoever, upon the CITY because it entered into this Agreement or because of the terms of this Agreement.

7.4 Termination of Agreement for Default of OWNER. Subject to the provisions contained in Subsection 6.3 herein, in addition to the remedy of specific performance as set forth in Section 7.2, CITY may terminate this Agreement for any failure of OWNER to perform any material duty or obligation of OWNER under this Agreement, or to comply in good faith with the terms of this Agreement (hereinafter referred to as “default”); provided, however, CITY may terminate this Agreement pursuant to this Section only after providing written notice to OWNER of default setting forth the nature of the default and the actions, if any, required by OWNER to cure such default and, where the default can be cured, OWNER has failed to take such actions and cure such default within 60 days after the effective date of such notice or, in the event that such default cannot be cured within such 60 day period but can be cured within a longer time, has failed to commence the actions necessary to cure such default within such 60 day period and to diligently proceed to complete such actions and cure such default.

7.5 Termination of Agreement for Default of CITY. OWNER may terminate this Agreement only in the event of a default by CITY in the performance of a material term of this Agreement and only after providing written notice to CITY of default setting forth the nature of the default and the actions, if any, required by CITY to cure such default and, where the default can be cured, CITY has failed to take such actions and cure such default within 60 days after the effective date of such notice or, in the event that such default cannot be cured within such 60 day period but can be cured within a longer time, has failed to commence the actions necessary to cure such default within such 60 day period and to diligently proceed to complete such actions and cure such default.

8. THIRD PARTY LITIGATION.

8.1 General Plan Litigation. CITY has determined that this Agreement is consistent with its General Plan, as such called General Plan exists as of the Effective Date (“General Plan”), and that the General Plan meets all requirements of law. OWNER has reviewed the General Plan and concurs with CITY’s determination.

CITY shall have no liability in damages under this Agreement for any failure of CITY to perform under this Agreement or the inability of OWNER to develop the Property as contemplated by the Development Plan of this Agreement as the result of a judicial determination that on the Effective Date, or at any time thereafter, the General Plan, or portions thereof, are invalid or inadequate or not in compliance with law.

8.2 Third Party Litigation Concerning Agreement. OWNER shall defend, at its expense, including attorneys’ fees, indemnify, and hold harmless CITY, its agents, officers and employees from any claim, action or proceeding against CITY, its agents, officers, or employees to attack, set aside, void, or annul the approval of this Agreement or the approval of any permit granted pursuant to this Agreement. CITY shall promptly notify OWNER of any such claim, action or proceeding, and CITY shall cooperate in the defense. If CITY fails to promptly notify OWNER of any such claim, action or proceeding, or if CITY fails to cooperate in the defense,

OWNER shall not thereafter be responsible to defend, indemnify, or hold harmless CITY. CITY may in its discretion participate in the defense of any such claim, action or proceeding.

8.3 Indemnity. In addition to the provisions of 8.2 above, OWNER shall indemnify and hold CITY, its officers, agents, employees and independent contractors free and harmless from any liability whatsoever, based or asserted upon any act or omission of OWNER, its officers, agents, employees, subcontractors and independent contractors, for property damage, bodily injury, or death (OWNER's employees included) or any other element of damage of any kind or nature, relating to or in any way connected with or arising from the activities contemplated hereunder, including, but not limited to, the study, design, engineering, construction, completion, failure and conveyance of the public improvements, save and except claims for damages arising through the sole active negligence or sole willful misconduct of CITY. OWNER shall defend, at its expense, including attorneys' fees, CITY, its officers, agents, employees and independent contractors in any legal action based upon such alleged acts or omissions. CITY may in its discretion participate in the defense of any such legal action.

8.4 Environment Assurances. OWNER shall indemnify and hold CITY, its officers, agents, and employees free and harmless from any liability, based or asserted, upon any act or omission of OWNER, its officers, agents, employees, subcontractors, predecessors in interest, successors, assigns and independent contractors for any violation of any federal, state or local law, ordinance or regulation relating to industrial hygiene or to environmental conditions on, under or about the Property, including, but not limited to, soil and groundwater conditions, and OWNER shall defend, at its expense, including attorneys' fees, CITY, its officers, agents and employees in any action based or asserted upon any such alleged act or omission. CITY may in its discretion participate in the defense of any such action.

8.5 Reservation of Rights. With respect to Sections 8.2, 8.3 and 8.4 herein, CITY reserves the right to either (1) approve the attorney(s) which OWNER selects, hires or otherwise engages to defend CITY hereunder, which approval shall not be unreasonably withheld, or (2) conduct its own defense, provided, however, that OWNER shall reimburse CITY forthwith for any and all reasonable expenses incurred for such defense, including attorneys' fees, upon billing and accounting therefor.

8.6 Survival. The provisions of this Sections 8.1 through 8.6, inclusive, shall survive the termination of this Agreement.

9. MORTGAGEE PROTECTION.

The parties hereto agree that this Agreement shall not prevent or limit OWNER, in any manner, at OWNER's sole discretion, from encumbering the Property or any portion thereof or any improvement thereon by any mortgage, deed of trust or other security device securing financing with respect to the Property. CITY acknowledges that the lenders providing such financing may require certain Agreement interpretations and modifications and agrees upon request, from time to time, to meet with OWNER and representatives of such lenders to negotiate in good faith any such request for interpretation or modification. CITY will not unreasonably withhold its consent to any such requested interpretation or modification provided

such interpretation or modification is consistent with the intent and purposes of this Agreement. Any Mortgagee of the Property shall be entitled to the following rights and privileges:

(a) Neither entering into this Agreement nor a breach of this Agreement shall defeat, render invalid, diminish or impair the lien of any mortgage on the Property made in good faith and for value, unless otherwise required by law.

(b) The Mortgagee of any mortgage or deed of trust encumbering the Property, or any part thereof, which Mortgagee, has submitted a request in writing to the CITY in the manner specified herein for giving notices, shall be entitled to receive written notification from CITY of any default by OWNER in the performance of OWNER's obligations under this Agreement.

(c) If CITY timely receives a request from a mortgagee requesting a copy of any notice of default given to OWNER under the terms of this Agreement, CITY shall provide a copy of that notice to the Mortgagee within ten (10) days of sending the notice of default to OWNER. The Mortgagee shall have the right, but not the obligation, to cure the default during the remaining cure period allowed such party under this Agreement.

(d) Any Mortgagee who comes into possession of the Property, or any part thereof, pursuant to foreclosure of the mortgage or deed of trust, or deed in lieu of such foreclosure, shall take the Property, or part thereof, subject to the terms of this Agreement. Notwithstanding any other provision of this Agreement to the contrary, no Mortgagee shall have an obligation or duty under this Agreement to perform any of OWNER's obligations or other affirmative covenants of OWNER hereunder, or to guarantee such performance; provided, however, that to the extent that any covenant to be performed by OWNER is a condition precedent to the performance of a covenant by CITY, the performance thereof shall continue to be a condition precedent to CITY's performance hereunder, and further provided that any sale, transfer or assignment by any Mortgagee in possession shall be subject to the provisions of Section 2.4 of this Agreement.

10. MISCELLANEOUS PROVISIONS.

10.1 Recordation of Agreement. This Agreement and any amendment or cancellation thereof shall be recorded with the Yolo County Recorder by the City Clerk within ten (10) days of CITY's entry into this Agreement, as required by Section 65868.5 of the Government Code. If the parties to this Agreement or their successors in interest amend or cancel this Agreement as provided for herein and in Government Code Section 65868, or if the CITY terminates or modifies the agreement as provided for herein and in Government Code Section 65865.1 for failure of the applicant to comply in good faith with the terms or conditions of this Agreement, the City Clerk shall have notice of such action recorded with the Yolo County Recorder.

10.2 Entire Agreement. This Agreement sets forth and contains the entire understanding and agreement of the parties, and there are no oral or written representations, understandings or ancillary covenants, undertakings or agreements which are not contained or expressly referred to herein. No testimony or evidence of any such representations,

understandings or covenants shall be admissible in any proceeding of any kind or nature to interpret or determine the terms or conditions of this Agreement.

10.3 Severability. If any term, provision, covenant or condition of this Agreement shall be determined invalid, void or unenforceable, the remainder of this Agreement shall not be affected thereby to the extent such remaining provisions are not rendered impractical to perform taking into consideration the purposes of this Agreement. Notwithstanding the foregoing, the provision of the Public Benefits set forth in Section 4 of this Agreement, including but not limited to the payment of the fees set forth therein, are essential elements of this Agreement and CITY would not have entered into this Agreement but for such provisions, and therefore in the event such provisions are determined to be invalid, void or unenforceable, this entire Agreement shall be null and void and of no force and effect whatsoever.

10.4 Interpretation and Governing Law. This Agreement and any dispute arising hereunder shall be governed and interpreted in accordance with the laws of the State of California. This Agreement shall be construed as a whole according to its fair language and common meaning to achieve the objectives and purposes of the parties hereto, and the rule of construction to the effect that ambiguities are to be resolved against the drafting party shall not be employed in interpreting this Agreement, all parties having been represented by counsel in the negotiation and preparation hereof.

10.5 Section Headings. All section headings and subheadings are inserted for convenience only and shall not affect any construction or interpretation of this Agreement.

10.6 Singular and Plural. As used herein, the singular of any word includes the plural.

10.7 Joint and Several Obligations. Subject to Section 2.4, if at any time during the term of this Agreement the Property is owned, in whole or in part, by more than one owner, all obligations of such owners under this Agreement shall be joint and several, and the default of any such owner shall be the default of all such owners. Notwithstanding the foregoing, no owner of a single lot which has been finally subdivided and sold to such owner as a member of the general public or otherwise as an ultimate user shall have any obligation under this Agreement except as provided under Section 4 hereof.

10.8 Time of Essence. Time is of the essence in the performance of the provisions of this Agreement as to which time is an element.

10.9 Waiver. Failure by a party to insist upon the strict performance of any of the provisions of this Agreement by the other party, or the failure by a party to exercise its rights upon the default of the other party, shall not constitute a waiver of such party's right to insist and demand strict compliance by the other party with the terms of this Agreement thereafter.

10.10 No Third Party Beneficiaries. This Agreement is made and entered into for the sole protection and benefit of the parties and their successors and assigns. No other person shall have any right of action based upon any provision of this Agreement.

10.11 Force Majeure. Neither party shall be deemed to be in default where failure or delay in performance of any of its obligations under this Agreement is caused by floods,

earthquakes, other Acts of God, fires, wars, riots or similar hostilities, strikes and other labor difficulties beyond the party's control, (including the party's employment force), government regulations, court actions (such as restraining orders or injunctions), or other causes beyond the party's control. If any such events shall occur, the term of this Agreement and the time for performance by either party of any of its obligations hereunder may be extended by the written agreement of the parties for the period of time that such events prevented such performance, provided that the term of this Agreement shall not be extended under any circumstances for more than five (5) years.

10.12 Mutual Covenants. The covenants contained herein are mutual covenants and also constitute conditions to the concurrent or subsequent performance by the party benefited thereby of the covenants to be performed hereunder by such benefited party.

10.13 Successors in Interest. The burdens of this Agreement shall be binding upon, and the benefits of this Agreement shall inure to, all successors in interest to the parties to this Agreement. All provisions of this Agreement shall be enforceable as equitable servitudes and constitute covenants running with the land. Each covenant to do or refrain from doing some act hereunder with regard to development of the Property: (a) is for the benefit of and is a burden upon every portion of the Property; (b) runs with the Property and each portion thereof; and, (c) is binding upon each party and each successor in interest during ownership of the Property or any portion thereof.

10.14 Counterparts. This Agreement may be executed by the parties in counterparts, which counterparts shall be construed together and have the same effect as if all of the parties had executed the same instrument.

10.15 Jurisdiction and Venue. Any action at law or in equity arising under this Agreement or brought by a party hereto for the purpose of enforcing, construing or determining the validity of any provision of this Agreement shall be filed and tried in the Superior Court of the County of Yolo, State of California, and the parties hereto waive all provisions of law providing for the filing, removal or change of venue to any other court.

10.16 Project as a Private Undertaking. It is specifically understood and agreed by and between the parties hereto that the development of the Project is a private development, that neither party is acting as the agent of the other in any respect hereunder, and that each party is an independent contracting entity with respect to the terms, covenants and conditions contained in this Agreement. No partnership, joint venture or other association of any kind is formed by this Agreement. The only relationship between CITY and OWNER is that of a government entity regulating the development of private property and the owner of such property.

10.17 Further Actions and Instruments. Each of the parties shall cooperate with and provide reasonable assistance to the other to the extent contemplated hereunder in the performance of all obligations under this Agreement and the satisfaction of the conditions of this Agreement. Upon the request of either party at any time, the other party shall promptly execute, with acknowledgment or affidavit if reasonably required, and file or record such required instruments and writings and take any actions as may be reasonably necessary under the terms of this Agreement to carry out the intent and to fulfill the provisions of this Agreement or to

evidence or consummate the transactions contemplated by this Agreement. The City Manager may delegate his or her powers and duties under this Agreement to the Community Development Director or other management level employee of the CITY. CITY shall cooperate in good faith with OWNER in the implementation of the Development of the Property to support successful development of each of the allowed land uses in the Specific Plan Area. The City acknowledges that OWNER has made and will be required to make additional investments to implement the Plan. This Agreement provides assurance to OWNER that the City will cooperate and assist in completion of the annexation process. City agrees that it will accept, in good faith, for processing, review and action, including but not limited to all applications for lot line adjustments, large lot subdivision maps, zoning, special permits, development permits, tentative maps, subdivision maps or other entitlements for use of the Property in accordance with the General Plan and this Agreement.

10.18 Eminent Domain. No provision of this Agreement shall be construed to limit or restrict the exercise by CITY of its power of eminent domain.

10.19 Agent for Service of Process. In the event OWNER is not a resident of the State of California or it is an association, partnership or joint venture without a member, partner or joint venturer resident of the State of California, or it is a foreign corporation, then in any such event, OWNER shall file with the Community Development Director, upon its execution of this Agreement, a designation of a natural person residing in the State of California, giving his or her name, residence and business addresses, as its agent for the purpose of service of process in any court action arising out of or based upon this Agreement, and the delivery to such agent of a copy of any process in any such action shall constitute valid service upon OWNER. If for any reason service of such process upon such agent is not feasible, then in such event OWNER may be personally served with such process out of this County and such service shall constitute valid service upon OWNER. OWNER is amenable to the process so served, submits to the jurisdiction of the Court so obtained and waives any and all objections and protests thereto.

10.20 Estoppel Certificate. Within thirty (30) days following a written request by any of the parties, the other party shall execute and deliver to the requesting party a statement certifying that (i) either this Agreement is unmodified and in full force and effect or there have been specified (date and nature) modifications to the Agreement, but it remains in full force and effect as modified; and (ii) either there are no known current uncured defaults under this Agreement or that the responding party alleges that specified (date and nature) defaults exist. The statement shall also provide any other reasonable information requested. The failure to timely deliver this statement shall constitute a conclusive presumption that this Agreement is in full force and effect without modification except as may be represented by the requesting party and that there are no uncured defaults in the performance of the requesting party, except as may be represented by the requesting party. OWNER shall pay to CITY all costs incurred by CITY in connection with the issuance of estoppel certificates under this Section 10.20 prior to CITY's issuance of such certificates.

10.21 Authority to Execute. The person or persons executing this Agreement on behalf of OWNER warrants and represents that he or she/they have the authority to execute this Agreement on behalf of his or her/their corporation, partnership or business entity and warrants

and represents that he or she/they has/have the authority to bind OWNER to the performance of its obligations hereunder.

IN WITNESS WHEREOF, the parties hereto have executed this Development Agreement on the day and year set forth below.

INFRASTRUCTURE PHASING RULES

In order to proceed with development of their property, each owner within the Woodland Research and Technology Park Specific Plan Area is required by the Development Agreement entered into with the City to submit to City and obtain approval of an Infrastructure Phasing Plan (“Phasing Plan”) for each phase of development prior to approval of a tentative subdivision map for the property included in such phase. Owners are not required to seek approval of a Phasing Plan as described herein until they or their successor in interest to the Development Agreement apply for a tentative subdivision map for all or a portion of their property. The Phasing Plan must be consistent with these Infrastructure Phasing Rules (the “Rules”). For these Rules, all references to LDR also includes VCLDR and all references to MDR also includes VCMDR.

Each Phasing Plan shall ensure that the Improvements required for the development of the Property consistent with the Development Plan shall be completed prior to or concurrently with the development of the Property in accordance with the Phasing Plan for the Property. The Improvements included in the Plan must be supported by engineering studies that are based on sound engineering judgment and the technical studies and documents that provide support for the adoption of the Specific Plan.

The City and all property owners within the Specific Plan Area anticipate that the residential units in the LDR and MDR zones of the Specific Plan will be developed early in the overall build out of the Specific Plan Area, and generally prior to the development of high density residential and commercial development contemplated by the Specific Plan. In order to ensure that the Improvements required for the development of the Specific Plan Area are constructed in a manner that will serve that early development in a functional manner and ensure that there is not a delay in the provision of necessary infrastructure, each Plan that includes residential units in an LDR or MDR zone must construct infrastructure that is equal in value, based on the Engineer’s Estimate of Costs set forth in the CIP (as amended and adjusted for CCI) to not less than 145% or more than 150% of the RTIF (excluding the RTIF administration category) required to be paid for LDR units and not less than 125% or more than 130% of the RTIF (excluding the RTIF administration category) required to be paid for MDR units (based on the then current RTIF at the time the Phasing Plan was approved) for the residential units that are to be constructed in the LDR and/or MDR zones as part of such phase. .

The infrastructure to be counted toward the 150% or 130%, as applicable, of total value shall not include any dedications of right of way required to be made by the Owner or future developer of the Property. Such dedications, which shall be made as conditions on the applicable tentative subdivision map, shall be subject to reimbursement from future development in accordance with the Public Infrastructure Reimbursement Rules if the right of way is included in the CIP.

Each Phasing Plan that includes residential units in a LDR and/or MDR zone shall include all Improvements required for the development of the property included in the applicable phase, plus additional backbone and off-site improvements as determined to be appropriate for

the applicable phase in consultation with the City Engineer. In determining the backbone and off-site improvements to be included in the Plan, Developer and City shall work to design, fund and construct the following improvements as determined by the City Engineer:

- The Developer shall obtain approval from the City Engineer for improvement plans and shall provide improvement security in amounts consistent with the requirements Government Code Section 66499-66499.10 for all improvements set forth in the Plan prior to or concurrently with recordation of the first final subdivision map for the phase covered by the Plan.
- The City may, at its discretion, require additional on-site Improvements as part of the phase that are not specifically included in the engineering analysis for the applicable phase, but are deemed appropriate by the City Engineer, in consultation with Owner's Engineer for such development (e.g., traffic calming measures, left turn lanes for the benefit of bicycle and pedestrian safety, design requirements for roundabouts).
- In order to facilitate the construction of non-residential development, the first Plan including LDR or MDR units submitted to and approved by City shall include the extension of underground utilities to the Road B/County Road 25A ("CR 25A") intersection. This Plan shall also include the construction of Road A and Road B south of CR 25A, and Road G between Road A and Road B. Alternatively, the Owner may instead propose to construct non-residential infrastructure on the north side of CR 25A, and City may, in its sole discretion, allow for this alternative to be included in the first Plan rather than the extension of roads south of CR 25A.
- The Plan for the first 500 residential units¹ to be developed cumulatively in the MDR and LDR zones in the Specific Plan shall require the Owner to provide sufficient funding to design and construct the CR 25A/State Route 113 ("SR 113") interchange. Each of the first five hundred units shall contribute toward the CR 25A/State Route 133 ("SR 113") interchange according to the following formula:
Per unit contribution = project cost * 1.2 * 0.53/500 units
The project cost is the amount listed in the CIP with an annual adjustment by CCI
The 1.2 factor provides an extra contingency amount to make sure the project is adequately funded
0.53 is the cost share for the WRTP as reflected in the CIP
The first 350 units shall make this contribution at building permit. Any units from 351-500 shall make this contribution at final map.
The Owner may elect to perform a traffic study in order to defer the collection of project funds and the timing of construction. The City Engineer shall review the results of the traffic study and determine the timing of the collection of project funds and the timing of construction.
- The Plan that includes the 600th residential unit shall include the completion of Road B between CR 25A and Parkland.
- The Plan that includes the 750th residential unit shall include the mobility hub improvements if they have not been constructed previously.

¹ All references to the number of residential units in these Phasing Rules refer to the cumulative number of residential units developed in the LDR and MDR zones of the Specific Plan. Residential units in other zones are not counted toward the threshold number of residential units triggering various public improvements as set forth in these Rules.

- The Parkland Ave Overcrossing abutment fill slope, dirt placement, compaction to CalTrans standards and stabilization must be included in the Plan that includes the first storm drainage pond.
- Any phase that will include the cumulative approval of more than 450 residential units must include construction of at least 1/3 of the Yard park improvements.
- The Plan for any phase of development of land that accesses Marston Drive must provide for the construction of a connection of Marston Avenue to CR 25A from either Road D or Road B if such a connection was not previously constructed, to ensure that any development that accesses Marston Avenue will be able to connect to the CR 25A/SR 113 interchange without traveling through the Spring Lake Specific Plan Area.
- The Plan for the first phase of development of land north of Parkland Avenue must provide for the construction of at least one eastbound lane and one westbound lane of Parkland Avenue between Road B and Harry Lorenzo Avenue.
- Greenbelts and park infrastructure that is included on the eastern and northern edges of the Specific Plan shall be included with the phase that includes any adjacent development. Further, any phase that includes residential development adjacent to a greenbelt shall include improvement of that greenbelt area within the Plan for that phase of development.
- The City may, at its option, require Owner to construct the Improvements described in the approved Plan or City may construct such improvements itself. Responsibility for construction of the improvements shall be indicated in the approved Plan. In the event the City constructs some or all of the Improvements included in the Plan, Owner shall be required to pay the full cost of the Improvements (or Owner's proportionate share of the cost, as indicated in the Plan), even if the reimbursement available through the RTIF is less than the actual cost of constructing the improvements.
- The City may, at its discretion, reject a Plan that includes partially constructed infrastructure. In the alternative, the City may reduce the amount of reimbursement that Owner may receive based on a determination by the City Engineer of the estimated additional costs that will be incurred by future developers to complete such infrastructure, which costs would not be incurred if the infrastructure was completed as a single project. Such determination shall be made in accordance with the Public Infrastructure Reimbursement Rules.
- Certain infrastructure improvements included in the CIP are not triggered by specific development and are not required based on a specific number of units (e.g., Gateway Monuments and enhanced landscaping). Those improvements shall be included in Plans in consultation with the City as needed to comply with the requirement to provide Improvements equal to 150% of the applicable phase's RTIF obligation for LDR units and 130% for MDR units.
- City may, at its discretion, delay the timing of infrastructure such that it falls to a future developer, then that future developer waives the right to contest the change in infrastructure requirements.
- All Improvements that are included in the CIP must be funded, constructed, or the Owner shall have entered into a public improvement agreement and provided the required security for such Improvements prior to recordation of the final subdivision map that includes the final residential units to be developed in the LDR and MDR zones.

EXHIBIT E

WRTP CAPITAL IMPROVEMENT PLAN MODIFICATIONS

It is understood that the following CIP items will need additional work after Specific Plan approval in order to provide a more accurate project cost for the CIP and fee program. The following items shall be investigated further so that the CIP and the fee program can be updated prior to the issuance of the first building permit in the Specific Plan. The CIP shall be updated consistent with the review and update of all of these items prior to the approval of the first phasing plan. These items need to be updated prior to first tentative map and phasing plan (because of right of way and cost implications). Tentative Map submissions to create large parcel maps do not trigger this requirement if they do not allow for development of LDR, VCLDR, MDR, or VCMDR residential units. The City shall enter into the contracts required to complete the work required to complete the following items with funding provided by the Owner and other property owners within the Specific Plan Area. OWNER and CITY agree that the City's staff time and legal expenses will be paid from the administrative portion of the RTIF.

- The CIP was developed assuming that the existing cross section for CR 25A can be reused for the future alignment of this roadway. If this is not true then there could be significant additional costs added to the CIP. Applicant to perform preliminary design work to verify horizontal and vertical alignment and update the cost estimate for CR 25A.

- Applicant to obtain survey information for Parkland Ave OC design to verify the amount of fill material needed for the abutment fill section. This information is also needed to set the right of way footprint for the abutment.

- The interchange footprint needs to be verified and included in the CIP update and in the dedication exhibit.

- The Miscellaneous segment of the CIP needs to be broken down in more detail by location so that the City can determine which developer to reimburse for what work.

- The Greenbelts, Parks and Ponds section of the CIP needs to be broken down in more detail by location so that the City can determine which developer to reimburse for what work.

- The development team will need to perform earthwork testing to determine if the pond excavation can be used as abutment fill material. Abutment backfill estimate to consider meeting Caltrans specifications. Surveying to be performed to determine quantities more accurately. If this earthwork testing is not performed, then the cost estimates shall be increased to account for off-hauling of the pond material and importing of the abutment material.

- Section N-N needs to be updated to account for modifications associated with the CR 25A/SR 113 interchange plans. The north side of section N-N and O-O will be modified to construct the landscaping and sidewalk. The south side of section N-N and O-O will not have a sidewalk (unless required by Caltrans).

-Review whether to add a sound wall to the CIP on the north side of CR 25A from the eastern edge of the Specific Plan to Road D.

-HCP/Ag mitigation to be included in the off site projects (if it applies).

-The size of roundabouts needs to be reviewed and approved by City staff prior to the update of the CIP and the dedication exhibit update.

-The City plans to change the name of County Road 25A (name is still not determined). The cost estimate will include the changes to any signs as part of the interchange project or the improvements to CR 25A.

-Subject to Caltrans approval, the City may choose to add minor landscaping improvements on the east side of SR 113 adjacent to the W RTP (planting/watering of trees and/or planting vines on the sound wall).

-The development team shall update unit costs in the CIP prior to updating the RTIF fee. The most recent cost estimate for the interchange will be included in the CIP update and the RTIF update.

EXHIBIT F

MASTER PLANNING AND DESIGN OBLIGATIONS

OWNER agrees that it will provide funding for certain master planning and design efforts that are required as part of the Specific Plan. These master planning and design efforts are required by the Specific Plan to be completed prior to the issuance of certain development approvals within the Specific Plan collectively, and as a result, certain developers within the Specific Plan may fund these master planning and design efforts in order to proceed with development and seek reimbursement from the other property owners within the Specific Plan Area pursuant to the Public Infrastructure Reimbursement Rules. In the event that other property owners have funded any of the master planning and design efforts set forth below, OWNER shall provide reimbursement for OWNER's proportionate share of the costs of such master planning and design efforts pursuant to the Public Infrastructure Reimbursement Rules. OWNER and CITY agree that the City's staff time and legal expenses will be paid from the administrative portion of the RTIF.

The master planning and design efforts are as follows:

- Master Parks Plan for Design of "The Yard" park as described in Section 6.2.3 of the Specific Plan. The Master Parks Plan for the Yard shall be consistent with and shall include the amenities set forth in the concept plan for The Yard that is attached to the CIP and will include a master plan level of design for The Yard. The Master Parks Plan shall be funded by contributions by OWNER and/or other property owners within the Specific Plan Area. The Master Parks Plan must be complete prior to the approval of the first tentative subdivision map or any other Subsequent Development Approval within the Specific Plan Area (excepting development of the Business Incubator property as set forth in the Development Agreement or development of affordable housing on a land dedication site as set forth in the WRTP Affordable Housing Plan). Tentative Map submissions to create large parcel maps do not trigger this requirement if they do not allow for the development of LDR, VCLDR, MDR or VCMDR residential units .
- Comprehensive Planting and Street Tree Palette. OWNER and other property owners within the Specific Plan Area shall fund the preparation of a comprehensive planting and street tree palette for both private and public landscaping improvements within the Specific Plan Area as more particularly described in Section 6.2.3 of the Specific Plan. This effort shall also include guidance on street furnishings, street lighting palettes and the conceptual design of Gateway monuments at the intersections of Road 25A and Road B and Road B and Marston Road. The Planting and Street Tree Palette shall be funded by contributions by OWNER and/or other property owners within the Specific Plan Area. The Planting and Street Tree Palette must be complete prior to the approval of the first tentative subdivision map or any other Subsequent Development Approval within the Specific Plan Area (excepting development of the Business Incubator property as set forth in the Development Agreement or development of affordable housing on a land dedication site as set forth in the WRTP Affordable Housing Plan).

- TDM/VMT Program. OWNER and other property owners shall fund the preparation of a Comprehensive Transportation Demand Management/Vehicle Miles Traveled Reduction Program (“TDM/VMT Program”) that shall (1) establish transportation strategies, programs, facilities or services for the purpose of VMT reduction and (2) provide specific VMT reduction strategies that all property owners/tenants shall be required to implement through individual Project-level TDM Plans consistent with the TDM/VMT Program. The TDM/VMT Program is more particularly described in Section 6.2.3 of the Specific Plan. The measures included in the TDM/VMT Program shall in combination achieve a 10 percent reduction in Plan Area VMT per capita compared to baseline conditions by 2035. The TDM/VMT Program shall be funded by contributions by OWNER and/or other property owners within the Specific Plan Area. The TDM/VMT Program must be complete prior to the approval of the first tentative subdivision map or any other Subsequent Development Approval within the Specific Plan Area. Prior to or as a condition of approval of OWNER’s first tentative subdivision map for the Property, OWNER must demonstrate to the satisfaction of CITY that a funding mechanism has been established to the satisfaction of CITY that will provide sufficient funding on an on-going basis to implement and maintain the Project-level TDM Plan or Plans for the Property.

- Infrastructure Study Report. OWNER and the other property owners within the Specific Plan Area shall fund the preparation of an Infrastructure Study Report which shall include the following items:
 - sound wall layout
 - signal interconnect exhibit
 - right of way dedication exhibit
 - greenway dedication exhibit
 - the yard exhibit and cost estimate
 - mobility hub exhibit and cost estimate
 - CFD map showing what will be maintained
 - Map and description for wells and pipes
 - Technical memos including correspondence (if necessary) and appendices (storm drainage, sewer, water, traffic etc)

EXHIBIT H

WOODLAND RESEARCH AND TECHNOLOGY PARK AFFORDABLE HOUSING PLAN

1. All residential development in the Woodland Research and Technology Park Specific Plan Area is subject to the Affordable and Inclusionary Housing obligations as set forth in the City of Woodland's Affordable Housing Ordinance (Woodland Municipal Code Chapter 15.16) as modified by this Plan to ensure the inclusion of Affordable Housing within the Specific Plan Area. Provisions of this Plan that specifically apply in the Specific Plan Area and are not otherwise set forth in the Affordable Housing Ordinance are specified as being "Specific to WRTP".
2. **Specific to WRTP** – A minimum of 160 units within the Specific Plan Area at build out of the Specific Plan are planned to be constructed and rented at an affordable rent or sold at an affordable housing cost to low income households. The payment of in-lieu fees is anticipated to provide supplemental funding to support the construction of these units. Further, a minimum of 279 units in the Specific Plan Area (inclusive of 160 units for low income households) shall be constructed at or above 30du/ac consistent with the requirements of the City's Housing Element. The requirements set forth below are intended to implement these goals.
3. Inclusionary Obligation – Consistent with the City of Woodland's Affordable Housing Ordinance all development within the Specific Plan Area must meet the following affordable housing requirement either through the construction and sale/rental of affordable units, or one of the alternative compliance methods set forth in this policy:
 - a. In all **For-Sale** projects of at least 10 units in size, 10% of new for-sale units shall be affordable to low income households.
 - b. Calculations of required affordable units that result in a fraction of a **For-Sale** unit shall be rounded up to the nearest whole unit.
 - c. Ten percent (10%) of all **multifamily rental units** shall be affordable to low income households.
 - d. These requirements shall apply to all **multifamily rental projects** of at least 20 units. Projects with fewer than 20 units are exempt from affordable housing requirements.
 - e. Calculations of required affordable **multifamily rental** units that result in a fraction of a unit shall be rounded up to the nearest whole unit.
 - f. **Specific to WRTP** – Residential units that are developed within the Village Center Mixed Use Zone are exempt from the requirements of this Policy and the Affordable Housing Ordinance.

4. In-Lieu Fees – Consistent with the requirements of the City of Woodland’s Affordable Housing Ordinance:
- a. Owner is permitted to pay in-lieu fees to satisfy all or a part of the Owner’s affordable housing obligation as set forth in Section 3 of this Plan, except that in those instances where Owner is required pursuant to section 5.b below to make a land dedication as part of Owner’s satisfaction of this Plan and the Affordable Housing Ordinance, Owner must first make the required land dedication and may only pay in-lieu fees to the extent that there is a remaining obligation after the land dedication is complete.
 - b. **Specific to WRTP** – In-lieu fee shall be paid at the following rates (which rates shall be adjusted by the City annually by the Construction Cost Index as published from time to time by the Engineering News-Record):
 - i. \$3.00/sf on all market rate Low Density Residential units
 - ii. \$2.50/sf on all market rate Medium Density Residential units
 - iii. \$2.00/sf on all market rate High Density Residential units
 - c. **Specific to WRTP** – In-lieu fees collected within the WRTP Specific Plan Area shall first be prioritized to support the construction of the required 160 low income affordable units within the Specific Plan Area. City will explore development of a program specific to the WRTP pursuant to which developers of property may receive credits toward their in-lieu fee obligations for the amounts being spent for public infrastructure in excess of their RTIF obligations. Under the contemplated program future RTIF funds would be deposited into the City’s housing trust fund rather than being used to reimburse or provide RTIF credits to developers. Any such program, if adopted, will provide considerations to ensure that in-lieu fees are available on a time-frame as needed to develop the affordable housing units contemplated by this Affordable Housing Plan. The priority focus of the program should be to incentivize the construction of MDR units. Any program adopted should ensure that the housing trust fund does not have more RTIF credits that can reasonably be used by affordable housing developers.
5. Land Dedication - In accordance with the City of Woodland’s Affordable Housing Ordinance:
- a. A developer of property located within the Medium Density Residential (MDR), Village Center Medium Density Residential (VCMDR) or High Density Residential (HDR) zone(s), may be allowed to make an irrevocable offer of dedication to the City or its designee of sufficient land to satisfy the affordability requirement. Any land dedication site shall be consistent with the requirements for land dedication **Specific to WRTP**: Land within the Low Density Residential (LDR) or

Village Center Low Density Residential (VCLDR) zones may not be dedicated to the City for purpose of meeting the Owner's affordable housing obligations.

- b. **Specific to WRTP** – Concurrently with the recordation of the first final subdivision map for properties designated as Urban Village North or South, High Density Residential in the Specific Plan, the Owner of such property shall dedicate a parcel of a minimum size of two and one half acres (unless the City, in its sole discretion, agrees to a smaller site based on a special housing need, or because the another High Density Residential parcel of greater than two and one-half acres was previously dedicated to affordable housing in the Specific Plan Area that would provide for greater than 80 units of affordable housing) to a non-profit or for-profit affordable housing developer, which developer must be approved by the City in its sole discretion, for the construction of an affordable rental housing project. The City may, at its discretion, allow the Owner to make an irrevocable offer of dedication of the parcel directly to the City in the event that the City has not approved an affordable housing developer at the time of recordation of the first final subdivision map for the applicable property. The dedicated parcel is not required to be located within the Property governed by this Development Agreement, provided that the parcel meets the requirements below, is located within the Specific Plan Area, and is designated for High Density Residential. The dedicated site must additionally conform with the following requirements:
 - i. The dedicated parcel shall be of a sufficient size and configuration to accommodate/provide a minimum of 80 residential units consistent with all applicable zoning and Specific Plan requirements (provided, however, that in the event that a prior land dedication site has been developed with greater than 80 units affordable to low income households, the City, may in its sole discretion approve a site that will provide a lesser number of residential units, so long as the minimum number of units will still allow for 160 total low income affordable housing units within the Specific Plan Area.
 - ii. Prior to acceptance of the offer of dedication by the affordable housing developer or City, as applicable, the dedicated parcel shall be fully improved with, or bonds shall be provided to ensure the construction of, infrastructure, frontage improvements (i.e., curb, gutter, walk), paved street access, utility (i.e., water, gas, sewer and electric) service connections stubbed to the property lines, and other such off-site improvements as may be necessary for development of the required affordable units or as required by the City.
- c. An owner who dedicates a land dedication parcel pursuant to this Section 5 shall receive credit toward its inclusionary obligation for HDR project(s) based on the appraised FMV of the land dedication site. In-lieu fee credits may not be

transferred to other lower density zones without separate City approval, in City's sole discretion. The value of the site will be treated as equivalent to a payment of affordable housing in-lieu fees based on the rates set forth in Section 4.b. Any remaining affordable housing obligation shall be provided in the form of affordable housing in-lieu fees paid as set forth in Section 4.b or through the construction of affordable units within the Project.

EXHIBIT I

MAINTENANCE SERVICES TO BE FUNDED BY MAINTENANCE CFD

Following improvements shall be maintained with funding to be established through the Maintenance CFD

- Landscape maintenance for any parks, landscaped medians, and greenbelts located within the Specific Plan Area, including but not limited to sidewalks, play equipment, lighting, and irrigation
- Tree-related services for all street trees within the Specific Plan Area, including tree inspections, planting, watering, re-staking, mulching and weeding, fertilization, insect and disease control, pruning, and hazardous tree removal.
- Maintenance of the improvements included as part of any detention pond/open space areas within the Specific Plan Area, including walking paths and other amenities included with the detention pond
- Fair share cost for maintenance of any storm drainage features downstream of the Specific Plan Area, including but not limited to the following:
 - East Regional Pond
 - North Regional Pond
 - County Road 25A Channel
 - Outfall Channel and Outfall Channel Outlet Structure
 - Farmers Central Drainage Channel
 - Any drainage features conveying storm drainage between the features listed above
- Lighting and landscape maintenance for one-half of the Pedestrian Overcrossing. The City will designate the portion of the Pedestrian Overcrossing funded by the Maintenance CFD at its discretion in conformance with all applicable law..
- Lighting and landscape maintenance, including any enhanced landscaping/public art/entry monument at the roundabouts, for which the City is responsible on the east side of the State Route 113/County Road 25A interchange. The specific area in the interchange funded by the Maintenance CFD shall be determined by the City at its discretion in conformance with all applicable law.
- Lighting and landscape maintenance for the east side of the future Parkland Avenue Overcrossing.
- Maintenance of traffic signals and street lights within the Specific Plan Area
- Funding of requirements identified in the Transportation Demand Management (TDM) plan, VMT, and Transit Program, as being funded through the Maintenance CFD.
- Maintenance of Specific Plan Area multi-use pedestrian/bike paths, sound walls, street furniture, public art, entry monument/enhanced landscaping, and mobility hub/transit
- Maintenance of any landscaping on the east side of SR 113 adjacent to the project limits of the WRTP.

EXHIBIT J

PUBLIC INFRASTRUCTURE REIMBURSEMENT RULES

PUBLIC INFRASTRUCTURE REIMBURSEMENT RULES FOR THE WOODLAND RESEARCH AND TECHNOLOGY PARK SPECIFIC PLAN

1. Construction of Public Infrastructure and Dedication of Land Owned by Owner.

a. Parties agree that each Owner shall, for the collective benefit of all Owners in the Specific Plan Area (1) dedicate such real property located on their property that is required for public infrastructure as set forth in the Capital Improvement Program (the “CIP”) and (2) design and construct public infrastructure required to serve the Specific Plan Area in accordance with the requirements of their respective development agreements, infrastructure phasing plans, tentative subdivision maps and public improvement agreements. Owners dedicating real property for public infrastructure projects included in the CIP and reflected in the RTIF and/or constructing such public infrastructure shall receive RTIF fee credits and reimbursement pursuant to the terms of these rules and the Individual Reimbursement Agreements to be entered into by and between individual Owners and the City, as more specifically described herein.

b. Prior to dedication of real property for public infrastructure projects included in the CIP and reflected in the RTIF and/or commencement of construction of any public infrastructure as required pursuant to an approved infrastructure phasing plan, and pursuant to the CIP the Owner shall enter into an individual reimbursement agreement in a form approved by the City Attorney. The individual reimbursement agreement shall establish the manner in which the Property Owner will solicit bids for construction of the public infrastructure, administer the applicable contracts, document costs incurred in connection with the public infrastructure work, and shall more specifically establish the manner in which the Owner shall receive fee credits and reimbursement for such construction work, as well as any dedication of real property associated with such construction work. The terms of the individual reimbursement agreement shall be consistent with these Reimbursement Rules.

2. Master Planning and Design Work.

a. Owners are collectively responsible pursuant to the terms of their respective development agreements for funding the analysis and consideration of certain modifications to the CIP as more specifically described in each Development Agreement as Exhibit E (the “CIP Modification Work”) and certain master planning and design work as is more specifically described in each Development Agreement as Exhibit F (the “Master Planning and Design Work”).

b. Owners agree that the first Owner to submit an application to the City for a tentative subdivision map within the Specific Plan Area shall provide advance funding for all CIP Modification Work and Master Planning and Design Work described in each Development Agreement as Exhibits E and F. Prior to submission of an application for such first tentative subdivision map, the applicable Owner shall enter into an advance funding agreement with the City in a form as approved by the City Attorney for the cost of such CIP Modification and Master Planning and Design Work, and shall continue to fund such costs through completion of the work. All CIP Modification and Master Planning and Design Work described in Exhibits E and F must be completed prior to City approval of the first tentative subdivision map or other discretionary development approval for property within the Specific Plan Area. The Owner that funds the CIP modification work and the master planning and design work shall be eligible for reimbursement from other Owners in accordance with the terms of the respective Development Agreements and as set forth in Section 4(h) of this Exhibit. The CIP Modification and Master Planning and Design Work shall be conducted by the City, unless the City directs the Owner to contract for such work directly with the applicable consultants.

3. Dedication of Land for Public Infrastructure Constructed by Others..

a. Owners acknowledge and agree that their respective properties will not develop at the same time, and that initial development in the Specific Plan will require certain backbone infrastructure such as public right of way, public utility easements, stormwater detention facilities and other facilities that will be necessary for that initial development to proceed. Therefore, there is a likelihood that the Owners developing their property first will require one or more other Owners to dedicate right of way, easements, rights of access and egress and/or fee title to property (the "Dedication Property") for public infrastructure required under the Specific Plan in order for the first Owner to complete the public infrastructure required under its infrastructure phasing plan and applicable public improvement agreement.

b. In order to ensure the orderly and efficient construction of public infrastructure to serve the entirety of the Specific Plan Area, each Owner agrees that in the event that Dedication Property within the boundaries of one Owner is required by the approved infrastructure phasing plan of another Owner, the first Owner (for purposes of this Section, the "Dedicating Property Owner") shall dedicate such required Dedication Property to the City in accordance with the terms and conditions of these rules.

c. At such time that the City and the Owner planning to construct public infrastructure on the Dedication Property (for purposes of this Section, the "Constructing Property Owner") determine that the Dedicating Property Owner's Dedication Property will be required, the City shall notify the

Dedicating Property Owner, and shall request rights of access and egress to the Dedicating Property Owner's property as necessary to prepare any surveys or other analysis as necessary or appropriate to effectuate the transfer of the Dedication Property. Upon receipt of such notification, the Dedicating Property Owner shall grant rights of access and egress to their property at no cost other than the amount paid through the RTIF program, subject to an access agreement with terms as reasonably agreed to between City and Dedicating Property Owner, to complete such survey work and additional analysis required for such dedication.

d. The City shall thereafter submit to the Dedicating Property Owner the documentation required for the granting of such Dedication Property as well as any temporary construction easements and rights of access and egress as required to complete the construction of the public infrastructure, and the Dedicating Property Owner shall execute such documentation, in recordable form as applicable, and return to the City for recordation. Said documentation shall be delivered to the City in a reasonable time frame with the goal being within ten (10) days of the date of receipt by Dedicating Property Owner of such documentation. Failure by the Dedicating Property Owner to execute and deliver the documentation within thirty (30) days of receipt by Dedicating Property Owner shall be a material default under the terms of the Development Agreement and the City may bring an action for specific performance to compel the dedication of the required lands in accordance with this Section. Prior to initiating litigation, the City shall enter into an advance funding agreement with the Constructing Property Owner to fund the cost of such litigation.

4. Fee Credits and Reimbursement for Costs Incurred by Owners.

a. Each Owner shall be entitled to fee credits and reimbursement for construction of public infrastructure, for the dedication of Property for construction of public infrastructure by other Owners, for dedication of real property upon which they construct public infrastructure, and CIP Modification and Master Planning and Design Work funded by an Owner as set forth in the respective Development Agreements.

b. Valuation of Construction Costs. Owners may receive credit and reimbursement for the lesser of the cost established for public infrastructure as set forth in the Schedule of Costs contained in the CIP, subject to any modification that may be made by and in the sole discretion of the City Engineer or designee, or the actual cost of construction of the applicable public improvements. For purposes of determining the cost of the public improvements in comparison to the amounts in the CIP, the Owner may group the calculation of all improvements constructed with the same tentative map, constructed during the same time period and submitted for City documentation at the same time. The valuation for the cost of such construction work shall be established based on the valuations contained in the CIP (as will be amended from time to time and as

updated annually based on the Construction Cost Index (“CCI”)) at the time the Owner awards the construction contract for the applicable public improvement. If construction is not completed in the same calendar year as the contract is awarded, then the CIP valuation may be increased by up to one year of CCI (in addition to any other changes to the CIP that may have occurred between contract award and July 1 of the following year). If the Owner requests credit and reimbursement in the same year that the contract is awarded (either through this subsection b. or through subsection f. below), then they shall not be eligible for the additional year of CCI. Following completion of the applicable public improvements, the Owner shall provide to the City Engineer or designee documentation of actual construction costs for the applicable public improvements. Credit and reimbursement shall be provided based on the lesser of the CIP valuation established at the time of contract award (and if applicable as amended by one year of CCI), or actual costs documented by the Owner. Soft costs associated with the applicable public improvement shall be valued based on valuations contained in the CIP, except that the City has the discretion to request documentation of the soft costs actually incurred by Property Owner, and may value such soft costs based on the costs actually incurred if they are less than the values set forth in the CIP. In the event that a Owner constructs a portion of public infrastructure in a manner that will increase the costs to future Owners that will be required to complete such infrastructure as determined by the City Engineer, the City has the discretion to reduce the valuation of the completed improvement in an amount equal to the City Engineer’s estimate of the increased cost to such future Owner. Examples of this reduced reimbursement include but are not limited to: the partial construction of a road that would make the remaining portion less efficient to construct or the realignment of utilities such that the unbuilt segment is deeper or has a longer distance to travel. City shall have final approval authority regarding whether a particular cost will be approved as a credited cost under these rules, which approval shall not be unreasonably withheld.

c. Valuation of Real Property Dedicated for Public Use. To determine the value of real property to be dedicated by each Owner, the City shall use the value of such property set forth in the Schedule of Costs contained in the CIP (as will be adjusted from time to time based on the Construction Cost Index as published by the Engineering News-Record (“CCI”) through City annual updates to the CIP) for the applicable dedicated real property interests on the date that such dedicated real property is accepted by the City. This applies whether such real property is dedicated for public infrastructure constructed by the dedicating Owner or is property dedicated for improvements to be constructed by other Owners.

d. Valuation of CIP Modification and Master Planning and Design Work. The City will determine the value of CIP Modification and Master Planning and Design Work completed by each Owner as follows: In the event that the City completes CIP Modification and Master Planning and Design Work

required of the Owner, the valuation for that work shall be established on the date that the funds for such work are deposited with the City. In the event that the Owner completes certain CIP Modification and Master Planning and Design Work, the valuation for that work shall be established on the date that the Owner executes a contract for such CIP Modification and Master Planning and Design Work, provided that the Owner shall not be eligible for reimbursement until the work is complete and accepted or approved by the City, as applicable. All contracts (including contract amendments) entered into directly by the Owner for CIP Modification and Master Planning and Design Work must be reviewed by the City and approved in writing prior to contract execution (or contract amendment execution) in order to be eligible for reimbursement. The City shall notify the Owners of the total amount of such costs at such time that the valuation for such costs is established and that amount shall be added to the Reimbursement Account for the Owner funding such costs. Thereafter, the costs will be annually adjusted as set forth in paragraph e. below.

e. Annual Adjustments to Valuations. The outstanding amount of costs incurred by each Owner shall be determined and maintained by City as a “Credit/Reimbursement Account” for each Owner. The balance of each Credit/Reimbursement Account shall be adjusted annually by a percentage amount equal to the Construction Cost Index as published from time to time by the Engineering News-Record Twenty City Index or other index adopted by the City Council (“CCI”) at the same time and by the same percentage that the City adjusts the RTIF. The value of the outstanding costs shall only be adjusted when and if the RTIF is adjusted, and in the event, or any reason, the City does not adjust the RTIF in a given year, the outstanding value of any outstanding costs contained in a Credit/Reimbursement Account similarly shall not be adjusted. Notwithstanding the foregoing, the balance associated with any public improvements constructed by a Owner shall not be adjusted by CCI until such time that the public improvements are accepted by the City, after which the City shall adjust such balances in accordance with this paragraph.

f. Fee Credits. Each Owner shall receive fee credits against its overall RTIF obligation equal to the total value of the construction of the RTIF public infrastructure funded by Owner and dedication of real property by the Owner. Owners will not receive fee credits for the costs of CIP Modification and Master Planning and Design Work. Those costs will be reimbursed pursuant to the terms described in paragraph h, below. Fee credits will be applied toward Owner’s RTIF obligations so long as Owner has available fee credits, except that such credits shall not be applied toward the portion of the RTIF that is attributable to administration costs (the “Administration Portion”). The Administration Portion of the RTIF shall be paid at the time of building permit issuance, and shall be accounted for by the City separately from the remainder of the RTIF. Upon application of any fee credit to units to be constructed by Owner, Owner’s Credit/Reimbursement Account will be reduced in the amount of the fee credit. Fee credits that are based on dedication of real property shall be

available to be used by Owner only after the real property dedication is accepted by the City. Fee credits that are based on construction of public infrastructure shall be available to be used by Owner only after the public infrastructure has been accepted by the City and the City Engineer or designee has verified the costs incurred by Owner for such infrastructure. Notwithstanding the foregoing, Owners may request authorization to utilize fee credits for the construction of public infrastructure prior to acceptance of such public infrastructure by the City, provided that the City will only authorize the utilization of fee credits prior to completion one time for each public infrastructure project. The authorized fee credit shall be limited to 85% of the value of the public infrastructure as set forth in the CIP at the time of Property Owner's request, excluding values in the CIP for soft costs and contingency. Any such request for fee credits prior to acceptance of the applicable partially completed public infrastructure shall be made in writing, and approved by the City in writing based on the sole discretion of the City Engineer. The City Engineer shall verify that the requested amount of fee credits is justified based on the amount of completed infrastructure, including testing of infrastructure. Each Owner that funds the design and construction for the CR 25A/SR 113 interchange shall receive fee credits at the time of payment to the City. Further, the City may collect RTIF funding for other specific capital improvement projects to be constructed by the City. If the City collects RTIF funding from a Owner for a specific capital improvement project as contemplated herein, the Owner shall receive fee credits at the time of payment to the City.

g. Reimbursement Process for Public Infrastructure and Real Property Dedication. Reimbursement will be paid on a "first in, first out" basis, with the first public infrastructure and/or real property accepted by the City eligible for the first reimbursement payments from available RTIF; (excluding the portion of the RTIF attributable to Administration Portion of the RTIF), and subsequent construction and/or dedications being eligible for reimbursement in the chronological order in which they are accepted by the City. In the event that there is not available RTIF to reimburse the Owner at the time the public infrastructure and/or real property is accepted by City, the reimbursements shall be paid as RTIF funds become available.

h. Reimbursement Process for CIP Modification and Master Planning and Design Costs. Reimbursement for CIP Modification and Master Planning and Design Work costs incurred by an Owner shall be paid from the Administration Portion of the RTIF collected by the City. The City will provide reimbursement to the Owners that incur such CIP Modification and Master Planning and Design Work costs pursuant to an individual reimbursement agreement to be entered into by and between City and Owner that will establish the amount of reimbursement available to the Owner, and subject to the terms of these Reimbursement Rules. Reimbursement for the CIP Modification and Master Planning and Design Work costs will be paid on a "first in, first out" basis, with the first CIP Modification and Master Planning and Design Work accepted or approved by the City eligible for the first reimbursement payments

from the available Administration Portion of the RTIF, and subsequent CIP Modification and Master Planning and Design Work being eligible for reimbursement in the chronological order in which the work is accepted or approved by the City. In the event that there is not available Administration Portion of the RTIF to reimburse the Owner at the time the CIP Modification and Master Planning and Design Work is accepted or approved by City, the reimbursements shall be paid as the Portion of the RTIF becomes available. The City's Director of Administrative Services will determine, in their sole discretion, when sufficient funding from the Administration Portion of the RTIF is available for reimbursement, taking into account other costs required to be paid from the Administration Portion of the RTIF, such as City Attorney or staff costs.

i. City Will Reimburse Only From Cash Available. City shall only reimburse Owners from cash that is available for such reimbursement from CFD bond proceeds, cash payments made pursuant to agreements entered into with other Property Owners to fund the costs of such public improvements, or proceeds of RTIF payments. Reimbursement shall be limited to available CFD bond proceeds or funds obtained from other Owners. Nothing in this Agreement obligates, or shall be deemed to obligate, City to use General Fund monies or any other source of City revenues to satisfy any Owner's claim for reimbursement. City's obligation to reimburse Owner pursuant to this Agreement shall be limited to CFD bond proceeds or other funds actually received by City from other owners in accordance with the terms of existing agreements and procedures. Owners acknowledge and agree that the City shall collect RTIF funding for specific capital improvement projects to be constructed by the City, including but not limited to the CR 25A/SR 113 Interchange Project. The funding the City receives toward the CR 25A/SR 113 Interchange Project or any other RTIF funded capital improvement project to be constructed by the City will not be available for reimbursement to Property Owners. Following completion of the CR 25A/SR 113 Interchange Project, the City will review whether an adjustment to the CIP and fee program for the RTIF is possible, based on the amount of funding available at that time.

EXHIBIT K

WRTP PROJECT FEES

CITY shall collect any of the following fees based on the project conditions of approval, the WRTP approval documents and as defined in this Exhibit K. The fees set forth herein do not include fees imposed by other agencies, such as the County of Yolo or Woodland Joint Unified School District. Actual fee amounts owed by OWNER will be the then-current amounts of such fees at the time they are paid by OWNER. All fees are subject to annual Construction Cost Increases (CCI) and may be subject to increases based on City evaluation of the various fee programs in accordance with applicable State law, or with regard to the RTIF, in accordance with the Development Agreement and the RTIF Report. The Engineering News-Record Twenty City Index or other index adopted by the City Council shall be used for the calculation of CCI.

Development Impact Fees for the following categories and amounts are shown as of September 2023. The Administrative Guidelines in effect on the date of the approval of this Agreement shall be used for the duration of this Agreement.

Development Impact Fee	Greenfield SFD (Single Family Dwelling)	Greenfield MFU (Multi-family Unit)
General City	\$1,005	\$755
Fire	\$3,406	\$2,042
Library	\$628	\$471
Police	\$823	\$616
Wastewater	\$7,524	\$5,642
Water Capacity Fee	\$6,174	\$4,630*
Parks & Recreational Facilities	\$9,279	\$6,959
Roads	\$9,915	\$4,063
Admin Fee (.75%)	\$291	\$189
Storm Drainage Facilities	\$0	\$0
Total	\$39,045	\$25,367
Storm drainage is \$0 for the WRTP, as it is all paid in the RTIF. Water fee is reduced (to 75% of the SF rate) for multifamily. *Water Capacity Fee will be determined by meter size		

Other fees include all fees identified in this Agreement or conditions of approval which are linked to final map approval or issuance of a building permit, as follows:

- RTIF fees for the cost of the backbone infrastructure to the Woodland Research and Technology Park plan area (September 2023 fees) are as listed in Attachment No. 1 to this Exhibit.
- Habitat Conservation Obligation. Before any ground-disturbing activities, the City will require project proponent/s to submit the Yolo HCP/NCCP *Application Form* for non-member agency projects and *Member Agency Reporting Form* for member agency projects, as applicable, and pay applicable fees to the Yolo Habitat Conservancy as specified in the appropriate form.
- Affordable Housing. All residential projects are subject to the Citywide Affordable Housing

Ordinance (WMC Chapter 15.16) which requires a 10 percent inclusionary housing obligation, except where modified by the W RTP Project Development Agreement (Exhibit H). Applicants shall comply with their inclusionary obligation through on site construction of affordable units, through the payment of in-lieu fees, and/or through land dedication as specified in Exhibit H. The current in-lieu fees are as follows: for LDR \$3.00/building sq ft, for MDR \$2.50/building sq ft and for HDR \$2.00/building sq ft

- Conversion of Prime Agricultural Land. Project applicants for future projects proposed within the W RTP Specific Plan Area are required to comply with Woodland Municipal Code Chapter 15.33, which requires replacement of Prime Farmland at a 1:1 ratio. In addition, the South Regional Pond development area is subject to the County's agricultural conservation ordinance (Section 8-2.404 and Section 8.2-405 of the Yolo County Code), which requires replacement of Prime Farmland at a ratio of three acres of conserved farmland to one acre of converted land and replacement of other types of farmland at a ratio of two acres to one; small projects of less than 20 acres may pay an in-lieu fee rather than conserve farmland directly.
- Fair Share Cost of public facilities, services and improvements as determined by the City of Woodland nexus study (MPFP fee triggered at building permit)
- Public transit capital fee of \$311 for LDR, \$212 for MDR and \$159 for HDR. This fee will be used to pay for the construction of transit capital improvements.
- Installation of or payment of fees consistent with the City's Public Art Ordinance.
- Tentative Map processing shall be paid on a time and materials basis based on the City's current liability account procedures (at the time of project application).
- With regard to Engineering fees: Plan Check fees shall be 3% of the value of the improvements or as modified based on the engineering fees in effect at time of Development Agreement approval. At the City's option, inspection fees will be paid for on a time and materials basis or on a fee basis per the engineering fees in effect at the time of Development Agreement approval.
- Building permit fees, planning fees, fire department fees and all other development processing fees not mentioned in this Exhibit will be those fees in effect at the time the various documents are submitted to the City for approval; provided that the Property shall only be subject to City fees to the extent they existed at the time this Agreement was approved by City Council. City has disclosed and Owner has acknowledged that City may during the term of this Agreement adopt new and different City-wide processes and labels for processing development approvals and development processing fees. Owner will comply with changes as they apply to the Property, provided that in no case shall such changes adversely affect or modify Owner's rights under this Agreement, nor shall such changes increase the total costs payable by Owner for development processing fees above what would have been charged for the applicable development approvals immediately prior to such change, without a mutually agreed amendment to this Agreement.
- If any fees are modified or new fees are created based on County, State or Federal requirements (or in response to County, State and Federal requirements), then those fees shall be paid based on the fees in effect at the time the various documents are submitted to the City for approval, provided that any increased cost to Owner shall be limited to the costs related to County, State and Federal requirements). If any building fees are modified or new fees are created based on the International Code Council (ICC) or similarly used resources in the building industry, then those fees shall be paid based on the fees in effect at the time the various documents are submitted to the City for approval.

FORM OF ASSIGNMENT AND ASSUMPTION AGREEMENT

RECORDING REQUESTED BY AND
WHEN RECORDED MAIL TO:

Attention: _____

Space Above this Line Reserved for Recorder's Use

**ASSIGNMENT AND ASSUMPTION
OF DEVELOPMENT AGREEMENT**

THIS ASSIGNMENT AND ASSUMPTION OF DEVELOPMENT AGREEMENT (this “**Assignment**”) is made effective as of _____, 20__ (the “**Effective Date**”), by and between _____, L.P., a California limited partnership (“**Assignor**”), and _____, L.P., a California limited partnership (“**Assignee**”).

RECITALS

A. The City of Woodland (“**City**”) adopted Ordinance Number ____ on _____, 20__, authorizing entry into that certain Development Agreement by and between the City of Woodland (the “**City**”) and Assignor, dated on or about _____ (the “**Development Agreement**”), as Document No. ____ - _____ in the Official Records of the County Recorder for Yolo County, California (the “**Official Records**”). The Development Agreement as used herein shall mean, refer to, and include the Development Agreement, as well as any exhibits, addenda, operating memoranda, implementation agreements, amendments, and attachments thereto (which are hereby incorporated herein by this reference) as well as other documents expressly incorporated by reference in the Development Agreement. Capitalized terms not defined herein shall have the meanings ascribed to them in the Development Agreement.

B. The Development Agreement grants certain rights, duties, and obligations with respect to the development and improvement of certain real property in the City of Woodland, County of Yolo, State of California, as more particularly described in **Exhibit “A”** attached hereto and incorporated herein (the “**Property**”) as more particularly set forth in the Development Agreement (the “**Development Agreement Rights, Duties and Obligations**”).

C. Paragraph 2.4 of the Development Agreement describes the process for assignment of the Development Agreement Rights, Duties and Obligations.

D. Assignor desires to assign to Assignee, and Assignee desires to accept and assume, each and all of Assignor's Development Agreement Rights, Duties and Obligations.

AGREEMENT

NOW THEREFORE, for good and valuable consideration, the receipt and adequacy of which are hereby acknowledged, Assignor and Assignee hereby agree as follows:

1. Assignment. Effective as of the date of recordation of this Assignment, Assignor hereby assigns to Assignee all of the Development Agreement Rights, Duties and Obligations.

2. Acceptance and Assumption. Effective as of the date of recordation of this Assignment, Assignee hereby accepts the foregoing assignment of the Development Agreement Rights, Duties and Obligations from Assignor and unconditionally assumes and agrees to perform each and all of the duties, covenants, and obligations comprising the Development Agreement Rights, Duties and Obligations, first arising from and after the date of recordation of this Assignment pursuant to the Development Agreement (collectively, the "**Assumed Obligations**").

3. Assignor Not Released. Assignor and Assignee acknowledge and agree that, pursuant to Section 2.4.2 of the Development Agreement, Assignor shall continue to be obligated under the Development Agreement unless and until Assignor is given a release in writing by the City.

4. Assignee Address. The principal address of Assignee for purposes of the Development Agreement is as follows:

Attention: _____
E-mail: _____

5. Miscellaneous.

(a) This Assignment shall be determined in accordance with and governed by the laws of the State of California.

(b) This Assignment may be executed in counterparts, each of which shall be deemed an original and which, when taken together, shall constitute a complete instrument.

(c) Each party agrees to perform any further acts, and to execute and deliver any further documents that may be reasonably necessary or required to carry out the intent and provisions of this Assignment and the transactions contemplated hereby.

(d) This Assignment shall bind and inure to the benefit of the respective heirs, personal representatives, grantees, successors, and assigns of the parties hereto.

IN WITNESS WHEREOF, the parties hereto have caused this Assignment to be signed by their duly authorized officers as of the day and year first written above.

FORM OF PARTIAL ASSIGNMENT AND ASSUMPTION AGREEMENT

RECORDING REQUESTED BY AND
WHEN RECORDED MAIL TO:

Attention: _____

Space Above this Line Reserved for Recorder's Use

**PARTIAL ASSIGNMENT AND ASSUMPTION
OF DEVELOPMENT AGREEMENT**

THIS PARTIAL ASSIGNMENT AND ASSUMPTION OF DEVELOPMENT AGREEMENT (this "**Assignment**") is made effective as of _____, 20__ (the "**Effective Date**"), by and between _____, a _____ ("**Assignor**"), and _____, a _____ ("**Assignee**").

RECITALS

A. The City of Woodland ("**City**") adopted Ordinance Number ____ on _____, 20__, authorizing entry into that certain Development Agreement by and between the City of Woodland (the "**City**") and Assignor, dated on or about _____, (the "**Development Agreement**") which was recorded on _____, 20__, as Document No. ____ - _____ in the Official Records of the County Recorder for Yolo County, California (the "**Official Records**"). The Development Agreement as used herein shall mean, refer to, and include the Development Agreement, as well as any exhibits, addenda, operating memoranda, implementation agreements, amendments, and attachments thereto (which are hereby incorporated herein by this reference) as well as other documents expressly incorporated by reference in the Development Agreement. Capitalized terms not defined herein shall have the meanings ascribed to them in the Development Agreement.

B. The Development Agreement grants certain rights, duties, and obligations with respect to the development and improvement of certain real property in the City of Woodland, County of Yolo, State of California, as more particularly described in **Exhibit "A"** attached hereto and incorporated herein (the "**Entire Property**"), including, without limitation, with respect to the property described in attached **Exhibit "B"** (the "**Transferred Property**") as more particularly set forth in the Development Agreement (the "**Development Agreement Rights, Duties and Obligations**").

C. Paragraph 2.4.6 of the Development Agreement describes the process for the partial assignment of the Development Agreement Rights, Duties and Obligations.

D. Assignor desires to assign to Assignee, and Assignee desires to accept and assume, each and all of Assignor's Development Agreement Rights, Duties and Obligations as they pertain and relate to the Transferred Property.

AGREEMENT

NOW THEREFORE, for good and valuable consideration, the receipt and adequacy of which are hereby acknowledged, Assignor and Assignee hereby agree as follows:

6. Assignment. Effective as of the date of recordation of this Assignment, Assignor hereby assigns to Assignee all of the Development Agreement Rights, Duties and Obligations relating or pertaining to the Transferred Property.

7. Acceptance and Assumption. Effective as of the date of recordation of this Assignment, Assignee hereby accepts the foregoing assignment of the Development Agreement Rights, Duties and Obligations from Assignor and unconditionally assumes and agrees to perform each and all of the duties, covenants, and obligations comprising the Development Agreement Rights, Duties and Obligations relating or pertaining to the Transferred Property, first arising from and after the date of recordation of this Assignment pursuant to the Development Agreement (collectively, the "**Assumed Obligations**").

8. Assignor Not Released. Assignor and Assignee acknowledge and agree that, pursuant to Section 2.4.6 of the Development Agreement, Assignor shall continue to be obligated under the Development Agreement unless and until Assignor is given a release in writing by the City.

9. Assignee Address. The principal address of Assignee for purposes of the Development Agreement is as follows:

Attention: _____
E-mail: _____

10. Miscellaneous.

(a) This Assignment shall be determined in accordance with and governed by the laws of the State of California.

(b) This Assignment may be executed in counterparts, each of which shall be deemed an original and which, when taken together, shall constitute a complete instrument.

(c) Each party agrees to perform any further acts, and to execute and deliver any further documents that may be reasonably necessary or required to carry out the intent and provisions of this Assignment and the transactions contemplated hereby.

(d) This Assignment shall bind and inure to the benefit of the respective heirs, personal representatives, grantees, successors, and assigns of the parties hereto.

IN WITNESS WHEREOF, the parties hereto have caused this Assignment to be signed by their duly authorized officers as of the day and year first written above.

DEVELOPMENT AGREEMENT
(Sewmawpaw Woodland, LLC—Woodland Research and Technology Park)

DEVELOPMENT AGREEMENT BETWEEN
CITY OF WOODLAND
and
SEWMAWPAW WOODLAND, LLC, a CALIFORNIA LIMITED LIABILITY
COMPANY

DEVELOPMENT AGREEMENT NO. ____

This Development Agreement (hereinafter “Agreement”) is entered into effective on the date it is recorded with the Yolo County Recorder (hereinafter the “Effective Date”) by and among the City of Woodland, a California municipal corporation (hereinafter “CITY”), and SEWMAWPAW WOODLAND, LLC a California limited liability company (hereinafter “OWNER”):

RECITALS

WHEREAS, CITY is authorized to enter into binding development agreements with persons having legal or equitable interests in real property for the development of such property, pursuant to Section 65864 et seq. of the Government Code; and

WHEREAS, OWNER has requested CITY to enter into a development agreement and proceedings have been taken in accordance with the rules and regulations of CITY; and

WHEREAS, by electing to enter into this Agreement, CITY shall bind future City Councils of CITY by the obligations specified herein and limit the future exercise of certain governmental and proprietary powers of CITY; and

WHEREAS, the terms and conditions of this Agreement have undergone extensive review by CITY and the City Council and have been found to be fair, just and reasonable; and

WHEREAS, the best interests of the citizens of the CITY and the public health, safety and welfare will be served by entering into this Agreement; and

WHEREAS, all of the procedures of the California Environmental Quality Act have been met with respect to the Project and the Agreement in that the City certified a Final Environmental Impact Report for the Woodland Research and Technology Park Specific Plan (the “Final EIR”), which Specific Plan Area includes the Project, and which was fully analyzed as part of the Final EIR; and

WHEREAS, OWNER has jointly filed an application with other adjacent property owners for, and the City Council has approved, the Woodland Research and Technology Park Specific Plan (the “Specific Plan”), governing the development of the Property; and

WHEREAS, this Agreement and the Project are consistent with the CITY’s General Plan and the Specific Plan applicable thereto; and

WHEREAS, all actions taken and approvals given by CITY have been duly taken or approved in accordance with all applicable legal requirements for notice, public hearings, findings, votes, and other procedural matters; and

WHEREAS, development of the Property in accordance with this Agreement will provide substantial benefits to CITY and will further important policies and goals of CITY; and

WHEREAS, this Agreement will eliminate uncertainty in planning and provide for the orderly development of the Property, ensure progressive installation of necessary improvements, provide for public services appropriate to the development of the Project, and generally serve the purposes for which development agreements under Sections 65864 et seq of the Government Code are intended; and

WHEREAS, OWNER has incurred and will in the future incur substantial costs in order to assure development of the Property in accordance with this Agreement; and

WHEREAS, OWNER has incurred and will in the future incur substantial costs in excess of the generally applicable requirements in order to assure vesting of legal rights to develop the Property in accordance with this Agreement.

AGREEMENT

NOW, THEREFORE, in consideration of the above recitals and of the mutual covenants hereinafter contained and for other good and valuable consideration, the receipt and sufficiency of which is hereby acknowledged, the parties agree as follows:

1. DEFINITIONS AND EXHIBITS.

1.1 Definitions. The following terms when used in this Agreement shall be defined as follows:

1.1.1 “Agreement” means this Development Agreement.

1.1.2 “CITY” means the City of Woodland, a municipal corporation, organized and existing pursuant to the laws of the State of California.

1.1.3 “Capital Improvement Plan” or “CIP” means the Capital Improvement Plan adopted by the City Council for the Specific Plan by Resolution No. _____, as it may be amended from time to time by the CITY.

1.1.4 “Development” means the improvement of the Property for the purposes of completing the structures, improvements and facilities comprising the Project including, but not limited to: grading; the construction of infrastructure and public facilities related to the Project whether located within or outside the Property; the construction of buildings and structures; and the installation of landscaping. “Development” does not include the maintenance, repair, reconstruction or redevelopment of any building, structure, improvement or facility after the construction and completion thereof.

1.1.5 “Development Approvals” means all permits and other entitlements for use subject to approval or issuance by CITY in connection with development of the Property including, but not limited to:

(a) the Woodland Research and Technology Park Specific Plan, as it may be amended from time to time;

- (b) tentative and final subdivision maps, including large and small lot mapping, and parcel maps;
- (c) conditional use permits, design review approvals and plot plans;
- (d) zoning;
- (e) grading and building permits.

1.1.6 “Development Exaction” means any requirement of CITY in connection with or pursuant to any Land Use Regulation or Development Approval for the dedication of easements, land, the construction of improvements or public facilities, or the payment of fees in order to lessen, offset, mitigate or compensate for the impacts of development on the environment or other public interests.

1.1.7 “Development Impact Fee” means a monetary exaction other than a tax or special assessment, whether established for a broad class of projects by legislation of general applicability or imposed on a specific project on an ad hoc basis, that is charged by a local agency to the applicant in connection with approval of a development project for the purpose of defraying all or a portion of the cost of public facilities related to the development project, but does not include park “in lieu” fees specified in Government Code Section 66477, fees for processing applications for governmental regulatory actions or approvals, fees collected under development agreements adopted pursuant to Article 2.5 of the Government Code (commencing with Section 65864) of Chapter 4. “Development Impact Fee” shall not include processing fees and charges imposed by CITY to cover the estimated actual costs to CITY of processing applications for Development Approvals or for monitoring compliance with any Development Approvals granted or issued, including, without limitation, fees for zoning variances; zoning changes; use permits; building inspections; building permits; filing and processing applications and petitions filed with the local agency formation commission or conducting preliminary proceedings or proceedings under the Cortese-Knox-Hertzberg Local Government Reorganization Act of 2000, Division 3 (commencing with Section 56000) of Title 5 of the Government Code; the processing of maps under the provisions of the Subdivision Map Act, Division 2 (commencing with Section 66410) of Title 7 of the Government Code; or planning services under the authority of Chapter 3 (commencing with Section 65100) of Division 1 of Title 7 of the Government Code, fees and charges as described in Sections 51287, 56383, 57004, 65104, 65456, 65863.7, 65909.5, 66013, 66014, and 66451.2 of the Government Code, Sections 17951, 19132.3, and 19852 of the Health and Safety Code, Section 41901 of the Public Resources Code, and Section 21671.5 of the Public Utilities Code, as such codes may be amended or superseded, including by amendment or replacement. OWNER understands and agrees that the RTIF as defined herein is not a Development Impact Fee but is instead a fee that is charged pursuant to and in accordance with the terms of this Agreement.

1.1.8 “Development Plan” means the development of the Property consistent with the Land Use Zoning Exhibit for the Woodland Research and Technology Park attached hereto and incorporated as Exhibit “C”, which development shall be consistent with the Subsequent Development Approvals and the Existing Land Use Regulations.

1.1.9 “Effective Date” means the date that the ordinance approving this Agreement becomes effective.

1.1.10 “Existing Land Use Regulations” means all Land Use Regulations in effect on the Effective Date.

1.1.11 “General Plan” means the General Plan 2035 adopted on May 16, 2017 by Resolution No. 6836.

1.1.12 “Improvement” or “Improvements” means those public improvements required to support the development of the Project as described in the Capital Improvement Plan for the Specific Plan.

1.1.13 “Improvements Outside Specific Plan Area” means any Improvement that OWNER is required to construct pursuant to the CIP and its Infrastructure Phasing Plan that is located on land outside of the Specific Plan Area.

1.1.14 “Land Use Regulations” means all ordinances, resolutions, codes, rules, regulations and official policies of CITY governing the development and use of land, including, without limitation, the permitted use of land, the density or intensity of use, subdivision requirements, timing and phasing of development, the maximum height and size of proposed buildings, the provisions for reservation or dedication of easements or land for public purposes, and the design, improvement and construction standards and specifications applicable to the development of the Property. “Land Use Regulations” does not include any CITY ordinance, resolution, code, rule, regulation or official policy, governing:

- (a) the conduct of businesses, professions, and occupations;
- (b) taxes and assessments;
- (c) the control and abatement of nuisances;
- (d) the granting of encroachment permits and the conveyance of similar rights and interests which provide for the use of or the entry upon public property;
- (e) the exercise of the power of eminent domain.

1.1.15 “Maintenance CFD” shall have the meaning as set forth in Section 5.3.1 of this Agreement.

1.1.16 “Mortgagee” means a mortgagee of a mortgage, a beneficiary under a deed of trust or any other security-device lender, and their successors and assigns.

1.1.17 “Offsite Property” has the meaning set forth in Section 3.11 of this Agreement.

1.1.18 “OWNER” means the persons and entities listed as OWNER on page 1 of this Agreement and their permitted successors in interest to all or any part of the Property.

1.1.19 “Project” means the development of the Property contemplated by the Specific Plan and the Development Plan as such Development Plan may be further defined, enhanced or modified pursuant to the provisions of this Agreement.

1.1.20 “Property” means the real property described on Exhibit “A” and shown on Exhibit “B” to this Agreement.

1.1.21 “Public Infrastructure Reimbursement Rules” means the “Public Infrastructure Reimbursement Rules for the Woodland Research and Technology Park Specific Plan,” attached hereto as Exhibit “J” and incorporated herein by this reference.

1.1.22 “Reservations of Authority” means the rights and authority excepted from the assurances and rights provided to OWNER under this Agreement and reserved to CITY under Section 3.9 of this Agreement.

1.1.23 “Specific Plan” means that certain specific plan adopted by the City Council by Resolution No. ___, and entitled, “Woodland Research and Technology Park Specific Plan.”

1.1.24 “Specific Plan Area” means those properties that are located within the geographic boundaries of the Specific Plan.

1.1.25 “Subdivision Map Act” means Government Code Section 66410 et seq., as it may be amended from time to time.

1.1.26 “Subsequent Development Approvals” means all Development Approvals required subsequent to the Effective Date in connection with development of the Property.

1.1.27 “Subsequent Land Use Regulations” means any Land Use Regulations adopted and effective after the Effective Date of this Agreement.

1.2 Exhibits. The following documents are attached to, and by this reference made a part of, this Agreement:

Exhibit “A” — Legal Description of the Property.

Exhibit “B” — Map showing Property and its location.

Exhibit “C” — Development Plan.

Exhibit “D” — Infrastructure Phasing Rules.

Exhibit “E” — WRTP CIP Modification

Exhibit “F” — Master Planning and Design Obligations

Exhibit “G” — Public Dedications

Exhibit “H” — WRTP Affordable Housing Plan

Exhibit “I” — Maintenance Services

Exhibit “J” — Public Infrastructure Reimbursement Rules

Exhibit “K” — W RTP Project Fees

Exhibit “L” — Form of Assignment and Assumption Agreement

Exhibit “M” — Form of Partial Assignment and Assumption Agreement

2. GENERAL PROVISIONS.

2.1 Binding Effect of Agreement. The Property is hereby made subject to this Agreement. Development of the Property is hereby authorized and shall be carried out only in accordance with the terms of this Agreement.

2.2 Ownership of Property. OWNER represents and covenants that it is the owner of the fee simple title to the Property or a portion thereof, or has the right to acquire fee simple title to the Property or a portion thereof from the current owner(s) thereof. To the extent OWNER does not own fee simple title to the Property, OWNER shall obtain written consent from the current fee owner of the Property agreeing to the terms of this Agreement and the recordation thereof.

2.3 Term. The term of this Agreement shall commence on the Effective Date, and shall continue for an initial period of twenty-five (25) years thereafter unless this term is modified or extended pursuant to the provisions of this Agreement. OWNER may elect to extend the Term by up to two successive five (5) year terms (for a total maximum Term of thirty-five (35) years) by providing CITY written notice no later than thirty (30) days prior to the date the Term would otherwise expire. The initial term and, if applicable any extension, shall be referred to herein as the “Term.” Any tentative map approved by CITY for the Property shall have a duration (i) eight (8) years during which period no application to extend the expiration date of any tentative map need be filed, plus the Community Development Director is hereby authorized to grant two extensions of two (2) years each at the Community Development Director’s sole discretion, without further approval by the Planning Commission or City Council, plus (ii) such time extensions authorized by state law currently or in the future.

2.4 Assignment.

2.4.1 Right to Assign. OWNER shall have the right to sell, transfer or assign the Property in whole or in part (provided that no such partial transfer shall violate the Subdivision Map Act, Government Code Section 66410 et seq.), to any person, partnership, limited liability company, joint venture, firm or corporation at any time during the term of this Agreement; provided, however, that any such sale, transfer or assignment shall include the assignment and assumption of the rights, duties and obligations arising under or from this Agreement and be made in strict compliance with the following conditions precedent:

(a) No sale, transfer or assignment of any right or interest under this Agreement shall be made unless made together with the sale, transfer or assignment of all or a part of the Property.

(b) Concurrent with any such sale, transfer or assignment, or within fifteen (15) business days thereafter, OWNER shall notify CITY's City Manager, in writing, of such sale, transfer or assignment and shall provide CITY with (1) an executed agreement, in the form attached hereto as Exhibit "L" or in an alternative form reasonably acceptable to CITY, by the purchaser, transferee or assignee and providing therein that the purchaser, transferee or assignee expressly and unconditionally assumes all the duties and obligations of OWNER under this Agreement with respect to the portion of the Property so sold, transferred or assigned; and (2) the payment of the applicable processing charge to cover the CITY's review and consideration of such sale, transfer or assignment.

Any sale, transfer or assignment not made in strict compliance with the foregoing conditions shall constitute a default by OWNER under this Agreement. Notwithstanding the failure of any purchaser, transferee or assignee to execute the agreement required by Paragraph (b) of this Subsection 2.4.1, the burdens of this Agreement shall be binding upon such purchaser, transferee or assignee, but the benefits of this Agreement shall not inure to such purchaser, transferee or assignee until and unless such agreement is executed. The City Manager shall have the authority to review, consider and either approve, conditionally approve, or deny any proposed sale, transfer or assignment that is not made in compliance with this section 2.4.

2.4.2 Release of Transferring Owner. Notwithstanding any sale, transfer or assignment, a transferring OWNER shall continue to be obligated under this Agreement unless such transferring OWNER is given a release in writing by CITY, which release shall be provided by CITY upon the full satisfaction by such transferring OWNER of the following conditions:

(a) OWNER no longer has a legal or equitable interest in all or any portion of the Property sold, transferred, or assigned.

(b) OWNER is not then in default under this Agreement.

(c) OWNER has provided CITY with the notice and executed agreement required under Paragraph (b) of Subsection 2.4.1 above.

(d) The purchaser, transferee or assignee provides CITY with security equivalent to any security previously provided by OWNER to secure performance of its obligations hereunder.

2.4.3 Effect of Assignment and Release of Obligations. In the event of a sale, transfer or assignment pursuant to the provisions of Section 2.4.2 above:

(a) The assignee shall be liable for the performance of all obligations of OWNER with respect to transferred property, but shall have no obligations with respect to the portions of the Property, if any, not transferred (the "Retained Property").

(b) The owner of the Retained Property shall be liable for the performance of all obligations of OWNER with respect to Retained Property, but shall have no further obligations with respect to the transferred property.

(c) The assignee's exercise, use and enjoyment of the Property or portion thereof shall be subject to the terms of this Agreement to the same extent as if the assignee were the OWNER.

2.4.4 Subsequent Assignment. Any subsequent sale, transfer or assignment after an initial sale, transfer or assignment shall be made only in accordance with and subject to the terms and conditions of this Section 2.4.

2.4.5 Termination of Agreement with Respect to Individual Lots Upon Sale to Public and Completion of Construction. The provisions of Subsection 2.4.1 shall not apply to the sale or lease (for a period longer than one year) of any lot which has been finally subdivided and is individually (and not in "bulk") sold or leased to a member of the public or other ultimate user. Notwithstanding any other provisions of this Agreement, this Agreement shall terminate with respect to any lot and such lot shall be released and no longer be subject to this Agreement without the execution or recordation of any further document upon satisfaction of both of the following conditions:

(a) The lot has been finally subdivided and individually (and not in "bulk") sold or leased (for a period longer than one year) to a member of the public or other ultimate user; and,

(b) A certificate of occupancy has been issued for a building on the lot, and the fees set forth under Section 4 of this Agreement have been paid.

2.4.6 Partial Assignment and Assumption. CITY and OWNER agree OWNER may partially assign its obligations and rights under this Agreement, and all amendments hereto, to a purchaser, transferee or assignee of a lot, which has been subdivided subject to provisions of a partial assignment and assumption agreement in the form attached hereto as Exhibit "M" or in an alternative form as reasonably approved by CITY. Any such complete and executed partial assignment and assumption of this Agreement shall be submitted to CITY for approval pursuant to Section 2.4.1 of this Agreement. Within fifteen (15) days following such complete submittal, CITY shall review, and if the above conditions are satisfied, may approve the partial assignment and release and notify the purchaser, transferee or assignee in writing thereof. No such release approved pursuant to this Subsection 2.4.6 shall cause, or otherwise affect, a release of OWNER from the duties and obligations under this Agreement that are retained by OWNER and excluded from the transfer or assignment.

2.5 Amendment or Cancellation of Agreement. This Agreement may be amended or cancelled in whole or in part by either party or successor in interest only in the manner provided for in Government Code Sections 65865.1 or 65868 or as set forth in this Agreement. Any amendment of this Agreement, which amendment has been requested by OWNER, shall be considered by the CITY only upon the payment of the applicable processing charge. This provision shall not limit any remedy of CITY or OWNER as provided by this Agreement. For

purposes of this section, the term “successor in interest” shall mean any person having a legal or equitable interest in the whole of the Property, or any portion thereof as to which such person wishes to amend or cancel this Agreement as applied to the portion of the Property owned by that successor in interest. The procedure for proposing and adopting an amendment to, or cancellation of, in whole or in part, this Agreement shall be the same as the procedure for adopting and entering into this Agreement in the first instance. Notwithstanding the foregoing sentence, if the CITY initiates the proposed amendment to, or cancellation of, in whole or in part, this Agreement, CITY shall first give notice to the OWNER of its intention to initiate such proceedings at least sixty (60) days in advance of the giving the public notice of intention to consider the amendment or cancellation. CITY and OWNER acknowledge and agree that this Agreement can only be amended or cancelled by mutual agreement of the CITY and OWNER or relevant successor in interest.

2.6 Minor Modification. Upon the written application of OWNER, minor modifications and changes to the Development Plan may be approved by the City Manager without the need to amend this Development Agreement. A minor/administrative modification to the Specific Plan as described in Section 7.4.1 of the Specific Plan shall not require an amendment to this Development Agreement. It is also contemplated by CITY and OWNER that OWNER may, from time to time, seek Additional Development Approvals. Any such Development Approvals are contemplated by CITY and OWNER as being within the scope of this Agreement as long as they are consistent with the Land Use Regulations and shall, upon approval by CITY, constitute Development Approvals as referenced herein. The parties agree that any such modifications or additional Development Approvals shall not constitute an amendment to this Agreement nor require an amendment to this Agreement. Other changes to the Development Agreement shall be processed in accordance with the City’s Municipal Code and applicable state law.

2.7 Termination. This Agreement shall be deemed terminated and of no further effect upon the occurrence of any of the following events:

- (a) Expiration of the stated term of this Agreement as set forth in Section 2.3.
- (b) Entry of a final judgment setting aside, voiding or annulling the adoption of the ordinance approving this Agreement.
- (c) The adoption of a referendum measure overriding or repealing the ordinance approving this Agreement.
- (d) Completion of the Project in accordance with the terms of this Agreement including issuance of all required occupancy permits, completion of all required Improvements as required herein and acceptance by CITY or applicable public agency of all required dedications.
- (e) Termination of this Agreement based on any default of OWNER and following the termination proceedings required as set forth in this Agreement.

Termination of this Agreement shall not constitute termination of any other land use entitlements approved for the Property. Upon the termination of this Agreement, no party

shall have any further right or obligation hereunder except with respect to any obligation to have been performed prior to such termination or with respect to any default in the performance of the provisions of this Agreement which has occurred prior to such termination or with respect to any obligations which are specifically set forth as surviving this Agreement. Upon such termination, any Development Impact Fees or RTIF paid pursuant to Section 4.2 of this Agreement by OWNER to CITY for residential units on which construction has not yet begun shall be refunded to OWNER by CITY.

2.8 Notices.

(a) As used in this Agreement, “notice” includes, but is not limited to, the communication of notice, request, demand, approval, statement, report, acceptance, consent, waiver, appointment or other communication required or permitted hereunder.

(b) All notices shall be in writing and shall be considered given either: (i) when delivered in person, including, without limitation, by courier, to the recipient named below; or (ii) on the date of delivery shown on the return receipt, after deposit in the United States mail in a sealed envelope as either registered or certified mail with return receipt requested, and postage and postal charges prepaid, and addressed to the recipient named below. All notices shall be addressed as follows:

If to CITY:

City of Woodland
300 First Street
Woodland, CA 95695
Attn: City Manager
Telephone: (530) 661-5800
Email: ken.hiatt@cityofwoodland.org

Copy to:

Best, Best & Krieger, LLP
500 Capitol Mall, Suite 1700
Sacramento, CA 95814
Attn: City Attorney
Telephone: (916) 325-4000
Email: ethan.walsh@bbklaw.com

If to OWNER:

Sewmawpaw Woodland LLC
c/o Pamela Rozycki
999 Country Club Drive
Modesto, CA 95356

(c) Either party may, by notice given at any time, require subsequent notices to be given to another person or entity, whether a party or an officer or representative of a party, or to a different address, or both. Notices given before actual receipt of notice of change shall not be invalidated by the change.

3. DEVELOPMENT OF THE PROPERTY.

3.1 Rights to Develop. Subject to the terms of this Agreement including the Reservations of Authority, OWNER shall have a vested right to develop the Property in accordance with, and to the extent of, the Specific Plan. The Project shall remain subject to all Subsequent Development Approvals required to complete the Project as contemplated by the Development Plan. OWNER shall not be required to enter into a subsequent development agreement in order to develop the Property. Except as otherwise provided in this Agreement, the permitted uses of the Property, the density and intensity of use, the maximum height and size of proposed buildings, and provisions for reservation and dedication of easements or land for public purposes shall be those set forth in the Specific Plan and this Agreement. OWNER does not have an affirmative obligation to develop the Property, but if the Property is developed it shall be developed according to the Development Approvals.

3.2 Effect of Agreement on Land Use Regulations. Except as otherwise provided under the terms of this Agreement including the Reservations of Authority, the rules, regulations and official policies governing permitted uses of the Property, the density and intensity of use of the Property, the maximum height and size of proposed buildings, and the design, improvement and construction standards and specifications applicable to development of the Property shall be in accordance with the Existing Land Use Regulations. In connection with any Subsequent Development Approval, CITY shall exercise discretion in the same manner that it exercises discretion under its police powers including the Reservations of Authority set forth herein; provided, however, that such discretion shall not prevent development of the Property for the uses and to the density or intensity of development set forth in this Agreement.

3.3 Timing of Development. The parties acknowledge that OWNER cannot at this time predict when or the rate at which phases of the Property will be developed. Such decisions depend upon numerous factors which are not within the control of OWNER, such as market orientation and demand, interest rates, absorption, completion and other similar factors. Since the California Supreme Court held in Pardee Construction Co. v. City of Camarillo, (1984) 37 Cal.3d 465, that the failure of the parties therein to provide for the timing of development resulted in a later adopted initiative restricting the timing of development to prevail over such parties' agreement, it is the parties' intent to cure that deficiency by acknowledging and providing that OWNER shall have the right to develop the Property in such order and at such rate and at such times as OWNER deems appropriate within the exercise of its subjective business judgment. Notwithstanding the foregoing, the phasing of the Project shall be conducted in accordance with the Phasing Rules as defined in Section 3.5 of this Agreement and the Infrastructure Phasing Plan submitted and approved in the manner more specifically described in Section 3.5 of this Agreement. Except as may be specifically provided elsewhere in this Agreement, OWNER has no affirmative obligation to commence development of the Property or to develop it at a specified rate. No modification of the City's ordinances, resolutions, policies, rules, or regulations adopted after the Effective Date whether by regulatory action, Council vote,

voter initiative or otherwise, which purport to cap, prohibit or otherwise limit development and/or the rate of development over time or to govern the sequence of development of land within the Specific Plan Area, shall apply to the Property.

3.4 Density Transfer Requirements. OWNER and CITY agree to the following requirements which guide unit yield assumptions within Residential Development Zones (“RDZ”) that are designated in the Specific Plan, and the process by which residential densities are established and, if permitted by the Community Development Director, transferred to other RDZ’s.

(a) Residential unit yields within each of six RDZs shall be those established by the Exhibit 6-1 and Table 6.1 in the Specific Plan. RDZ boundaries generally follow property lines for the Property and property owned by other property owners in the Specific Plan Area as existed at the time of Specific Plan approval.

(b) When any portion or all of an RDZ is mapped/subdivided (large or small lot), unit yields/densities shall be determined and allocated across the entire RDZ effected, and shall meet the Density Requirements outlined in Section 6.5.3 in the Specific Plan.

(c) OWNER may develop up to the assigned number of units within the RDZ at densities permitted by the Specific Plan for the underlying zoning (LDR, MDR, HDR).

(d) OWNER may request an increase in units up to 10 percent above the assigned units within the RDZ, subject to CEQA consistency review.

(e) If an RDZ is developed *under* the assigned number of units, an RTIF fee make up shall be required in amount necessary so that OWNER pays the RTIF fee equal to the amount required for the assigned number of units, unless at time of tentative map, an alternate RDZ picks up the unit deficit, subject to CITY approval and provided that the owner of the property located outside the RDZ enters into a written agreement to the satisfaction of the CITY that it shall adjust the density of its property to ensure consistency with the overall residential yields for the Specific Plan Area.

(f) If an RDZ is developed *over* assigned units, overage units must be removed from an alternate RDZ at tentative map, subject to CITY approval and provided that the owner of the property located outside the RDZ enters into a written agreement to the satisfaction of the CITY that it shall adjust the density of its property to ensure consistency with the overall residential yields for the Specific Plan Area.

(g) Except for the provisions stated above, the CITY has sole authority to approve the reallocation of units or to add units within each RDZ.

(h) If OWNER proposes land use changes or an increase in the number of units, then the City will reallocate units or add units within each RDZ and fees shall be updated with a nexus study and if necessary updates to the Public Facilities Financing Plan and the CIP.

3.5 Requirement for Public Infrastructure Improvements/Infrastructure Phasing Plan. Development of the Property is contingent in part on the construction of certain area-wide

infrastructure improvements in accordance with certain Infrastructure Phasing Rules established by the City for the Specific Plan Area, as attached hereto as Exhibit “D” (the “Phasing Rules”), and incorporated herein by this reference. OWNER agrees to comply with the Phasing Rules in the payment for and construction of Improvements as required for development of the Specific Plan Area.

3.5.1 Concurrent with the submission of the first tentative subdivision map, OWNER shall submit to the City an Infrastructure Phasing Plan for the Property, which shall be consistent with the Phasing Rules, for review and approval by the City Engineer. Tentative map submissions to create large parcels for financing purposes, which lots could not be developed without further subdivision, would not trigger this requirement. City Engineer shall confirm that the Infrastructure Phasing Plan is consistent with this Development Agreement, the Specific Plan, the CIP, the Phasing Rules, and all applicable tentative or final subdivision or parcel map conditions. In the event the Infrastructure Phasing Plan is consistent with the requirements described herein the City Engineer shall approve the Infrastructure Phasing Plan. If it is not consistent with such requirements the City Engineer shall indicate in writing which inconsistencies must be corrected in order for the Infrastructure Phasing Plan to be approved. The City will not approve a tentative subdivision map for any portion of the Property until an Infrastructure Phasing Plan is approved in accordance with this Section 3.5.1 and the Phasing Rules. Given the possible timing of different tentative maps proceeding in the same time period or the possibility that someone with a tentative map may decide to delay development of their property, it is likely that multiple tentative maps could have the same infrastructure requirements. Given the financing constraints of the Specific Plan that require the LDR and MDR units to construct most of the infrastructure in the Plan Area, it is imperative that every development with LDR or MDR units meet the development agreement requirement of constructing 150% or 130%, as applicable, of their RTIF infrastructure burden in accordance with the Phasing Rules. The City Engineer therefore has the authority to add replacement infrastructure conditions to an already approved tentative map (to meet the development agreement requirement of constructing 150% or 130% as applicable) if that tentative map is conditioned to construct improvements that have already been constructed. The City Engineer shall follow the same rules outlined in Exhibit D to determine the replacement infrastructure conditions. If the City anticipates multiple tentative maps may proceed with obligations to construct the same infrastructure, the City Engineer may list an alternative infrastructure requirement at the time of tentative map approval. If the City does not list an alternative infrastructure requirement, then the City still has the authority to require replacement infrastructure conditions. OWNER agrees that it will comply with the requirements to construct such replacement or alternative infrastructure as appropriate, and shall coordinate with CITY and other property owners within the Specific Plan Area in conjunction with the implementation of such replacement or alternative infrastructure requirements.

3.5.2 The OWNER shall construct public infrastructure improvements within the Specific Plan Area consistent with the Infrastructure Phasing Plan as approved by the City Engineer. City’s obligation to issue building permits for the Project shall be conditioned on construction of the public improvements consistent with the approved Infrastructure Phasing Plan and the Phasing Rules, which in some cases could restrict the cumulative number of building permits issued within the Specific Plan Area until certain public improvements are

complete or until security has been provided for the required improvements in accordance with a public improvement agreement entered into by and between CITY and OWNER.

3.5.3 OWNER shall be eligible for fee credits for the RTIF to be paid pursuant to this Development Agreement and reimbursement from future development within the Specific Plan Area for public infrastructure improvements constructed pursuant to and in accordance with this Development Agreement. Such fee credits and reimbursement shall be provided in accordance with Section 4.2.5 of this Agreement, the Public Infrastructure Reimbursement Rules and the Financing Plan prepared for the Specific Plan, as approved by City Council and as it may be updated from time to time.

3.6 Alignment of Parcels. Prior to or concurrently with the submission of an application for a tentative subdivision map for any portion of the Property, OWNER shall, in conjunction with Tammy Emery, Sole Trustee of the Spencer Revocable Living Trust Dated May 15, 1995 (“Spencer”), or the successor in interest to fee title to the property adjacent to the Property and owned by Spencer at the time of recordation of this Agreement, apply for a lot line adjustment to ensure that the portion of both OWNER’s property and Spencer’s property that is designated as Village Center Low Density Residential (“VCLDR”) in the Specific Plan has frontage access onto Road D. The lot line adjustment shall be located such that the parcels designated as VCLDR and Village Center Medium Density Residential (“VCMDR”) on both OWNER’s Property and the property owned by Spencer can be developed in an efficient manner without awkward land parcels as determined by CITY in its reasonable discretion.

3.7 Changes and Amendments. The parties acknowledge that development of the Project will require Subsequent Development Approvals including but not limited to approval of tentative and final subdivision maps for large and small parcels and design review for development of new uses on the Property. As necessary or appropriate, OWNER shall apply for Subsequent Development Approvals and CITY shall process and act on such application in accordance with the Existing Land Use Regulations, except as otherwise provided by this Agreement including the Reservations of Authority. Unless otherwise required by law, as determined in CITY’s reasonable discretion, Subsequent Development Approvals shall be deemed “minor” and not require an amendment to this Agreement provided such approvals do not:

- (a) Alter the permitted uses of the Property as a whole; or,
- (b) Increase the density or intensity of use of the Property as analyzed under the Specific Plan CEQA document, which may include limited adjustments as authorized by the City; or,
- (c) Increase the maximum height and size of permitted buildings beyond what is permissible under the Specific Plan; or,
- (d) Delete a requirement for the reservation or dedication of easements or land for public purposes within the Property as a whole; or,
- (e) Constitute a project requiring a subsequent or supplemental environmental impact report pursuant to Section 21166 of the Public Resources Code.

3.8 Reservations of Authority.

3.8.1 Limitations, Reservations and Exceptions. Notwithstanding any other provision of this Agreement, the CITY shall not be prevented from applying new rules, regulations and policies upon the OWNER, nor shall a development agreement prevent the CITY from denying or conditionally approving any subsequent development project application on the basis of such new rules, regulations and policies where the new rules, regulations and policies consist of the following:

(a) Processing fees and charges of every kind and nature imposed by CITY to cover the costs of processing applications for Development Approvals or for monitoring compliance with any Development Approvals.

(b) Procedural regulations relating to hearing bodies, petitions, applications, notices, findings, records, hearings, reports, recommendations, appeals and any other matter of procedure.

(c) Regulations, policies, and rules governing engineering and construction standards and specifications applicable to public and private improvements, including all uniform codes adopted by the CITY and any local amendments to those codes adopted by the CITY; provided, however, that, OWNER shall have a vested right to develop the Property in accordance with, and to the extent of, the standards and specifications that are expressly identified in the Specific Plan. Further, for the first ten (10) years following the Effective Date, the City shall not implement a change to the City's engineering standards and specifications that would result in an increase to the cost of construction of the required public improvements for a subdivision located within the Property by more than 2% of the estimated cost of the public improvements prior to such change.

(d) Regulations imposing Development Exactions; provided, however, that no subsequently adopted Development Impact Fees or fees levied pursuant to the terms of this Agreement shall be applicable to development of the Property except for those Project Fees set forth in Exhibit K to this Agreement, which Project Fees may be increased from time to time in accordance with applicable State law, or as contemplated in this Agreement.

(e) Regulations which may conflict with this Agreement or the Development Plan but which are reasonably necessary to protect the public health and safety. To the extent possible, any such regulations shall be applied and construed so as to provide OWNER with the rights and assurances provided under this Agreement.

(f) Regulations which do not conflict with those rules, regulations and policies set forth in this Agreement or the Development Plan. Any regulation, whether adopted by initiative or otherwise, limiting the rate or timing of development of the Property shall be deemed to conflict with the Development Plan and shall therefore not be applicable to the development of the Property.

(g) Regulations which may conflict with this Agreement or the Development Plan, but to which the OWNER consents in writing.

3.8.2 Subsequent Development Approvals. This Agreement shall not prevent CITY, in acting on Subsequent Development Approvals, from applying Subsequent Land Use Regulations which do not conflict with this Development Agreement or the Specific Plan in the form in effect on the Effective Date of this Development Agreement, nor shall this Agreement prevent CITY from denying or conditionally approving any Subsequent Development Approval on the basis of the Existing Land Use Regulations or any Subsequent Land Use Regulation not in conflict with the Specific Plan.

3.8.3 Modification or Suspension by State or Federal Law. In the event that State or Federal laws or regulations, enacted after the Effective Date of this Agreement, prevent or preclude compliance with one or more of the provisions of this Agreement, such provisions of this Agreement shall be modified or suspended as may be necessary to comply with such State or Federal laws or regulations, provided, however, that this Agreement shall remain in full force and effect to the extent it is not inconsistent with such laws or regulations and to the extent such laws or regulations do not render such remaining provisions impractical to enforce. In the event OWNER alleges that such State or Federal laws or regulations preclude or prevent compliance with one or more provisions of this Agreement, and the CITY does not agree, the OWNER may, at its sole cost and expense, seek declaratory relief (or other similar non-monetary remedies); provided, however, that nothing contained in this Section 3.8.3 shall impose on CITY any monetary liability for contesting such declaratory relief (or other similar non-monetary relief).

3.8.4 Intent. The parties acknowledge and agree that CITY is restricted in its authority to limit its police power by contract and that the foregoing limitations, reservations and exceptions are intended to reserve to CITY all of its police power which cannot be so limited. This Agreement shall be construed, contrary to its stated terms if necessary, to reserve to CITY all such power and authority which cannot be restricted by contract.

3.9 Public Works. If OWNER is required by this Agreement to construct any public works facilities which will be dedicated to CITY or any other public agency upon completion, and if required by applicable laws to do so, OWNER shall perform such work in the same manner and subject to the same requirements as would be applicable to CITY or such other public agency should it have undertaken such construction.

3.10 Acquisition of Offsite Real Property Interests. In any instance where OWNER is required pursuant to the Infrastructure Phasing Plan to construct any Improvements Outside Specific Plan Area, OWNER shall at its sole cost and expense provide or cause to be provided, the real property interests necessary for the construction of such public improvements (the "Offsite Property"). In the event OWNER is unable, after exercising reasonable efforts, including, but not limited to, the rights under Sections 1001 and 1002 of the Civil Code, to acquire the Offsite Property necessary for the construction of the Improvements Outside Specific Plan Area, and if so instructed by OWNER and upon OWNER'S provision of adequate security for costs CITY may reasonably incur, CITY agrees to use reasonable and diligent good faith efforts to acquire the Offsite Property from the owner or owners of record by negotiation to the extent permitted by law and consistent with this Agreement. If CITY is unable to acquire the Offsite Property by negotiation within sixty (60) days after OWNER's written request, CITY shall, in accordance with the procedures established by law, use its power of eminent domain to acquire the Offsite Property at a public hearing noticed and conducted in accordance with

California Code of Civil Procedure Section 1245.235 for the purpose of considering the adoption of a resolution of necessity concerning the Offsite Property, subject to the conditions set forth in this Section 3.10. The CITY and OWNER acknowledge that the timelines set forth in this Section 3.10 represent the maximum time periods which CITY and OWNER reasonably believe will be necessary to complete the acquisition of any Offsite Property. CITY agrees to use reasonable good faith efforts to complete the actions described within lesser time periods, to the extent that it is reasonably able to do so, consistent with the legal constraints imposed upon CITY. OWNER shall pay all costs associated with such acquisition or condemnation proceedings. This section 3.10 is not intended by the parties to impose upon the OWNER an enforceable duty to acquire land or construct any public improvements on land not owned by OWNER, except to the extent that the OWNER elects to proceed with the development of the Project, and then only in accordance with valid conditions imposed by the CITY upon the development of the Project under the Subdivision Map Act or other legal authority. CITY and OWNER acknowledge and agree that Government Code Section 66462.5 shall apply to the installation of public improvements on Offsite Property. CITY and OWNER further agree that the parties may explore alternative options for the required Improvements Outside Specific Plan Area, including but not limited to relocating to an alternative site, prior to proceeding with condemnation.

3.10.1 Owner's Option to Terminate Proceedings. CITY shall provide written notice to OWNER no later than fifteen (15) days prior to making an offer to the owner of the Offsite Property. At any time within that fifteen (15) day period, OWNER may, at its option, notify CITY that it wants CITY to cease all acquisition proceedings with respect to the Offsite Property, whereupon CITY shall cease such proceedings. CITY shall provide written notice to OWNER no later than fifteen (15) days prior to the date of the hearing on CITY'S intent to consider the adoption of a resolution of necessity as to any Offsite Property. At any time within that fifteen (15) day period, OWNER may, at its option, notify CITY that it wants CITY to cease condemnation proceedings, whereupon CITY shall cease such proceedings. If OWNER does not notify CITY to cease condemnation proceedings within said fifteen (15) day period, then the CITY may proceed to consider and act upon the Offsite Property resolution of necessity. If CITY adopts such resolution of necessity, then CITY shall diligently institute condemnation proceedings and file a complaint in condemnation and seek an order of immediate possession with respect to the Offsite Property.

3.10.2. Acquisition of Offsite Real Property Interests within Specific Plan Area. CITY and OWNER acknowledge that for improvements located outside of OWNER's Property but within the Specific Plan Area, the other property owners are required to dedicate property needed for public infrastructure to be constructed by OWNER pursuant to the terms of the other property owners' development agreements, including, without limitation, Section 3 of the Public Infrastructure Reimbursement Rules. Even if the property is not included in the CIP, the rules set forth in Section 3 of the Public Infrastructure Reimbursement Rules shall be followed. Notwithstanding the foregoing, in the event that another property owner within the Specific Plan Area does not dedicate such property as required by their development agreement, CITY and OWNER may take the steps set forth in this Section 3.10 to acquire such property.

3.11 Regulation by Other Public Agencies. It is acknowledged by the parties that other public agencies not within the control of CITY possess authority to regulate aspects of the

development of the Property separately from or jointly with CITY and this Agreement does not limit the authority of such other public agencies. CITY agrees to cooperate, at no cost to CITY, with OWNER in obtaining any required permits or compliance with the regulations of other public agencies provided such cooperation is not in conflict with any laws, regulations or policies of the CITY.

3.12 Utilities. The Project shall be connected to all utilities necessary to provide adequate water, sewer, gas, electric, and other utility service to the Project in accordance with all applicable laws and regulations.

3.13 Wastewater Treatment Capacity. CITY and OWNER agree that there is capacity in the CITY's wastewater treatment facility to serve: (1) existing residents and businesses that are already hooked up to the facility; (2) anticipated residents and businesses through build-out of the City's existing General Plan; and (3) the Project. CITY and OWNER acknowledge and agree that reserving this capacity for the Project, such that sewer hookups shall be available at such time as they are needed as the Project builds out, is a material element of the consideration provided by CITY to OWNER in exchange for the benefits provided to CITY under this Agreement. The Parties recognize the availability of sufficient sewer capacity may be affected by regulatory or operational constraints that are not within the CITY's discretion. To the extent the availability of sewer capacity is within the CITY's discretion (e.g., whether to extend sewer service to areas *not* currently within the CITY's service area), CITY shall not approve providing such capacity to areas currently outside the CITY's service area if this approval would prevent or delay the ability of the CITY to provide sewer hookups to the Project as the Project requires hook-ups or connections. This provision shall not affect the CITY's ability to provide sewer service within its service boundaries or within the existing CITY boundaries as they exist on the effective date of this Agreement, and as to such connections, the Parties requesting sewer service shall be connected on a first come first served basis. OWNER shall pay the applicable connection charge in effect pursuant to City-wide ordinance at the time of building permit issuance. OWNER acknowledges that connection charges may increase substantially over time and that the cost to comply with the CITY's National Pollution Discharge Elimination System ("NPDES") permit, as may be approved from time to time during the term of this Agreement, may be substantial.

3.14 Water Availability. CITY and OWNER agree that the CITY's has adequate water availability to serve: (1) existing residents and businesses that are already connected to CITY's water system; (2) anticipated residents and businesses through build-out of the City's existing General Plan; and (3) the Project. CITY and OWNER acknowledge and agree that reserving this capacity for the Project, such that water connections shall be available at such time as they are needed as the Project builds out, is a material element of the consideration provided by CITY to OWNER in exchange for the benefits provided to CITY under this Agreement. The Parties recognize the availability of sufficient water availability may be affected by environmental, regulatory or operational constraints that are not within the CITY's discretion. To the extent the availability of water is within the CITY's discretion (e.g., whether to extend water service to areas *not* currently within the CITY's service area), CITY shall not approve providing such capacity to areas currently outside the CITY's service area if this approval would prevent or delay the ability of the CITY to provide water connections to the Project as the Project requires

water connections. This provision shall not affect the CITY's ability to provide water service within its service boundaries or within the existing CITY boundaries as they exist on the effective date of this Agreement, and as to such connections, the Parties requesting water service shall be connected on a first come first served basis. OWNER shall pay the applicable connection charge in effect pursuant to City-wide ordinance at the time of building permit issuance. OWNER acknowledges that connection charges may increase substantially over time.

3.15 Right to Farm. OWNER acknowledges and shall comply with the requirements of Woodland Municipal Code Chapter 9.52, "Right to Farm", including but not limited to the requirements to record deed restrictions against property located within 500 feet of agricultural land or agricultural operations in any deed transferring any right, title or interest in the Property or any portion thereof, as more specifically set forth in Section 9.52.060 of the Woodland Municipal Code.

4. PUBLIC BENEFITS.

4.1 Intent. The parties acknowledge and agree that development of the Property will result in substantial public needs which will not be fully met by the Development Plan and further acknowledge and agree that this Agreement confers substantial private benefits on OWNER which should be balanced by commensurate public benefits. Accordingly, the parties intend to provide consideration to the public to balance the private benefits conferred on OWNER by providing more fully for the satisfaction of the public needs resulting from the Project. Significant public benefits provided by OWNER pursuant to the terms of this Agreement include but are not limited to construction of or contribution to the construction portions of the Yard and greenbelt areas as contemplated by the Specific Plan, funding and constructing public infrastructure for the Specific Plan Area, contribution to the construction of the regional interchange project at State Route 113, and the provision of affordable housing within the Project.

4.2 Development Impact Fees and RTIF.

4.2.1 Amount and Components of Development Impact Fees. OWNER shall pay the Development Impact Fees listed in Exhibit "K", W RTP Project Fees and other fees, attached hereto and incorporated herein by this reference. OWNER shall not be required to pay newly enacted Development Impact Fees or other fees that are not listed in Exhibit "K" in conjunction with the Project. The Development Impact Fee and other fee amounts to be paid by OWNER shall be the amounts that are in effect at the time such amounts are due. Nothing contained in this Agreement shall affect the ability of the CITY to amend the amounts of existing Development Impact Fees or other fees as permitted by State law, except that OWNER and CITY agree that new fee categories cannot be added to this project without mutual written agreement amending this Agreement. Additionally, nothing contained in this Agreement shall affect the ability of other public agencies that are not controlled by CITY to impose and amend, from time to time, Development Impact Fees established or imposed by such other public agencies, even though such Development Impact Fees may be collected by CITY.

4.2.2 Research and Technology Infrastructure Fee. In addition to all Development Impact Fees which shall be paid by OWNER, OWNER shall pay the Research and

Technology Park Infrastructure Fee (the “RTIF”) as established by the City Council and as may be updated from time to time in accordance with this Agreement and other development agreements entered into by and between the City and OWNERS within the Specific Plan Area. The RTIF shall be paid by OWNER in the amounts as established pursuant to that certain Woodland Research and Technology Park Development Impact Fee Nexus Study dated July 2023, prepared by Economic and Planning Systems, Inc. (the “RTIF Report”), which is incorporated herein by this reference, subject to annual adjustment as set forth in the RTIF Report, and further subject to periodic updates to the RTIF report as provided for herein. OWNER acknowledges and agrees that the RTIF is established pursuant to this and other development agreements entered into by and between OWNER and other property owners within the Specific Plan Area for specified land uses in a manner so as to help ensure the completion of the public facilities contemplated by the Specific Plan and the feasibility of all proposed land uses within the Specific Plan Area. Accordingly, OWNER agrees as follows:

(a) OWNER understands, acknowledges and agrees that the RTIF is calculated to ensure sufficient funding to complete the Improvements contemplated by the Specific Plan as a whole, but that some land uses, including certain residential uses, will pay RTIF in excess of their proportionate share of the total cost of those public facilities in order to facilitate the build out of other land uses contemplated within the Specific Plan. OWNER hereby agrees to pay such fees in the amounts and the manner set forth in this Agreement and the RTIF Report, as it may be updated from time to time, to provide the public benefits that will be derived from successful development of all land uses in the Specific Plan Area.

(b) OWNER and City further acknowledge and agree that portions of the RTIF shall be updated prior to issuance of the first building permit for the Project based on more detailed engineering work that will be conducted on the improvements included in the Capital Improvement Plan. Such modifications are described in Exhibit E, “WRTP CIP Modification”, attached hereto and incorporated herein by this reference. Following the completion of the modifications described in Exhibit E, the City shall update the RTIF to account for such modifications. OWNER hereby agrees and consents to such modifications of the RTIF, provided that the allocation of such fees is consistent with the methodology utilized in the RTIF Report.

(c) OWNER and CITY further acknowledge and agree that certain projects that are to be funded by the RTIF are intended in whole or in part to address impacts created by development in the Spring Lake Specific Plan Area located adjacent to the Specific Plan Area that includes the Property. These projects have been included in the projects to be funded by the RTIF as a form of equitable swap in exchange for certain projects constructed by developers in the Spring Lake Specific Plan that partially benefit the Specific Plan Area that includes the Property. OWNER acknowledges and explicitly consents to the inclusion of such projects in the calculation of the RTIF and acknowledges that the RTIF may be used to fund such projects. OWNER further acknowledges and agrees that it OWNER shall not be eligible for reimbursement from property owners or developers of property located within the Spring Lake Specific Plan Area for any projects that are funded by the RTIF.

(d) OWNER and CITY further acknowledge and agree that for properties that are designated in the Land Use section of the Specific Plan as Village Center

Mixed Use (VCMU), in the event that the ground floor development fronting Road B is developed for a non-residential use, and OWNER constructs upper floor residential units, above the non-residential buildings fronting Road B, OWNER shall not be required to pay the RTIF on any such upper floor residential units. Further, for properties that are designated in the Land Use section of the Specific Plan as High Density Residential with Community Commercial Overlay (HDR/CCO), in the event that (1) the total unit yield for Residential Development Zone (“RDZ”) 6 as set forth in Table 6.1 of the Specific Plan has been constructed and occupied by residents, and (2) OWNER constructs upper floor residential units above the non-residential buildings fronting Road B which upper floor residential units are in excess of the required total unit yield for RDZ 6, OWNER shall not be required to pay the RTIF on any such upper floor residential units.

4.2.3 Time of Payment. The Development Impact Fees and RTIF shall be paid to CITY prior to the issuance of building permits for each residential unit. Notwithstanding the foregoing, deferral of the payment of any RTIF fees may be granted pursuant to a separate agreement approved by CITY pursuant to CITY’s deferred impact fee policy for non-residential development, if applicable. At CITY’s discretion, CITY shall be allowed to defer RTIF fees to Certificate of Occupancy provided that the fee paid is the fee in effect on the date it is paid. Payment of RTIF fees shall be subject to the provisions of credits as provided for in this Agreement and the Public Infrastructure Reimbursement Rules.

4.2.4 Minimum RTIF Fees. OWNER specifically agrees that for each Low Density Residential unit developed in a LDR or VCLDR zone shall pay, at a minimum, the RTIF fee that is established for the 2,000-3,000 square foot unit, even for those units that are less than 2,000 square feet. OWNER further agrees that for each Medium Density Residential unit developed in a MDR or VCMDR zone shall pay, at a minimum, the RTIF fee that is established for the 1,000-2,000 square foot unit, even for those units that are less than 1,000 square feet..

4.2.5 Credits. OWNER shall be entitled to credit against the fees required pursuant to Subsection 4.2.1 and 4.2.2 for the dedication of easements, land and/or the construction of improvements required pursuant to this Agreement, the CIP, the Public Infrastructure Reimbursement Rules, the Phasing Rules, OWNER’s Infrastructure Phasing Plan and the applicable Subdivision Agreements/Tentative Map conditions for the Project. OWNER shall not receive credits for Improvements constructed pursuant to this Agreement in an amount greater than the Engineer’s estimate of the cost of such improvements as set forth in the CIP, adjusted on an annual basis by the Construction Cost Index as published from time to time by the Engineering News-Record (“CCI”). Similarly, OWNER shall receive credits toward the RTIF for land dedicated to the CITY for public infrastructure improvements based on the costs for such land as set forth in the CIP, adjusted on an annual basis by CCI. The Public Infrastructure Reimbursement Rules provides further detail on the terms pursuant to which OWNER will receive credits and reimbursement for dedication of easements, land and construction of Improvements in conjunction with the development of the Property, and OWNER acknowledges and agrees that it is subject to and shall comply with the Public Infrastructure Reimbursement Rules.

4.3 Responsibility for Funding Master Planning and Design Documents and CIP Modification Work. OWNER shall be required to fund the cost of certain Master Plans and the

design of certain public improvements, as more specifically set forth in Exhibit “F” (“**Master Planning and Design Obligations**”), attached hereto and incorporated herein by this reference, and to fund the cost of the analysis and consideration of the proposed modifications to the CIP as described in Section 4.2.2(b) and Exhibit “E” (“**CIP Modification Work**”). Such funding shall be provided by OWNER and other property owners in the Specific Plan Area at the times as required by this Agreement, including the Public Infrastructure Reimbursement Rules and the Phasing Rules. Except as otherwise set forth in the Master Planning and Design Obligations, the Master Plans and the design documents and the CIP Modification Work are the cumulative responsibility of the owners of property within the Specific Plan Area, and to the extent the OWNER is required to pay more than its proportionate share of the cost of any of such Master Plans and design documents or CIP Modification Work, OWNER shall be eligible for reimbursement from other property owners within the Specific Plan Area pursuant to the terms of the Public Infrastructure Reimbursement Rules. CITY and OWNER shall cooperate in the preparation of these documents.

4.4 Dedications for Public Improvements. OWNER agrees to dedicate to CITY certain property to be used for public facilities and improvements as more specifically set forth in Exhibit “G” (“**Public Dedications**”), attached hereto and incorporated herein by this reference. Such dedications shall be made by OWNER at the times as required by this Agreement and the Phasing Rules so as to provide dedications when needed for the extension of infrastructure or public amenities for the Project and other development in the Specific Plan Area. These dedications may be required ahead of development of OWNER’s Property. OWNER may be eligible for credits and, if applicable, reimbursement from other property owners within the Specific Plan Area for the dedications required by this Agreement if the real property to be dedicated is included in the CIP and reflected in the RTIF. Credit or reimbursement for such real property shall be provided as set forth in Section 4.2.5 of this Agreement, which credits and reimbursements shall be paid in accordance with the Public Infrastructure Reimbursement Rules. Real property that is set forth in Exhibit “G” but is not included in the CIP and reflected in the RTIF shall not be eligible for credit or reimbursement from other property owners or the RTIF. If real property is needed for temporary drainage of agricultural runoff prior to the full implementation of the storm drainage system reflected in the CIP, then the dedicating property owner shall dedicate the drainage easement to the developing land owner without compensation consistent with the timing of other public dedications in this agreement. CITY and OWNER acknowledge and agree that the property that must be dedicated to CITY may be modified from time to time through updates to the CIP after approval of this Agreement or in conjunction with the processing of subdivision maps for the Property. OWNER shall make such dedications in accordance with the CIP as it may be modified from time to time, in accordance with the timing for dedication as set forth in the approved Infrastructure Phasing Plan and Exhibit G.

4.5 Responsibility for Construction of Public Improvements.

4.5.1 Timely Construction of Public Infrastructure. As part of the development of the Project, OWNER shall be required to construct portions of certain area wide infrastructure that will serve the Specific Plan Area. Such infrastructure shall be the infrastructure that will be required pursuant to the Infrastructure Phasing Plan that shall be developed by OWNER pursuant to Section 3.5.1 of this Agreement. OWNER shall be responsible for the timely construction and

completion of all Improvements required for the Project in accordance with the Infrastructure Phasing Plan and any and all tentative subdivision map conditions. All required Improvements for each Subdivision Map, shall be completed and operational prior to City approval of the final subdivision map, unless OWNER enters into a Public Improvement Agreement with the City for such Improvements and provides adequate security for such improvements in accordance with the Subdivision Map Act and Woodland Municipal Code Chapter 16.52, as it may be amended from time to time, in which case such Improvements shall be constructed within the times provided in the Public Improvement Agreement.

4.5.2 Reimbursement for Public Infrastructure. Upon completion of the Improvements for an applicable portion of the development of the Property as required pursuant to this Agreement, CITY and OWNER shall enter into a reimbursement agreement that will provide for reimbursement of OWNER to the extent that the Engineers estimate of the cost of such improvements as set forth in the CIP (and adjusted by CCI) exceeds the amount of the RTIF applicable to the applicable portion of the Property developed by OWNER. Such reimbursement agreement shall be consistent with the Public Infrastructure Reimbursement Rules and the Phasing Rules. In the event OWNER/Developer builds MPFP projects, they are eligible for reimbursement consistent with the policies in the City's MPFP fee program and the City's MPFP administrative guidelines.

4.6 Parks Impact Fee. OWNER agrees that it shall pay the Parks Impact Fee adopted for the Specific Plan Area in the amount of \$9,279 per single family unit or \$6,959 per multi-family unit (as of January 1, 2023), which fee shall be adjusted on an annual basis by CCI. OWNER shall not be eligible to receive credits toward the Parks Impact Fee for dedication of park acreage or greenbelts or for construction of park or green belt improvements within the Specific Plan Area.

4.7 Affordable Housing. OWNER will comply with the requirements of Chapter 15.18 of the Woodland Municipal Code (the "Affordable Housing Ordinance") through the implementation of the Affordable Housing Plan for the Specific Plan (the "**WRTP Affordable Housing Plan**"), which is attached hereto as Exhibit "H" and incorporated herein by this reference. In the event of any inconsistencies between the Affordable Housing Ordinance and the WRTP Affordable Housing Plan, the WRTP Affordable Housing Plan shall apply to the Project.

4.8 Supplemental School Fee. OWNER acknowledges that Costalotta Partners, LLC, the owners of the "Beeman North" property will be entering into good faith negotiations with Woodland Joint Unified School District ("WJUSD") for the potential purchase of property to be used as a school campus. OWNER will participate in good faith negotiations involving the payment of a supplemental school fee towards the construction of facilities that provide capacity for students generated by the Specific Plan. OWNER agrees that if a supplemental fee shall be paid by OWNER, then such supplemental fee shall be deposited with the City of Woodland at the time of building permit issuance, placed in a segregated account, and held by City for future payment to WJUSD for the construction of the WRTP elementary school, or as otherwise specified in the School Site Purchase and Sale Agreement. In the event WJUSD does not proceed with construction of a school at the School Site, or other project(s) specified in the School Site Purchase and Sale Agreement by issuance of the 800th residential building permit in

the Specific Plan Area, then the supplemental fee funds may be used by the City to construct public improvements included in the CIP, as it may be amended from time to time, at the discretion of the City

4.9 Right to Continue Use of Agricultural Well. CITY and OWNER understand and acknowledge that there exists within the Specific Plan Area agricultural wells that provide irrigation for certain other property that remains in agricultural use. The Parties agree that OWNER may operate any such agricultural wells owned by OWNER to serve agricultural uses on OWNER's property or other property, provided that such use must be in compliance with all applicable federal, state and local laws, including but not limited to the Yolo Subbasin Groundwater Sustainability Plan adopted by the Yolo Subbasin Groundwater Agency, and any regulations or directives promulgated thereunder. OWNER shall be solely responsible to retain any and all property interests necessary for continuing operation of any such agricultural well, and for ensuring compliance with all applicable laws and regulations, as well as the Groundwater Sustainability Plan.

4.10 Build to Rent Development. OWNER agrees that neither it nor any successor or assign to this Agreement shall develop single family residences in the Low Density Residential, Village Center Low Density Residential, Village Center Medium Density Residential or Medium Density Residential zones located north of Marston Drive in the Specific Plan Area as shown on the Development Plan attached hereto as Exhibit "C", as a "build to rent single family development". For purposes of this Agreement, a "build to rent single family development" is a single family residential subdivision or a portion of such subdivision that is built for the purpose of renting, rather than selling the constructed homes.

5. FINANCING OF PUBLIC IMPROVEMENTS.

5.1 Financing Districts or Alternative Mechanisms. If deemed appropriate, CITY and OWNER will cooperate in the formation of any special assessment district, community facilities district or alternate financing mechanisms to pay for the construction and/or maintenance and operation of public infrastructure facilities or Improvements required as part of this Agreement, the CIP and the approved Infrastructure Phasing Plan, provided, however, that to the extent that a district or alternative financing mechanism is established for the purpose of bonding to raise funds for construction of infrastructure or payment of fees, the boundaries of such district will be limited to separate improvement areas that correspond with the boundaries of the tentative map (or tentative maps) within each Infrastructure Phasing Plan. The RTIF fees generated from the improvement area may be used to fund any improvement in the CIP. Such improvement areas shall be shown in the Infrastructure Phasing Plan approved by the City pursuant to this Development Agreement. CITY also agrees that, to the extent any such district or other financing entity is formed and sells bonds in order to finance such Improvements, OWNER may receive credits for the RTIF to be paid by OWNER, and may be reimbursed to the extent that OWNER spends funds or dedicates land for the establishment of public improvements that are included in the CIP, provided that such fee credits and reimbursements must be in conformance with the Public Infrastructure Reimbursement Rules and any individual reimbursement agreements entered into by and between CITY and OWNER. Notwithstanding the foregoing, it is acknowledged and agreed by the parties that nothing contained in this Agreement shall be construed as requiring CITY or the City Council to form any such district or to issue and sell

bonds. If bonds are sold then the proceeds of those bonds shall be used to reimburse the public improvements that are listed in the CIP and required by the conditions of the associated development.

CITY agrees to use reasonable efforts to develop and implement such financing mechanisms subject to applicable public hearing and election requirements of applicable State and, if tax-exempt bonds are to be issued, federal law, the existing regulations and the customary and reasonable industry standards for the development of such financings. OWNER and CITY acknowledge and agree that the establishment of a financing district and the issuance of bonds supported by the special taxes are dependent on many factors that are not known at this time. The viability of the financing, the amount of special taxes for debt service, and available bond proceeds will be dependent on several factors existing at the time the bonds are sold, including, but not limited to, the financial markets, interest on tax exempt financings, housing market, value of homes in the area, absorption rates for home sales in the area, bond underwriting criteria and ratings by bond-rating agencies. Fee credits that are generated from bond sales shall remain with the land that they were bonded against and can be used as a credit against RTIF fee payments. These fee credits cannot be sold or transferred.

CITY and OWNER acknowledge the infrastructure costs needed to support the project are substantial and may compromise the feasibility or timely build out of the Project and its associated benefits. CITY and OWNER further acknowledge this is especially the case for the development of residential units in the MDR and HDR zones. As such, both parties agree to work cooperatively to identify and pursue external funding sources, multiple financing strategies and tools to defray project infrastructure improvement costs. Further, the City anticipates that adjustments to the Specific Plan and associated approvals may be needed in the future, and the City will conduct further evaluation of the Specific Plan, CIP and City fee program after Specific Plan approval to determine what adjustments are appropriate.

5.2 Sports Park Community Facilities District. OWNER acknowledges the existence of the Spring Lake Community Facilities District (“**Sports Park CFD**”) which was created pursuant to the Mello-Roos Community Facilities Act, as set forth in Government Code Section 53311 *et seq.* for the purpose of funding the ongoing operation of the Woodland Sports Park, which provides regional park facilities that will serve the Property. OWNER voluntarily consents to and prior to recordation of each small lot final subdivision map or large lot map (for High Density and Mixed Use Residential units) for the Project shall take whatever affirmative action it needs to take on its part to ensure that all portions of the Project and Property that are designated as Low Density Residential, Village Center Low Density Residential, Medium Density Residential, Village Center Medium Density Residential and High Density Residential (including units above Village Center Mixed Use and Community Commercial Overlay for which such small lot final subdivision map or large lot map - for High Density and Mixed Use Residential units) is recorded is subject to the assessments of the Sports Park CFD, which includes without limitation, voting to annex to said Sports Park CFD.

5.3 Maintenance Community Facilities District(s).

5.3.1 Formation, Consent, Waiver, and Benefit. No building permits shall be issued for the residential units or commercial development provided for in the first subdivision

map for the Project until a Community Facilities District has been formed for the purpose of funding public services and maintenance costs associated with the Project for services identified in Exhibit I or the Property has been annexed into such a Community Facilities District that has already been formed to fund public services and maintenance costs for the Specific Plan Area (the “**Maintenance CFD**”), or OWNER participates in the formation of an equivalent funding mechanism for public services and maintenance purpose in a form satisfactory to the City Engineer. OWNER consents to and shall cooperate in such formation or annexation of the Maintenance CFD or the formation of an equivalent financing mechanism for maintenance and services purposes. OWNER also consents to the levy of such special taxes or assessments as are necessary to fund the maintenance and service obligations described herein, pursuant to and consistent with the requirements of this Agreement, Government Code Section 53111, et seq., and the City's Capital Financing and Debt Management Policy, adopted by City Council on June 20, 2017 and incorporated herein by this reference.

5.3.2 Annexation of Subsequent Phases. No building permits shall be issued for subsequent phases of the Project until the such phase is annexed into the Maintenance CFD or an equivalent funding mechanism for public services and maintenance costs has been established for such subsequent phase in accordance with Section 5.3.1.

5.3.3 Uses of Funds Collected. The Maintenance CFD will fund maintenance of certain landscaping, public improvements and public facilities as more specifically set forth in Exhibit “I”, attached hereto and incorporated herein by this reference (“**Maintenance Services**”).

5.4 Maximum Effective Tax Rate. CITY and OWNER agree that the maximum effective tax rate for assessor’s parcels within the Property from all applicable financing districts, including without limitation, any financing districts established as contemplated in Section 5.1 of this Agreement, the Sports Park CFD, the Maintenance CFD and any CFD or Assessment District established pursuant to the Statewide Community Infrastructure Program, may not exceed one and 8/10 percent (1.8%) of the reasonably expected value of the parcel with planned vertical improvements determined at the time of approval of the applicable financing district and the Rate and Method of Apportionment.

6. REVIEW FOR COMPLIANCE.

6.1 Periodic and Special Reviews.

6.1.1 Time for and Initiation of Periodic Review. The CITY shall review this Agreement as determined by the City, in order to ascertain the good faith compliance by OWNER with the terms of this Agreement. OWNER shall submit an Annual Monitoring Report to CITY, in a form acceptable to the City Manager, along with any applicable processing charge, within ten (10) days after each anniversary date of the Effective Date of this Agreement. Within thirty (30) days after the receipt of the Annual Monitoring Report, CITY shall either issue a notice of continuing compliance or a notice of non-compliance and a notice of CITY’s intent to conduct a Special Review pursuant to Sections 6.1.2 through 6.1.6. Issuance of a notice of continuing compliance may be issued by the City Manager or his designee. The cost of this review shall be funded by the OWNER on a time and materials basis.

6.1.2 Initiation of Special Review. A special review may be called either by agreement of the parties or by unilateral initiation by the CITY in one or more of the following ways:

- (a) Recommendation of the Community Development Director;
- (b) Affirmative vote of at least four (4) members of the Planning Commission; or
- (c) Affirmative vote of at least three (3) members of the City Council.

6.1.3 Notice of Special Review. The City Manager shall begin the special review proceeding by giving notice to OWNER that the CITY intends to undertake a special review of this Agreement. Such notice shall be given at least ten (10) days in advance of the time at which the matter will be considered by the Planning Commission.

6.1.4 Public Hearing. The Planning Commission shall conduct a hearing at which OWNER must demonstrate good faith compliance with the terms of this Agreement. The burden of proof on this issue shall be on OWNER.

6.1.5 Findings upon Public Hearing. The Planning Commission shall determine, upon the basis of substantial evidence, whether OWNER has, for the period under review, complied in good faith with the terms and conditions of this Agreement.

6.1.6 Procedure upon Findings.

(a) If the Planning Commission finds and determines on the basis of substantial evidence that OWNER has complied in good faith with the terms and conditions of this Agreement, during the period under review, the review for that period shall be concluded.

(b) If the Planning Commission finds and determines on the basis of substantial evidence that OWNER has not complied in good faith with the terms and conditions of this Agreement, during the period under review, the Planning Commission may recommend to the City Council to modify or terminate this Agreement.

(c) OWNER may appeal a determination pursuant to paragraph (b) to the City Council in accordance with CITY's rules for consideration of appeals in zoning matters generally.

6.2 Proceedings Upon Modification or Termination. If, upon a finding under Section 6.1.6(b), CITY determines to proceed with modification or termination of this Agreement, CITY shall give written notice to OWNER of its intention so to do. The notice shall be given at least ten (10) calendar days prior to the scheduled hearing and shall contain:

- (a) The time and place of the hearing;
- (b) A statement as to whether or not CITY proposes to terminate or to modify the Agreement; and,

(c) Such other information CITY considers necessary to inform OWNER of the nature of the proceeding.

6.3 Hearing on Modification or Termination. At the time and place set for the hearing on modification or termination, OWNER shall be given an opportunity to be heard. OWNER shall be required to demonstrate good faith compliance with the terms and conditions of this Agreement. The burden of proof on this issue shall be on OWNER. If the City Council finds, based upon substantial evidence in the administrative record, that OWNER has not complied in good faith with the terms or conditions of the Agreement, the City Council may terminate or modify this Agreement and impose such conditions to the action it takes as it considers necessary to protect the interests of the CITY. The decision of the City Council shall be final, subject only to judicial review pursuant to Section 1094.5 of the Code of Civil Procedure.

6.4 Certificate of Agreement Compliance. If, at the conclusion of a Periodic or Special Review, OWNER is found to be in compliance with this Agreement, CITY shall, upon written request by OWNER, issue a Certificate of Agreement Compliance ("Certificate") to OWNER stating that after the most recent Periodic or Special Review and based upon the information known or made known to the Community Development Director and City Council that (1) this Agreement remains in effect and (2) OWNER is not in default. The Certificate shall be in recordable form, shall contain information necessary to communicate constructive record notice of the finding of compliance, shall state whether the Certificate is issued after a Periodic or Special Review and shall state the anticipated date of commencement of the next Periodic Review. OWNER may record the Certificate with the County Recorder.

Whether or not the Certificate is relied upon by assignees or other transferees or OWNER, CITY shall not be bound by a Certificate if a default existed at the time of the Periodic or Special Review, but was concealed from or otherwise not known to the Community Development Director or City Council.

7. DEFAULT AND REMEDIES.

7.1 Remedies in General. It is acknowledged by the parties that CITY would not have entered into this Agreement if it were to be liable in damages under this Agreement, or with respect to this Agreement or the application thereof.

In general, each of the parties hereto may pursue any remedy at law or equity available for the breach of any provision of this Agreement, except that CITY shall not be liable in damages to OWNER, or to any successor in interest of OWNER, or to any other person, and OWNER covenants not to sue for damages or claim any damages:

(a) For any breach of this Agreement or for any cause of action which arises out of this Agreement; or

(b) For the taking, impairment or restriction of any right or interest conveyed or provided under or pursuant to this Agreement; or

(c) Arising out of or connected with any dispute, controversy or issue regarding the application or interpretation or effect of the provisions of this Agreement.

7.2 Specific Performance. The parties acknowledge that money damages and remedies at law generally are inadequate and specific performance and other non-monetary relief are particularly appropriate remedies for the enforcement of this Agreement and should be available to all parties for the following reasons:

(a) Money damages are unavailable against CITY as provided in Section 7.1 above.

(b) Due to the size, nature and scope of the project, it may not be practical or possible to restore the Property to its natural condition once implementation of this Agreement has begun. After such implementation, OWNER may be foreclosed from other choices it may have had to utilize the Property or portions thereof. OWNER has invested significant time and resources and performed extensive planning and processing of the Project in agreeing to the terms of this Agreement and will be investing even more significant time and resources in implementing the Project in reliance upon the terms of this Agreement, and it is not possible to determine the sum of money which would adequately compensate OWNER for such efforts.

7.3 Release. Except for non-damage remedies, including the remedy of specific performance and judicial review as provided for in Sections 7.2 and 6.3, respectively, OWNER, for itself, its successors and assignees, hereby releases the CITY, its officers, agents and employees from any and all claims, demands, actions, or suits of any kind or nature arising out of any liability, known or unknown, present or future, including, but not limited to, any claim or liability, based or asserted, pursuant to Article I, Section 19 of the California Constitution, the Fifth Amendment of the United States Constitution, or any other law or ordinance which seeks to impose any other liability or damage, whatsoever, upon the CITY because it entered into this Agreement or because of the terms of this Agreement.

7.4 Termination of Agreement for Default of OWNER. Subject to the provisions contained in Subsection 6.3 herein, in addition to the remedy of specific performance as set forth in Section 7.2, CITY may terminate this Agreement for any failure of OWNER to perform any material duty or obligation of OWNER under this Agreement, or to comply in good faith with the terms of this Agreement (hereinafter referred to as "default"); provided, however, CITY may terminate this Agreement pursuant to this Section only after providing written notice to OWNER of default setting forth the nature of the default and the actions, if any, required by OWNER to cure such default and, where the default can be cured, OWNER has failed to take such actions and cure such default within 60 days after the effective date of such notice or, in the event that such default cannot be cured within such 60 day period but can be cured within a longer time, has failed to commence the actions necessary to cure such default within such 60 day period and to diligently proceed to complete such actions and cure such default.

7.5 Termination of Agreement for Default of CITY. OWNER may terminate this Agreement only in the event of a default by CITY in the performance of a material term of this Agreement and only after providing written notice to CITY of default setting forth the nature of the default and the actions, if any, required by CITY to cure such default and, where the default can be cured, CITY has failed to take such actions and cure such default within 60 days after the effective date of such notice or, in the event that such default cannot be cured within such 60 day period but can be cured within a longer time, has failed to commence the actions necessary to

cure such default within such 60 day period and to diligently proceed to complete such actions and cure such default.

8. THIRD PARTY LITIGATION.

8.1 General Plan Litigation. CITY has determined that this Agreement is consistent with its General Plan, as such called General Plan exists as of the Effective Date (“General Plan”), and that the General Plan meets all requirements of law. OWNER has reviewed the General Plan and concurs with CITY’s determination.

CITY shall have no liability in damages under this Agreement for any failure of CITY to perform under this Agreement or the inability of OWNER to develop the Property as contemplated by the Development Plan of this Agreement as the result of a judicial determination that on the Effective Date, or at any time thereafter, the General Plan, or portions thereof, are invalid or inadequate or not in compliance with law.

8.2 Third Party Litigation Concerning Agreement. OWNER shall defend, at its expense, including attorneys’ fees, indemnify, and hold harmless CITY, its agents, officers and employees from any claim, action or proceeding against CITY, its agents, officers, or employees to attack, set aside, void, or annul the approval of this Agreement or the approval of any permit granted pursuant to this Agreement. CITY shall promptly notify OWNER of any such claim, action or proceeding, and CITY shall cooperate in the defense. If CITY fails to promptly notify OWNER of any such claim, action or proceeding, or if CITY fails to cooperate in the defense, OWNER shall not thereafter be responsible to defend, indemnify, or hold harmless CITY. CITY may in its discretion participate in the defense of any such claim, action or proceeding.

8.3 Indemnity. In addition to the provisions of 8.2 above, OWNER shall indemnify and hold CITY, its officers, agents, employees and independent contractors free and harmless from any liability whatsoever, based or asserted upon any act or omission of OWNER, its officers, agents, employees, subcontractors and independent contractors, for property damage, bodily injury, or death (OWNER’s employees included) or any other element of damage of any kind or nature, relating to or in any way connected with or arising from the activities contemplated hereunder, including, but not limited to, the study, design, engineering, construction, completion, failure and conveyance of the public improvements, save and except claims for damages arising through the sole active negligence or sole willful misconduct of CITY. OWNER shall defend, at its expense, including attorneys’ fees, CITY, its officers, agents, employees and independent contractors in any legal action based upon such alleged acts or omissions. CITY may in its discretion participate in the defense of any such legal action.

8.4 Environment Assurances. OWNER shall indemnify and hold CITY, its officers, agents, and employees free and harmless from any liability, based or asserted, upon any act or omission of OWNER, its officers, agents, employees, subcontractors, predecessors in interest, successors, assigns and independent contractors for any violation of any federal, state or local law, ordinance or regulation relating to industrial hygiene or to environmental conditions on, under or about the Property, including, but not limited to, soil and groundwater conditions, and OWNER shall defend, at its expense, including attorneys’ fees, CITY, its officers, agents and

employees in any action based or asserted upon any such alleged act or omission. CITY may in its discretion participate in the defense of any such action.

8.5 Reservation of Rights. With respect to Sections 8.2, 8.3 and 8.4 herein, CITY reserves the right to either (1) approve the attorney(s) which OWNER selects, hires or otherwise engages to defend CITY hereunder, which approval shall not be unreasonably withheld, or (2) conduct its own defense, provided, however, that OWNER shall reimburse CITY forthwith for any and all reasonable expenses incurred for such defense, including attorneys' fees, upon billing and accounting therefor.

8.6 Survival. The provisions of this Sections 8.1 through 8.6, inclusive, shall survive the termination of this Agreement.

9. MORTGAGEE PROTECTION.

The parties hereto agree that this Agreement shall not prevent or limit OWNER, in any manner, at OWNER's sole discretion, from encumbering the Property or any portion thereof or any improvement thereon by any mortgage, deed of trust or other security device securing financing with respect to the Property. CITY acknowledges that the lenders providing such financing may require certain Agreement interpretations and modifications and agrees upon request, from time to time, to meet with OWNER and representatives of such lenders to negotiate in good faith any such request for interpretation or modification. CITY will not unreasonably withhold its consent to any such requested interpretation or modification provided such interpretation or modification is consistent with the intent and purposes of this Agreement. Any Mortgagee of the Property shall be entitled to the following rights and privileges:

(a) Neither entering into this Agreement nor a breach of this Agreement shall defeat, render invalid, diminish or impair the lien of any mortgage on the Property made in good faith and for value, unless otherwise required by law.

(b) The Mortgagee of any mortgage or deed of trust encumbering the Property, or any part thereof, which Mortgagee, has submitted a request in writing to the CITY in the manner specified herein for giving notices, shall be entitled to receive written notification from CITY of any default by OWNER in the performance of OWNER's obligations under this Agreement.

(c) If CITY timely receives a request from a mortgagee requesting a copy of any notice of default given to OWNER under the terms of this Agreement, CITY shall provide a copy of that notice to the Mortgagee within ten (10) days of sending the notice of default to OWNER. The Mortgagee shall have the right, but not the obligation, to cure the default during the remaining cure period allowed such party under this Agreement.

(d) Any Mortgagee who comes into possession of the Property, or any part thereof, pursuant to foreclosure of the mortgage or deed of trust, or deed in lieu of such foreclosure, shall take the Property, or part thereof, subject to the terms of this Agreement. Notwithstanding any other provision of this Agreement to the contrary, no Mortgagee shall have an obligation or duty under this Agreement to perform any of OWNER's obligations or other affirmative covenants of OWNER hereunder, or to guarantee such performance; provided,

however, that to the extent that any covenant to be performed by OWNER is a condition precedent to the performance of a covenant by CITY, the performance thereof shall continue to be a condition precedent to CITY's performance hereunder, and further provided that any sale, transfer or assignment by any Mortgagee in possession shall be subject to the provisions of Section 2.4 of this Agreement.

10. MISCELLANEOUS PROVISIONS.

10.1 Recordation of Agreement. This Agreement and any amendment or cancellation thereof shall be recorded with the Yolo County Recorder by the City Clerk within ten (10) days of CITY's entry into this Agreement, as required by Section 65868.5 of the Government Code. If the parties to this Agreement or their successors in interest amend or cancel this Agreement as provided for herein and in Government Code Section 65868, or if the CITY terminates or modifies the agreement as provided for herein and in Government Code Section 65865.1 for failure of the applicant to comply in good faith with the terms or conditions of this Agreement, the City Clerk shall have notice of such action recorded with the Yolo County Recorder.

10.2 Entire Agreement. This Agreement sets forth and contains the entire understanding and agreement of the parties, and there are no oral or written representations, understandings or ancillary covenants, undertakings or agreements which are not contained or expressly referred to herein. No testimony or evidence of any such representations, understandings or covenants shall be admissible in any proceeding of any kind or nature to interpret or determine the terms or conditions of this Agreement.

10.3 Severability. If any term, provision, covenant or condition of this Agreement shall be determined invalid, void or unenforceable, the remainder of this Agreement shall not be affected thereby to the extent such remaining provisions are not rendered impractical to perform taking into consideration the purposes of this Agreement. Notwithstanding the foregoing, the provision of the Public Benefits set forth in Section 4 of this Agreement, including but not limited to the payment of the fees set forth therein, are essential elements of this Agreement and CITY would not have entered into this Agreement but for such provisions, and therefore in the event such provisions are determined to be invalid, void or unenforceable, this entire Agreement shall be null and void and of no force and effect whatsoever.

10.4 Interpretation and Governing Law. This Agreement and any dispute arising hereunder shall be governed and interpreted in accordance with the laws of the State of California. This Agreement shall be construed as a whole according to its fair language and common meaning to achieve the objectives and purposes of the parties hereto, and the rule of construction to the effect that ambiguities are to be resolved against the drafting party shall not be employed in interpreting this Agreement, all parties having been represented by counsel in the negotiation and preparation hereof.

10.5 Section Headings. All section headings and subheadings are inserted for convenience only and shall not affect any construction or interpretation of this Agreement.

10.6 Singular and Plural. As used herein, the singular of any word includes the plural.

10.7 Joint and Several Obligations. Subject to Section 2.4, if at any time during the term of this Agreement the Property is owned, in whole or in part, by more than one owner, all obligations of such owners under this Agreement shall be joint and several, and the default of any such owner shall be the default of all such owners. Notwithstanding the foregoing, no owner of a single lot which has been finally subdivided and sold to such owner as a member of the general public or otherwise as an ultimate user shall have any obligation under this Agreement except as provided under Section 4 hereof.

10.8 Time of Essence. Time is of the essence in the performance of the provisions of this Agreement as to which time is an element.

10.9 Waiver. Failure by a party to insist upon the strict performance of any of the provisions of this Agreement by the other party, or the failure by a party to exercise its rights upon the default of the other party, shall not constitute a waiver of such party's right to insist and demand strict compliance by the other party with the terms of this Agreement thereafter.

10.10 No Third Party Beneficiaries. This Agreement is made and entered into for the sole protection and benefit of the parties and their successors and assigns. No other person shall have any right of action based upon any provision of this Agreement.

10.11 Force Majeure. Neither party shall be deemed to be in default where failure or delay in performance of any of its obligations under this Agreement is caused by floods, earthquakes, other Acts of God, fires, wars, riots or similar hostilities, strikes and other labor difficulties beyond the party's control, (including the party's employment force), government regulations, court actions (such as restraining orders or injunctions), or other causes beyond the party's control. If any such events shall occur, the term of this Agreement and the time for performance by either party of any of its obligations hereunder may be extended by the written agreement of the parties for the period of time that such events prevented such performance, provided that the term of this Agreement shall not be extended under any circumstances for more than five (5) years.

10.12 Mutual Covenants. The covenants contained herein are mutual covenants and also constitute conditions to the concurrent or subsequent performance by the party benefited thereby of the covenants to be performed hereunder by such benefited party.

10.13 Successors in Interest. The burdens of this Agreement shall be binding upon, and the benefits of this Agreement shall inure to, all successors in interest to the parties to this Agreement. All provisions of this Agreement shall be enforceable as equitable servitudes and constitute covenants running with the land. Each covenant to do or refrain from doing some act hereunder with regard to development of the Property: (a) is for the benefit of and is a burden upon every portion of the Property; (b) runs with the Property and each portion thereof; and, (c) is binding upon each party and each successor in interest during ownership of the Property or any portion thereof.

10.14 Counterparts. This Agreement may be executed by the parties in counterparts, which counterparts shall be construed together and have the same effect as if all of the parties had executed the same instrument.

10.15 Jurisdiction and Venue. Any action at law or in equity arising under this Agreement or brought by a party hereto for the purpose of enforcing, construing or determining the validity of any provision of this Agreement shall be filed and tried in the Superior Court of the County of Yolo, State of California, and the parties hereto waive all provisions of law providing for the filing, removal or change of venue to any other court.

10.16 Project as a Private Undertaking. It is specifically understood and agreed by and between the parties hereto that the development of the Project is a private development, that neither party is acting as the agent of the other in any respect hereunder, and that each party is an independent contracting entity with respect to the terms, covenants and conditions contained in this Agreement. No partnership, joint venture or other association of any kind is formed by this Agreement. The only relationship between CITY and OWNER is that of a government entity regulating the development of private property and the owner of such property.

10.17 Further Actions and Instruments. Each of the parties shall cooperate with and provide reasonable assistance to the other to the extent contemplated hereunder in the performance of all obligations under this Agreement and the satisfaction of the conditions of this Agreement. Upon the request of either party at any time, the other party shall promptly execute, with acknowledgment or affidavit if reasonably required, and file or record such required instruments and writings and take any actions as may be reasonably necessary under the terms of this Agreement to carry out the intent and to fulfill the provisions of this Agreement or to evidence or consummate the transactions contemplated by this Agreement. The City Manager may delegate his or her powers and duties under this Agreement to the Community Development Director or other management level employee of the CITY. CITY shall cooperate in good faith with OWNER in the implementation of the Development of the Property to support successful development of each of the allowed land uses in the Specific Plan Area. The City acknowledges that OWNER has made and will be required to make additional investments to implement the Plan. This Agreement provides assurance to OWNER that the City will cooperate and assist in completion of the annexation process. City agrees that it will accept, in good faith, for processing, review and action, including but not limited to all applications for lot line adjustments, large lot subdivision maps, zoning, special permits, development permits, tentative maps, subdivision maps or other entitlements for use of the Property in accordance with the General Plan and this Agreement.

10.18 Eminent Domain. No provision of this Agreement shall be construed to limit or restrict the exercise by CITY of its power of eminent domain.

10.19 Agent for Service of Process. In the event OWNER is not a resident of the State of California or it is an association, partnership or joint venture without a member, partner or joint venturer resident of the State of California, or it is a foreign corporation, then in any such event, OWNER shall file with the Community Development Director, upon its execution of this Agreement, a designation of a natural person residing in the State of California, giving his or her name, residence and business addresses, as its agent for the purpose of service of process in any court action arising out of or based upon this Agreement, and the delivery to such agent of a copy of any process in any such action shall constitute valid service upon OWNER. If for any reason service of such process upon such agent is not feasible, then in such event OWNER may be personally served with such process out of this County and such service shall constitute valid

service upon OWNER. OWNER is amenable to the process so served, submits to the jurisdiction of the Court so obtained and waives any and all objections and protests thereto.

10.20 Estoppel Certificate. Within thirty (30) days following a written request by any of the parties, the other party shall execute and deliver to the requesting party a statement certifying that (i) either this Agreement is unmodified and in full force and effect or there have been specified (date and nature) modifications to the Agreement, but it remains in full force and effect as modified; and (ii) either there are no known current uncured defaults under this Agreement or that the responding party alleges that specified (date and nature) defaults exist. The statement shall also provide any other reasonable information requested. The failure to timely deliver this statement shall constitute a conclusive presumption that this Agreement is in full force and effect without modification except as may be represented by the requesting party and that there are no uncured defaults in the performance of the requesting party, except as may be represented by the requesting party. OWNER shall pay to CITY all costs incurred by CITY in connection with the issuance of estoppel certificates under this Section 10.20 prior to CITY's issuance of such certificates.

10.21 Authority to Execute. The person or persons executing this Agreement on behalf of OWNER warrants and represents that he or she/they have the authority to execute this Agreement on behalf of his or her/their corporation, partnership or business entity and warrants and represents that he or she/they has/have the authority to bind OWNER to the performance of its obligations hereunder.

IN WITNESS WHEREOF, the parties hereto have executed this Development Agreement on the day and year set forth below.

INFRASTRUCTURE PHASING RULES

In order to proceed with development of their property, each owner within the Woodland Research and Technology Park Specific Plan Area is required by the Development Agreement entered into with the City to submit to City and obtain approval of an Infrastructure Phasing Plan (“Phasing Plan”) for each phase of development prior to approval of a tentative subdivision map for the property included in such phase. Owners are not required to seek approval of a Phasing Plan as described herein until they or their successor in interest to the Development Agreement apply for a tentative subdivision map for all or a portion of their property. The Phasing Plan must be consistent with these Infrastructure Phasing Rules (the “Rules”). For these Rules, all references to LDR also includes VCLDR and all references to MDR also includes VCMDR.

Each Phasing Plan shall ensure that the Improvements required for the development of the Property consistent with the Development Plan shall be completed prior to or concurrently with the development of the Property in accordance with the Phasing Plan for the Property. The Improvements included in the Plan must be supported by engineering studies that are based on sound engineering judgment and the technical studies and documents that provide support for the adoption of the Specific Plan.

The City and all property owners within the Specific Plan Area anticipate that the residential units in the LDR and MDR zones of the Specific Plan will be developed early in the overall build out of the Specific Plan Area, and generally prior to the development of high density residential and commercial development contemplated by the Specific Plan. In order to ensure that the Improvements required for the development of the Specific Plan Area are constructed in a manner that will serve that early development in a functional manner and ensure that there is not a delay in the provision of necessary infrastructure, each Plan that includes residential units in an LDR or MDR zone must construct infrastructure that is equal in value, based on the Engineer’s Estimate of Costs set forth in the CIP (as amended and adjusted for CCI) to not less than 145% or more than 150% of the RTIF (excluding the RTIF administration category) required to be paid for LDR units and not less than 125% or more than 130% of the RTIF (excluding the RTIF administration category) required to be paid for MDR units (based on the then current RTIF at the time the Phasing Plan was approved) for the residential units that are to be constructed in the LDR and/or MDR zones as part of such phase. .

The infrastructure to be counted toward the 150% or 130%, as applicable, of total value shall not include any dedications of right of way required to be made by the Owner or future developer of the Property. Such dedications, which shall be made as conditions on the applicable tentative subdivision map, shall be subject to reimbursement from future development in accordance with the Public Infrastructure Reimbursement Rules if the right of way is included in the CIP.

Each Phasing Plan that includes residential units in a LDR and/or MDR zone shall include all Improvements required for the development of the property included in the applicable phase, plus additional backbone and off-site improvements as determined to be appropriate for

the applicable phase in consultation with the City Engineer. In determining the backbone and off-site improvements to be included in the Plan, Developer and City shall work to design, fund and construct the following improvements as determined by the City Engineer:

- The Developer shall obtain approval from the City Engineer for improvement plans and shall provide improvement security in amounts consistent with the requirements Government Code Section 66499-66499.10 for all improvements set forth in the Plan prior to or concurrently with recordation of the first final subdivision map for the phase covered by the Plan.
- The City may, at its discretion, require additional on-site Improvements as part of the phase that are not specifically included in the engineering analysis for the applicable phase, but are deemed appropriate by the City Engineer, in consultation with Owner's Engineer for such development (e.g., traffic calming measures, left turn lanes for the benefit of bicycle and pedestrian safety, design requirements for roundabouts).
- In order to facilitate the construction of non-residential development, the first Plan including LDR or MDR units submitted to and approved by City shall include the extension of underground utilities to the Road B/County Road 25A ("CR 25A") intersection. This Plan shall also include the construction of Road A and Road B south of CR 25A, and Road G between Road A and Road B. Alternatively, the Owner may instead propose to construct non-residential infrastructure on the north side of CR 25A, and City may, in its sole discretion, allow for this alternative to be included in the first Plan rather than the extension of roads south of CR 25A.
- The Plan for the first 500 residential units¹ to be developed cumulatively in the MDR and LDR zones in the Specific Plan shall require the Owner to provide sufficient funding to design and construct the CR 25A/State Route 113 ("SR 113") interchange. Each of the first five hundred units shall contribute toward the CR 25A/State Route 133 ("SR 113") interchange according to the following formula:
Per unit contribution = project cost * 1.2 * 0.53/500 units
The project cost is the amount listed in the CIP with an annual adjustment by CCI
The 1.2 factor provides an extra contingency amount to make sure the project is adequately funded
0.53 is the cost share for the WRTP as reflected in the CIP
The first 350 units shall make this contribution at building permit. Any units from 351-500 shall make this contribution at final map.
The Owner may elect to perform a traffic study in order to defer the collection of project funds and the timing of construction. The City Engineer shall review the results of the traffic study and determine the timing of the collection of project funds and the timing of construction.
- The Plan that includes the 600th residential unit shall include the completion of Road B between CR 25A and Parkland.
- The Plan that includes the 750th residential unit shall include the mobility hub improvements if they have not been constructed previously.

¹ All references to the number of residential units in these Phasing Rules refer to the cumulative number of residential units developed in the LDR and MDR zones of the Specific Plan. Residential units in other zones are not counted toward the threshold number of residential units triggering various public improvements as set forth in these Rules.

- The Parkland Ave Overcrossing abutment fill slope, dirt placement, compaction to CalTrans standards and stabilization must be included in the Plan that includes the first storm drainage pond.
- Any phase that will include the cumulative approval of more than 450 residential units must include construction of at least 1/3 of the Yard park improvements.
- The Plan for any phase of development of land that accesses Marston Drive must provide for the construction of a connection of Marston Avenue to CR 25A from either Road D or Road B if such a connection was not previously constructed, to ensure that any development that accesses Marston Avenue will be able to connect to the CR 25A/SR 113 interchange without traveling through the Spring Lake Specific Plan Area.
- The Plan for the first phase of development of land north of Parkland Avenue must provide for the construction of at least one eastbound lane and one westbound lane of Parkland Avenue between Road B and Harry Lorenzo Avenue.
- Greenbelts and park infrastructure that is included on the eastern and northern edges of the Specific Plan shall be included with the phase that includes any adjacent development. Further, any phase that includes residential development adjacent to a greenbelt shall include improvement of that greenbelt area within the Plan for that phase of development.
- The City may, at its option, require Owner to construct the Improvements described in the approved Plan or City may construct such improvements itself. Responsibility for construction of the improvements shall be indicated in the approved Plan. In the event the City constructs some or all of the Improvements included in the Plan, Owner shall be required to pay the full cost of the Improvements (or Owner's proportionate share of the cost, as indicated in the Plan), even if the reimbursement available through the RTIF is less than the actual cost of constructing the improvements.
- The City may, at its discretion, reject a Plan that includes partially constructed infrastructure. In the alternative, the City may reduce the amount of reimbursement that Owner may receive based on a determination by the City Engineer of the estimated additional costs that will be incurred by future developers to complete such infrastructure, which costs would not be incurred if the infrastructure was completed as a single project. Such determination shall be made in accordance with the Public Infrastructure Reimbursement Rules.
- Certain infrastructure improvements included in the CIP are not triggered by specific development and are not required based on a specific number of units (e.g., Gateway Monuments and enhanced landscaping). Those improvements shall be included in Plans in consultation with the City as needed to comply with the requirement to provide Improvements equal to 150% of the applicable phase's RTIF obligation for LDR units and 130% for MDR units.
- City may, at its discretion, delay the timing of infrastructure such that it falls to a future developer, then that future developer waives the right to contest the change in infrastructure requirements.
- All Improvements that are included in the CIP must be funded, constructed, or the Owner shall have entered into a public improvement agreement and provided the required security for such Improvements prior to recordation of the final subdivision map that includes the final residential units to be developed in the LDR and MDR zones.

EXHIBIT E

WRTP CAPITAL IMPROVEMENT PLAN MODIFICATIONS

It is understood that the following CIP items will need additional work after Specific Plan approval in order to provide a more accurate project cost for the CIP and fee program. The following items shall be investigated further so that the CIP and the fee program can be updated prior to the issuance of the first building permit in the Specific Plan. The CIP shall be updated consistent with the review and update of all of these items prior to the approval of the first phasing plan. These items need to be updated prior to first tentative map and phasing plan (because of right of way and cost implications). Tentative Map submissions to create large parcel maps do not trigger this requirement if they do not allow for development of LDR, VCLDR, MDR, or VCMDR residential units. The City shall enter into the contracts required to complete the work required to complete the following items with funding provided by the Owner and other property owners within the Specific Plan Area. OWNER and CITY agree that the City's staff time and legal expenses will be paid from the administrative portion of the RTIF.

- The CIP was developed assuming that the existing cross section for CR 25A can be reused for the future alignment of this roadway. If this is not true then there could be significant additional costs added to the CIP. Applicant to perform preliminary design work to verify horizontal and vertical alignment and update the cost estimate for CR 25A.

- Applicant to obtain survey information for Parkland Ave OC design to verify the amount of fill material needed for the abutment fill section. This information is also needed to set the right of way footprint for the abutment.

- The interchange footprint needs to be verified and included in the CIP update and in the dedication exhibit.

- The Miscellaneous segment of the CIP needs to be broken down in more detail by location so that the City can determine which developer to reimburse for what work.

- The Greenbelts, Parks and Ponds section of the CIP needs to be broken down in more detail by location so that the City can determine which developer to reimburse for what work.

- The development team will need to perform earthwork testing to determine if the pond excavation can be used as abutment fill material. Abutment backfill estimate to consider meeting Caltrans specifications. Surveying to be performed to determine quantities more accurately. If this earthwork testing is not performed, then the cost estimates shall be increased to account for off-hauling of the pond material and importing of the abutment material.

- Section N-N needs to be updated to account for modifications associated with the CR 25A/SR 113 interchange plans. The north side of section N-N and O-O will be modified to construct the landscaping and sidewalk. The south side of section N-N and O-O will not have a sidewalk (unless required by Caltrans).

-Review whether to add a sound wall to the CIP on the north side of CR 25A from the eastern edge of the Specific Plan to Road D.

-HCP/Ag mitigation to be included in the off site projects (if it applies).

-The size of roundabouts needs to be reviewed and approved by City staff prior to the update of the CIP and the dedication exhibit update.

-The City plans to change the name of County Road 25A (name is still not determined). The cost estimate will include the changes to any signs as part of the interchange project or the improvements to CR 25A.

-Subject to Caltrans approval, the City may choose to add minor landscaping improvements on the east side of SR 113 adjacent to the W RTP (planting/watering of trees and/or planting vines on the sound wall).

-The development team shall update unit costs in the CIP prior to updating the RTIF fee. The most recent cost estimate for the interchange will be included in the CIP update and the RTIF update.

EXHIBIT F

MASTER PLANNING AND DESIGN OBLIGATIONS

OWNER agrees that it will provide funding for certain master planning and design efforts that are required as part of the Specific Plan. These master planning and design efforts are required by the Specific Plan to be completed prior to the issuance of certain development approvals within the Specific Plan collectively, and as a result, certain developers within the Specific Plan may fund these master planning and design efforts in order to proceed with development and seek reimbursement from the other property owners within the Specific Plan Area pursuant to the Public Infrastructure Reimbursement Rules. In the event that other property owners have funded any of the master planning and design efforts set forth below, OWNER shall provide reimbursement for OWNER's proportionate share of the costs of such master planning and design efforts pursuant to the Public Infrastructure Reimbursement Rules. OWNER and CITY agree that the City's staff time and legal expenses will be paid from the administrative portion of the RTIF.

The master planning and design efforts are as follows:

- Master Parks Plan for Design of "The Yard" park as described in Section 6.2.3 of the Specific Plan. The Master Parks Plan for the Yard shall be consistent with and shall include the amenities set forth in the concept plan for The Yard that is attached to the CIP and will include a master plan level of design for The Yard. The Master Parks Plan shall be funded by contributions by OWNER and/or other property owners within the Specific Plan Area. The Master Parks Plan must be complete prior to the approval of the first tentative subdivision map or any other Subsequent Development Approval within the Specific Plan Area (excepting development of the Business Incubator property as set forth in the Development Agreement or development of affordable housing on a land dedication site as set forth in the WRTP Affordable Housing Plan). Tentative Map submissions to create large parcel maps do not trigger this requirement if they do not allow for the development of LDR, VCLDR, MDR or VCMDR residential units .
- Comprehensive Planting and Street Tree Palette. OWNER and other property owners within the Specific Plan Area shall fund the preparation of a comprehensive planting and street tree palette for both private and public landscaping improvements within the Specific Plan Area as more particularly described in Section 6.2.3 of the Specific Plan. This effort shall also include guidance on street furnishings, street lighting palettes and the conceptual design of Gateway monuments at the intersections of Road 25A and Road B and Road B and Marston Road. The Planting and Street Tree Palette shall be funded by contributions by OWNER and/or other property owners within the Specific Plan Area. The Planting and Street Tree Palette must be complete prior to the approval of the first tentative subdivision map or any other Subsequent Development Approval within the Specific Plan Area (excepting development of the Business Incubator property as set forth in the Development Agreement or development of affordable housing on a land dedication site as set forth in the WRTP Affordable Housing Plan).

- TDM/VMT Program. OWNER and other property owners shall fund the preparation of a Comprehensive Transportation Demand Management/Vehicle Miles Traveled Reduction Program (“TDM/VMT Program”) that shall (1) establish transportation strategies, programs, facilities or services for the purpose of VMT reduction and (2) provide specific VMT reduction strategies that all property owners/tenants shall be required to implement through individual Project-level TDM Plans consistent with the TDM/VMT Program. The TDM/VMT Program is more particularly described in Section 6.2.3 of the Specific Plan. The measures included in the TDM/VMT Program shall in combination achieve a 10 percent reduction in Plan Area VMT per capita compared to baseline conditions by 2035. The TDM/VMT Program shall be funded by contributions by OWNER and/or other property owners within the Specific Plan Area. The TDM/VMT Program must be complete prior to the approval of the first tentative subdivision map or any other Subsequent Development Approval within the Specific Plan Area. Prior to or as a condition of approval of OWNER’s first tentative subdivision map for the Property, OWNER must demonstrate to the satisfaction of CITY that a funding mechanism has been established to the satisfaction of CITY that will provide sufficient funding on an on-going basis to implement and maintain the Project-level TDM Plan or Plans for the Property.
- Infrastructure Study Report. OWNER and the other property owners within the Specific Plan Area shall fund the preparation of an Infrastructure Study Report which shall include the following items:
 - sound wall layout
 - signal interconnect exhibit
 - right of way dedication exhibit
 - greenway dedication exhibit
 - the yard exhibit and cost estimate
 - mobility hub exhibit and cost estimate
 - CFD map showing what will be maintained
 - Map and description for wells and pipes
 - Technical memos including correspondence (if necessary) and appendices (storm drainage, sewer, water, traffic etc)

EXHIBIT G
PUBLIC DEDICATIONS

NOTES:

1. THIS EXHIBIT IS BASED ON BEST AVAILABLE INFORMATION AT THE TIME OF PREPARATION. IN ALL CASES THE REQUIREMENTS OF THE WOODLAND RESEARCH AND TECHNOLOGY PARK SPECIFIC PLAN TAKE PRECEDENCE. IT SHOULD BE ASSUMED THAT FURTHER ADJUSTMENT FOR ACTUAL GREENWAY AND PARK DEDICATION MAY BE REQUIRED. DISTANCES ARE APPROXIMATE AND SUBJECT TO CHANGE WITH FORMAL BOUNDARY SURVEY(S) AND/OR DESIGN. ANY CHANGE IN GREENWAY DIMENSIONS TO BE CONSISTENT WITH ACREAGE IN SPECIFIC PLAN.
3. PROPERTY LINES BASED ON RECORD INFORMATION. ACTUAL PROPERTY LINE LOCATIONS MAY CHANGE UPON FIELD SURVEYING.

LEGEND:

-  GREENWAY AREA
-  AREA OUTSIDE MASTER PLAN
-  SEE DETENTION POND NOTE #1
-  SEE DETENTION POND NOTE #2
-  DIMENSIONS OF WIDENED AREAS AT KEY INTERSECTIONS TO BE DETERMINED WITH TENTATIVE MAPPING
-  EXISITING PROPERTY LINE
-  EXISITING RIGHT OF WAY
-  AREA TO BE DEDICATED AS STREET RIGHT OF WAY OR EASEMENT

DETENTION POND NOTES:

1. PROPOSED DETENTION POND - DIMENSIONS SUBJECT TO CHANGE BASED ON FINAL STORM WATER CALCULATIONS AND TENTATIVE MAP LAYOUT.
2. PROPOSED DETENTION POND - DIMENSIONS SUBJECT TO CHANGE BASED ON FINAL STORM WATER CALCULATIONS.

EXHIBIT H

WOODLAND RESEARCH AND TECHNOLOGY PARK AFFORDABLE HOUSING PLAN

1. All residential development in the Woodland Research and Technology Park Specific Plan Area is subject to the Affordable and Inclusionary Housing obligations as set forth in the City of Woodland's Affordable Housing Ordinance (Woodland Municipal Code Chapter 15.16) as modified by this Plan to ensure the inclusion of Affordable Housing within the Specific Plan Area. Provisions of this Plan that specifically apply in the Specific Plan Area and are not otherwise set forth in the Affordable Housing Ordinance are specified as being "Specific to WRTP".
2. **Specific to WRTP** – A minimum of 160 units within the Specific Plan Area at build out of the Specific Plan are planned to be constructed and rented at an affordable rent or sold at an affordable housing cost to low income households. The payment of in-lieu fees is anticipated to provide supplemental funding to support the construction of these units. Further, a minimum of 279 units in the Specific Plan Area (inclusive of 160 units for low income households) shall be constructed at or above 30du/ac consistent with the requirements of the City's Housing Element. The requirements set forth below are intended to implement these goals.
3. Inclusionary Obligation – Consistent with the City of Woodland's Affordable Housing Ordinance all development within the Specific Plan Area must meet the following affordable housing requirement either through the construction and sale/rental of affordable units, or one of the alternative compliance methods set forth in this policy:
 - a. In all **For-Sale** projects of at least 10 units in size, 10% of new for-sale units shall be affordable to low income households.
 - b. Calculations of required affordable units that result in a fraction of a **For-Sale** unit shall be rounded up to the nearest whole unit.
 - c. Ten percent (10%) of all **multifamily rental units** shall be affordable to low income households.
 - d. These requirements shall apply to all **multifamily rental projects** of at least 20 units. Projects with fewer than 20 units are exempt from affordable housing requirements.
 - e. Calculations of required affordable **multifamily rental** units that result in a fraction of a unit shall be rounded up to the nearest whole unit.
 - f. **Specific to WRTP** – Residential units that are developed within the Village Center Mixed Use Zone are exempt from the requirements of this Policy and the Affordable Housing Ordinance.

4. In-Lieu Fees – Consistent with the requirements of the City of Woodland’s Affordable Housing Ordinance:
- a. Owner is permitted to pay in-lieu fees to satisfy all or a part of the Owner’s affordable housing obligation as set forth in Section 3 of this Plan, except that in those instances where Owner is required pursuant to section 5.b below to make a land dedication as part of Owner’s satisfaction of this Plan and the Affordable Housing Ordinance, Owner must first make the required land dedication and may only pay in-lieu fees to the extent that there is a remaining obligation after the land dedication is complete.
 - b. **Specific to WRTP** – In-lieu fee shall be paid at the following rates (which rates shall be adjusted by the City annually by the Construction Cost Index as published from time to time by the Engineering News-Record):
 - i. \$3.00/sf on all market rate Low Density Residential units
 - ii. \$2.50/sf on all market rate Medium Density Residential units
 - iii. \$2.00/sf on all market rate High Density Residential units
 - c. **Specific to WRTP** – In-lieu fees collected within the WRTP Specific Plan Area shall first be prioritized to support the construction of the required 160 low income affordable units within the Specific Plan Area. City will explore development of a program specific to the WRTP pursuant to which developers of property may receive credits toward their in-lieu fee obligations for the amounts being spent for public infrastructure in excess of their RTIF obligations. Under the contemplated program future RTIF funds would be deposited into the City’s housing trust fund rather than being used to reimburse or provide RTIF credits to developers. Any such program, if adopted, will provide considerations to ensure that in-lieu fees are available on a time-frame as needed to develop the affordable housing units contemplated by this Affordable Housing Plan. The priority focus of the program should be to incentivize the construction of MDR units. Any program adopted should ensure that the housing trust fund does not have more RTIF credits that can reasonably be used by affordable housing developers.
5. Land Dedication - In accordance with the City of Woodland’s Affordable Housing Ordinance:
- a. A developer of property located within the Medium Density Residential (MDR), Village Center Medium Density Residential (VCMDR) or High Density Residential (HDR) zone(s), may be allowed to make an irrevocable offer of dedication to the City or its designee of sufficient land to satisfy the affordability requirement. Any land dedication site shall be consistent with the requirements for land dedication **Specific to WRTP:** Land within the Low Density Residential (LDR) or

Village Center Low Density Residential (VCLDR) zones may not be dedicated to the City for purpose of meeting the Owner's affordable housing obligations.

- b. **Specific to WRTP** – Concurrently with the recordation of the first final subdivision map for properties designated as Urban Village North or South, High Density Residential in the Specific Plan, the Owner of such property shall dedicate a parcel of a minimum size of two and one half acres (unless the City, in its sole discretion, agrees to a smaller site based on a special housing need, or because the another High Density Residential parcel of greater than two and one-half acres was previously dedicated to affordable housing in the Specific Plan Area that would provide for greater than 80 units of affordable housing) to a non-profit or for-profit affordable housing developer, which developer must be approved by the City in its sole discretion, for the construction of an affordable rental housing project. The City may, at its discretion, allow the Owner to make an irrevocable offer of dedication of the parcel directly to the City in the event that the City has not approved an affordable housing developer at the time of recordation of the first final subdivision map for the applicable property. The dedicated parcel is not required to be located within the Property governed by this Development Agreement, provided that the parcel meets the requirements below, is located within the Specific Plan Area, and is designated for High Density Residential. The dedicated site must additionally conform with the following requirements:
 - i. The dedicated parcel shall be of a sufficient size and configuration to accommodate/provide a minimum of 80 residential units consistent with all applicable zoning and Specific Plan requirements (provided, however, that in the event that a prior land dedication site has been developed with greater than 80 units affordable to low income households, the City, may in its sole discretion approve a site that will provide a lesser number of residential units, so long as the minimum number of units will still allow for 160 total low income affordable housing units within the Specific Plan Area.
 - ii. Prior to acceptance of the offer of dedication by the affordable housing developer or City, as applicable, the dedicated parcel shall be fully improved with, or bonds shall be provided to ensure the construction of, infrastructure, frontage improvements (i.e., curb, gutter, walk), paved street access, utility (i.e., water, gas, sewer and electric) service connections stubbed to the property lines, and other such off-site improvements as may be necessary for development of the required affordable units or as required by the City.
- c. An owner who dedicates a land dedication parcel pursuant to this Section 5 shall receive credit toward its inclusionary obligation for HDR project(s) based on the appraised FMV of the land dedication site. In-lieu fee credits may not be

transferred to other lower density zones without separate City approval, in City's sole discretion. The value of the site will be treated as equivalent to a payment of affordable housing in-lieu fees based on the rates set forth in Section 4.b. Any remaining affordable housing obligation shall be provided in the form of affordable housing in-lieu fees paid as set forth in Section 4.b or through the construction of affordable units within the Project.

EXHIBIT I

MAINTENANCE SERVICES TO BE FUNDED BY MAINTENANCE CFD

Following improvements shall be maintained with funding to be established through the Maintenance CFD

- Landscape maintenance for any parks, landscaped medians, and greenbelts located within the Specific Plan Area, including but not limited to sidewalks, play equipment, lighting, and irrigation
- Tree-related services for all street trees within the Specific Plan Area, including tree inspections, planting, watering, re-staking, mulching and weeding, fertilization, insect and disease control, pruning, and hazardous tree removal.
- Maintenance of the improvements included as part of any detention pond/open space areas within the Specific Plan Area, including walking paths and other amenities included with the detention pond
- Fair share cost for maintenance of any storm drainage features downstream of the Specific Plan Area, including but not limited to the following:
 - East Regional Pond
 - North Regional Pond
 - County Road 25A Channel
 - Outfall Channel and Outfall Channel Outlet Structure
 - Farmers Central Drainage Channel
 - Any drainage features conveying storm drainage between the features listed above
- Lighting and landscape maintenance for one-half of the Pedestrian Overcrossing. The City will designate the portion of the Pedestrian Overcrossing funded by the Maintenance CFD at its discretion in conformance with all applicable law..
- Lighting and landscape maintenance, including any enhanced landscaping/public art/entry monument at the roundabouts, for which the City is responsible on the east side of the State Route 113/County Road 25A interchange. The specific area in the interchange funded by the Maintenance CFD shall be determined by the City at its discretion in conformance with all applicable law.
- Lighting and landscape maintenance for the east side of the future Parkland Avenue Overcrossing.
- Maintenance of traffic signals and street lights within the Specific Plan Area
- Funding of requirements identified in the Transportation Demand Management (TDM) plan, VMT, and Transit Program, as being funded through the Maintenance CFD.
- Maintenance of Specific Plan Area multi-use pedestrian/bike paths, sound walls, street furniture, public art, entry monument/enhanced landscaping, and mobility hub/transit
- Maintenance of any landscaping on the east side of SR 113 adjacent to the project limits of the WRTP.

EXHIBIT J

PUBLIC INFRASTRUCTURE REIMBURSEMENT RULES

PUBLIC INFRASTRUCTURE REIMBURSEMENT RULES FOR THE WOODLAND RESEARCH AND TECHNOLOGY PARK SPECIFIC PLAN

1. Construction of Public Infrastructure and Dedication of Land Owned by Owner.

a. Parties agree that each Owner shall, for the collective benefit of all Owners in the Specific Plan Area (1) dedicate such real property located on their property that is required for public infrastructure as set forth in the Capital Improvement Program (the “CIP”) and (2) design and construct public infrastructure required to serve the Specific Plan Area in accordance with the requirements of their respective development agreements, infrastructure phasing plans, tentative subdivision maps and public improvement agreements. Owners dedicating real property for public infrastructure projects included in the CIP and reflected in the RTIF and/or constructing such public infrastructure shall receive RTIF fee credits and reimbursement pursuant to the terms of these rules and the Individual Reimbursement Agreements to be entered into by and between individual Owners and the City, as more specifically described herein.

b. Prior to dedication of real property for public infrastructure projects included in the CIP and reflected in the RTIF and/or commencement of construction of any public infrastructure as required pursuant to an approved infrastructure phasing plan, and pursuant to the CIP the Owner shall enter into an individual reimbursement agreement in a form approved by the City Attorney. The individual reimbursement agreement shall establish the manner in which the Property Owner will solicit bids for construction of the public infrastructure, administer the applicable contracts, document costs incurred in connection with the public infrastructure work, and shall more specifically establish the manner in which the Owner shall receive fee credits and reimbursement for such construction work, as well as any dedication of real property associated with such construction work. The terms of the individual reimbursement agreement shall be consistent with these Reimbursement Rules.

2. Master Planning and Design Work.

a. Owners are collectively responsible pursuant to the terms of their respective development agreements for funding the analysis and consideration of certain modifications to the CIP as more specifically described in each Development Agreement as Exhibit E (the “CIP Modification Work”) and certain master planning and design work as is more specifically described in each Development Agreement as Exhibit F (the “Master Planning and Design Work”).

b. Owners agree that the first Owner to submit an application to the City for a tentative subdivision map within the Specific Plan Area shall provide advance funding for all CIP Modification Work and Master Planning and Design Work described in each Development Agreement as Exhibits E and F. Prior to submission of an application for such first tentative subdivision map, the applicable Owner shall enter into an advance funding agreement with the City in a form as approved by the City Attorney for the cost of such CIP Modification and Master Planning and Design Work, and shall continue to fund such costs through completion of the work. All CIP Modification and Master Planning and Design Work described in Exhibits E and F must be completed prior to City approval of the first tentative subdivision map or other discretionary development approval for property within the Specific Plan Area. The Owner that funds the CIP modification work and the master planning and design work shall be eligible for reimbursement from other Owners in accordance with the terms of the respective Development Agreements and as set forth in Section 4(h) of this Exhibit. The CIP Modification and Master Planning and Design Work shall be conducted by the City, unless the City directs the Owner to contract for such work directly with the applicable consultants.

3. Dedication of Land for Public Infrastructure Constructed by Others..

a. Owners acknowledge and agree that their respective properties will not develop at the same time, and that initial development in the Specific Plan will require certain backbone infrastructure such as public right of way, public utility easements, stormwater detention facilities and other facilities that will be necessary for that initial development to proceed. Therefore, there is a likelihood that the Owners developing their property first will require one or more other Owners to dedicate right of way, easements, rights of access and egress and/or fee title to property (the “Dedication Property”) for public infrastructure required under the Specific Plan in order for the first Owner to complete the public infrastructure required under its infrastructure phasing plan and applicable public improvement agreement.

b. In order to ensure the orderly and efficient construction of public infrastructure to serve the entirety of the Specific Plan Area, each Owner agrees that in the event that Dedication Property within the boundaries of one Owner is required by the approved infrastructure phasing plan of another Owner, the first Owner (for purposes of this Section, the “Dedicating Property Owner”) shall dedicate such required Dedication Property to the City in accordance with the terms and conditions of these rules.

c. At such time that the City and the Owner planning to construct public infrastructure on the Dedication Property (for purposes of this Section, the “Constructing Property Owner”) determine that the Dedicating Property Owner’s Dedication Property will be required, the City shall notify the

Dedicating Property Owner, and shall request rights of access and egress to the Dedicating Property Owner's property as necessary to prepare any surveys or other analysis as necessary or appropriate to effectuate the transfer of the Dedication Property. Upon receipt of such notification, the Dedicating Property Owner shall grant rights of access and egress to their property at no cost other than the amount paid through the RTIF program, subject to an access agreement with terms as reasonably agreed to between City and Dedicating Property Owner, to complete such survey work and additional analysis required for such dedication.

d. The City shall thereafter submit to the Dedicating Property Owner the documentation required for the granting of such Dedication Property as well as any temporary construction easements and rights of access and egress as required to complete the construction of the public infrastructure, and the Dedicating Property Owner shall execute such documentation, in recordable form as applicable, and return to the City for recordation. Said documentation shall be delivered to the City in a reasonable time frame with the goal being within ten (10) days of the date of receipt by Dedicating Property Owner of such documentation. Failure by the Dedicating Property Owner to execute and deliver the documentation within thirty (30) days of receipt by Dedicating Property Owner shall be a material default under the terms of the Development Agreement and the City may bring an action for specific performance to compel the dedication of the required lands in accordance with this Section. Prior to initiating litigation, the City shall enter into an advance funding agreement with the Constructing Property Owner to fund the cost of such litigation.

4. Fee Credits and Reimbursement for Costs Incurred by Owners.

a. Each Owner shall be entitled to fee credits and reimbursement for construction of public infrastructure, for the dedication of Property for construction of public infrastructure by other Owners, for dedication of real property upon which they construct public infrastructure, and CIP Modification and Master Planning and Design Work funded by an Owner as set forth in the respective Development Agreements.

b. Valuation of Construction Costs. Owners may receive credit and reimbursement for the lesser of the cost established for public infrastructure as set forth in the Schedule of Costs contained in the CIP, subject to any modification that may be made by and in the sole discretion of the City Engineer or designee, or the actual cost of construction of the applicable public improvements. For purposes of determining the cost of the public improvements in comparison to the amounts in the CIP, the Owner may group the calculation of all improvements constructed with the same tentative map, constructed during the same time period and submitted for City documentation at the same time. The valuation for the cost of such construction work shall be established based on the valuations contained in the CIP (as will be amended from time to time and as

updated annually based on the Construction Cost Index (“CCI”)) at the time the Owner awards the construction contract for the applicable public improvement. If construction is not completed in the same calendar year as the contract is awarded, then the CIP valuation may be increased by up to one year of CCI (in addition to any other changes to the CIP that may have occurred between contract award and July 1 of the following year). If the Owner requests credit and reimbursement in the same year that the contract is awarded (either through this subsection b. or through subsection f. below), then they shall not be eligible for the additional year of CCI. Following completion of the applicable public improvements, the Owner shall provide to the City Engineer or designee documentation of actual construction costs for the applicable public improvements. Credit and reimbursement shall be provided based on the lesser of the CIP valuation established at the time of contract award (and if applicable as amended by one year of CCI), or actual costs documented by the Owner. Soft costs associated with the applicable public improvement shall be valued based on valuations contained in the CIP, except that the City has the discretion to request documentation of the soft costs actually incurred by Property Owner, and may value such soft costs based on the costs actually incurred if they are less than the values set forth in the CIP. In the event that a Owner constructs a portion of public infrastructure in a manner that will increase the costs to future Owners that will be required to complete such infrastructure as determined by the City Engineer, the City has the discretion to reduce the valuation of the completed improvement in an amount equal to the City Engineer’s estimate of the increased cost to such future Owner. Examples of this reduced reimbursement include but are not limited to: the partial construction of a road that would make the remaining portion less efficient to construct or the realignment of utilities such that the unbuilt segment is deeper or has a longer distance to travel. City shall have final approval authority regarding whether a particular cost will be approved as a credited cost under these rules, which approval shall not be unreasonably withheld.

c. Valuation of Real Property Dedicated for Public Use. To determine the value of real property to be dedicated by each Owner, the City shall use the value of such property set forth in the Schedule of Costs contained in the CIP (as will be adjusted from time to time based on the Construction Cost Index as published by the Engineering News-Record (“CCI”) through City annual updates to the CIP) for the applicable dedicated real property interests on the date that such dedicated real property is accepted by the City. This applies whether such real property is dedicated for public infrastructure constructed by the dedicating Owner or is property dedicated for improvements to be constructed by other Owners.

d. Valuation of CIP Modification and Master Planning and Design Work. The City will determine the value of CIP Modification and Master Planning and Design Work completed by each Owner as follows: In the event that the City completes CIP Modification and Master Planning and Design Work

required of the Owner, the valuation for that work shall be established on the date that the funds for such work are deposited with the City. In the event that the Owner completes certain CIP Modification and Master Planning and Design Work, the valuation for that work shall be established on the date that the Owner executes a contract for such CIP Modification and Master Planning and Design Work, provided that the Owner shall not be eligible for reimbursement until the work is complete and accepted or approved by the City, as applicable. All contracts (including contract amendments) entered into directly by the Owner for CIP Modification and Master Planning and Design Work must be reviewed by the City and approved in writing prior to contract execution (or contract amendment execution) in order to be eligible for reimbursement. The City shall notify the Owners of the total amount of such costs at such time that the valuation for such costs is established and that amount shall be added to the Reimbursement Account for the Owner funding such costs. Thereafter, the costs will be annually adjusted as set forth in paragraph e. below.

e. Annual Adjustments to Valuations. The outstanding amount of costs incurred by each Owner shall be determined and maintained by City as a “Credit/Reimbursement Account” for each Owner. The balance of each Credit/Reimbursement Account shall be adjusted annually by a percentage amount equal to the Construction Cost Index as published from time to time by the Engineering News-Record Twenty City Index or other index adopted by the City Council (“CCI”) at the same time and by the same percentage that the City adjusts the RTIF. The value of the outstanding costs shall only be adjusted when and if the RTIF is adjusted, and in the event, or any reason, the City does not adjust the RTIF in a given year, the outstanding value of any outstanding costs contained in a Credit/Reimbursement Account similarly shall not be adjusted. Notwithstanding the foregoing, the balance associated with any public improvements constructed by a Owner shall not be adjusted by CCI until such time that the public improvements are accepted by the City, after which the City shall adjust such balances in accordance with this paragraph.

f. Fee Credits. Each Owner shall receive fee credits against its overall RTIF obligation equal to the total value of the construction of the RTIF public infrastructure funded by Owner and dedication of real property by the Owner. Owners will not receive fee credits for the costs of CIP Modification and Master Planning and Design Work. Those costs will be reimbursed pursuant to the terms described in paragraph h, below. Fee credits will be applied toward Owner’s RTIF obligations so long as Owner has available fee credits, except that such credits shall not be applied toward the portion of the RTIF that is attributable to administration costs (the “Administration Portion”). The Administration Portion of the RTIF shall be paid at the time of building permit issuance, and shall be accounted for by the City separately from the remainder of the RTIF. Upon application of any fee credit to units to be constructed by Owner, Owner’s Credit/Reimbursement Account will be reduced in the amount of the fee credit. Fee credits that are based on dedication of real property shall be

available to be used by Owner only after the real property dedication is accepted by the City. Fee credits that are based on construction of public infrastructure shall be available to be used by Owner only after the public infrastructure has been accepted by the City and the City Engineer or designee has verified the costs incurred by Owner for such infrastructure. Notwithstanding the foregoing, Owners may request authorization to utilize fee credits for the construction of public infrastructure prior to acceptance of such public infrastructure by the City, provided that the City will only authorize the utilization of fee credits prior to completion one time for each public infrastructure project. The authorized fee credit shall be limited to 85% of the value of the public infrastructure as set forth in the CIP at the time of Property Owner's request, excluding values in the CIP for soft costs and contingency. Any such request for fee credits prior to acceptance of the applicable partially completed public infrastructure shall be made in writing, and approved by the City in writing based on the sole discretion of the City Engineer. The City Engineer shall verify that the requested amount of fee credits is justified based on the amount of completed infrastructure, including testing of infrastructure. Each Owner that funds the design and construction for the CR 25A/SR 113 interchange shall receive fee credits at the time of payment to the City. Further, the City may collect RTIF funding for other specific capital improvement projects to be constructed by the City. If the City collects RTIF funding from a Owner for a specific capital improvement project as contemplated herein, the Owner shall receive fee credits at the time of payment to the City.

g. Reimbursement Process for Public Infrastructure and Real Property Dedication. Reimbursement will be paid on a "first in, first out" basis, with the first public infrastructure and/or real property accepted by the City eligible for the first reimbursement payments from available RTIF; (excluding the portion of the RTIF attributable to Administration Portion of the RTIF), and subsequent construction and/or dedications being eligible for reimbursement in the chronological order in which they are accepted by the City. In the event that there is not available RTIF to reimburse the Owner at the time the public infrastructure and/or real property is accepted by City, the reimbursements shall be paid as RTIF funds become available.

h. Reimbursement Process for CIP Modification and Master Planning and Design Costs. Reimbursement for CIP Modification and Master Planning and Design Work costs incurred by an Owner shall be paid from the Administration Portion of the RTIF collected by the City. The City will provide reimbursement to the Owners that incur such CIP Modification and Master Planning and Design Work costs pursuant to an individual reimbursement agreement to be entered into by and between City and Owner that will establish the amount of reimbursement available to the Owner, and subject to the terms of these Reimbursement Rules. Reimbursement for the CIP Modification and Master Planning and Design Work costs will be paid on a "first in, first out" basis, with the first CIP Modification and Master Planning and Design Work accepted or approved by the City eligible for the first reimbursement payments

from the available Administration Portion of the RTIF, and subsequent CIP Modification and Master Planning and Design Work being eligible for reimbursement in the chronological order in which the work is accepted or approved by the City. In the event that there is not available Administration Portion of the RTIF to reimburse the Owner at the time the CIP Modification and Master Planning and Design Work is accepted or approved by City, the reimbursements shall be paid as the Portion of the RTIF becomes available. The City's Director of Administrative Services will determine, in their sole discretion, when sufficient funding from the Administration Portion of the RTIF is available for reimbursement, taking into account other costs required to be paid from the Administration Portion of the RTIF, such as City Attorney or staff costs.

i. City Will Reimburse Only From Cash Available. City shall only reimburse Owners from cash that is available for such reimbursement from CFD bond proceeds, cash payments made pursuant to agreements entered into with other Property Owners to fund the costs of such public improvements, or proceeds of RTIF payments. Reimbursement shall be limited to available CFD bond proceeds or funds obtained from other Owners. Nothing in this Agreement obligates, or shall be deemed to obligate, City to use General Fund monies or any other source of City revenues to satisfy any Owner's claim for reimbursement. City's obligation to reimburse Owner pursuant to this Agreement shall be limited to CFD bond proceeds or other funds actually received by City from other owners in accordance with the terms of existing agreements and procedures. Owners acknowledge and agree that the City shall collect RTIF funding for specific capital improvement projects to be constructed by the City, including but not limited to the CR 25A/SR 113 Interchange Project. The funding the City receives toward the CR 25A/SR 113 Interchange Project or any other RTIF funded capital improvement project to be constructed by the City will not be available for reimbursement to Property Owners. Following completion of the CR 25A/SR 113 Interchange Project, the City will review whether an adjustment to the CIP and fee program for the RTIF is possible, based on the amount of funding available at that time.

EXHIBIT K

WRTP PROJECT FEES

CITY shall collect any of the following fees based on the project conditions of approval, the WRTP approval documents and as defined in this Exhibit K. The fees set forth herein do not include fees imposed by other agencies, such as the County of Yolo or Woodland Joint Unified School District. Actual fee amounts owed by OWNER will be the then-current amounts of such fees at the time they are paid by OWNER. All fees are subject to annual Construction Cost Increases (CCI) and may be subject to increases based on City evaluation of the various fee programs in accordance with applicable State law, or with regard to the RTIF, in accordance with the Development Agreement and the RTIF Report. The Engineering News-Record Twenty City Index or other index adopted by the City Council shall be used for the calculation of CCI.

Development Impact Fees for the following categories and amounts are shown as of September 2023. The Administrative Guidelines in effect on the date of the approval of this Agreement shall be used for the duration of this Agreement.

Development Impact Fee	Greenfield SFD (Single Family Dwelling)	Greenfield MFU (Multi-family Unit)
General City	\$1,005	\$755
Fire	\$3,406	\$2,042
Library	\$628	\$471
Police	\$823	\$616
Wastewater	\$7,524	\$5,642
Water Capacity Fee	\$6,174	\$4,630*
Parks & Recreational Facilities	\$9,279	\$6,959
Roads	\$9,915	\$4,063
Admin Fee (.75%)	\$291	\$189
Storm Drainage Facilities	\$0	\$0
Total	\$39,045	\$25,367
Storm drainage is \$0 for the WRTP, as it is all paid in the RTIF. Water fee is reduced (to 75% of the SF rate) for multifamily. *Water Capacity Fee will be determined by meter size		

Other fees include all fees identified in this Agreement or conditions of approval which are linked to final map approval or issuance of a building permit, as follows:

- RTIF fees for the cost of the backbone infrastructure to the Woodland Research and Technology Park plan area (September 2023 fees) are as listed in Attachment No. 1 to this Exhibit.
- Habitat Conservation Obligation. Before any ground-disturbing activities, the City will require project proponent/s to submit the Yolo HCP/NCCP *Application Form* for non-member agency projects and *Member Agency Reporting Form* for member agency projects, as applicable, and pay applicable fees to the Yolo Habitat Conservancy as specified in the appropriate form.
- Affordable Housing. All residential projects are subject to the Citywide Affordable Housing

Ordinance (WMC Chapter 15.16) which requires a 10 percent inclusionary housing obligation, except where modified by the W RTP Project Development Agreement (Exhibit H). Applicants shall comply with their inclusionary obligation through on site construction of affordable units, through the payment of in-lieu fees, and/or through land dedication as specified in Exhibit H. The current in-lieu fees are as follows: for LDR \$3.00/building sq ft, for MDR \$2.50/building sq ft and for HDR \$2.00/building sq ft

- Conversion of Prime Agricultural Land. Project applicants for future projects proposed within the W RTP Specific Plan Area are required to comply with Woodland Municipal Code Chapter 15.33, which requires replacement of Prime Farmland at a 1:1 ratio. In addition, the South Regional Pond development area is subject to the County's agricultural conservation ordinance (Section 8-2.404 and Section 8.2-405 of the Yolo County Code), which requires replacement of Prime Farmland at a ratio of three acres of conserved farmland to one acre of converted land and replacement of other types of farmland at a ratio of two acres to one; small projects of less than 20 acres may pay an in-lieu fee rather than conserve farmland directly.
- Fair Share Cost of public facilities, services and improvements as determined by the City of Woodland nexus study (MPFP fee triggered at building permit)
- Public transit capital fee of \$311 for LDR, \$212 for MDR and \$159 for HDR. This fee will be used to pay for the construction of transit capital improvements.
- Installation of or payment of fees consistent with the City's Public Art Ordinance.
- Tentative Map processing shall be paid on a time and materials basis based on the City's current liability account procedures (at the time of project application).
- With regard to Engineering fees: Plan Check fees shall be 3% of the value of the improvements or as modified based on the engineering fees in effect at time of Development Agreement approval. At the City's option, inspection fees will be paid for on a time and materials basis or on a fee basis per the engineering fees in effect at the time of Development Agreement approval.
- Building permit fees, planning fees, fire department fees and all other development processing fees not mentioned in this Exhibit will be those fees in effect at the time the various documents are submitted to the City for approval; provided that the Property shall only be subject to City fees to the extent they existed at the time this Agreement was approved by City Council. City has disclosed and Owner has acknowledged that City may during the term of this Agreement adopt new and different City-wide processes and labels for processing development approvals and development processing fees. Owner will comply with changes as they apply to the Property, provided that in no case shall such changes adversely affect or modify Owner's rights under this Agreement, nor shall such changes increase the total costs payable by Owner for development processing fees above what would have been charged for the applicable development approvals immediately prior to such change, without a mutually agreed amendment to this Agreement.
- If any fees are modified or new fees are created based on County, State or Federal requirements (or in response to County, State and Federal requirements), then those fees shall be paid based on the fees in effect at the time the various documents are submitted to the City for approval, provided that any increased cost to Owner shall be limited to the costs related to County, State and Federal requirements). If any building fees are modified or new fees are created based on the International Code Council (ICC) or similarly used resources in the building industry, then those fees shall be paid based on the fees in effect at the time the various documents are submitted to the City for approval.

FORM OF ASSIGNMENT AND ASSUMPTION AGREEMENT

RECORDING REQUESTED BY AND
WHEN RECORDED MAIL TO:

Attention: _____

Space Above this Line Reserved for Recorder's Use

**ASSIGNMENT AND ASSUMPTION
OF DEVELOPMENT AGREEMENT**

THIS ASSIGNMENT AND ASSUMPTION OF DEVELOPMENT AGREEMENT (this “**Assignment**”) is made effective as of _____, 20__ (the “**Effective Date**”), by and between _____, L.P., a California limited partnership (“**Assignor**”), and _____, L.P., a California limited partnership (“**Assignee**”).

RECITALS

A. The City of Woodland (“**City**”) adopted Ordinance Number ____ on _____, 20__, authorizing entry into that certain Development Agreement by and between the City of Woodland (the “**City**”) and Assignor, dated on or about _____ (the “**Development Agreement**”), as Document No. ____ - _____ in the Official Records of the County Recorder for Yolo County, California (the “**Official Records**”). The Development Agreement as used herein shall mean, refer to, and include the Development Agreement, as well as any exhibits, addenda, operating memoranda, implementation agreements, amendments, and attachments thereto (which are hereby incorporated herein by this reference) as well as other documents expressly incorporated by reference in the Development Agreement. Capitalized terms not defined herein shall have the meanings ascribed to them in the Development Agreement.

B. The Development Agreement grants certain rights, duties, and obligations with respect to the development and improvement of certain real property in the City of Woodland, County of Yolo, State of California, as more particularly described in **Exhibit “A”** attached hereto and incorporated herein (the “**Property**”) as more particularly set forth in the Development Agreement (the “**Development Agreement Rights, Duties and Obligations**”).

C. Paragraph 2.4 of the Development Agreement describes the process for assignment of the Development Agreement Rights, Duties and Obligations.

D. Assignor desires to assign to Assignee, and Assignee desires to accept and assume, each and all of Assignor’s Development Agreement Rights, Duties and Obligations.

AGREEMENT

NOW THEREFORE, for good and valuable consideration, the receipt and adequacy of which are hereby acknowledged, Assignor and Assignee hereby agree as follows:

1. Assignment. Effective as of the date of recordation of this Assignment, Assignor hereby assigns to Assignee all of the Development Agreement Rights, Duties and Obligations.

2. Acceptance and Assumption. Effective as of the date of recordation of this Assignment, Assignee hereby accepts the foregoing assignment of the Development Agreement Rights, Duties and Obligations from Assignor and unconditionally assumes and agrees to perform each and all of the duties, covenants, and obligations comprising the Development Agreement Rights, Duties and Obligations, first arising from and after the date of recordation of this Assignment pursuant to the Development Agreement (collectively, the “**Assumed Obligations**”).

3. Assignor Not Released. Assignor and Assignee acknowledge and agree that, pursuant to Section 2.4.2 of the Development Agreement, Assignor shall continue to be obligated under the Development Agreement unless and until Assignor is given a release in writing by the City.

4. Assignee Address. The principal address of Assignee for purposes of the Development Agreement is as follows:

Attention: _____

E-mail: _____

5. Miscellaneous.

(a) This Assignment shall be determined in accordance with and governed by the laws of the State of California.

(b) This Assignment may be executed in counterparts, each of which shall be deemed an original and which, when taken together, shall constitute a complete instrument.

(c) Each party agrees to perform any further acts, and to execute and deliver any further documents that may be reasonably necessary or required to carry out the intent and provisions of this Assignment and the transactions contemplated hereby.

(d) This Assignment shall bind and inure to the benefit of the respective heirs, personal representatives, grantees, successors, and assigns of the parties hereto.

IN WITNESS WHEREOF, the parties hereto have caused this Assignment to be signed by their duly authorized officers as of the day and year first written above.

FORM OF PARTIAL ASSIGNMENT AND ASSUMPTION AGREEMENT

RECORDING REQUESTED BY AND
WHEN RECORDED MAIL TO:

Attention: _____

Space Above this Line Reserved for Recorder's Use

**PARTIAL ASSIGNMENT AND ASSUMPTION
OF DEVELOPMENT AGREEMENT**

THIS PARTIAL ASSIGNMENT AND ASSUMPTION OF DEVELOPMENT AGREEMENT (this "**Assignment**") is made effective as of _____, 20__ (the "**Effective Date**"), by and between _____, a _____ ("**Assignor**"), and _____, a _____ ("**Assignee**").

RECITALS

A. The City of Woodland ("**City**") adopted Ordinance Number ____ on _____, 20__, authorizing entry into that certain Development Agreement by and between the City of Woodland (the "**City**") and Assignor, dated on or about _____, (the "**Development Agreement**") which was recorded on _____, 20__, as Document No. ____ - _____ in the Official Records of the County Recorder for Yolo County, California (the "**Official Records**"). The Development Agreement as used herein shall mean, refer to, and include the Development Agreement, as well as any exhibits, addenda, operating memoranda, implementation agreements, amendments, and attachments thereto (which are hereby incorporated herein by this reference) as well as other documents expressly incorporated by reference in the Development Agreement. Capitalized terms not defined herein shall have the meanings ascribed to them in the Development Agreement.

B. The Development Agreement grants certain rights, duties, and obligations with respect to the development and improvement of certain real property in the City of Woodland, County of Yolo, State of California, as more particularly described in **Exhibit "A"** attached hereto and incorporated herein (the "**Entire Property**"), including, without limitation, with respect to the property described in attached **Exhibit "B"** (the "**Transferred Property**") as more particularly set forth in the Development Agreement (the "**Development Agreement Rights, Duties and Obligations**").

C. Paragraph 2.4.6 of the Development Agreement describes the process for the partial assignment of the Development Agreement Rights, Duties and Obligations.

D. Assignor desires to assign to Assignee, and Assignee desires to accept and assume, each and all of Assignor's Development Agreement Rights, Duties and Obligations as they pertain and relate to the Transferred Property.

AGREEMENT

NOW THEREFORE, for good and valuable consideration, the receipt and adequacy of which are hereby acknowledged, Assignor and Assignee hereby agree as follows:

6. Assignment. Effective as of the date of recordation of this Assignment, Assignor hereby assigns to Assignee all of the Development Agreement Rights, Duties and Obligations relating or pertaining to the Transferred Property.

7. Acceptance and Assumption. Effective as of the date of recordation of this Assignment, Assignee hereby accepts the foregoing assignment of the Development Agreement Rights, Duties and Obligations from Assignor and unconditionally assumes and agrees to perform each and all of the duties, covenants, and obligations comprising the Development Agreement Rights, Duties and Obligations relating or pertaining to the Transferred Property, first arising from and after the date of recordation of this Assignment pursuant to the Development Agreement (collectively, the "**Assumed Obligations**").

8. Assignor Not Released. Assignor and Assignee acknowledge and agree that, pursuant to Section 2.4.6 of the Development Agreement, Assignor shall continue to be obligated under the Development Agreement unless and until Assignor is given a release in writing by the City.

9. Assignee Address. The principal address of Assignee for purposes of the Development Agreement is as follows:

Attention: _____
E-mail: _____

10. Miscellaneous.

(a) This Assignment shall be determined in accordance with and governed by the laws of the State of California.

(b) This Assignment may be executed in counterparts, each of which shall be deemed an original and which, when taken together, shall constitute a complete instrument.

(c) Each party agrees to perform any further acts, and to execute and deliver any further documents that may be reasonably necessary or required to carry out the intent and provisions of this Assignment and the transactions contemplated hereby.

(d) This Assignment shall bind and inure to the benefit of the respective heirs, personal representatives, grantees, successors, and assigns of the parties hereto.

IN WITNESS WHEREOF, the parties hereto have caused this Assignment to be signed by their duly authorized officers as of the day and year first written above.

DEVELOPMENT AGREEMENT BETWEEN

CITY OF WOODLAND

and

**TAMMY EMERY, SOLE TRUSTEE OF THE SPENCER REVOCABLE LIVING
TRUST DATED MAY 15, 1995**

DEVELOPMENT AGREEMENT NO. __

This Development Agreement (hereinafter “Agreement”) is entered into effective on the date it is recorded with the Yolo County Recorder (hereinafter the “Effective Date”) by and among the City of Woodland, a California municipal corporation (hereinafter “CITY”), and (hereinafter “OWNER”):

RECITALS

WHEREAS, CITY is authorized to enter into binding development agreements with persons having legal or equitable interests in real property for the development of such property, pursuant to Section 65864 et seq. of the Government Code; and

WHEREAS, OWNER has requested CITY to enter into a development agreement and proceedings have been taken in accordance with the rules and regulations of CITY; and

WHEREAS, by electing to enter into this Agreement, CITY shall bind future City Councils of CITY by the obligations specified herein and limit the future exercise of certain governmental and proprietary powers of CITY; and

WHEREAS, the terms and conditions of this Agreement have undergone extensive review by CITY and the City Council and have been found to be fair, just and reasonable; and

WHEREAS, the best interests of the citizens of the CITY and the public health, safety and welfare will be served by entering into this Agreement; and

WHEREAS, all of the procedures of the California Environmental Quality Act have been met with respect to the Project and the Agreement in that the City certified a Final Environmental Impact Report for the Woodland Research and Technology Park Specific Plan (the “Final EIR”), which Specific Plan Area includes the Project, and which was fully analyzed as part of the Final EIR; and

WHEREAS, OWNER has jointly filed an application with other adjacent property owners for, and the City Council has approved, the Woodland Research and Technology Park Specific Plan (the “Specific Plan”), governing the development of the Property; and

WHEREAS, this Agreement and the Project are consistent with the CITY’s General Plan and the Specific Plan applicable thereto; and

WHEREAS, all actions taken and approvals given by CITY have been duly taken or approved in accordance with all applicable legal requirements for notice, public hearings, findings, votes, and other procedural matters; and

WHEREAS, development of the Property in accordance with this Agreement will provide substantial benefits to CITY and will further important policies and goals of CITY; and

WHEREAS, this Agreement will eliminate uncertainty in planning and provide for the orderly development of the Property, ensure progressive installation of necessary improvements,

provide for public services appropriate to the development of the Project, and generally serve the purposes for which development agreements under Sections 65864 et seq of the Government Code are intended; and

WHEREAS, OWNER has incurred and will in the future incur substantial costs in order to assure development of the Property in accordance with this Agreement; and

WHEREAS, OWNER has incurred and will in the future incur substantial costs in excess of the generally applicable requirements in order to assure vesting of legal rights to develop the Property in accordance with this Agreement.

AGREEMENT

NOW, THEREFORE, in consideration of the above recitals and of the mutual covenants hereinafter contained and for other good and valuable consideration, the receipt and sufficiency of which is hereby acknowledged, the parties agree as follows:

1. DEFINITIONS AND EXHIBITS.

1.1 Definitions. The following terms when used in this Agreement shall be defined as follows:

1.1.1 “Agreement” means this Development Agreement.

1.1.2 “CITY” means the City of Woodland, a municipal corporation, organized and existing pursuant to the laws of the State of California.

1.1.3 “Capital Improvement Plan” or “CIP” means the Capital Improvement Plan adopted by the City Council for the Specific Plan by Resolution No. _____, as it may be amended from time to time by the CITY.

1.1.4 “Development” means the improvement of the Property for the purposes of completing the structures, improvements and facilities comprising the Project including, but not limited to: grading; the construction of infrastructure and public facilities related to the Project whether located within or outside the Property; the construction of buildings and structures; and the installation of landscaping. “Development” does not include the maintenance, repair, reconstruction or redevelopment of any building, structure, improvement or facility after the construction and completion thereof.

1.1.5 “Development Approvals” means all permits and other entitlements for use subject to approval or issuance by CITY in connection with development of the Property including, but not limited to:

(a) the Woodland Research and Technology Park Specific Plan, as it may be amended from time to time;

(b) tentative and final subdivision maps, including large and small lot mapping, and parcel maps;

- (c) conditional use permits, design review approvals and plot plans;
- (d) zoning;
- (e) grading and building permits.

1.1.6 “Development Exaction” means any requirement of CITY in connection with or pursuant to any Land Use Regulation or Development Approval for the dedication of easements, land, the construction of improvements or public facilities, or the payment of fees in order to lessen, offset, mitigate or compensate for the impacts of development on the environment or other public interests.

1.1.7 “Development Impact Fee” means a monetary exaction other than a tax or special assessment, whether established for a broad class of projects by legislation of general applicability or imposed on a specific project on an ad hoc basis, that is charged by a local agency to the applicant in connection with approval of a development project for the purpose of defraying all or a portion of the cost of public facilities related to the development project, but does not include park “in lieu” fees specified in Government Code Section 66477, fees for processing applications for governmental regulatory actions or approvals, fees collected under development agreements adopted pursuant to Article 2.5 of the Government Code (commencing with Section 65864) of Chapter 4. “Development Impact Fee” shall not include processing fees and charges imposed by CITY to cover the estimated actual costs to CITY of processing applications for Development Approvals or for monitoring compliance with any Development Approvals granted or issued, including, without limitation, fees for zoning variances; zoning changes; use permits; building inspections; building permits; filing and processing applications and petitions filed with the local agency formation commission or conducting preliminary proceedings or proceedings under the Cortese-Knox-Hertzberg Local Government Reorganization Act of 2000, Division 3 (commencing with Section 56000) of Title 5 of the Government Code; the processing of maps under the provisions of the Subdivision Map Act, Division 2 (commencing with Section 66410) of Title 7 of the Government Code; or planning services under the authority of Chapter 3 (commencing with Section 65100) of Division 1 of Title 7 of the Government Code, fees and charges as described in Sections 51287, 56383, 57004, 65104, 65456, 65863.7, 65909.5, 66013, 66014, and 66451.2 of the Government Code, Sections 17951, 19132.3, and 19852 of the Health and Safety Code, Section 41901 of the Public Resources Code, and Section 21671.5 of the Public Utilities Code, as such codes may be amended or superseded, including by amendment or replacement. OWNER understands and agrees that the RTIF as defined herein is not a Development Impact Fee but is instead a fee that is charged pursuant to and in accordance with the terms of this Agreement.

1.1.8 “Development Plan” means the development of the Property consistent with the Land Use Zoning Exhibit for the Woodland Research and Technology Park attached hereto and incorporated as Exhibit “C”, which development shall be consistent with the Subsequent Development Approvals and the Existing Land Use Regulations.

1.1.9 “Effective Date” means the date that the ordinance approving this Agreement becomes effective.

1.1.10 “Existing Land Use Regulations” means all Land Use Regulations in effect on the Effective Date.

1.1.11 “General Plan” means the General Plan 2035 adopted on May 16, 2017 by Resolution No. 6836.

1.1.12 “Improvement” or “Improvements” means those public improvements required to support the development of the Project as described in the Capital Improvement Plan for the Specific Plan.

1.1.13 “Improvements Outside Specific Plan Area” means any Improvement that OWNER is required to construct pursuant to the CIP and its Infrastructure Phasing Plan that is located on land outside of the Specific Plan Area.

1.1.14 “Land Use Regulations” means all ordinances, resolutions, codes, rules, regulations and official policies of CITY governing the development and use of land, including, without limitation, the permitted use of land, the density or intensity of use, subdivision requirements, timing and phasing of development, the maximum height and size of proposed buildings, the provisions for reservation or dedication of easements or land for public purposes, and the design, improvement and construction standards and specifications applicable to the development of the Property. “Land Use Regulations” does not include any CITY ordinance, resolution, code, rule, regulation or official policy, governing:

- (a) the conduct of businesses, professions, and occupations;
- (b) taxes and assessments;
- (c) the control and abatement of nuisances;
- (d) the granting of encroachment permits and the conveyance of similar rights and interests which provide for the use of or the entry upon public property;
- (e) the exercise of the power of eminent domain.

1.1.15 “Maintenance CFD” shall have the meaning as set forth in Section 5.3.1 of this Agreement.

1.1.16 “Mortgagee” means a mortgagee of a mortgage, a beneficiary under a deed of trust or any other security-device lender, and their successors and assigns.

1.1.17 “Offsite Property” has the meaning set forth in Section 3.11 of this Agreement.

1.1.18 “OWNER” means the persons and entities listed as OWNER on page 1 of this Agreement and their permitted successors in interest to all or any part of the Property.

1.1.19 “Project” means the development of the Property contemplated by the Specific Plan and the Development Plan as such Development Plan may be further defined, enhanced or modified pursuant to the provisions of this Agreement.

1.1.20 “Property” means the real property described on Exhibit “A” and shown on Exhibit “B” to this Agreement.

1.1.21 “Public Infrastructure Reimbursement Rules” means the “Public Infrastructure Reimbursement Rules for the Woodland Research and Technology Park Specific Plan,” attached hereto as Exhibit “J” and incorporated herein by this reference.

1.1.22 “Reservations of Authority” means the rights and authority excepted from the assurances and rights provided to OWNER under this Agreement and reserved to CITY under Section 3.9 of this Agreement.

1.1.23 “Specific Plan” means that certain specific plan adopted by the City Council by Resolution No. ___, and entitled, “Woodland Research and Technology Park Specific Plan.”

1.1.24 “Specific Plan Area” means those properties that are located within the geographic boundaries of the Specific Plan.

1.1.25 “Subdivision Map Act” means Government Code Section 66410 et seq., as it may be amended from time to time.

1.1.26 “Subsequent Development Approvals” means all Development Approvals required subsequent to the Effective Date in connection with development of the Property.

1.1.27 “Subsequent Land Use Regulations” means any Land Use Regulations adopted and effective after the Effective Date of this Agreement.

1.2 Exhibits. The following documents are attached to, and by this reference made a part of, this Agreement:

Exhibit “A” — Legal Description of the Property.

Exhibit “B” — Map showing Property and its location.

Exhibit “C” — Development Plan.

Exhibit “D” — Infrastructure Phasing Rules.

Exhibit “E” — WRTP CIP Modification

Exhibit “F” — Master Planning and Design Obligations

Exhibit “G” — Public Dedications

Exhibit “H” — WRTP Affordable Housing Plan

Exhibit “I” — Maintenance Services

Exhibit “J” — Public Infrastructure Reimbursement Rules

Exhibit “K” — W RTP Project Fees

Exhibit “L” — Form of Assignment and Assumption Agreement

Exhibit “M” — Form of Partial Assignment and Assumption Agreement

2. GENERAL PROVISIONS.

2.1 Binding Effect of Agreement. The Property is hereby made subject to this Agreement. Development of the Property is hereby authorized and shall be carried out only in accordance with the terms of this Agreement.

2.2 Ownership of Property. OWNER represents and covenants that it is the owner of the fee simple title to the Property or a portion thereof, or has the right to acquire fee simple title to the Property or a portion thereof from the current owner(s) thereof. To the extent OWNER does not own fee simple title to the Property, OWNER shall obtain written consent from the current fee owner of the Property agreeing to the terms of this Agreement and the recordation thereof.

2.3 Term. The term of this Agreement shall commence on the Effective Date, and shall continue for an initial period of twenty-five (25) years thereafter unless this term is modified or extended pursuant to the provisions of this Agreement. OWNER may elect to extend the Term by up to two successive five (5) year terms (for a total maximum Term of thirty-five (35) years) by providing CITY written notice no later than thirty (30) days prior to the date the Term would otherwise expire. The initial term and, if applicable any extension, shall be referred to herein as the “Term.” Any tentative map approved by CITY for the Property shall have a duration (i) eight (8) years during which period no application to extend the expiration date of any tentative map need be filed, plus the Community Development Director is hereby authorized to grant two extensions of two (2) years each at the Community Development Director’s sole discretion, without further approval by the Planning Commission or City Council, plus (ii) such time extensions authorized by state law currently or in the future.

2.4 Assignment.

2.4.1 Right to Assign. OWNER shall have the right to sell, transfer or assign the Property in whole or in part (provided that no such partial transfer shall violate the Subdivision Map Act, Government Code Section 66410 et seq.), to any person, partnership, limited liability company, joint venture, firm or corporation at any time during the term of this Agreement; provided, however, that any such sale, transfer or assignment shall include the assignment and assumption of the rights, duties and obligations arising under or from this Agreement and be made in strict compliance with the following conditions precedent:

(a) No sale, transfer or assignment of any right or interest under this Agreement shall be made unless made together with the sale, transfer or assignment of all or a part of the Property.

(b) Concurrent with any such sale, transfer or assignment, or within fifteen (15) business days thereafter, OWNER shall notify CITY's City Manager, in writing, of such sale, transfer or assignment and shall provide CITY with (1) an executed agreement, in the form attached hereto as Exhibit "L" or in an alternative form reasonably acceptable to CITY, by the purchaser, transferee or assignee and providing therein that the purchaser, transferee or assignee expressly and unconditionally assumes all the duties and obligations of OWNER under this Agreement with respect to the portion of the Property so sold, transferred or assigned; and (2) the payment of the applicable processing charge to cover the CITY's review and consideration of such sale, transfer or assignment.

Any sale, transfer or assignment not made in strict compliance with the foregoing conditions shall constitute a default by OWNER under this Agreement. Notwithstanding the failure of any purchaser, transferee or assignee to execute the agreement required by Paragraph (b) of this Subsection 2.4.1, the burdens of this Agreement shall be binding upon such purchaser, transferee or assignee, but the benefits of this Agreement shall not inure to such purchaser, transferee or assignee until and unless such agreement is executed. The City Manager shall have the authority to review, consider and either approve, conditionally approve, or deny any proposed sale, transfer or assignment that is not made in compliance with this section 2.4.

2.4.2 Release of Transferring Owner. Notwithstanding any sale, transfer or assignment, a transferring OWNER shall continue to be obligated under this Agreement unless such transferring OWNER is given a release in writing by CITY, which release shall be provided by CITY upon the full satisfaction by such transferring OWNER of the following conditions:

(a) OWNER no longer has a legal or equitable interest in all or any portion of the Property sold, transferred, or assigned.

(b) OWNER is not then in default under this Agreement.

(c) OWNER has provided CITY with the notice and executed agreement required under Paragraph (b) of Subsection 2.4.1 above.

(d) The purchaser, transferee or assignee provides CITY with security equivalent to any security previously provided by OWNER to secure performance of its obligations hereunder.

2.4.3 Effect of Assignment and Release of Obligations. In the event of a sale, transfer or assignment pursuant to the provisions of Section 2.4.2 above:

(a) The assignee shall be liable for the performance of all obligations of OWNER with respect to transferred property, but shall have no obligations with respect to the portions of the Property, if any, not transferred (the "Retained Property").

(b) The owner of the Retained Property shall be liable for the performance of all obligations of OWNER with respect to Retained Property, but shall have no further obligations with respect to the transferred property.

(c) The assignee's exercise, use and enjoyment of the Property or portion thereof shall be subject to the terms of this Agreement to the same extent as if the assignee were the OWNER.

2.4.4 Subsequent Assignment. Any subsequent sale, transfer or assignment after an initial sale, transfer or assignment shall be made only in accordance with and subject to the terms and conditions of this Section 2.4.

2.4.5 Termination of Agreement with Respect to Individual Lots Upon Sale to Public and Completion of Construction. The provisions of Subsection 2.4.1 shall not apply to the sale or lease (for a period longer than one year) of any lot which has been finally subdivided and is individually (and not in "bulk") sold or leased to a member of the public or other ultimate user. Notwithstanding any other provisions of this Agreement, this Agreement shall terminate with respect to any lot and such lot shall be released and no longer be subject to this Agreement without the execution or recordation of any further document upon satisfaction of both of the following conditions:

(a) The lot has been finally subdivided and individually (and not in "bulk") sold or leased (for a period longer than one year) to a member of the public or other ultimate user; and,

(b) A certificate of occupancy has been issued for a building on the lot, and the fees set forth under Section 4 of this Agreement have been paid.

2.4.6 Partial Assignment and Assumption. CITY and OWNER agree OWNER may partially assign its obligations and rights under this Agreement, and all amendments hereto, to a purchaser, transferee or assignee of a lot, which has been subdivided subject to provisions of a partial assignment and assumption agreement in the form attached hereto as Exhibit "M" or in an alternative form as reasonably approved by CITY. Any such complete and executed partial assignment and assumption of this Agreement shall be submitted to CITY for approval pursuant to Section 2.4.1 of this Agreement. Within fifteen (15) days following such complete submittal, CITY shall review, and if the above conditions are satisfied, may approve the partial assignment and release and notify the purchaser, transferee or assignee in writing thereof. No such release approved pursuant to this Subsection 2.4.6 shall cause, or otherwise affect, a release of OWNER from the duties and obligations under this Agreement that are retained by OWNER and excluded from the transfer or assignment.

2.5 Amendment or Cancellation of Agreement. This Agreement may be amended or cancelled in whole or in part by either party or successor in interest only in the manner provided for in Government Code Sections 65865.1 or 65868 or as set forth in this Agreement. Any amendment of this Agreement, which amendment has been requested by OWNER, shall be considered by the CITY only upon the payment of the applicable processing charge. This provision shall not limit any remedy of CITY or OWNER as provided by this

Agreement. For purposes of this section, the term “successor in interest” shall mean any person having a legal or equitable interest in the whole of the Property, or any portion thereof as to which such person wishes to amend or cancel this Agreement as applied to the portion of the Property owned by that successor in interest. The procedure for proposing and adopting an amendment to, or cancellation of, in whole or in part, this Agreement shall be the same as the procedure for adopting and entering into this Agreement in the first instance. Notwithstanding the foregoing sentence, if the CITY initiates the proposed amendment to, or cancellation of, in whole or in part, this Agreement, CITY shall first give notice to the OWNER of its intention to initiate such proceedings at least sixty (60) days in advance of the giving the public notice of intention to consider the amendment or cancellation. CITY and OWNER acknowledge and agree that this Agreement can only be amended or cancelled by mutual agreement of the CITY and OWNER or relevant successor in interest.

2.6 Minor Modification. Upon the written application of OWNER, minor modifications and changes to the Development Plan may be approved by the City Manager without the need to amend this Development Agreement. A minor/administrative modification to the Specific Plan as described in Section 7.4.1 of the Specific Plan shall not require an amendment to this Development Agreement. It is also contemplated by CITY and OWNER that OWNER may, from time to time, seek Additional Development Approvals. Any such Development Approvals are contemplated by CITY and OWNER as being within the scope of this Agreement as long as they are consistent with the Land Use Regulations and shall, upon approval by CITY, constitute Development Approvals as referenced herein. The parties agree that any such modifications or additional Development Approvals shall not constitute an amendment to this Agreement nor require an amendment to this Agreement. Other changes to the Development Agreement shall be processed in accordance with the City’s Municipal Code and applicable state law.

2.7 Termination. This Agreement shall be deemed terminated and of no further effect upon the occurrence of any of the following events:

- (a) Expiration of the stated term of this Agreement as set forth in Section 2.3.
- (b) Entry of a final judgment setting aside, voiding or annulling the adoption of the ordinance approving this Agreement.
- (c) The adoption of a referendum measure overriding or repealing the ordinance approving this Agreement.
- (d) Completion of the Project in accordance with the terms of this Agreement including issuance of all required occupancy permits, completion of all required Improvements as required herein and acceptance by CITY or applicable public agency of all required dedications.
- (e) Termination of this Agreement based on any default of OWNER and following the termination proceedings required as set forth in this Agreement.

Termination of this Agreement shall not constitute termination of any other land use entitlements approved for the Property. Upon the termination of this Agreement, no party

shall have any further right or obligation hereunder except with respect to any obligation to have been performed prior to such termination or with respect to any default in the performance of the provisions of this Agreement which has occurred prior to such termination or with respect to any obligations which are specifically set forth as surviving this Agreement. Upon such termination, any Development Impact Fees or RTIF paid pursuant to Section 4.2 of this Agreement by OWNER to CITY for residential units on which construction has not yet begun shall be refunded to OWNER by CITY.

2.8 Notices.

(a) As used in this Agreement, “notice” includes, but is not limited to, the communication of notice, request, demand, approval, statement, report, acceptance, consent, waiver, appointment or other communication required or permitted hereunder.

(b) All notices shall be in writing and shall be considered given either: (i) when delivered in person, including, without limitation, by courier, to the recipient named below; or (ii) on the date of delivery shown on the return receipt, after deposit in the United States mail in a sealed envelope as either registered or certified mail with return receipt requested, and postage and postal charges prepaid, and addressed to the recipient named below. All notices shall be addressed as follows:

If to CITY:

City of Woodland
300 First Street
Woodland, CA 95695
Attn: City Manager
Telephone: (530) 661-5800
Email: ken.hiatt@cityofwoodland.org

Copy to:

Best, Best & Krieger, LLP
500 Capitol Mall, Suite 1700
Sacramento, CA 95814
Attn: City Attorney
Telephone: (916) 325-4000
Email: ethan.walsh@bbklaw.com

If to OWNER:

Tammy Emery
Wright & Wright Inc.
1215 Plumas Street, Ste. 1500
Yuba City, CA 95991

(c) Either party may, by notice given at any time, require subsequent notices to be given to another person or entity, whether a party or an officer or representative of a party, or to a different address, or both. Notices given before actual receipt of notice of change shall not be invalidated by the change.

3. DEVELOPMENT OF THE PROPERTY.

3.1 Rights to Develop. Subject to the terms of this Agreement including the Reservations of Authority, OWNER shall have a vested right to develop the Property in accordance with, and to the extent of, the Specific Plan. The Project shall remain subject to all Subsequent Development Approvals required to complete the Project as contemplated by the Development Plan. OWNER shall not be required to enter into a subsequent development agreement in order to develop the Property. Except as otherwise provided in this Agreement, the permitted uses of the Property, the density and intensity of use, the maximum height and size of proposed buildings, and provisions for reservation and dedication of easements or land for public purposes shall be those set forth in the Specific Plan and this Agreement. OWNER does not have an affirmative obligation to develop the Property, but if the Property is developed it shall be developed according to the Development Approvals.

3.2 Effect of Agreement on Land Use Regulations. Except as otherwise provided under the terms of this Agreement including the Reservations of Authority, the rules, regulations and official policies governing permitted uses of the Property, the density and intensity of use of the Property, the maximum height and size of proposed buildings, and the design, improvement and construction standards and specifications applicable to development of the Property shall be in accordance with the Existing Land Use Regulations. In connection with any Subsequent Development Approval, CITY shall exercise discretion in the same manner that it exercises discretion under its police powers including the Reservations of Authority set forth herein; provided, however, that such discretion shall not prevent development of the Property for the uses and to the density or intensity of development set forth in this Agreement.

3.3 Timing of Development. The parties acknowledge that OWNER cannot at this time predict when or the rate at which phases of the Property will be developed. Such decisions depend upon numerous factors which are not within the control of OWNER, such as market orientation and demand, interest rates, absorption, completion and other similar factors. Since the California Supreme Court held in Pardee Construction Co. v. City of Camarillo, (1984) 37 Cal.3d 465, that the failure of the parties therein to provide for the timing of development resulted in a later adopted initiative restricting the timing of development to prevail over such parties' agreement, it is the parties' intent to cure that deficiency by acknowledging and providing that OWNER shall have the right to develop the Property in such order and at such rate and at such times as OWNER deems appropriate within the exercise of its subjective business judgment. Notwithstanding the foregoing, the phasing of the Project shall be conducted in accordance with the Phasing Rules as defined in Section 3.5 of this Agreement and the Infrastructure Phasing Plan submitted and approved in the manner more specifically described in Section 3.5 of this Agreement. Except as may be specifically provided elsewhere in this Agreement, OWNER has no affirmative obligation to commence development of the Property or to develop it at a specified rate. No modification of the City's ordinances, resolutions, policies, rules, or regulations adopted after the Effective Date whether by regulatory action, Council vote,

voter initiative or otherwise, which purport to cap, prohibit or otherwise limit development and/or the rate of development over time or to govern the sequence of development of land within the Specific Plan Area, shall apply to the Property.

3.4 Density Transfer Requirements. OWNER and CITY agree to the following requirements which guide unit yield assumptions within Residential Development Zones (“RDZ”) that are designated in the Specific Plan, and the process by which residential densities are established and, if permitted by the Community Development Director, transferred to other RDZ’s.

(a) Residential unit yields within each of six RDZs shall be those established by the Exhibit 6-1 and Table 6.1 in the Specific Plan. RDZ boundaries generally follow property lines for the Property and property owned by other property owners in the Specific Plan Area as existed at the time of Specific Plan approval.

(b) When any portion or all of an RDZ is mapped/subdivided (large or small lot), unit yields/densities shall be determined and allocated across the entire RDZ effected, and shall meet the Density Requirements outlined in Section 6.5.3 in the Specific Plan.

(c) OWNER may develop up to the assigned number of units within the RDZ at densities permitted by the Specific Plan for the underlying zoning (LDR, MDR, HDR).

(d) OWNER may request an increase in units up to 10 percent above the assigned units within the RDZ, subject to CEQA consistency review.

(e) If an RDZ is developed *under* the assigned number of units, an RTIF fee make up shall be required in amount necessary so that OWNER pays the RTIF fee equal to the amount required for the assigned number of units, unless at time of tentative map, an alternate RDZ picks up the unit deficit, subject to CITY approval and provided that the owner of the property located outside the RDZ enters into a written agreement to the satisfaction of the CITY that it shall adjust the density of its property to ensure consistency with the overall residential yields for the Specific Plan Area.

(f) If an RDZ is developed *over* assigned units, overage units must be removed from an alternate RDZ at tentative map, subject to CITY approval and provided that the owner of the property located outside the RDZ enters into a written agreement to the satisfaction of the CITY that it shall adjust the density of its property to ensure consistency with the overall residential yields for the Specific Plan Area.

(g) Except for the provisions stated above, the CITY has sole authority to approve the reallocation of units or to add units within each RDZ.

(h) If OWNER proposes land use changes or an increase in the number of units, then the City will reallocate units or add units within each RDZ and fees shall be updated with a nexus study and if necessary updates to the Public Facilities Financing Plan and the CIP.

3.5 Requirement for Public Infrastructure Improvements/Infrastructure Phasing Plan. Development of the Property is contingent in part on the construction of certain area-wide

infrastructure improvements in accordance with certain Infrastructure Phasing Rules established by the City for the Specific Plan Area, as attached hereto as Exhibit “D” (the “Phasing Rules”), and incorporated herein by this reference. OWNER agrees to comply with the Phasing Rules in the payment for and construction of Improvements as required for development of the Specific Plan Area.

3.5.1 Concurrent with the submission of the first tentative subdivision map, OWNER shall submit to the City an Infrastructure Phasing Plan for the Property, which shall be consistent with the Phasing Rules, for review and approval by the City Engineer. Tentative map submissions to create large parcels for financing purposes, which lots could not be developed without further subdivision, would not trigger this requirement. City Engineer shall confirm that the Infrastructure Phasing Plan is consistent with this Development Agreement, the Specific Plan, the CIP, the Phasing Rules, and all applicable tentative or final subdivision or parcel map conditions. In the event the Infrastructure Phasing Plan is consistent with the requirements described herein the City Engineer shall approve the Infrastructure Phasing Plan. If it is not consistent with such requirements the City Engineer shall indicate in writing which inconsistencies must be corrected in order for the Infrastructure Phasing Plan to be approved. The City will not approve a tentative subdivision map for any portion of the Property until an Infrastructure Phasing Plan is approved in accordance with this Section 3.5.1 and the Phasing Rules. Given the possible timing of different tentative maps proceeding in the same time period or the possibility that someone with a tentative map may decide to delay development of their property, it is likely that multiple tentative maps could have the same infrastructure requirements. Given the financing constraints of the Specific Plan that require the LDR and MDR units to construct most of the infrastructure in the Plan Area, it is imperative that every development with LDR or MDR units meet the development agreement requirement of constructing 150% or 130%, as applicable, of their RTIF infrastructure burden in accordance with the Phasing Rules. The City Engineer therefore has the authority to add replacement infrastructure conditions to an already approved tentative map (to meet the development agreement requirement of constructing 150% or 130% as applicable) if that tentative map is conditioned to construct improvements that have already been constructed. The City Engineer shall follow the same rules outlined in Exhibit D to determine the replacement infrastructure conditions. If the City anticipates multiple tentative maps may proceed with obligations to construct the same infrastructure, the City Engineer may list an alternative infrastructure requirement at the time of tentative map approval. If the City does not list an alternative infrastructure requirement, then the City still has the authority to require replacement infrastructure conditions. OWNER agrees that it will comply with the requirements to construct such replacement or alternative infrastructure as appropriate, and shall coordinate with CITY and other property owners within the Specific Plan Area in conjunction with the implementation of such replacement or alternative infrastructure requirements.

3.5.2 The OWNER shall construct public infrastructure improvements within the Specific Plan Area consistent with the Infrastructure Phasing Plan as approved by the City Engineer. City’s obligation to issue building permits for the Project shall be conditioned on construction of the public improvements consistent with the approved Infrastructure Phasing Plan and the Phasing Rules, which in some cases could restrict the cumulative number of building permits issued within the Specific Plan Area until certain public improvements are

complete or until security has been provided for the required improvements in accordance with a public improvement agreement entered into by and between CITY and OWNER.

3.5.3 OWNER shall be eligible for fee credits for the RTIF to be paid pursuant to this Development Agreement and reimbursement from future development within the Specific Plan Area for public infrastructure improvements constructed pursuant to and in accordance with this Development Agreement. Such fee credits and reimbursement shall be provided in accordance with Section 4.2.5 of this Agreement, the Public Infrastructure Reimbursement Rules and the Financing Plan prepared for the Specific Plan, as approved by City Council and as it may be updated from time to time.

3.6 Alignment of Parcels. Prior to or concurrently with the submission of an application for a tentative subdivision map for any portion of the Property, OWNER shall, in conjunction with Sewmawpaw Woodland, LLC, or the successor in interest to fee title to the property adjacent to the Property and owned by Sewmawpaw Woodland, LLC at the time of recordation of this Agreement (“Wass”), apply for a lot line adjustment to ensure that the portion of both OWNER’s property and Wass’s property that is designated as Village Center Low Density Residential (“VCLDR”) in the Specific Plan has frontage access onto Road D. The lot line adjustment shall be located such that the parcels designated as VCLDR and Village Center Medium Density Residential (“VCMDR”) on both OWNER’s Property and the property owned by Wass can be developed in an efficient manner without awkward land parcels as determined by CITY in its reasonable discretion.

3.7 Conceptual Plan for HDR/CCO Properties. Prior to or concurrently with submission to CITY of OWNER’s first application for a tentative subdivision map or other Subsequent Development Entitlement for the property bounded by Road B, County Road 25A, Road D and Road C following approval of this Agreement, OWNER shall submit to the City for approval, with a copy to Costalotta Partners, LLC (“Costalotta”), a conceptual plan to include a land use proposal for the portion of OWNER’s Property and the Property owned by Costalotta and designated as High Density Residential/Community Commercial Overlay (“HDR/CCO”) in the Specific Plan, which conceptual plan shall include a description of the relationship between the two development types, including opportunities for shared access for the designated properties (from Roads B and/or C), circulation, and parking. Parking to serve the designated properties shall be located away from Road B, behind any buildings that front Road B. Such conceptual plan shall be subject to review and approval by the Community Development Director in consultation with CITY’s traffic engineer to confirm consistency with the requirements with this Section, which approval shall not be unreasonably withheld. If the conceptual plan is submitted by Costalotta and approved by the Community Development Director prior to submission of OWNER’s first application for a tentative subdivision map or a referenced above, such approval shall satisfy OWNER’s obligation under this Section.

3.8 Changes and Amendments. The parties acknowledge that development of the Project will require Subsequent Development Approvals including but not limited to approval of tentative and final subdivision maps for large and small parcels and design review for development of new uses on the Property. As necessary or appropriate, OWNER shall apply for Subsequent Development Approvals and CITY shall process and act on such application in accordance with the Existing Land Use Regulations, except as otherwise provided by this

Agreement including the Reservations of Authority. Unless otherwise required by law, as determined in CITY's reasonable discretion, Subsequent Development Approvals shall be deemed "minor" and not require an amendment to this Agreement provided such approvals do not:

- (a) Alter the permitted uses of the Property as a whole; or,
- (b) Increase the density or intensity of use of the Property as analyzed under the Specific Plan CEQA document, which may include limited adjustments as authorized by the City; or,
- (c) Increase the maximum height and size of permitted buildings beyond what is permissible under the Specific Plan; or,
- (d) Delete a requirement for the reservation or dedication of easements or land for public purposes within the Property as a whole; or,
- (e) Constitute a project requiring a subsequent or supplemental environmental impact report pursuant to Section 21166 of the Public Resources Code.

3.9 Reservations of Authority.

3.9.1 Limitations, Reservations and Exceptions. Notwithstanding any other provision of this Agreement, the CITY shall not be prevented from applying new rules, regulations and policies upon the OWNER, nor shall a development agreement prevent the CITY from denying or conditionally approving any subsequent development project application on the basis of such new rules, regulations and policies where the new rules, regulations and policies consist of the following:

- (a) Processing fees and charges of every kind and nature imposed by CITY to cover the costs of processing applications for Development Approvals or for monitoring compliance with any Development Approvals.
- (b) Procedural regulations relating to hearing bodies, petitions, applications, notices, findings, records, hearings, reports, recommendations, appeals and any other matter of procedure.
- (c) Regulations, policies, and rules governing engineering and construction standards and specifications applicable to public and private improvements, including all uniform codes adopted by the CITY and any local amendments to those codes adopted by the CITY; provided, however, that, OWNER shall have a vested right to develop the Property in accordance with, and to the extent of, the standards and specifications that are expressly identified in the Specific Plan. Further, for the first ten (10) years following the Effective Date, the City shall not implement a change to the City's engineering standards and specifications that would result in an increase to the cost of construction of the required public improvements for a subdivision located within the Property by more than 2% of the estimated cost of the public improvements prior to such change.

(d) Regulations imposing Development Exactions; provided, however, that no subsequently adopted Development Impact Fees or fees levied pursuant to the terms of this Agreement shall be applicable to development of the Property except for those Project Fees set forth in Exhibit K to this Agreement, which Project Fees may be increased from time to time in accordance with applicable State law, or as contemplated in this Agreement.

(e) Regulations which may conflict with this Agreement or the Development Plan but which are reasonably necessary to protect the public health and safety. To the extent possible, any such regulations shall be applied and construed so as to provide OWNER with the rights and assurances provided under this Agreement.

(f) Regulations which do not conflict with those rules, regulations and policies set forth in this Agreement or the Development Plan. Any regulation, whether adopted by initiative or otherwise, limiting the rate or timing of development of the Property shall be deemed to conflict with the Development Plan and shall therefore not be applicable to the development of the Property.

(g) Regulations which may conflict with this Agreement or the Development Plan, but to which the OWNER consents in writing.

3.9.2 Subsequent Development Approvals. This Agreement shall not prevent CITY, in acting on Subsequent Development Approvals, from applying Subsequent Land Use Regulations which do not conflict with this Development Agreement or the Specific Plan in the form in effect on the Effective Date of this Development Agreement, nor shall this Agreement prevent CITY from denying or conditionally approving any Subsequent Development Approval on the basis of the Existing Land Use Regulations or any Subsequent Land Use Regulation not in conflict with the Specific Plan.

3.9.3 Modification or Suspension by State or Federal Law. In the event that State or Federal laws or regulations, enacted after the Effective Date of this Agreement, prevent or preclude compliance with one or more of the provisions of this Agreement, such provisions of this Agreement shall be modified or suspended as may be necessary to comply with such State or Federal laws or regulations, provided, however, that this Agreement shall remain in full force and effect to the extent it is not inconsistent with such laws or regulations and to the extent such laws or regulations do not render such remaining provisions impractical to enforce. In the event OWNER alleges that such State or Federal laws or regulations preclude or prevent compliance with one or more provisions of this Agreement, and the CITY does not agree, the OWNER may, at its sole cost and expense, seek declaratory relief (or other similar non-monetary remedies); provided, however, that nothing contained in this Section 3.9.3 shall impose on CITY any monetary liability for contesting such declaratory relief (or other similar non-monetary relief).

3.9.4 Intent. The parties acknowledge and agree that CITY is restricted in its authority to limit its police power by contract and that the foregoing limitations, reservations and exceptions are intended to reserve to CITY all of its police power which cannot be so limited. This Agreement shall be construed, contrary to its stated terms if necessary, to reserve to CITY all such power and authority which cannot be restricted by contract.

3.10 Public Works. If OWNER is required by this Agreement to construct any public works facilities which will be dedicated to CITY or any other public agency upon completion, and if required by applicable laws to do so, OWNER shall perform such work in the same manner and subject to the same requirements as would be applicable to CITY or such other public agency should it have undertaken such construction.

3.11 Acquisition of Offsite Real Property Interests. In any instance where OWNER is required pursuant to the Infrastructure Phasing Plan to construct any Improvements Outside Specific Plan Area, OWNER shall at its sole cost and expense provide or cause to be provided, the real property interests necessary for the construction of such public improvements (the "Offsite Property"). In the event OWNER is unable, after exercising reasonable efforts, including, but not limited to, the rights under Sections 1001 and 1002 of the Civil Code, to acquire the Offsite Property necessary for the construction of the Improvements Outside Specific Plan Area, and if so instructed by OWNER and upon OWNER'S provision of adequate security for costs CITY may reasonably incur, CITY agrees to use reasonable and diligent good faith efforts to acquire the Offsite Property from the owner or owners of record by negotiation to the extent permitted by law and consistent with this Agreement. If CITY is unable to acquire the Offsite Property by negotiation within sixty (60) days after OWNER's written request, CITY shall, in accordance with the procedures established by law, use its power of eminent domain to acquire the Offsite Property at a public hearing noticed and conducted in accordance with California Code of Civil Procedure Section 1245.235 for the purpose of considering the adoption of a resolution of necessity concerning the Offsite Property, subject to the conditions set forth in this Section 3.11. The CITY and OWNER acknowledge that the timelines set forth in this Section 3.11 represent the maximum time periods which CITY and OWNER reasonably believe will be necessary to complete the acquisition of any Offsite Property. CITY agrees to use reasonable good faith efforts to complete the actions described within lesser time periods, to the extent that it is reasonably able to do so, consistent with the legal constraints imposed upon CITY. OWNER shall pay all costs associated with such acquisition or condemnation proceedings. This section 3.11 is not intended by the parties to impose upon the OWNER an enforceable duty to acquire land or construct any public improvements on land not owned by OWNER, except to the extent that the OWNER elects to proceed with the development of the Project, and then only in accordance with valid conditions imposed by the CITY upon the development of the Project under the Subdivision Map Act or other legal authority. CITY and OWNER acknowledge and agree that Government Code Section 66462.5 shall apply to the installation of public improvements on Offsite Property. CITY and OWNER further agree that the parties may explore alternative options for the required Improvements Outside Specific Plan Area, including but not limited to relocating to an alternative site, prior to proceeding with condemnation.

3.11.1 Owner's Option to Terminate Proceedings. CITY shall provide written notice to OWNER no later than fifteen (15) days prior to making an offer to the owner of the Offsite Property. At any time within that fifteen (15) day period, OWNER may, at its option, notify CITY that it wants CITY to cease all acquisition proceedings with respect to the Offsite Property, whereupon CITY shall cease such proceedings. CITY shall provide written notice to OWNER no later than fifteen (15) days prior to the date of the hearing on CITY'S intent to consider the adoption of a resolution of necessity as to any Offsite Property. At any time within that fifteen (15) day period, OWNER may, at its option, notify CITY that it wants CITY to cease

condemnation proceedings, whereupon CITY shall cease such proceedings. If OWNER does not notify CITY to cease condemnation proceedings within said fifteen (15) day period, then the CITY may proceed to consider and act upon the Offsite Property resolution of necessity. If CITY adopts such resolution of necessity, then CITY shall diligently institute condemnation proceedings and file a complaint in condemnation and seek an order of immediate possession with respect to the Offsite Property.

3.11.2. Acquisition of Offsite Real Property Interests within Specific Plan Area. CITY and OWNER acknowledge that for improvements located outside of OWNER's Property but within the Specific Plan Area, the other property owners are required to dedicate property needed for public infrastructure to be constructed by OWNER pursuant to the terms of the other property owners' development agreements, including, without limitation, Section 3 of the Public Infrastructure Reimbursement Rules. Even if the property is not included in the CIP, the rules set forth in Section 3 of the Public Infrastructure Reimbursement Rules shall be followed. Notwithstanding the foregoing, in the event that another property owner within the Specific Plan Area does not dedicate such property as required by their development agreement, CITY and OWNER may take the steps set forth in this Section 3.11 to acquire such property.

3.12 Regulation by Other Public Agencies. It is acknowledged by the parties that other public agencies not within the control of CITY possess authority to regulate aspects of the development of the Property separately from or jointly with CITY and this Agreement does not limit the authority of such other public agencies. CITY agrees to cooperate, at no cost to CITY, with OWNER in obtaining any required permits or compliance with the regulations of other public agencies provided such cooperation is not in conflict with any laws, regulations or policies of the CITY.

3.13 Utilities. The Project shall be connected to all utilities necessary to provide adequate water, sewer, gas, electric, and other utility service to the Project in accordance with all applicable laws and regulations.

3.14 Wastewater Treatment Capacity. CITY and OWNER agree that there is capacity in the CITY's wastewater treatment facility to serve: (1) existing residents and businesses that are already hooked up to the facility; (2) anticipated residents and businesses through build-out of the City's existing General Plan; and (3) the Project. CITY and OWNER acknowledge and agree that reserving this capacity for the Project, such that sewer hookups shall be available at such time as they are needed as the Project builds out, is a material element of the consideration provided by CITY to OWNER in exchange for the benefits provided to CITY under this Agreement. The Parties recognize the availability of sufficient sewer capacity may be affected by regulatory or operational constraints that are not within the CITY's discretion. To the extent the availability of sewer capacity is within the CITY's discretion (e.g., whether to extend sewer service to areas *not* currently within the CITY's service area), CITY shall not approve providing such capacity to areas currently outside the CITY's service area if this approval would prevent or delay the ability of the CITY to provide sewer hookups to the Project as the Project requires hook-ups or connections. This provision shall not affect the CITY's ability to provide sewer service within its service boundaries or within the existing CITY boundaries as they exist on the effective date of this Agreement, and as to such connections, the Parties requesting sewer service shall be connected on a first come first served basis. OWNER shall pay the applicable

connection charge in effect pursuant to City-wide ordinance at the time of building permit issuance. OWNER acknowledges that connection charges may increase substantially over time and that the cost to comply with the CITY's National Pollution Discharge Elimination System ("NPDES") permit, as may be approved from time to time during the term of this Agreement, may be substantial.

3.15 Water Availability. CITY and OWNER agree that the CITY's has adequate water availability to serve: (1) existing residents and businesses that are already connected to CITY's water system; (2) anticipated residents and businesses through build-out of the City's existing General Plan; and (3) the Project. CITY and OWNER acknowledge and agree that reserving this capacity for the Project, such that water connections shall be available at such time as they are needed as the Project builds out, is a material element of the consideration provided by CITY to OWNER in exchange for the benefits provided to CITY under this Agreement. The Parties recognize the availability of sufficient water availability may be affected by environmental, regulatory or operational constraints that are not within the CITY's discretion. To the extent the availability of water is within the CITY's discretion (e.g., whether to extend water service to areas *not* currently within the CITY's service area), CITY shall not approve providing such capacity to areas currently outside the CITY's service area if this approval would prevent or delay the ability of the CITY to provide water connections to the Project as the Project requires water connections. This provision shall not affect the CITY's ability to provide water service within its service boundaries or within the existing CITY boundaries as they exist on the effective date of this Agreement, and as to such connections, the Parties requesting water service shall be connected on a first come first served basis. OWNER shall pay the applicable connection charge in effect pursuant to City-wide ordinance at the time of building permit issuance. OWNER acknowledges that connection charges may increase substantially over time.

3.16 Right to Farm. OWNER acknowledges and shall comply with the requirements of Woodland Municipal Code Chapter 9.52, "Right to Farm", including but not limited to the requirements to record deed restrictions against property located within 500 feet of agricultural land or agricultural operations in any deed transferring any right, title or interest in the Property or any portion thereof, as more specifically set forth in Section 9.52.060 of the Woodland Municipal Code.

4. PUBLIC BENEFITS.

4.1 Intent. The parties acknowledge and agree that development of the Property will result in substantial public needs which will not be fully met by the Development Plan and further acknowledge and agree that this Agreement confers substantial private benefits on OWNER which should be balanced by commensurate public benefits. Accordingly, the parties intend to provide consideration to the public to balance the private benefits conferred on OWNER by providing more fully for the satisfaction of the public needs resulting from the Project. Significant public benefits provided by OWNER pursuant to the terms of this Agreement include but are not limited to construction of or contribution to the construction portions of the Yard and greenbelt areas as contemplated by the Specific Plan, funding and constructing public infrastructure for the Specific Plan Area, contribution to the construction of the regional interchange project at State Route 113, and the provision of affordable housing within the Project.

4.2 Development Impact Fees and RTIF.

4.2.1 Amount and Components of Development Impact Fees. OWNER shall pay the Development Impact Fees listed in Exhibit “K”, W RTP Project Fees and other fees, attached hereto and incorporated herein by this reference. OWNER shall not be required to pay newly enacted Development Impact Fees or other fees that are not listed in Exhibit “K” in conjunction with the Project. The Development Impact Fee and other fee amounts to be paid by OWNER shall be the amounts that are in effect at the time such amounts are due. Nothing contained in this Agreement shall affect the ability of the CITY to amend the amounts of existing Development Impact Fees or other fees as permitted by State law, except that OWNER and CITY agree that new fee categories cannot be added to this project without mutual written agreement amending this Agreement. Additionally, nothing contained in this Agreement shall affect the ability of other public agencies that are not controlled by CITY to impose and amend, from time to time, Development Impact Fees established or imposed by such other public agencies, even though such Development Impact Fees may be collected by CITY.

4.2.2 Research and Technology Infrastructure Fee. In addition to all Development Impact Fees which shall be paid by OWNER, OWNER shall pay the Research and Technology Park Infrastructure Fee (the “RTIF”) as established by the City Council and as may be updated from time to time in accordance with this Agreement and other development agreements entered into by and between the City and OWNERS within the Specific Plan Area. The RTIF shall be paid by OWNER in the amounts as established pursuant to that certain Woodland Research and Technology Park Development Impact Fee Nexus Study dated July 2023, prepared by Economic and Planning Systems, Inc. (the “RTIF Report”), which is incorporated herein by this reference, subject to annual adjustment as set forth in the RTIF Report, and further subject to periodic updates to the RTIF report as provided for herein. OWNER acknowledges and agrees that the RTIF is established pursuant to this and other development agreements entered into by and between OWNER and other property owners within the Specific Plan Area for specified land uses in a manner so as to help ensure the completion of the public facilities contemplated by the Specific Plan and the feasibility of all proposed land uses within the Specific Plan Area. Accordingly, OWNER agrees as follows:

(a) OWNER understands, acknowledges and agrees that the RTIF is calculated to ensure sufficient funding to complete the Improvements contemplated by the Specific Plan as a whole, but that some land uses, including certain residential uses, will pay RTIF in excess of their proportionate share of the total cost of those public facilities in order to facilitate the build out of other land uses contemplated within the Specific Plan. OWNER hereby agrees to pay such fees in the amounts and the manner set forth in this Agreement and the RTIF Report, as it may be updated from time to time, to provide the public benefits that will be derived from successful development of all land uses in the Specific Plan Area.

(b) OWNER and City further acknowledge and agree that portions of the RTIF shall be updated prior to issuance of the first building permit for the Project based on more detailed engineering work that will be conducted on the improvements included in the Capital Improvement Plan. Such modifications are described in Exhibit E, “W RTP CIP Modification”, attached hereto and incorporated herein by this reference. Following the completion of the modifications described in Exhibit E, the City shall update the RTIF to account

for such modifications. OWNER hereby agrees and consents to such modifications of the RTIF, provided that the allocation of such fees is consistent with the methodology utilized in the RTIF Report.

(c) OWNER and CITY further acknowledge and agree that certain projects that are to be funded by the RTIF are intended in whole or in part to address impacts created by development in the Spring Lake Specific Plan Area located adjacent to the Specific Plan Area that includes the Property. These projects have been included in the projects to be funded by the RTIF as a form of equitable swap in exchange for certain projects constructed by developers in the Spring Lake Specific Plan that partially benefit the Specific Plan Area that includes the Property. OWNER acknowledges and explicitly consents to the inclusion of such projects in the calculation of the RTIF and acknowledges that the RTIF may be used to fund such projects. OWNER further acknowledges and agrees that it OWNER shall not be eligible for reimbursement from property owners or developers of property located within the Spring Lake Specific Plan Area for any projects that are funded by the RTIF.

(d) OWNER and CITY further acknowledge and agree that for properties that are designated in the Land Use section of the Specific Plan as Village Center Mixed Use (VCMU), in the event that the ground floor development fronting Road B is developed for a non-residential use, and OWNER constructs upper floor residential units, above the non-residential buildings fronting Road B, OWNER shall not be required to pay the RTIF on any such upper floor residential units. Further, for properties that are designated in the Land Use section of the Specific Plan as High Density Residential with Community Commercial Overlay (HDR/CCO), in the event that (1) the total unit yield for Residential Development Zone (“RDZ”) 6 as set forth in Table 6.1 of the Specific Plan has been constructed and occupied by residents, and (2) OWNER constructs upper floor residential units above the non-residential buildings fronting Road B which upper floor residential units are in excess of the required total unit yield for RDZ 6, OWNER shall not be required to pay the RTIF on any such upper floor residential units.

4.2.3 Time of Payment. The Development Impact Fees and RTIF shall be paid to CITY prior to the issuance of building permits for each residential unit. Notwithstanding the foregoing, deferral of the payment of any RTIF fees may be granted pursuant to a separate agreement approved by CITY pursuant to CITY’s deferred impact fee policy for non-residential development, if applicable. At CITY’s discretion, CITY shall be allowed to defer RTIF fees to Certificate of Occupancy provided that the fee paid is the fee in effect on the date it is paid. Payment of RTIF fees shall be subject to the provisions of credits as provided for in this Agreement and the Public Infrastructure Reimbursement Rules.

4.2.4 Minimum RTIF Fees. OWNER specifically agrees that for each Low Density Residential unit developed in a LDR or VCLDR zone shall pay, at a minimum, the RTIF fee that is established for the 2,000-3,000 square foot unit, even for those units that are less than 2,000 square feet. OWNER further agrees that for each Medium Density Residential unit developed in a MDR or VCMDR zone shall pay, at a minimum, the RTIF fee that is established for the 1,000-2,000 square foot unit, even for those units that are less than 1,000 square feet..

4.2.5 Credits. OWNER shall be entitled to credit against the fees required pursuant to Subsection 4.2.1 and 4.2.2 for the dedication of easements, land and/or the construction of improvements required pursuant to this Agreement, the CIP, the Public Infrastructure Reimbursement Rules, the Phasing Rules, OWNER's Infrastructure Phasing Plan and the applicable Subdivision Agreements/Tentative Map conditions for the Project. OWNER shall not receive credits for Improvements constructed pursuant to this Agreement in an amount greater than the Engineer's estimate of the cost of such improvements as set forth in the CIP, adjusted on an annual basis by the Construction Cost Index as published from time to time by the Engineering News-Record ("CCI"). Similarly, OWNER shall receive credits toward the RTIF for land dedicated to the CITY for public infrastructure improvements based on the costs for such land as set forth in the CIP, adjusted on an annual basis by CCI. The Public Infrastructure Reimbursement Rules provides further detail on the terms pursuant to which OWNER will receive credits and reimbursement for dedication of easements, land and construction of Improvements in conjunction with the development of the Property, and OWNER acknowledges and agrees that it is subject to and shall comply with the Public Infrastructure Reimbursement Rules.

4.3 Responsibility for Funding Master Planning and Design Documents and CIP Modification Work. OWNER shall be required to fund the cost of certain Master Plans and the design of certain public improvements, as more specifically set forth in Exhibit "F" ("**Master Planning and Design Obligations**"), attached hereto and incorporated herein by this reference, and to fund the cost of the analysis and consideration of the proposed modifications to the CIP as described in Section 4.2.2(b) and Exhibit "E" ("**CIP Modification Work**"). Such funding shall be provided by OWNER and other property owners in the Specific Plan Area at the times as required by this Agreement, including the Public Infrastructure Reimbursement Rules and the Phasing Rules. Except as otherwise set forth in the Master Planning and Design Obligations, the Master Plans and the design documents and the CIP Modification Work are the cumulative responsibility of the owners of property within the Specific Plan Area, and to the extent the OWNER is required to pay more than its proportionate share of the cost of any of such Master Plans and design documents or CIP Modification Work, OWNER shall be eligible for reimbursement from other property owners within the Specific Plan Area pursuant to the terms of the Public Infrastructure Reimbursement Rules. CITY and OWNER shall cooperate in the preparation of these documents.

4.4 Dedications for Public Improvements. OWNER agrees to dedicate to CITY certain property to be used for public facilities and improvements as more specifically set forth in Exhibit "G" ("**Public Dedications**"), attached hereto and incorporated herein by this reference. Such dedications shall be made by OWNER at the times as required by this Agreement and the Phasing Rules so as to provide dedications when needed for the extension of infrastructure or public amenities for the Project and other development in the Specific Plan Area. These dedications may be required ahead of development of OWNER's Property. OWNER may be eligible for credits and, if applicable, reimbursement from other property owners within the Specific Plan Area for the dedications required by this Agreement if the real property to be dedicated is included in the CIP and reflected in the RTIF. Credit or reimbursement for such real property shall be provided as set forth in Section 4.2.5 of this Agreement, which credits and reimbursements shall be paid in accordance with the Public Infrastructure Reimbursement Rules. Real property that is set forth in Exhibit "G" but is not

included in the CIP and reflected in the RTIF shall not be eligible for credit or reimbursement from other property owners or the RTIF. If real property is needed for temporary drainage of agricultural runoff prior to the full implementation of the storm drainage system reflected in the CIP, then the dedicating property owner shall dedicate the drainage easement to the developing land owner without compensation consistent with the timing of other public dedications in this agreement. CITY and OWNER acknowledge and agree that the property that must be dedicated to CITY may be modified from time to time through updates to the CIP after approval of this Agreement or in conjunction with the processing of subdivision maps for the Property. OWNER shall make such dedications in accordance with the CIP as it may be modified from time to time, in accordance with the timing for dedication as set forth in the approved Infrastructure Phasing Plan and Exhibit G.

4.5 Responsibility for Construction of Public Improvements.

4.5.1 Timely Construction of Public Infrastructure. As part of the development of the Project, OWNER shall be required to construct portions of certain area wide infrastructure that will serve the Specific Plan Area. Such infrastructure shall be the infrastructure that will be required pursuant to the Infrastructure Phasing Plan that shall be developed by OWNER pursuant to Section 3.5.1 of this Agreement. OWNER shall be responsible for the timely construction and completion of all Improvements required for the Project in accordance with the Infrastructure Phasing Plan and any and all tentative subdivision map conditions. All required Improvements for each Subdivision Map, shall be completed and operational prior to City approval of the final subdivision map, unless OWNER enters into a Public Improvement Agreement with the City for such Improvements and provides adequate security for such improvements in accordance with the Subdivision Map Act and Woodland Municipal Code Chapter 16.52, as it may be amended from time to time, in which case such Improvements shall be constructed within the times provided in the Public Improvement Agreement.

4.5.2 Reimbursement for Public Infrastructure. Upon completion of the Improvements for an applicable portion of the development of the Property as required pursuant to this Agreement, CITY and OWNER shall enter into a reimbursement agreement that will provide for reimbursement of OWNER to the extent that the Engineers estimate of the cost of such improvements as set forth in the CIP (and adjusted by CCI) exceeds the amount of the RTIF applicable to the applicable portion of the Property developed by OWNER. Such reimbursement agreement shall be consistent with the Public Infrastructure Reimbursement Rules and the Phasing Rules. In the event OWNER/Developer builds MPFP projects, they are eligible for reimbursement consistent with the policies in the City's MPFP fee program and the City's MPFP administrative guidelines.

4.6 Parks Impact Fee. OWNER agrees that it shall pay the Parks Impact Fee adopted for the Specific Plan Area in the amount of \$9,279 per single family unit or \$6,959 per multi-family unit (as of January 1, 2023), which fee shall be adjusted on an annual basis by CCI. OWNER shall not be eligible to receive credits toward the Parks Impact Fee for dedication of park acreage or greenbelts or for construction of park or green belt improvements within the Specific Plan Area.

4.7 Affordable Housing. OWNER will comply with the requirements of Chapter 15.18 of the Woodland Municipal Code (the “Affordable Housing Ordinance”) through the implementation of the Affordable Housing Plan for the Specific Plan (the “**WRTP Affordable Housing Plan**”), which is attached hereto as Exhibit “H” and incorporated herein by this reference. In the event of any inconsistencies between the Affordable Housing Ordinance and the WRTP Affordable Housing Plan, the WRTP Affordable Housing Plan shall apply to the Project.

4.8 Supplemental School Fee. OWNER acknowledges that Costalotta Partners, LLC, the owners of the “Beeman North” property will be entering into good faith negotiations with Woodland Joint Unified School District (“WJUSD”) for the potential purchase of property to be used as a school campus. OWNER will participate in good faith negotiations involving the payment of a supplemental school fee towards the construction of facilities that provide capacity for students generated by the Specific Plan. OWNER agrees that if a supplemental fee shall be paid by OWNER, then such supplemental fee shall be deposited with the City of Woodland at the time of building permit issuance, placed in a segregated account, and held by City for future payment to WJUSD for the construction of the WRTP elementary school, or as otherwise specified in the School Site Purchase and Sale Agreement. In the event WJUSD does not proceed with construction of a school at the School Site, or other project(s) specified in the School Site Purchase and Sale Agreement by issuance of the 800th residential building permit in the Specific Plan Area, then the supplemental fee funds may be used by the City to construct public improvements included in the CIP, as it may be amended from time to time, at the discretion of the City

4.9 Build to Rent Development. OWNER agrees that neither it nor any successor or assign to this Agreement shall develop single family residences in the Low Density Residential, Village Center Low Density Residential, Village Center Medium Density Residential or Medium Density Residential zones located north of Marston Drive in the Specific Plan Area as shown on the Development Plan attached hereto as Exhibit “C”, as a “build to rent single family development”. For purposes of this Agreement, a “build to rent single family development” is a single family residential subdivision or a portion of such subdivision that is built for the purpose of renting, rather than selling the constructed homes.

5. FINANCING OF PUBLIC IMPROVEMENTS.

5.1 Financing Districts or Alternative Mechanisms. If deemed appropriate, CITY and OWNER will cooperate in the formation of any special assessment district, community facilities district or alternate financing mechanisms to pay for the construction and/or maintenance and operation of public infrastructure facilities or Improvements required as part of this Agreement, the CIP and the approved Infrastructure Phasing Plan, provided, however, that to the extent that a district or alternative financing mechanism is established for the purpose of bonding to raise funds for construction of infrastructure or payment of fees, the boundaries of such district will be limited to separate improvement areas that correspond with the boundaries of the tentative map (or tentative maps) within each Infrastructure Phasing Plan. The RTIF fees generated from the improvement area may be used to fund any improvement in the CIP. Such improvement areas shall be shown in the Infrastructure Phasing Plan approved by the City pursuant to this Development Agreement. CITY also agrees that, to the extent any such district or other

financing entity is formed and sells bonds in order to finance such Improvements, OWNER may receive credits for the RTIF to be paid by OWNER, and may be reimbursed to the extent that OWNER spends funds or dedicates land for the establishment of public improvements that are included in the CIP, provided that such fee credits and reimbursements must be in conformance with the Public Infrastructure Reimbursement Rules and any individual reimbursement agreements entered into by and between CITY and OWNER. Notwithstanding the foregoing, it is acknowledged and agreed by the parties that nothing contained in this Agreement shall be construed as requiring CITY or the City Council to form any such district or to issue and sell bonds. If bonds are sold then the proceeds of those bonds shall be used to reimburse the public improvements that are listed in the CIP and required by the conditions of the associated development.

CITY agrees to use reasonable efforts to develop and implement such financing mechanisms subject to applicable public hearing and election requirements of applicable State and, if tax-exempt bonds are to be issued, federal law, the existing regulations and the customary and reasonable industry standards for the development of such financings. OWNER and CITY acknowledge and agree that the establishment of a financing district and the issuance of bonds supported by the special taxes are dependent on many factors that are not known at this time. The viability of the financing, the amount of special taxes for debt service, and available bond proceeds will be dependent on several factors existing at the time the bonds are sold, including, but not limited to, the financial markets, interest on tax exempt financings, housing market, value of homes in the area, absorption rates for home sales in the area, bond underwriting criteria and ratings by bond-rating agencies. Fee credits that are generated from bond sales shall remain with the land that they were bonded against and can be used as a credit against RTIF fee payments. These fee credits cannot be sold or transferred.

CITY and OWNER acknowledge the infrastructure costs needed to support the project are substantial and may compromise the feasibility or timely build out of the Project and its associated benefits. CITY and OWNER further acknowledge this is especially the case for the development of residential units in the MDR and HDR zones. As such, both parties agree to work cooperatively to identify and pursue external funding sources, multiple financing strategies and tools to defray project infrastructure improvement costs. Further, the City anticipates that adjustments to the Specific Plan and associated approvals may be needed in the future, and the City will conduct further evaluation of the Specific Plan, CIP and City fee program after Specific Plan approval to determine what adjustments are appropriate.

5.2 Sports Park Community Facilities District. OWNER acknowledges the existence of the Spring Lake Community Facilities District (“**Sports Park CFD**”) which was created pursuant to the Mello-Roos Community Facilities Act, as set forth in Government Code Section 53311 *et seq.* for the purpose of funding the ongoing operation of the Woodland Sports Park, which provides regional park facilities that will serve the Property. OWNER voluntarily consents to and prior to recordation of each small lot final subdivision map or large lot map (for High Density and Mixed Use Residential units) for the Project shall take whatever affirmative action it needs to take on its part to ensure that all portions of the Project and Property that are designated as Low Density Residential, Village Center Low Density Residential, Medium Density Residential, Village Center Medium Density Residential and High Density Residential (including units above Village Center Mixed Use and Community Commercial Overlay for

which such small lot final subdivision map or large lot map - for High Density and Mixed Use Residential units) is recorded is subject to the assessments of the Sports Park CFD, which includes without limitation, voting to annex to said Sports Park CFD.

5.3 Maintenance Community Facilities District(s).

5.3.1 Formation, Consent, Waiver, and Benefit. No building permits shall be issued for the residential units or commercial development provided for in the first subdivision map for the Project until a Community Facilities District has been formed for the purpose of funding public services and maintenance costs associated with the Project for services identified in Exhibit I or the Property has been annexed into such a Community Facilities District that has already been formed to fund public services and maintenance costs for the Specific Plan Area (the “**Maintenance CFD**”), or OWNER participates in the formation of an equivalent funding mechanism for public services and maintenance purpose in a form satisfactory to the City Engineer. OWNER consents to and shall cooperate in such formation or annexation of the Maintenance CFD or the formation of an equivalent financing mechanism for maintenance and services purposes. OWNER also consents to the levy of such special taxes or assessments as are necessary to fund the maintenance and service obligations described herein, pursuant to and consistent with the requirements of this Agreement, Government Code Section 53111, et seq., and the City's Capital Financing and Debt Management Policy, adopted by City Council on June 20, 2017 and incorporated herein by this reference.

5.3.2 Annexation of Subsequent Phases. No building permits shall be issued for subsequent phases of the Project until the such phase is annexed into the Maintenance CFD or an equivalent funding mechanism for public services and maintenance costs has been established for such subsequent phase in accordance with Section 5.3.1.

5.3.3 Uses of Funds Collected. The Maintenance CFD will fund maintenance of certain landscaping, public improvements and public facilities as more specifically set forth in Exhibit “I”, attached hereto and incorporated herein by this reference (“**Maintenance Services**”).

5.4 Maximum Effective Tax Rate. CITY and OWNER agree that the maximum effective tax rate for assessor’s parcels within the Property from all applicable financing districts, including without limitation, any financing districts established as contemplated in Section 5.1 of this Agreement, the Sports Park CFD, the Maintenance CFD and any CFD or Assessment District established pursuant to the Statewide Community Infrastructure Program, may not exceed one and 8/10 percent (1.8%) of the reasonably expected value of the parcel with planned vertical improvements determined at the time of approval of the applicable financing district and the Rate and Method of Apportionment.

6. REVIEW FOR COMPLIANCE.

6.1 Periodic and Special Reviews.

6.1.1 Time for and Initiation of Periodic Review. The CITY shall review this Agreement as determined by the City, in order to ascertain the good faith compliance by OWNER with the terms of this Agreement. OWNER shall submit an Annual Monitoring Report to CITY, in a form acceptable to the City Manager, along with any applicable processing charge, within ten (10) days after each anniversary date of the Effective Date of this Agreement. Within thirty (30) days after the receipt of the Annual Monitoring Report, CITY shall either issue a notice of continuing compliance or a notice of non-compliance and a notice of CITY's intent to conduct a Special Review pursuant to Sections 6.1.2 through 6.1.6. Issuance of a notice of continuing compliance may be issued by the City Manager or his designee. The cost of this review shall be funded by the OWNER on a time and materials basis.

6.1.2 Initiation of Special Review. A special review may be called either by agreement of the parties or by unilateral initiation by the CITY in one or more of the following ways:

- (a) Recommendation of the Community Development Director;
- (b) Affirmative vote of at least four (4) members of the Planning Commission; or
- (c) Affirmative vote of at least three (3) members of the City Council.

6.1.3 Notice of Special Review. The City Manager shall begin the special review proceeding by giving notice to OWNER that the CITY intends to undertake a special review of this Agreement. Such notice shall be given at least ten (10) days in advance of the time at which the matter will be considered by the Planning Commission.

6.1.4 Public Hearing. The Planning Commission shall conduct a hearing at which OWNER must demonstrate good faith compliance with the terms of this Agreement. The burden of proof on this issue shall be on OWNER.

6.1.5 Findings upon Public Hearing. The Planning Commission shall determine, upon the basis of substantial evidence, whether OWNER has, for the period under review, complied in good faith with the terms and conditions of this Agreement.

6.1.6 Procedure upon Findings.

- (a) If the Planning Commission finds and determines on the basis of substantial evidence that OWNER has complied in good faith with the terms and conditions of this Agreement, during the period under review, the review for that period shall be concluded.
- (b) If the Planning Commission finds and determines on the basis of substantial evidence that OWNER has not complied in good faith with the terms and conditions

of this Agreement, during the period under review, the Planning Commission may recommend to the City Council to modify or terminate this Agreement.

(c) OWNER may appeal a determination pursuant to paragraph (b) to the City Council in accordance with CITY's rules for consideration of appeals in zoning matters generally.

6.2 Proceedings Upon Modification or Termination. If, upon a finding under Section 6.1.6(b), CITY determines to proceed with modification or termination of this Agreement, CITY shall give written notice to OWNER of its intention so to do. The notice shall be given at least ten (10) calendar days prior to the scheduled hearing and shall contain:

- (a) The time and place of the hearing;
- (b) A statement as to whether or not CITY proposes to terminate or to modify the Agreement; and,
- (c) Such other information CITY considers necessary to inform OWNER of the nature of the proceeding.

6.3 Hearing on Modification or Termination. At the time and place set for the hearing on modification or termination, OWNER shall be given an opportunity to be heard. OWNER shall be required to demonstrate good faith compliance with the terms and conditions of this Agreement. The burden of proof on this issue shall be on OWNER. If the City Council finds, based upon substantial evidence in the administrative record, that OWNER has not complied in good faith with the terms or conditions of the Agreement, the City Council may terminate or modify this Agreement and impose such conditions to the action it takes as it considers necessary to protect the interests of the CITY. The decision of the City Council shall be final, subject only to judicial review pursuant to Section 1094.5 of the Code of Civil Procedure.

6.4 Certificate of Agreement Compliance. If, at the conclusion of a Periodic or Special Review, OWNER is found to be in compliance with this Agreement, CITY shall, upon written request by OWNER, issue a Certificate of Agreement Compliance ("Certificate") to OWNER stating that after the most recent Periodic or Special Review and based upon the information known or made known to the Community Development Director and City Council that (1) this Agreement remains in effect and (2) OWNER is not in default. The Certificate shall be in recordable form, shall contain information necessary to communicate constructive record notice of the finding of compliance, shall state whether the Certificate is issued after a Periodic or Special Review and shall state the anticipated date of commencement of the next Periodic Review. OWNER may record the Certificate with the County Recorder.

Whether or not the Certificate is relied upon by assignees or other transferees or OWNER, CITY shall not be bound by a Certificate if a default existed at the time of the Periodic or Special Review, but was concealed from or otherwise not known to the Community Development Director or City Council.

7. DEFAULT AND REMEDIES.

7.1 Remedies in General. It is acknowledged by the parties that CITY would not have entered into this Agreement if it were to be liable in damages under this Agreement, or with respect to this Agreement or the application thereof.

In general, each of the parties hereto may pursue any remedy at law or equity available for the breach of any provision of this Agreement, except that CITY shall not be liable in damages to OWNER, or to any successor in interest of OWNER, or to any other person, and OWNER covenants not to sue for damages or claim any damages:

(a) For any breach of this Agreement or for any cause of action which arises out of this Agreement; or

(b) For the taking, impairment or restriction of any right or interest conveyed or provided under or pursuant to this Agreement; or

(c) Arising out of or connected with any dispute, controversy or issue regarding the application or interpretation or effect of the provisions of this Agreement.

7.2 Specific Performance. The parties acknowledge that money damages and remedies at law generally are inadequate and specific performance and other non-monetary relief are particularly appropriate remedies for the enforcement of this Agreement and should be available to all parties for the following reasons:

(a) Money damages are unavailable against CITY as provided in Section 7.1 above.

(b) Due to the size, nature and scope of the project, it may not be practical or possible to restore the Property to its natural condition once implementation of this Agreement has begun. After such implementation, OWNER may be foreclosed from other choices it may have had to utilize the Property or portions thereof. OWNER has invested significant time and resources and performed extensive planning and processing of the Project in agreeing to the terms of this Agreement and will be investing even more significant time and resources in implementing the Project in reliance upon the terms of this Agreement, and it is not possible to determine the sum of money which would adequately compensate OWNER for such efforts.

7.3 Release. Except for non-damage remedies, including the remedy of specific performance and judicial review as provided for in Sections 7.2 and 6.3, respectively, OWNER, for itself, its successors and assignees, hereby releases the CITY, its officers, agents and employees from any and all claims, demands, actions, or suits of any kind or nature arising out of any liability, known or unknown, present or future, including, but not limited to, any claim or liability, based or asserted, pursuant to Article I, Section 19 of the California Constitution, the Fifth Amendment of the United States Constitution, or any other law or ordinance which seeks to impose any other liability or damage, whatsoever, upon the CITY because it entered into this Agreement or because of the terms of this Agreement.

7.4 Termination of Agreement for Default of OWNER. Subject to the provisions contained in Subsection 6.3 herein, in addition to the remedy of specific performance as set forth in Section 7.2, CITY may terminate this Agreement for any failure of OWNER to perform any material duty or obligation of OWNER under this Agreement, or to comply in good faith with the terms of this Agreement (hereinafter referred to as “default”); provided, however, CITY may terminate this Agreement pursuant to this Section only after providing written notice to OWNER of default setting forth the nature of the default and the actions, if any, required by OWNER to cure such default and, where the default can be cured, OWNER has failed to take such actions and cure such default within 60 days after the effective date of such notice or, in the event that such default cannot be cured within such 60 day period but can be cured within a longer time, has failed to commence the actions necessary to cure such default within such 60 day period and to diligently proceed to complete such actions and cure such default.

7.5 Termination of Agreement for Default of CITY. OWNER may terminate this Agreement only in the event of a default by CITY in the performance of a material term of this Agreement and only after providing written notice to CITY of default setting forth the nature of the default and the actions, if any, required by CITY to cure such default and, where the default can be cured, CITY has failed to take such actions and cure such default within 60 days after the effective date of such notice or, in the event that such default cannot be cured within such 60 day period but can be cured within a longer time, has failed to commence the actions necessary to cure such default within such 60 day period and to diligently proceed to complete such actions and cure such default.

8. THIRD PARTY LITIGATION.

8.1 General Plan Litigation. CITY has determined that this Agreement is consistent with its General Plan, as such called General Plan exists as of the Effective Date (“General Plan”), and that the General Plan meets all requirements of law. OWNER has reviewed the General Plan and concurs with CITY’s determination.

CITY shall have no liability in damages under this Agreement for any failure of CITY to perform under this Agreement or the inability of OWNER to develop the Property as contemplated by the Development Plan of this Agreement as the result of a judicial determination that on the Effective Date, or at any time thereafter, the General Plan, or portions thereof, are invalid or inadequate or not in compliance with law.

8.2 Third Party Litigation Concerning Agreement. OWNER shall defend, at its expense, including attorneys’ fees, indemnify, and hold harmless CITY, its agents, officers and employees from any claim, action or proceeding against CITY, its agents, officers, or employees to attack, set aside, void, or annul the approval of this Agreement or the approval of any permit granted pursuant to this Agreement. CITY shall promptly notify OWNER of any such claim, action or proceeding, and CITY shall cooperate in the defense. If CITY fails to promptly notify OWNER of any such claim, action or proceeding, or if CITY fails to cooperate in the defense, OWNER shall not thereafter be responsible to defend, indemnify, or hold harmless CITY. CITY may in its discretion participate in the defense of any such claim, action or proceeding.

8.3 Indemnity. In addition to the provisions of 8.2 above, OWNER shall indemnify and hold CITY, its officers, agents, employees and independent contractors free and harmless from any liability whatsoever, based or asserted upon any act or omission of OWNER, its officers, agents, employees, subcontractors and independent contractors, for property damage, bodily injury, or death (OWNER's employees included) or any other element of damage of any kind or nature, relating to or in any way connected with or arising from the activities contemplated hereunder, including, but not limited to, the study, design, engineering, construction, completion, failure and conveyance of the public improvements, save and except claims for damages arising through the sole active negligence or sole willful misconduct of CITY. OWNER shall defend, at its expense, including attorneys' fees, CITY, its officers, agents, employees and independent contractors in any legal action based upon such alleged acts or omissions. CITY may in its discretion participate in the defense of any such legal action.

8.4 Environment Assurances. OWNER shall indemnify and hold CITY, its officers, agents, and employees free and harmless from any liability, based or asserted, upon any act or omission of OWNER, its officers, agents, employees, subcontractors, predecessors in interest, successors, assigns and independent contractors for any violation of any federal, state or local law, ordinance or regulation relating to industrial hygiene or to environmental conditions on, under or about the Property, including, but not limited to, soil and groundwater conditions, and OWNER shall defend, at its expense, including attorneys' fees, CITY, its officers, agents and employees in any action based or asserted upon any such alleged act or omission. CITY may in its discretion participate in the defense of any such action.

8.5 Reservation of Rights. With respect to Sections 8.2, 8.3 and 8.4 herein, CITY reserves the right to either (1) approve the attorney(s) which OWNER selects, hires or otherwise engages to defend CITY hereunder, which approval shall not be unreasonably withheld, or (2) conduct its own defense, provided, however, that OWNER shall reimburse CITY forthwith for any and all reasonable expenses incurred for such defense, including attorneys' fees, upon billing and accounting therefor.

8.6 Survival. The provisions of this Sections 8.1 through 8.6, inclusive, shall survive the termination of this Agreement.

9. MORTGAGEE PROTECTION.

The parties hereto agree that this Agreement shall not prevent or limit OWNER, in any manner, at OWNER's sole discretion, from encumbering the Property or any portion thereof or any improvement thereon by any mortgage, deed of trust or other security device securing financing with respect to the Property. CITY acknowledges that the lenders providing such financing may require certain Agreement interpretations and modifications and agrees upon request, from time to time, to meet with OWNER and representatives of such lenders to negotiate in good faith any such request for interpretation or modification. CITY will not unreasonably withhold its consent to any such requested interpretation or modification provided such interpretation or modification is consistent with the intent and purposes of this Agreement. Any Mortgagee of the Property shall be entitled to the following rights and privileges:

(a) Neither entering into this Agreement nor a breach of this Agreement shall defeat, render invalid, diminish or impair the lien of any mortgage on the Property made in good faith and for value, unless otherwise required by law.

(b) The Mortgagee of any mortgage or deed of trust encumbering the Property, or any part thereof, which Mortgagee, has submitted a request in writing to the CITY in the manner specified herein for giving notices, shall be entitled to receive written notification from CITY of any default by OWNER in the performance of OWNER's obligations under this Agreement.

(c) If CITY timely receives a request from a mortgagee requesting a copy of any notice of default given to OWNER under the terms of this Agreement, CITY shall provide a copy of that notice to the Mortgagee within ten (10) days of sending the notice of default to OWNER. The Mortgagee shall have the right, but not the obligation, to cure the default during the remaining cure period allowed such party under this Agreement.

(d) Any Mortgagee who comes into possession of the Property, or any part thereof, pursuant to foreclosure of the mortgage or deed of trust, or deed in lieu of such foreclosure, shall take the Property, or part thereof, subject to the terms of this Agreement. Notwithstanding any other provision of this Agreement to the contrary, no Mortgagee shall have an obligation or duty under this Agreement to perform any of OWNER's obligations or other affirmative covenants of OWNER hereunder, or to guarantee such performance; provided, however, that to the extent that any covenant to be performed by OWNER is a condition precedent to the performance of a covenant by CITY, the performance thereof shall continue to be a condition precedent to CITY's performance hereunder, and further provided that any sale, transfer or assignment by any Mortgagee in possession shall be subject to the provisions of Section 2.4 of this Agreement.

10. MISCELLANEOUS PROVISIONS.

10.1 Recordation of Agreement. This Agreement and any amendment or cancellation thereof shall be recorded with the Yolo County Recorder by the City Clerk within ten (10) days of CITY's entry into this Agreement, as required by Section 65868.5 of the Government Code. If the parties to this Agreement or their successors in interest amend or cancel this Agreement as provided for herein and in Government Code Section 65868, or if the CITY terminates or modifies the agreement as provided for herein and in Government Code Section 65865.1 for failure of the applicant to comply in good faith with the terms or conditions of this Agreement, the City Clerk shall have notice of such action recorded with the Yolo County Recorder.

10.2 Entire Agreement. This Agreement sets forth and contains the entire understanding and agreement of the parties, and there are no oral or written representations, understandings or ancillary covenants, undertakings or agreements which are not contained or expressly referred to herein. No testimony or evidence of any such representations, understandings or covenants shall be admissible in any proceeding of any kind or nature to interpret or determine the terms or conditions of this Agreement.

10.3 Severability. If any term, provision, covenant or condition of this Agreement shall be determined invalid, void or unenforceable, the remainder of this Agreement shall not be affected thereby to the extent such remaining provisions are not rendered impractical to perform taking into consideration the purposes of this Agreement. Notwithstanding the foregoing, the provision of the Public Benefits set forth in Section 4 of this Agreement, including but not limited to the payment of the fees set forth therein, are essential elements of this Agreement and CITY would not have entered into this Agreement but for such provisions, and therefore in the event such provisions are determined to be invalid, void or unenforceable, this entire Agreement shall be null and void and of no force and effect whatsoever.

10.4 Interpretation and Governing Law. This Agreement and any dispute arising hereunder shall be governed and interpreted in accordance with the laws of the State of California. This Agreement shall be construed as a whole according to its fair language and common meaning to achieve the objectives and purposes of the parties hereto, and the rule of construction to the effect that ambiguities are to be resolved against the drafting party shall not be employed in interpreting this Agreement, all parties having been represented by counsel in the negotiation and preparation hereof.

10.5 Section Headings. All section headings and subheadings are inserted for convenience only and shall not affect any construction or interpretation of this Agreement.

10.6 Singular and Plural. As used herein, the singular of any word includes the plural.

10.7 Joint and Several Obligations. Subject to Section 2.4, if at any time during the term of this Agreement the Property is owned, in whole or in part, by more than one owner, all obligations of such owners under this Agreement shall be joint and several, and the default of any such owner shall be the default of all such owners. Notwithstanding the foregoing, no owner of a single lot which has been finally subdivided and sold to such owner as a member of the general public or otherwise as an ultimate user shall have any obligation under this Agreement except as provided under Section 4 hereof.

10.8 Time of Essence. Time is of the essence in the performance of the provisions of this Agreement as to which time is an element.

10.9 Waiver. Failure by a party to insist upon the strict performance of any of the provisions of this Agreement by the other party, or the failure by a party to exercise its rights upon the default of the other party, shall not constitute a waiver of such party's right to insist and demand strict compliance by the other party with the terms of this Agreement thereafter.

10.10 No Third Party Beneficiaries. This Agreement is made and entered into for the sole protection and benefit of the parties and their successors and assigns. No other person shall have any right of action based upon any provision of this Agreement.

10.11 Force Majeure. Neither party shall be deemed to be in default where failure or delay in performance of any of its obligations under this Agreement is caused by floods, earthquakes, other Acts of God, fires, wars, riots or similar hostilities, strikes and other labor difficulties beyond the party's control, (including the party's employment force), government regulations, court actions (such as restraining orders or injunctions), or other causes beyond the

party's control. If any such events shall occur, the term of this Agreement and the time for performance by either party of any of its obligations hereunder may be extended by the written agreement of the parties for the period of time that such events prevented such performance, provided that the term of this Agreement shall not be extended under any circumstances for more than five (5) years.

10.12 Mutual Covenants. The covenants contained herein are mutual covenants and also constitute conditions to the concurrent or subsequent performance by the party benefited thereby of the covenants to be performed hereunder by such benefited party.

10.13 Successors in Interest. The burdens of this Agreement shall be binding upon, and the benefits of this Agreement shall inure to, all successors in interest to the parties to this Agreement. All provisions of this Agreement shall be enforceable as equitable servitudes and constitute covenants running with the land. Each covenant to do or refrain from doing some act hereunder with regard to development of the Property: (a) is for the benefit of and is a burden upon every portion of the Property; (b) runs with the Property and each portion thereof; and, (c) is binding upon each party and each successor in interest during ownership of the Property or any portion thereof.

10.14 Counterparts. This Agreement may be executed by the parties in counterparts, which counterparts shall be construed together and have the same effect as if all of the parties had executed the same instrument.

10.15 Jurisdiction and Venue. Any action at law or in equity arising under this Agreement or brought by a party hereto for the purpose of enforcing, construing or determining the validity of any provision of this Agreement shall be filed and tried in the Superior Court of the County of Yolo, State of California, and the parties hereto waive all provisions of law providing for the filing, removal or change of venue to any other court.

10.16 Project as a Private Undertaking. It is specifically understood and agreed by and between the parties hereto that the development of the Project is a private development, that neither party is acting as the agent of the other in any respect hereunder, and that each party is an independent contracting entity with respect to the terms, covenants and conditions contained in this Agreement. No partnership, joint venture or other association of any kind is formed by this Agreement. The only relationship between CITY and OWNER is that of a government entity regulating the development of private property and the owner of such property.

10.17 Further Actions and Instruments. Each of the parties shall cooperate with and provide reasonable assistance to the other to the extent contemplated hereunder in the performance of all obligations under this Agreement and the satisfaction of the conditions of this Agreement. Upon the request of either party at any time, the other party shall promptly execute, with acknowledgment or affidavit if reasonably required, and file or record such required instruments and writings and take any actions as may be reasonably necessary under the terms of this Agreement to carry out the intent and to fulfill the provisions of this Agreement or to evidence or consummate the transactions contemplated by this Agreement. The City Manager may delegate his or her powers and duties under this Agreement to the Community Development Director or other management level employee of the CITY. CITY shall cooperate in good faith

with OWNER in the implementation of the Development of the Property to support successful development of each of the allowed land uses in the Specific Plan Area. The City acknowledges that OWNER has made and will be required to make additional investments to implement the Plan. This Agreement provides assurance to OWNER that the City will cooperate and assist in completion of the annexation process. City agrees that it will accept, in good faith, for processing, review and action, including but not limited to all applications for lot line adjustments, large lot subdivision maps, zoning, special permits, development permits, tentative maps, subdivision maps or other entitlements for use of the Property in accordance with the General Plan and this Agreement.

10.18 Eminent Domain. No provision of this Agreement shall be construed to limit or restrict the exercise by CITY of its power of eminent domain.

10.19 Agent for Service of Process. In the event OWNER is not a resident of the State of California or it is an association, partnership or joint venture without a member, partner or joint venturer resident of the State of California, or it is a foreign corporation, then in any such event, OWNER shall file with the Community Development Director, upon its execution of this Agreement, a designation of a natural person residing in the State of California, giving his or her name, residence and business addresses, as its agent for the purpose of service of process in any court action arising out of or based upon this Agreement, and the delivery to such agent of a copy of any process in any such action shall constitute valid service upon OWNER. If for any reason service of such process upon such agent is not feasible, then in such event OWNER may be personally served with such process out of this County and such service shall constitute valid service upon OWNER. OWNER is amenable to the process so served, submits to the jurisdiction of the Court so obtained and waives any and all objections and protests thereto.

10.20 Estoppel Certificate. Within thirty (30) days following a written request by any of the parties, the other party shall execute and deliver to the requesting party a statement certifying that (i) either this Agreement is unmodified and in full force and effect or there have been specified (date and nature) modifications to the Agreement, but it remains in full force and effect as modified; and (ii) either there are no known current uncured defaults under this Agreement or that the responding party alleges that specified (date and nature) defaults exist. The statement shall also provide any other reasonable information requested. The failure to timely deliver this statement shall constitute a conclusive presumption that this Agreement is in full force and effect without modification except as may be represented by the requesting party and that there are no uncured defaults in the performance of the requesting party, except as may be represented by the requesting party. OWNER shall pay to CITY all costs incurred by CITY in connection with the issuance of estoppel certificates under this Section 10.20 prior to CITY's issuance of such certificates.

10.21 Authority to Execute. The person or persons executing this Agreement on behalf of OWNER warrants and represents that he or she/they have the authority to execute this Agreement on behalf of his or her/their corporation, partnership or business entity and warrants and represents that he or she/they has/have the authority to bind OWNER to the performance of its obligations hereunder.

IN WITNESS WHEREOF, the parties hereto have executed this Development Agreement on the day and year set forth below.

INFRASTRUCTURE PHASING RULES

In order to proceed with development of their property, each owner within the Woodland Research and Technology Park Specific Plan Area is required by the Development Agreement entered into with the City to submit to City and obtain approval of an Infrastructure Phasing Plan (“Phasing Plan”) for each phase of development prior to approval of a tentative subdivision map for the property included in such phase. Owners are not required to seek approval of a Phasing Plan as described herein until they or their successor in interest to the Development Agreement apply for a tentative subdivision map for all or a portion of their property. The Phasing Plan must be consistent with these Infrastructure Phasing Rules (the “Rules”). For these Rules, all references to LDR also includes VCLDR and all references to MDR also includes VCMDR.

Each Phasing Plan shall ensure that the Improvements required for the development of the Property consistent with the Development Plan shall be completed prior to or concurrently with the development of the Property in accordance with the Phasing Plan for the Property. The Improvements included in the Plan must be supported by engineering studies that are based on sound engineering judgment and the technical studies and documents that provide support for the adoption of the Specific Plan.

The City and all property owners within the Specific Plan Area anticipate that the residential units in the LDR and MDR zones of the Specific Plan will be developed early in the overall build out of the Specific Plan Area, and generally prior to the development of high density residential and commercial development contemplated by the Specific Plan. In order to ensure that the Improvements required for the development of the Specific Plan Area are constructed in a manner that will serve that early development in a functional manner and ensure that there is not a delay in the provision of necessary infrastructure, each Plan that includes residential units in an LDR or MDR zone must construct infrastructure that is equal in value, based on the Engineer’s Estimate of Costs set forth in the CIP (as amended and adjusted for CCI) to not less than 145% or more than 150% of the RTIF (excluding the RTIF administration category) required to be paid for LDR units and not less than 125% or more than 130% of the RTIF (excluding the RTIF administration category) required to be paid for MDR units (based on the then current RTIF at the time the Phasing Plan was approved) for the residential units that are to be constructed in the LDR and/or MDR zones as part of such phase. .

The infrastructure to be counted toward the 150% or 130%, as applicable, of total value shall not include any dedications of right of way required to be made by the Owner or future developer of the Property. Such dedications, which shall be made as conditions on the applicable tentative subdivision map, shall be subject to reimbursement from future development in accordance with the Public Infrastructure Reimbursement Rules if the right of way is included in the CIP.

Each Phasing Plan that includes residential units in a LDR and/or MDR zone shall include all Improvements required for the development of the property included in the applicable phase, plus additional backbone and off-site improvements as determined to be appropriate for

the applicable phase in consultation with the City Engineer. In determining the backbone and off-site improvements to be included in the Plan, Developer and City shall work to design, fund and construct the following improvements as determined by the City Engineer:

- The Developer shall obtain approval from the City Engineer for improvement plans and shall provide improvement security in amounts consistent with the requirements Government Code Section 66499-66499.10 for all improvements set forth in the Plan prior to or concurrently with recordation of the first final subdivision map for the phase covered by the Plan.
- The City may, at its discretion, require additional on-site Improvements as part of the phase that are not specifically included in the engineering analysis for the applicable phase, but are deemed appropriate by the City Engineer, in consultation with Owner's Engineer for such development (e.g., traffic calming measures, left turn lanes for the benefit of bicycle and pedestrian safety, design requirements for roundabouts).
- In order to facilitate the construction of non-residential development, the first Plan including LDR or MDR units submitted to and approved by City shall include the extension of underground utilities to the Road B/County Road 25A ("CR 25A") intersection. This Plan shall also include the construction of Road A and Road B south of CR 25A, and Road G between Road A and Road B. Alternatively, the Owner may instead propose to construct non-residential infrastructure on the north side of CR 25A, and City may, in its sole discretion, allow for this alternative to be included in the first Plan rather than the extension of roads south of CR 25A.
- The Plan for the first 500 residential units¹ to be developed cumulatively in the MDR and LDR zones in the Specific Plan shall require the Owner to provide sufficient funding to design and construct the CR 25A/State Route 113 ("SR 113") interchange. Each of the first five hundred units shall contribute toward the CR 25A/State Route 133 ("SR 113") interchange according to the following formula:
Per unit contribution = project cost * 1.2 * 0.53/500 units
The project cost is the amount listed in the CIP with an annual adjustment by CCI
The 1.2 factor provides an extra contingency amount to make sure the project is adequately funded
0.53 is the cost share for the WRTP as reflected in the CIP
The first 350 units shall make this contribution at building permit. Any units from 351-500 shall make this contribution at final map.
The Owner may elect to perform a traffic study in order to defer the collection of project funds and the timing of construction. The City Engineer shall review the results of the traffic study and determine the timing of the collection of project funds and the timing of construction.
- The Plan that includes the 600th residential unit shall include the completion of Road B between CR 25A and Parkland.
- The Plan that includes the 750th residential unit shall include the mobility hub improvements if they have not been constructed previously.

¹ All references to the number of residential units in these Phasing Rules refer to the cumulative number of residential units developed in the LDR and MDR zones of the Specific Plan. Residential units in other zones are not counted toward the threshold number of residential units triggering various public improvements as set forth in these Rules.

- The Parkland Ave Overcrossing abutment fill slope, dirt placement, compaction to CalTrans standards and stabilization must be included in the Plan that includes the first storm drainage pond.
- Any phase that will include the cumulative approval of more than 450 residential units must include construction of at least 1/3 of the Yard park improvements.
- The Plan for any phase of development of land that accesses Marston Drive must provide for the construction of a connection of Marston Avenue to CR 25A from either Road D or Road B if such a connection was not previously constructed, to ensure that any development that accesses Marston Avenue will be able to connect to the CR 25A/SR 113 interchange without traveling through the Spring Lake Specific Plan Area.
- The Plan for the first phase of development of land north of Parkland Avenue must provide for the construction of at least one eastbound lane and one westbound lane of Parkland Avenue between Road B and Harry Lorenzo Avenue.
- Greenbelts and park infrastructure that is included on the eastern and northern edges of the Specific Plan shall be included with the phase that includes any adjacent development. Further, any phase that includes residential development adjacent to a greenbelt shall include improvement of that greenbelt area within the Plan for that phase of development.
- The City may, at its option, require Owner to construct the Improvements described in the approved Plan or City may construct such improvements itself. Responsibility for construction of the improvements shall be indicated in the approved Plan. In the event the City constructs some or all of the Improvements included in the Plan, Owner shall be required to pay the full cost of the Improvements (or Owner's proportionate share of the cost, as indicated in the Plan), even if the reimbursement available through the RTIF is less than the actual cost of constructing the improvements.
- The City may, at its discretion, reject a Plan that includes partially constructed infrastructure. In the alternative, the City may reduce the amount of reimbursement that Owner may receive based on a determination by the City Engineer of the estimated additional costs that will be incurred by future developers to complete such infrastructure, which costs would not be incurred if the infrastructure was completed as a single project. Such determination shall be made in accordance with the Public Infrastructure Reimbursement Rules.
- Certain infrastructure improvements included in the CIP are not triggered by specific development and are not required based on a specific number of units (e.g., Gateway Monuments and enhanced landscaping). Those improvements shall be included in Plans in consultation with the City as needed to comply with the requirement to provide Improvements equal to 150% of the applicable phase's RTIF obligation for LDR units and 130% for MDR units.
- City may, at its discretion, delay the timing of infrastructure such that it falls to a future developer, then that future developer waives the right to contest the change in infrastructure requirements.
- All Improvements that are included in the CIP must be funded, constructed, or the Owner shall have entered into a public improvement agreement and provided the required security for such Improvements prior to recordation of the final subdivision map that includes the final residential units to be developed in the LDR and MDR zones.

EXHIBIT E

WRTP CAPITAL IMPROVEMENT PLAN MODIFICATIONS

It is understood that the following CIP items will need additional work after Specific Plan approval in order to provide a more accurate project cost for the CIP and fee program. The following items shall be investigated further so that the CIP and the fee program can be updated prior to the issuance of the first building permit in the Specific Plan. The CIP shall be updated consistent with the review and update of all of these items prior to the approval of the first phasing plan. These items need to be updated prior to first tentative map and phasing plan (because of right of way and cost implications). Tentative Map submissions to create large parcel maps do not trigger this requirement if they do not allow for development of LDR, VCLDR, MDR, or VCMDR residential units. The City shall enter into the contracts required to complete the work required to complete the following items with funding provided by the Owner and other property owners within the Specific Plan Area. OWNER and CITY agree that the City's staff time and legal expenses will be paid from the administrative portion of the RTIF.

- The CIP was developed assuming that the existing cross section for CR 25A can be reused for the future alignment of this roadway. If this is not true then there could be significant additional costs added to the CIP. Applicant to perform preliminary design work to verify horizontal and vertical alignment and update the cost estimate for CR 25A.

- Applicant to obtain survey information for Parkland Ave OC design to verify the amount of fill material needed for the abutment fill section. This information is also needed to set the right of way footprint for the abutment.

- The interchange footprint needs to be verified and included in the CIP update and in the dedication exhibit.

- The Miscellaneous segment of the CIP needs to be broken down in more detail by location so that the City can determine which developer to reimburse for what work.

- The Greenbelts, Parks and Ponds section of the CIP needs to be broken down in more detail by location so that the City can determine which developer to reimburse for what work.

- The development team will need to perform earthwork testing to determine if the pond excavation can be used as abutment fill material. Abutment backfill estimate to consider meeting Caltrans specifications. Surveying to be performed to determine quantities more accurately. If this earthwork testing is not performed, then the cost estimates shall be increased to account for off-hauling of the pond material and importing of the abutment material.

- Section N-N needs to be updated to account for modifications associated with the CR 25A/SR 113 interchange plans. The north side of section N-N and O-O will be modified to construct the landscaping and sidewalk. The south side of section N-N and O-O will not have a sidewalk (unless required by Caltrans).

-Review whether to add a sound wall to the CIP on the north side of CR 25A from the eastern edge of the Specific Plan to Road D.

-HCP/Ag mitigation to be included in the off site projects (if it applies).

-The size of roundabouts needs to be reviewed and approved by City staff prior to the update of the CIP and the dedication exhibit update.

-The City plans to change the name of County Road 25A (name is still not determined). The cost estimate will include the changes to any signs as part of the interchange project or the improvements to CR 25A.

-Subject to Caltrans approval, the City may choose to add minor landscaping improvements on the east side of SR 113 adjacent to the W RTP (planting/watering of trees and/or planting vines on the sound wall).

-The development team shall update unit costs in the CIP prior to updating the RTIF fee. The most recent cost estimate for the interchange will be included in the CIP update and the RTIF update.

EXHIBIT F

MASTER PLANNING AND DESIGN OBLIGATIONS

OWNER agrees that it will provide funding for certain master planning and design efforts that are required as part of the Specific Plan. These master planning and design efforts are required by the Specific Plan to be completed prior to the issuance of certain development approvals within the Specific Plan collectively, and as a result, certain developers within the Specific Plan may fund these master planning and design efforts in order to proceed with development and seek reimbursement from the other property owners within the Specific Plan Area pursuant to the Public Infrastructure Reimbursement Rules. In the event that other property owners have funded any of the master planning and design efforts set forth below, OWNER shall provide reimbursement for OWNER's proportionate share of the costs of such master planning and design efforts pursuant to the Public Infrastructure Reimbursement Rules. OWNER and CITY agree that the City's staff time and legal expenses will be paid from the administrative portion of the RTIF.

The master planning and design efforts are as follows:

- Master Parks Plan for Design of "The Yard" park as described in Section 6.2.3 of the Specific Plan. The Master Parks Plan for the Yard shall be consistent with and shall include the amenities set forth in the concept plan for The Yard that is attached to the CIP and will include a master plan level of design for The Yard. The Master Parks Plan shall be funded by contributions by OWNER and/or other property owners within the Specific Plan Area. The Master Parks Plan must be complete prior to the approval of the first tentative subdivision map or any other Subsequent Development Approval within the Specific Plan Area (excepting development of the Business Incubator property as set forth in the Development Agreement or development of affordable housing on a land dedication site as set forth in the WRTP Affordable Housing Plan). Tentative Map submissions to create large parcel maps do not trigger this requirement if they do not allow for the development of LDR, VCLDR, MDR or VCMDR residential units .
- Comprehensive Planting and Street Tree Palette. OWNER and other property owners within the Specific Plan Area shall fund the preparation of a comprehensive planting and street tree palette for both private and public landscaping improvements within the Specific Plan Area as more particularly described in Section 6.2.3 of the Specific Plan. This effort shall also include guidance on street furnishings, street lighting palettes and the conceptual design of Gateway monuments at the intersections of Road 25A and Road B and Road B and Marston Road. The Planting and Street Tree Palette shall be funded by contributions by OWNER and/or other property owners within the Specific Plan Area. The Planting and Street Tree Palette must be complete prior to the approval of the first tentative subdivision map or any other Subsequent Development Approval within the Specific Plan Area (excepting development of the Business Incubator property as set forth in the Development Agreement or development of affordable housing on a land dedication site as set forth in the WRTP Affordable Housing Plan).

- TDM/VMT Program. OWNER and other property owners shall fund the preparation of a Comprehensive Transportation Demand Management/Vehicle Miles Traveled Reduction Program (“TDM/VMT Program”) that shall (1) establish transportation strategies, programs, facilities or services for the purpose of VMT reduction and (2) provide specific VMT reduction strategies that all property owners/tenants shall be required to implement through individual Project-level TDM Plans consistent with the TDM/VMT Program. The TDM/VMT Program is more particularly described in Section 6.2.3 of the Specific Plan. The measures included in the TDM/VMT Program shall in combination achieve a 10 percent reduction in Plan Area VMT per capita compared to baseline conditions by 2035. The TDM/VMT Program shall be funded by contributions by OWNER and/or other property owners within the Specific Plan Area. The TDM/VMT Program must be complete prior to the approval of the first tentative subdivision map or any other Subsequent Development Approval within the Specific Plan Area. Prior to or as a condition of approval of OWNER’s first tentative subdivision map for the Property, OWNER must demonstrate to the satisfaction of CITY that a funding mechanism has been established to the satisfaction of CITY that will provide sufficient funding on an on-going basis to implement and maintain the Project-level TDM Plan or Plans for the Property.
- Infrastructure Study Report. OWNER and the other property owners within the Specific Plan Area shall fund the preparation of an Infrastructure Study Report which shall include the following items:
 - sound wall layout
 - signal interconnect exhibit
 - right of way dedication exhibit
 - greenway dedication exhibit
 - the yard exhibit and cost estimate
 - mobility hub exhibit and cost estimate
 - CFD map showing what will be maintained
 - Map and description for wells and pipes
 - Technical memos including correspondence (if necessary) and appendices (storm drainage, sewer, water, traffic etc)

EXHIBIT H

WOODLAND RESEARCH AND TECHNOLOGY PARK AFFORDABLE HOUSING PLAN

1. All residential development in the Woodland Research and Technology Park Specific Plan Area is subject to the Affordable and Inclusionary Housing obligations as set forth in the City of Woodland's Affordable Housing Ordinance (Woodland Municipal Code Chapter 15.16) as modified by this Plan to ensure the inclusion of Affordable Housing within the Specific Plan Area. Provisions of this Plan that specifically apply in the Specific Plan Area and are not otherwise set forth in the Affordable Housing Ordinance are specified as being "Specific to WRTP".
2. **Specific to WRTP** – A minimum of 160 units within the Specific Plan Area at build out of the Specific Plan are planned to be constructed and rented at an affordable rent or sold at an affordable housing cost to low income households. The payment of in-lieu fees is anticipated to provide supplemental funding to support the construction of these units. Further, a minimum of 279 units in the Specific Plan Area (inclusive of 160 units for low income households) shall be constructed at or above 30du/ac consistent with the requirements of the City's Housing Element. The requirements set forth below are intended to implement these goals.
3. Inclusionary Obligation – Consistent with the City of Woodland's Affordable Housing Ordinance all development within the Specific Plan Area must meet the following affordable housing requirement either through the construction and sale/rental of affordable units, or one of the alternative compliance methods set forth in this policy:
 - a. In all **For-Sale** projects of at least 10 units in size, 10% of new for-sale units shall be affordable to low income households.
 - b. Calculations of required affordable units that result in a fraction of a **For-Sale** unit shall be rounded up to the nearest whole unit.
 - c. Ten percent (10%) of all **multifamily rental units** shall be affordable to low income households.
 - d. These requirements shall apply to all **multifamily rental projects** of at least 20 units. Projects with fewer than 20 units are exempt from affordable housing requirements.
 - e. Calculations of required affordable **multifamily rental** units that result in a fraction of a unit shall be rounded up to the nearest whole unit.
 - f. **Specific to WRTP** – Residential units that are developed within the Village Center Mixed Use Zone are exempt from the requirements of this Policy and the Affordable Housing Ordinance.

4. In-Lieu Fees – Consistent with the requirements of the City of Woodland’s Affordable Housing Ordinance:
- a. Owner is permitted to pay in-lieu fees to satisfy all or a part of the Owner’s affordable housing obligation as set forth in Section 3 of this Plan, except that in those instances where Owner is required pursuant to section 5.b below to make a land dedication as part of Owner’s satisfaction of this Plan and the Affordable Housing Ordinance, Owner must first make the required land dedication and may only pay in-lieu fees to the extent that there is a remaining obligation after the land dedication is complete.
 - b. **Specific to WRTP** – In-lieu fee shall be paid at the following rates (which rates shall be adjusted by the City annually by the Construction Cost Index as published from time to time by the Engineering News-Record):
 - i. \$3.00/sf on all market rate Low Density Residential units
 - ii. \$2.50/sf on all market rate Medium Density Residential units
 - iii. \$2.00/sf on all market rate High Density Residential units
 - c. **Specific to WRTP** – In-lieu fees collected within the WRTP Specific Plan Area shall first be prioritized to support the construction of the required 160 low income affordable units within the Specific Plan Area. City will explore development of a program specific to the WRTP pursuant to which developers of property may receive credits toward their in-lieu fee obligations for the amounts being spent for public infrastructure in excess of their RTIF obligations. Under the contemplated program future RTIF funds would be deposited into the City’s housing trust fund rather than being used to reimburse or provide RTIF credits to developers. Any such program, if adopted, will provide considerations to ensure that in-lieu fees are available on a time-frame as needed to develop the affordable housing units contemplated by this Affordable Housing Plan. The priority focus of the program should be to incentivize the construction of MDR units. Any program adopted should ensure that the housing trust fund does not have more RTIF credits that can reasonably be used by affordable housing developers.
5. Land Dedication - In accordance with the City of Woodland’s Affordable Housing Ordinance:
- a. A developer of property located within the Medium Density Residential (MDR), Village Center Medium Density Residential (VCMDR) or High Density Residential (HDR) zone(s), may be allowed to make an irrevocable offer of dedication to the City or its designee of sufficient land to satisfy the affordability requirement. Any land dedication site shall be consistent with the requirements for land dedication **Specific to WRTP:** Land within the Low Density Residential (LDR) or

Village Center Low Density Residential (VCLDR) zones may not be dedicated to the City for purpose of meeting the Owner's affordable housing obligations.

- b. **Specific to WRTP** – Concurrently with the recordation of the first final subdivision map for properties designated as Urban Village North or South, High Density Residential in the Specific Plan, the Owner of such property shall dedicate a parcel of a minimum size of two and one half acres (unless the City, in its sole discretion, agrees to a smaller site based on a special housing need, or because the another High Density Residential parcel of greater than two and one-half acres was previously dedicated to affordable housing in the Specific Plan Area that would provide for greater than 80 units of affordable housing) to a non-profit or for-profit affordable housing developer, which developer must be approved by the City in its sole discretion, for the construction of an affordable rental housing project. The City may, at its discretion, allow the Owner to make an irrevocable offer of dedication of the parcel directly to the City in the event that the City has not approved an affordable housing developer at the time of recordation of the first final subdivision map for the applicable property. The dedicated parcel is not required to be located within the Property governed by this Development Agreement, provided that the parcel meets the requirements below, is located within the Specific Plan Area, and is designated for High Density Residential. The dedicated site must additionally conform with the following requirements:
 - i. The dedicated parcel shall be of a sufficient size and configuration to accommodate/provide a minimum of 80 residential units consistent with all applicable zoning and Specific Plan requirements (provided, however, that in the event that a prior land dedication site has been developed with greater than 80 units affordable to low income households, the City, may in its sole discretion approve a site that will provide a lesser number of residential units, so long as the minimum number of units will still allow for 160 total low income affordable housing units within the Specific Plan Area.
 - ii. Prior to acceptance of the offer of dedication by the affordable housing developer or City, as applicable, the dedicated parcel shall be fully improved with, or bonds shall be provided to ensure the construction of, infrastructure, frontage improvements (i.e., curb, gutter, walk), paved street access, utility (i.e., water, gas, sewer and electric) service connections stubbed to the property lines, and other such off-site improvements as may be necessary for development of the required affordable units or as required by the City.
- c. An owner who dedicates a land dedication parcel pursuant to this Section 5 shall receive credit toward its inclusionary obligation for HDR project(s) based on the appraised FMV of the land dedication site. In-lieu fee credits may not be

transferred to other lower density zones without separate City approval, in City's sole discretion. The value of the site will be treated as equivalent to a payment of affordable housing in-lieu fees based on the rates set forth in Section 4.b. Any remaining affordable housing obligation shall be provided in the form of affordable housing in-lieu fees paid as set forth in Section 4.b or through the construction of affordable units within the Project.

EXHIBIT I

MAINTENANCE SERVICES TO BE FUNDED BY MAINTENANCE CFD

Following improvements shall be maintained with funding to be established through the Maintenance CFD

- Landscape maintenance for any parks, landscaped medians, and greenbelts located within the Specific Plan Area, including but not limited to sidewalks, play equipment, lighting, and irrigation
- Tree-related services for all street trees within the Specific Plan Area, including tree inspections, planting, watering, re-staking, mulching and weeding, fertilization, insect and disease control, pruning, and hazardous tree removal.
- Maintenance of the improvements included as part of any detention pond/open space areas within the Specific Plan Area, including walking paths and other amenities included with the detention pond
- Fair share cost for maintenance of any storm drainage features downstream of the Specific Plan Area, including but not limited to the following:
 - East Regional Pond
 - North Regional Pond
 - County Road 25A Channel
 - Outfall Channel and Outfall Channel Outlet Structure
 - Farmers Central Drainage Channel
 - Any drainage features conveying storm drainage between the features listed above
- Lighting and landscape maintenance for one-half of the Pedestrian Overcrossing. The City will designate the portion of the Pedestrian Overcrossing funded by the Maintenance CFD at its discretion in conformance with all applicable law..
- Lighting and landscape maintenance, including any enhanced landscaping/public art/entry monument at the roundabouts, for which the City is responsible on the east side of the State Route 113/County Road 25A interchange. The specific area in the interchange funded by the Maintenance CFD shall be determined by the City at its discretion in conformance with all applicable law.
- Lighting and landscape maintenance for the east side of the future Parkland Avenue Overcrossing.
- Maintenance of traffic signals and street lights within the Specific Plan Area
- Funding of requirements identified in the Transportation Demand Management (TDM) plan, VMT, and Transit Program, as being funded through the Maintenance CFD.
- Maintenance of Specific Plan Area multi-use pedestrian/bike paths, sound walls, street furniture, public art, entry monument/enhanced landscaping, and mobility hub/transit
- Maintenance of any landscaping on the east side of SR 113 adjacent to the project limits of the WRTP.

EXHIBIT J

PUBLIC INFRASTRUCTURE REIMBURSEMENT RULES

PUBLIC INFRASTRUCTURE REIMBURSEMENT RULES FOR THE WOODLAND RESEARCH AND TECHNOLOGY PARK SPECIFIC PLAN

1. Construction of Public Infrastructure and Dedication of Land Owned by Owner.

a. Parties agree that each Owner shall, for the collective benefit of all Owners in the Specific Plan Area (1) dedicate such real property located on their property that is required for public infrastructure as set forth in the Capital Improvement Program (the “CIP”) and (2) design and construct public infrastructure required to serve the Specific Plan Area in accordance with the requirements of their respective development agreements, infrastructure phasing plans, tentative subdivision maps and public improvement agreements. Owners dedicating real property for public infrastructure projects included in the CIP and reflected in the RTIF and/or constructing such public infrastructure shall receive RTIF fee credits and reimbursement pursuant to the terms of these rules and the Individual Reimbursement Agreements to be entered into by and between individual Owners and the City, as more specifically described herein.

b. Prior to dedication of real property for public infrastructure projects included in the CIP and reflected in the RTIF and/or commencement of construction of any public infrastructure as required pursuant to an approved infrastructure phasing plan, and pursuant to the CIP the Owner shall enter into an individual reimbursement agreement in a form approved by the City Attorney. The individual reimbursement agreement shall establish the manner in which the Property Owner will solicit bids for construction of the public infrastructure, administer the applicable contracts, document costs incurred in connection with the public infrastructure work, and shall more specifically establish the manner in which the Owner shall receive fee credits and reimbursement for such construction work, as well as any dedication of real property associated with such construction work. The terms of the individual reimbursement agreement shall be consistent with these Reimbursement Rules.

2. Master Planning and Design Work.

a. Owners are collectively responsible pursuant to the terms of their respective development agreements for funding the analysis and consideration of certain modifications to the CIP as more specifically described in each Development Agreement as Exhibit E (the “CIP Modification Work”) and certain master planning and design work as is more specifically described in each Development Agreement as Exhibit F (the “Master Planning and Design Work”).

b. Owners agree that the first Owner to submit an application to the City for a tentative subdivision map within the Specific Plan Area shall provide advance funding for all CIP Modification Work and Master Planning and Design Work described in each Development Agreement as Exhibits E and F. Prior to submission of an application for such first tentative subdivision map, the applicable Owner shall enter into an advance funding agreement with the City in a form as approved by the City Attorney for the cost of such CIP Modification and Master Planning and Design Work, and shall continue to fund such costs through completion of the work. All CIP Modification and Master Planning and Design Work described in Exhibits E and F must be completed prior to City approval of the first tentative subdivision map or other discretionary development approval for property within the Specific Plan Area. The Owner that funds the CIP modification work and the master planning and design work shall be eligible for reimbursement from other Owners in accordance with the terms of the respective Development Agreements and as set forth in Section 4(h) of this Exhibit. The CIP Modification and Master Planning and Design Work shall be conducted by the City, unless the City directs the Owner to contract for such work directly with the applicable consultants.

3. Dedication of Land for Public Infrastructure Constructed by Others..

a. Owners acknowledge and agree that their respective properties will not develop at the same time, and that initial development in the Specific Plan will require certain backbone infrastructure such as public right of way, public utility easements, stormwater detention facilities and other facilities that will be necessary for that initial development to proceed. Therefore, there is a likelihood that the Owners developing their property first will require one or more other Owners to dedicate right of way, easements, rights of access and egress and/or fee title to property (the “Dedication Property”) for public infrastructure required under the Specific Plan in order for the first Owner to complete the public infrastructure required under its infrastructure phasing plan and applicable public improvement agreement.

b. In order to ensure the orderly and efficient construction of public infrastructure to serve the entirety of the Specific Plan Area, each Owner agrees that in the event that Dedication Property within the boundaries of one Owner is required by the approved infrastructure phasing plan of another Owner, the first Owner (for purposes of this Section, the “Dedicating Property Owner”) shall dedicate such required Dedication Property to the City in accordance with the terms and conditions of these rules.

c. At such time that the City and the Owner planning to construct public infrastructure on the Dedication Property (for purposes of this Section, the “Constructing Property Owner”) determine that the Dedicating Property Owner’s Dedication Property will be required, the City shall notify the

Dedicating Property Owner, and shall request rights of access and egress to the Dedicating Property Owner's property as necessary to prepare any surveys or other analysis as necessary or appropriate to effectuate the transfer of the Dedication Property. Upon receipt of such notification, the Dedicating Property Owner shall grant rights of access and egress to their property at no cost other than the amount paid through the RTIF program, subject to an access agreement with terms as reasonably agreed to between City and Dedicating Property Owner, to complete such survey work and additional analysis required for such dedication.

d. The City shall thereafter submit to the Dedicating Property Owner the documentation required for the granting of such Dedication Property as well as any temporary construction easements and rights of access and egress as required to complete the construction of the public infrastructure, and the Dedicating Property Owner shall execute such documentation, in recordable form as applicable, and return to the City for recordation. Said documentation shall be delivered to the City in a reasonable time frame with the goal being within ten (10) days of the date of receipt by Dedicating Property Owner of such documentation. Failure by the Dedicating Property Owner to execute and deliver the documentation within thirty (30) days of receipt by Dedicating Property Owner shall be a material default under the terms of the Development Agreement and the City may bring an action for specific performance to compel the dedication of the required lands in accordance with this Section. Prior to initiating litigation, the City shall enter into an advance funding agreement with the Constructing Property Owner to fund the cost of such litigation.

4. Fee Credits and Reimbursement for Costs Incurred by Owners.

a. Each Owner shall be entitled to fee credits and reimbursement for construction of public infrastructure, for the dedication of Property for construction of public infrastructure by other Owners, for dedication of real property upon which they construct public infrastructure, and CIP Modification and Master Planning and Design Work funded by an Owner as set forth in the respective Development Agreements.

b. Valuation of Construction Costs. Owners may receive credit and reimbursement for the lesser of the cost established for public infrastructure as set forth in the Schedule of Costs contained in the CIP, subject to any modification that may be made by and in the sole discretion of the City Engineer or designee, or the actual cost of construction of the applicable public improvements. For purposes of determining the cost of the public improvements in comparison to the amounts in the CIP, the Owner may group the calculation of all improvements constructed with the same tentative map, constructed during the same time period and submitted for City documentation at the same time. The valuation for the cost of such construction work shall be established based on the valuations contained in the CIP (as will be amended from time to time and as

updated annually based on the Construction Cost Index (“CCI”)) at the time the Owner awards the construction contract for the applicable public improvement. If construction is not completed in the same calendar year as the contract is awarded, then the CIP valuation may be increased by up to one year of CCI (in addition to any other changes to the CIP that may have occurred between contract award and July 1 of the following year). If the Owner requests credit and reimbursement in the same year that the contract is awarded (either through this subsection b. or through subsection f. below), then they shall not be eligible for the additional year of CCI. Following completion of the applicable public improvements, the Owner shall provide to the City Engineer or designee documentation of actual construction costs for the applicable public improvements. Credit and reimbursement shall be provided based on the lesser of the CIP valuation established at the time of contract award (and if applicable as amended by one year of CCI), or actual costs documented by the Owner. Soft costs associated with the applicable public improvement shall be valued based on valuations contained in the CIP, except that the City has the discretion to request documentation of the soft costs actually incurred by Property Owner, and may value such soft costs based on the costs actually incurred if they are less than the values set forth in the CIP. In the event that a Owner constructs a portion of public infrastructure in a manner that will increase the costs to future Owners that will be required to complete such infrastructure as determined by the City Engineer, the City has the discretion to reduce the valuation of the completed improvement in an amount equal to the City Engineer’s estimate of the increased cost to such future Owner. Examples of this reduced reimbursement include but are not limited to: the partial construction of a road that would make the remaining portion less efficient to construct or the realignment of utilities such that the unbuilt segment is deeper or has a longer distance to travel. City shall have final approval authority regarding whether a particular cost will be approved as a credited cost under these rules, which approval shall not be unreasonably withheld.

c. Valuation of Real Property Dedicated for Public Use. To determine the value of real property to be dedicated by each Owner, the City shall use the value of such property set forth in the Schedule of Costs contained in the CIP (as will be adjusted from time to time based on the Construction Cost Index as published by the Engineering News-Record (“CCI”) through City annual updates to the CIP) for the applicable dedicated real property interests on the date that such dedicated real property is accepted by the City. This applies whether such real property is dedicated for public infrastructure constructed by the dedicating Owner or is property dedicated for improvements to be constructed by other Owners.

d. Valuation of CIP Modification and Master Planning and Design Work. The City will determine the value of CIP Modification and Master Planning and Design Work completed by each Owner as follows: In the event that the City completes CIP Modification and Master Planning and Design Work

required of the Owner, the valuation for that work shall be established on the date that the funds for such work are deposited with the City. In the event that the Owner completes certain CIP Modification and Master Planning and Design Work, the valuation for that work shall be established on the date that the Owner executes a contract for such CIP Modification and Master Planning and Design Work, provided that the Owner shall not be eligible for reimbursement until the work is complete and accepted or approved by the City, as applicable. All contracts (including contract amendments) entered into directly by the Owner for CIP Modification and Master Planning and Design Work must be reviewed by the City and approved in writing prior to contract execution (or contract amendment execution) in order to be eligible for reimbursement. The City shall notify the Owners of the total amount of such costs at such time that the valuation for such costs is established and that amount shall be added to the Reimbursement Account for the Owner funding such costs. Thereafter, the costs will be annually adjusted as set forth in paragraph e. below.

e. Annual Adjustments to Valuations. The outstanding amount of costs incurred by each Owner shall be determined and maintained by City as a “Credit/Reimbursement Account” for each Owner. The balance of each Credit/Reimbursement Account shall be adjusted annually by a percentage amount equal to the Construction Cost Index as published from time to time by the Engineering News-Record Twenty City Index or other index adopted by the City Council (“CCI”) at the same time and by the same percentage that the City adjusts the RTIF. The value of the outstanding costs shall only be adjusted when and if the RTIF is adjusted, and in the event, or any reason, the City does not adjust the RTIF in a given year, the outstanding value of any outstanding costs contained in a Credit/Reimbursement Account similarly shall not be adjusted. Notwithstanding the foregoing, the balance associated with any public improvements constructed by a Owner shall not be adjusted by CCI until such time that the public improvements are accepted by the City, after which the City shall adjust such balances in accordance with this paragraph.

f. Fee Credits. Each Owner shall receive fee credits against its overall RTIF obligation equal to the total value of the construction of the RTIF public infrastructure funded by Owner and dedication of real property by the Owner. Owners will not receive fee credits for the costs of CIP Modification and Master Planning and Design Work. Those costs will be reimbursed pursuant to the terms described in paragraph h, below. Fee credits will be applied toward Owner’s RTIF obligations so long as Owner has available fee credits, except that such credits shall not be applied toward the portion of the RTIF that is attributable to administration costs (the “Administration Portion”). The Administration Portion of the RTIF shall be paid at the time of building permit issuance, and shall be accounted for by the City separately from the remainder of the RTIF. Upon application of any fee credit to units to be constructed by Owner, Owner’s Credit/Reimbursement Account will be reduced in the amount of the fee credit. Fee credits that are based on dedication of real property shall be

available to be used by Owner only after the real property dedication is accepted by the City. Fee credits that are based on construction of public infrastructure shall be available to be used by Owner only after the public infrastructure has been accepted by the City and the City Engineer or designee has verified the costs incurred by Owner for such infrastructure. Notwithstanding the foregoing, Owners may request authorization to utilize fee credits for the construction of public infrastructure prior to acceptance of such public infrastructure by the City, provided that the City will only authorize the utilization of fee credits prior to completion one time for each public infrastructure project. The authorized fee credit shall be limited to 85% of the value of the public infrastructure as set forth in the CIP at the time of Property Owner's request, excluding values in the CIP for soft costs and contingency. Any such request for fee credits prior to acceptance of the applicable partially completed public infrastructure shall be made in writing, and approved by the City in writing based on the sole discretion of the City Engineer. The City Engineer shall verify that the requested amount of fee credits is justified based on the amount of completed infrastructure, including testing of infrastructure. Each Owner that funds the design and construction for the CR 25A/SR 113 interchange shall receive fee credits at the time of payment to the City. Further, the City may collect RTIF funding for other specific capital improvement projects to be constructed by the City. If the City collects RTIF funding from a Owner for a specific capital improvement project as contemplated herein, the Owner shall receive fee credits at the time of payment to the City.

g. Reimbursement Process for Public Infrastructure and Real Property Dedication. Reimbursement will be paid on a "first in, first out" basis, with the first public infrastructure and/or real property accepted by the City eligible for the first reimbursement payments from available RTIF; (excluding the portion of the RTIF attributable to Administration Portion of the RTIF), and subsequent construction and/or dedications being eligible for reimbursement in the chronological order in which they are accepted by the City. In the event that there is not available RTIF to reimburse the Owner at the time the public infrastructure and/or real property is accepted by City, the reimbursements shall be paid as RTIF funds become available.

h. Reimbursement Process for CIP Modification and Master Planning and Design Costs. Reimbursement for CIP Modification and Master Planning and Design Work costs incurred by an Owner shall be paid from the Administration Portion of the RTIF collected by the City. The City will provide reimbursement to the Owners that incur such CIP Modification and Master Planning and Design Work costs pursuant to an individual reimbursement agreement to be entered into by and between City and Owner that will establish the amount of reimbursement available to the Owner, and subject to the terms of these Reimbursement Rules. Reimbursement for the CIP Modification and Master Planning and Design Work costs will be paid on a "first in, first out" basis, with the first CIP Modification and Master Planning and Design Work accepted or approved by the City eligible for the first reimbursement payments

from the available Administration Portion of the RTIF, and subsequent CIP Modification and Master Planning and Design Work being eligible for reimbursement in the chronological order in which the work is accepted or approved by the City. In the event that there is not available Administration Portion of the RTIF to reimburse the Owner at the time the CIP Modification and Master Planning and Design Work is accepted or approved by City, the reimbursements shall be paid as the Portion of the RTIF becomes available. The City's Director of Administrative Services will determine, in their sole discretion, when sufficient funding from the Administration Portion of the RTIF is available for reimbursement, taking into account other costs required to be paid from the Administration Portion of the RTIF, such as City Attorney or staff costs.

i. City Will Reimburse Only From Cash Available. City shall only reimburse Owners from cash that is available for such reimbursement from CFD bond proceeds, cash payments made pursuant to agreements entered into with other Property Owners to fund the costs of such public improvements, or proceeds of RTIF payments. Reimbursement shall be limited to available CFD bond proceeds or funds obtained from other Owners. Nothing in this Agreement obligates, or shall be deemed to obligate, City to use General Fund monies or any other source of City revenues to satisfy any Owner's claim for reimbursement. City's obligation to reimburse Owner pursuant to this Agreement shall be limited to CFD bond proceeds or other funds actually received by City from other owners in accordance with the terms of existing agreements and procedures. Owners acknowledge and agree that the City shall collect RTIF funding for specific capital improvement projects to be constructed by the City, including but not limited to the CR 25A/SR 113 Interchange Project. The funding the City receives toward the CR 25A/SR 113 Interchange Project or any other RTIF funded capital improvement project to be constructed by the City will not be available for reimbursement to Property Owners. Following completion of the CR 25A/SR 113 Interchange Project, the City will review whether an adjustment to the CIP and fee program for the RTIF is possible, based on the amount of funding available at that time.

EXHIBIT K

WRTP PROJECT FEES

CITY shall collect any of the following fees based on the project conditions of approval, the WRTP approval documents and as defined in this Exhibit K. The fees set forth herein do not include fees imposed by other agencies, such as the County of Yolo or Woodland Joint Unified School District. Actual fee amounts owed by OWNER will be the then-current amounts of such fees at the time they are paid by OWNER. All fees are subject to annual Construction Cost Increases (CCI) and may be subject to increases based on City evaluation of the various fee programs in accordance with applicable State law, or with regard to the RTIF, in accordance with the Development Agreement and the RTIF Report. The Engineering News-Record Twenty City Index or other index adopted by the City Council shall be used for the calculation of CCI.

Development Impact Fees for the following categories and amounts are shown as of September 2023. The Administrative Guidelines in effect on the date of the approval of this Agreement shall be used for the duration of this Agreement.

Development Impact Fee	Greenfield SFD (Single Family Dwelling)	Greenfield MFU (Multi-family Unit)
General City	\$1,005	\$755
Fire	\$3,406	\$2,042
Library	\$628	\$471
Police	\$823	\$616
Wastewater	\$7,524	\$5,642
Water Capacity Fee	\$6,174	\$4,630*
Parks & Recreational Facilities	\$9,279	\$6,959
Roads	\$9,915	\$4,063
Admin Fee (.75%)	\$291	\$189
Storm Drainage Facilities	\$0	\$0
Total	\$39,045	\$25,367
Storm drainage is \$0 for the WRTP, as it is all paid in the RTIF. Water fee is reduced (to 75% of the SF rate) for multifamily. *Water Capacity Fee will be determined by meter size		

Other fees include all fees identified in this Agreement or conditions of approval which are linked to final map approval or issuance of a building permit, as follows:

- RTIF fees for the cost of the backbone infrastructure to the Woodland Research and Technology Park plan area (September 2023 fees) are as listed in Attachment No. 1 to this Exhibit.
- Habitat Conservation Obligation. Before any ground-disturbing activities, the City will require project proponent/s to submit the Yolo HCP/NCCP *Application Form* for non-member agency projects and *Member Agency Reporting Form* for member agency projects, as applicable, and pay applicable fees to the Yolo Habitat Conservancy as specified in the appropriate form.
- Affordable Housing. All residential projects are subject to the Citywide Affordable Housing

Ordinance (WMC Chapter 15.16) which requires a 10 percent inclusionary housing obligation, except where modified by the W RTP Project Development Agreement (Exhibit H). Applicants shall comply with their inclusionary obligation through on site construction of affordable units, through the payment of in-lieu fees, and/or through land dedication as specified in Exhibit H. The current in-lieu fees are as follows: for LDR \$3.00/building sq ft, for MDR \$2.50/building sq ft and for HDR \$2.00/building sq ft

- Conversion of Prime Agricultural Land. Project applicants for future projects proposed within the W RTP Specific Plan Area are required to comply with Woodland Municipal Code Chapter 15.33, which requires replacement of Prime Farmland at a 1:1 ratio. In addition, the South Regional Pond development area is subject to the County's agricultural conservation ordinance (Section 8-2.404 and Section 8.2-405 of the Yolo County Code), which requires replacement of Prime Farmland at a ratio of three acres of conserved farmland to one acre of converted land and replacement of other types of farmland at a ratio of two acres to one; small projects of less than 20 acres may pay an in-lieu fee rather than conserve farmland directly.
- Fair Share Cost of public facilities, services and improvements as determined by the City of Woodland nexus study (MPFP fee triggered at building permit)
- Public transit capital fee of \$311 for LDR, \$212 for MDR and \$159 for HDR. This fee will be used to pay for the construction of transit capital improvements.
- Installation of or payment of fees consistent with the City's Public Art Ordinance.
- Tentative Map processing shall be paid on a time and materials basis based on the City's current liability account procedures (at the time of project application).
- With regard to Engineering fees: Plan Check fees shall be 3% of the value of the improvements or as modified based on the engineering fees in effect at time of Development Agreement approval. At the City's option, inspection fees will be paid for on a time and materials basis or on a fee basis per the engineering fees in effect at the time of Development Agreement approval.
- Building permit fees, planning fees, fire department fees and all other development processing fees not mentioned in this Exhibit will be those fees in effect at the time the various documents are submitted to the City for approval; provided that the Property shall only be subject to City fees to the extent they existed at the time this Agreement was approved by City Council. City has disclosed and Owner has acknowledged that City may during the term of this Agreement adopt new and different City-wide processes and labels for processing development approvals and development processing fees. Owner will comply with changes as they apply to the Property, provided that in no case shall such changes adversely affect or modify Owner's rights under this Agreement, nor shall such changes increase the total costs payable by Owner for development processing fees above what would have been charged for the applicable development approvals immediately prior to such change, without a mutually agreed amendment to this Agreement.
- If any fees are modified or new fees are created based on County, State or Federal requirements (or in response to County, State and Federal requirements), then those fees shall be paid based on the fees in effect at the time the various documents are submitted to the City for approval, provided that any increased cost to Owner shall be limited to the costs related to County, State and Federal requirements). If any building fees are modified or new fees are created based on the International Code Council (ICC) or similarly used resources in the building industry, then those fees shall be paid based on the fees in effect at the time the various documents are submitted to the City for approval.

FORM OF ASSIGNMENT AND ASSUMPTION AGREEMENT

RECORDING REQUESTED BY AND
WHEN RECORDED MAIL TO:

Attention: _____

Space Above this Line Reserved for Recorder's Use

**ASSIGNMENT AND ASSUMPTION
OF DEVELOPMENT AGREEMENT**

THIS ASSIGNMENT AND ASSUMPTION OF DEVELOPMENT AGREEMENT (this “**Assignment**”) is made effective as of _____, 20__ (the “**Effective Date**”), by and between _____, L.P., a California limited partnership (“**Assignor**”), and _____, L.P., a California limited partnership (“**Assignee**”).

RECITALS

A. The City of Woodland (“**City**”) adopted Ordinance Number ____ on _____, 20__, authorizing entry into that certain Development Agreement by and between the City of Woodland (the “**City**”) and Assignor, dated on or about _____ (the “**Development Agreement**”), as Document No. ____ - _____ in the Official Records of the County Recorder for Yolo County, California (the “**Official Records**”). The Development Agreement as used herein shall mean, refer to, and include the Development Agreement, as well as any exhibits, addenda, operating memoranda, implementation agreements, amendments, and attachments thereto (which are hereby incorporated herein by this reference) as well as other documents expressly incorporated by reference in the Development Agreement. Capitalized terms not defined herein shall have the meanings ascribed to them in the Development Agreement.

B. The Development Agreement grants certain rights, duties, and obligations with respect to the development and improvement of certain real property in the City of Woodland, County of Yolo, State of California, as more particularly described in **Exhibit “A”** attached hereto and incorporated herein (the “**Property**”) as more particularly set forth in the Development Agreement (the “**Development Agreement Rights, Duties and Obligations**”).

C. Paragraph 2.4 of the Development Agreement describes the process for assignment of the Development Agreement Rights, Duties and Obligations.

D. Assignor desires to assign to Assignee, and Assignee desires to accept and assume, each and all of Assignor's Development Agreement Rights, Duties and Obligations.

AGREEMENT

NOW THEREFORE, for good and valuable consideration, the receipt and adequacy of which are hereby acknowledged, Assignor and Assignee hereby agree as follows:

1. Assignment. Effective as of the date of recordation of this Assignment, Assignor hereby assigns to Assignee all of the Development Agreement Rights, Duties and Obligations.

2. Acceptance and Assumption. Effective as of the date of recordation of this Assignment, Assignee hereby accepts the foregoing assignment of the Development Agreement Rights, Duties and Obligations from Assignor and unconditionally assumes and agrees to perform each and all of the duties, covenants, and obligations comprising the Development Agreement Rights, Duties and Obligations, first arising from and after the date of recordation of this Assignment pursuant to the Development Agreement (collectively, the "**Assumed Obligations**").

3. Assignor Not Released. Assignor and Assignee acknowledge and agree that, pursuant to Section 2.4.2 of the Development Agreement, Assignor shall continue to be obligated under the Development Agreement unless and until Assignor is given a release in writing by the City.

4. Assignee Address. The principal address of Assignee for purposes of the Development Agreement is as follows:

Attention: _____
E-mail: _____

5. Miscellaneous.

(a) This Assignment shall be determined in accordance with and governed by the laws of the State of California.

(b) This Assignment may be executed in counterparts, each of which shall be deemed an original and which, when taken together, shall constitute a complete instrument.

(c) Each party agrees to perform any further acts, and to execute and deliver any further documents that may be reasonably necessary or required to carry out the intent and provisions of this Assignment and the transactions contemplated hereby.

(d) This Assignment shall bind and inure to the benefit of the respective heirs, personal representatives, grantees, successors, and assigns of the parties hereto.

IN WITNESS WHEREOF, the parties hereto have caused this Assignment to be signed by their duly authorized officers as of the day and year first written above.

FORM OF PARTIAL ASSIGNMENT AND ASSUMPTION AGREEMENT

RECORDING REQUESTED BY AND
WHEN RECORDED MAIL TO:

Attention: _____

Space Above this Line Reserved for Recorder's Use

**PARTIAL ASSIGNMENT AND ASSUMPTION
OF DEVELOPMENT AGREEMENT**

THIS PARTIAL ASSIGNMENT AND ASSUMPTION OF DEVELOPMENT AGREEMENT (this "**Assignment**") is made effective as of _____, 20__ (the "**Effective Date**"), by and between _____, a _____ ("**Assignor**"), and _____, a _____ ("**Assignee**").

RECITALS

A. The City of Woodland ("**City**") adopted Ordinance Number ____ on _____, 20__, authorizing entry into that certain Development Agreement by and between the City of Woodland (the "**City**") and Assignor, dated on or about _____, (the "**Development Agreement**") which was recorded on _____, 20__, as Document No. ____ - _____ in the Official Records of the County Recorder for Yolo County, California (the "**Official Records**"). The Development Agreement as used herein shall mean, refer to, and include the Development Agreement, as well as any exhibits, addenda, operating memoranda, implementation agreements, amendments, and attachments thereto (which are hereby incorporated herein by this reference) as well as other documents expressly incorporated by reference in the Development Agreement. Capitalized terms not defined herein shall have the meanings ascribed to them in the Development Agreement.

B. The Development Agreement grants certain rights, duties, and obligations with respect to the development and improvement of certain real property in the City of Woodland, County of Yolo, State of California, as more particularly described in **Exhibit "A"** attached hereto and incorporated herein (the "**Entire Property**"), including, without limitation, with respect to the property described in attached **Exhibit "B"** (the "**Transferred Property**") as more particularly set forth in the Development Agreement (the "**Development Agreement Rights, Duties and Obligations**").

C. Paragraph 2.4.6 of the Development Agreement describes the process for the partial assignment of the Development Agreement Rights, Duties and Obligations.

D. Assignor desires to assign to Assignee, and Assignee desires to accept and assume, each and all of Assignor's Development Agreement Rights, Duties and Obligations as they pertain and relate to the Transferred Property.

AGREEMENT

NOW THEREFORE, for good and valuable consideration, the receipt and adequacy of which are hereby acknowledged, Assignor and Assignee hereby agree as follows:

6. Assignment. Effective as of the date of recordation of this Assignment, Assignor hereby assigns to Assignee all of the Development Agreement Rights, Duties and Obligations relating or pertaining to the Transferred Property.

7. Acceptance and Assumption. Effective as of the date of recordation of this Assignment, Assignee hereby accepts the foregoing assignment of the Development Agreement Rights, Duties and Obligations from Assignor and unconditionally assumes and agrees to perform each and all of the duties, covenants, and obligations comprising the Development Agreement Rights, Duties and Obligations relating or pertaining to the Transferred Property, first arising from and after the date of recordation of this Assignment pursuant to the Development Agreement (collectively, the "**Assumed Obligations**").

8. Assignor Not Released. Assignor and Assignee acknowledge and agree that, pursuant to Section 2.4.6 of the Development Agreement, Assignor shall continue to be obligated under the Development Agreement unless and until Assignor is given a release in writing by the City.

9. Assignee Address. The principal address of Assignee for purposes of the Development Agreement is as follows:

Attention: _____
E-mail: _____

10. Miscellaneous.

(a) This Assignment shall be determined in accordance with and governed by the laws of the State of California.

(b) This Assignment may be executed in counterparts, each of which shall be deemed an original and which, when taken together, shall constitute a complete instrument.

(c) Each party agrees to perform any further acts, and to execute and deliver any further documents that may be reasonably necessary or required to carry out the intent and provisions of this Assignment and the transactions contemplated hereby.

(d) This Assignment shall bind and inure to the benefit of the respective heirs, personal representatives, grantees, successors, and assigns of the parties hereto.

IN WITNESS WHEREOF, the parties hereto have caused this Assignment to be signed by their duly authorized officers as of the day and year first written above.

DEVELOPMENT AGREEMENT BETWEEN

CITY OF WOODLAND

and

**THOMAS HEATON AND OLGA CHENGAEVA, TRUSTEES OF THE THOMAS
HEATON AND OLGA CHENGAEVA TRUST**

DEVELOPMENT AGREEMENT NO. ____

This Development Agreement (hereinafter “Agreement”) is entered into effective on the date it is recorded with the Yolo County Recorder (hereinafter the “Effective Date”) by and among the City of Woodland, a California municipal corporation (hereinafter “CITY”), and Thomas Heaton and Olga Chengaeva, Trustees of the Thomas Heaton and Olga Chengaeva Trust (hereinafter “OWNER”):

RECITALS

WHEREAS, CITY is authorized to enter into binding development agreements with persons having legal or equitable interests in real property for the development of such property, pursuant to Section 65864 et seq. of the Government Code; and

WHEREAS, OWNER has requested CITY to enter into a development agreement and proceedings have been taken in accordance with the rules and regulations of CITY; and

WHEREAS, by electing to enter into this Agreement, CITY shall bind future City Councils of CITY by the obligations specified herein and limit the future exercise of certain governmental and proprietary powers of CITY; and

WHEREAS, the terms and conditions of this Agreement have undergone extensive review by CITY and the City Council and have been found to be fair, just and reasonable; and

WHEREAS, the best interests of the citizens of the CITY and the public health, safety and welfare will be served by entering into this Agreement; and

WHEREAS, all of the procedures of the California Environmental Quality Act have been met with respect to the Project and the Agreement in that the City certified a Final Environmental Impact Report for the Woodland Research and Technology Park Specific Plan (the “Final EIR”), which Specific Plan Area includes the Project, and which was fully analyzed as part of the Final EIR; and

WHEREAS, OWNER has jointly filed an application with other adjacent property owners for, and the City Council has approved, the Woodland Research and Technology Park Specific Plan (the “Specific Plan”), governing the development of the Property; and

WHEREAS, this Agreement and the Project are consistent with the CITY’s General Plan and the Specific Plan applicable thereto; and

WHEREAS, all actions taken and approvals given by CITY have been duly taken or approved in accordance with all applicable legal requirements for notice, public hearings, findings, votes, and other procedural matters; and

WHEREAS, development of the Property in accordance with this Agreement will provide substantial benefits to CITY and will further important policies and goals of CITY; and

WHEREAS, this Agreement will eliminate uncertainty in planning and provide for the orderly development of the Property, ensure progressive installation of necessary improvements, provide for public services appropriate to the development of the Project, and generally serve the purposes for which development agreements under Sections 65864 et seq of the Government Code are intended; and

WHEREAS, OWNER has incurred and will in the future incur substantial costs in order to assure development of the Property in accordance with this Agreement; and

WHEREAS, OWNER has incurred and will in the future incur substantial costs in excess of the generally applicable requirements in order to assure vesting of legal rights to develop the Property in accordance with this Agreement.

AGREEMENT

NOW, THEREFORE, in consideration of the above recitals and of the mutual covenants hereinafter contained and for other good and valuable consideration, the receipt and sufficiency of which is hereby acknowledged, the parties agree as follows:

1. DEFINITIONS AND EXHIBITS.

1.1 Definitions. The following terms when used in this Agreement shall be defined as follows:

1.1.1 “Agreement” means this Development Agreement.

1.1.2 “CITY” means the City of Woodland, a municipal corporation, organized and existing pursuant to the laws of the State of California.

1.1.3 “Capital Improvement Plan” or “CIP” means the Capital Improvement Plan adopted by the City Council for the Specific Plan by Resolution No. _____, as it may be amended from time to time by the CITY.

1.1.4 “Development” means the improvement of the Property for the purposes of completing the structures, improvements and facilities comprising the Project including, but not limited to: grading; the construction of infrastructure and public facilities related to the Project whether located within or outside the Property; the construction of buildings and structures; and the installation of landscaping. “Development” does not include the maintenance, repair, reconstruction or redevelopment of any building, structure, improvement or facility after the construction and completion thereof.

1.1.5 “Development Approvals” means all permits and other entitlements for use subject to approval or issuance by CITY in connection with development of the Property including, but not limited to:

(a) the Woodland Research and Technology Park Specific Plan, as it may be amended from time to time;

- (b) tentative and final subdivision maps, including large and small lot mapping, and parcel maps;
- (c) conditional use permits, design review approvals and plot plans;
- (d) zoning;
- (e) grading and building permits.

1.1.6 “Development Exaction” means any requirement of CITY in connection with or pursuant to any Land Use Regulation or Development Approval for the dedication of easements, land, the construction of improvements or public facilities, or the payment of fees in order to lessen, offset, mitigate or compensate for the impacts of development on the environment or other public interests.

1.1.7 “Development Impact Fee” means a monetary exaction other than a tax or special assessment, whether established for a broad class of projects by legislation of general applicability or imposed on a specific project on an ad hoc basis, that is charged by a local agency to the applicant in connection with approval of a development project for the purpose of defraying all or a portion of the cost of public facilities related to the development project, but does not include park “in lieu” fees specified in Government Code Section 66477, fees for processing applications for governmental regulatory actions or approvals, fees collected under development agreements adopted pursuant to Article 2.5 of the Government Code (commencing with Section 65864) of Chapter 4. “Development Impact Fee” shall not include processing fees and charges imposed by CITY to cover the estimated actual costs to CITY of processing applications for Development Approvals or for monitoring compliance with any Development Approvals granted or issued, including, without limitation, fees for zoning variances; zoning changes; use permits; building inspections; building permits; filing and processing applications and petitions filed with the local agency formation commission or conducting preliminary proceedings or proceedings under the Cortese-Knox-Hertzberg Local Government Reorganization Act of 2000, Division 3 (commencing with Section 56000) of Title 5 of the Government Code; the processing of maps under the provisions of the Subdivision Map Act, Division 2 (commencing with Section 66410) of Title 7 of the Government Code; or planning services under the authority of Chapter 3 (commencing with Section 65100) of Division 1 of Title 7 of the Government Code, fees and charges as described in Sections 51287, 56383, 57004, 65104, 65456, 65863.7, 65909.5, 66013, 66014, and 66451.2 of the Government Code, Sections 17951, 19132.3, and 19852 of the Health and Safety Code, Section 41901 of the Public Resources Code, and Section 21671.5 of the Public Utilities Code, as such codes may be amended or superseded, including by amendment or replacement. OWNER understands and agrees that the RTIF as defined herein is not a Development Impact Fee but is instead a fee that is charged pursuant to and in accordance with the terms of this Agreement.

1.1.8 “Development Plan” means the development of the Property consistent with the Land Use Zoning Exhibit for the Woodland Research and Technology Park attached hereto and incorporated as Exhibit “C”, which development shall be consistent with the Subsequent Development Approvals and the Existing Land Use Regulations.

1.1.9 “Effective Date” means the date that the ordinance approving this Agreement becomes effective.

1.1.10 “Existing Land Use Regulations” means all Land Use Regulations in effect on the Effective Date.

1.1.11 “General Plan” means the General Plan 2035 adopted on May 16, 2017 by Resolution No. 6836.

1.1.12 “Improvement” or “Improvements” means those public improvements required to support the development of the Project as described in the Capital Improvement Plan for the Specific Plan.

1.1.13 “Improvements Outside Specific Plan Area” means any Improvement that OWNER is required to construct pursuant to the CIP and its Infrastructure Phasing Plan that is located on land outside of the Specific Plan Area.

1.1.14 “Land Use Regulations” means all ordinances, resolutions, codes, rules, regulations and official policies of CITY governing the development and use of land, including, without limitation, the permitted use of land, the density or intensity of use, subdivision requirements, timing and phasing of development, the maximum height and size of proposed buildings, the provisions for reservation or dedication of easements or land for public purposes, and the design, improvement and construction standards and specifications applicable to the development of the Property. “Land Use Regulations” does not include any CITY ordinance, resolution, code, rule, regulation or official policy, governing:

- (a) the conduct of businesses, professions, and occupations;
- (b) taxes and assessments;
- (c) the control and abatement of nuisances;
- (d) the granting of encroachment permits and the conveyance of similar rights and interests which provide for the use of or the entry upon public property;
- (e) the exercise of the power of eminent domain.

1.1.15 “Maintenance CFD” shall have the meaning as set forth in Section 5.3.1 of this Agreement.

1.1.16 “Mortgagee” means a mortgagee of a mortgage, a beneficiary under a deed of trust or any other security-device lender, and their successors and assigns.

1.1.17 “Offsite Property” has the meaning set forth in Section 3.11 of this Agreement.

1.1.18 “OWNER” means the persons and entities listed as OWNER on page 1 of this Agreement and their permitted successors in interest to all or any part of the Property.

1.1.19 “Project” means the development of the Property contemplated by the Specific Plan and the Development Plan as such Development Plan may be further defined, enhanced or modified pursuant to the provisions of this Agreement.

1.1.20 “Property” means the real property described on Exhibit “A” and shown on Exhibit “B” to this Agreement.

1.1.21 “Public Infrastructure Reimbursement Rules” means the “Public Infrastructure Reimbursement Rules for the Woodland Research and Technology Park Specific Plan,” attached hereto as Exhibit “J” and incorporated herein by this reference.

1.1.22 “Reservations of Authority” means the rights and authority excepted from the assurances and rights provided to OWNER under this Agreement and reserved to CITY under Section 3.9 of this Agreement.

1.1.23 “Specific Plan” means that certain specific plan adopted by the City Council by Resolution No. ___, and entitled, “Woodland Research and Technology Park Specific Plan.”

1.1.24 “Specific Plan Area” means those properties that are located within the geographic boundaries of the Specific Plan.

1.1.25 “Subdivision Map Act” means Government Code Section 66410 et seq., as it may be amended from time to time.

1.1.26 “Subsequent Development Approvals” means all Development Approvals required subsequent to the Effective Date in connection with development of the Property.

1.1.27 “Subsequent Land Use Regulations” means any Land Use Regulations adopted and effective after the Effective Date of this Agreement.

1.2 Exhibits. The following documents are attached to, and by this reference made a part of, this Agreement:

Exhibit “A” — Legal Description of the Property.

Exhibit “B” — Map showing Property and its location.

Exhibit “C” — Development Plan.

Exhibit “D” — Infrastructure Phasing Rules.

Exhibit “E” — WRTP CIP Modification

Exhibit “F” — Master Planning and Design Obligations

Exhibit “G” — Public Dedications

Exhibit “H” — WRTP Affordable Housing Plan

Exhibit “I” — Maintenance Services

Exhibit “J” — Public Infrastructure Reimbursement Rules

Exhibit “K” — W RTP Project Fees

Exhibit “L” — Form of Assignment and Assumption Agreement

Exhibit “M” — Form of Partial Assignment and Assumption Agreement

2. GENERAL PROVISIONS.

2.1 Binding Effect of Agreement. The Property is hereby made subject to this Agreement. Development of the Property is hereby authorized and shall be carried out only in accordance with the terms of this Agreement.

2.2 Ownership of Property. OWNER represents and covenants that it is the owner of the fee simple title to the Property or a portion thereof, or has the right to acquire fee simple title to the Property or a portion thereof from the current owner(s) thereof. To the extent OWNER does not own fee simple title to the Property, OWNER shall obtain written consent from the current fee owner of the Property agreeing to the terms of this Agreement and the recordation thereof.

2.3 Term. The term of this Agreement shall commence on the Effective Date, and shall continue for an initial period of twenty-five (25) years thereafter unless this term is modified or extended pursuant to the provisions of this Agreement. OWNER may elect to extend the Term by up to two successive five (5) year terms (for a total maximum Term of thirty-five (35) years) by providing CITY written notice no later than thirty (30) days prior to the date the Term would otherwise expire. The initial term and, if applicable any extension, shall be referred to herein as the “Term.” Any tentative map approved by CITY for the Property shall have a duration (i) eight (8) years during which period no application to extend the expiration date of any tentative map need be filed, plus the Community Development Director is hereby authorized to grant two extensions of two (2) years each at the Community Development Director’s sole discretion, without further approval by the Planning Commission or City Council, plus (ii) such time extensions authorized by state law currently or in the future.

2.4 Assignment.

2.4.1 Right to Assign. OWNER shall have the right to sell, transfer or assign the Property in whole or in part (provided that no such partial transfer shall violate the Subdivision Map Act, Government Code Section 66410 et seq.), to any person, partnership, limited liability company, joint venture, firm or corporation at any time during the term of this Agreement; provided, however, that any such sale, transfer or assignment shall include the assignment and assumption of the rights, duties and obligations arising under or from this Agreement and be made in strict compliance with the following conditions precedent:

(a) No sale, transfer or assignment of any right or interest under this Agreement shall be made unless made together with the sale, transfer or assignment of all or a part of the Property.

(b) Concurrent with any such sale, transfer or assignment, or within fifteen (15) business days thereafter, OWNER shall notify CITY's City Manager, in writing, of such sale, transfer or assignment and shall provide CITY with (1) an executed agreement, in the form attached hereto as Exhibit "L" or in an alternative form reasonably acceptable to CITY, by the purchaser, transferee or assignee and providing therein that the purchaser, transferee or assignee expressly and unconditionally assumes all the duties and obligations of OWNER under this Agreement with respect to the portion of the Property so sold, transferred or assigned; and (2) the payment of the applicable processing charge to cover the CITY's review and consideration of such sale, transfer or assignment.

Any sale, transfer or assignment not made in strict compliance with the foregoing conditions shall constitute a default by OWNER under this Agreement. Notwithstanding the failure of any purchaser, transferee or assignee to execute the agreement required by Paragraph (b) of this Subsection 2.4.1, the burdens of this Agreement shall be binding upon such purchaser, transferee or assignee, but the benefits of this Agreement shall not inure to such purchaser, transferee or assignee until and unless such agreement is executed. The City Manager shall have the authority to review, consider and either approve, conditionally approve, or deny any proposed sale, transfer or assignment that is not made in compliance with this section 2.4.

2.4.2 Release of Transferring Owner. Notwithstanding any sale, transfer or assignment, a transferring OWNER shall continue to be obligated under this Agreement unless such transferring OWNER is given a release in writing by CITY, which release shall be provided by CITY upon the full satisfaction by such transferring OWNER of the following conditions:

(a) OWNER no longer has a legal or equitable interest in all or any portion of the Property sold, transferred, or assigned.

(b) OWNER is not then in default under this Agreement.

(c) OWNER has provided CITY with the notice and executed agreement required under Paragraph (b) of Subsection 2.4.1 above.

(d) The purchaser, transferee or assignee provides CITY with security equivalent to any security previously provided by OWNER to secure performance of its obligations hereunder.

2.4.3 Effect of Assignment and Release of Obligations. In the event of a sale, transfer or assignment pursuant to the provisions of Section 2.4.2 above:

(a) The assignee shall be liable for the performance of all obligations of OWNER with respect to transferred property, but shall have no obligations with respect to the portions of the Property, if any, not transferred (the "Retained Property").

(b) The owner of the Retained Property shall be liable for the performance of all obligations of OWNER with respect to Retained Property, but shall have no further obligations with respect to the transferred property.

(c) The assignee's exercise, use and enjoyment of the Property or portion thereof shall be subject to the terms of this Agreement to the same extent as if the assignee were the OWNER.

2.4.4 Subsequent Assignment. Any subsequent sale, transfer or assignment after an initial sale, transfer or assignment shall be made only in accordance with and subject to the terms and conditions of this Section 2.4.

2.4.5 Termination of Agreement with Respect to Individual Lots Upon Sale to Public and Completion of Construction. The provisions of Subsection 2.4.1 shall not apply to the sale or lease (for a period longer than one year) of any lot which has been finally subdivided and is individually (and not in "bulk") sold or leased to a member of the public or other ultimate user. Notwithstanding any other provisions of this Agreement, this Agreement shall terminate with respect to any lot and such lot shall be released and no longer be subject to this Agreement without the execution or recordation of any further document upon satisfaction of both of the following conditions:

(a) The lot has been finally subdivided and individually (and not in "bulk") sold or leased (for a period longer than one year) to a member of the public or other ultimate user; and,

(b) A certificate of occupancy has been issued for a building on the lot, and the fees set forth under Section 4 of this Agreement have been paid.

2.4.6 Partial Assignment and Assumption. CITY and OWNER agree OWNER may partially assign its obligations and rights under this Agreement, and all amendments hereto, to a purchaser, transferee or assignee of a lot, which has been subdivided subject to provisions of a partial assignment and assumption agreement in the form attached hereto as Exhibit "M" or in an alternative form as reasonably approved by CITY. Any such complete and executed partial assignment and assumption of this Agreement shall be submitted to CITY for approval pursuant to Section 2.4.1 of this Agreement. Within fifteen (15) days following such complete submittal, CITY shall review, and if the above conditions are satisfied, may approve the partial assignment and release and notify the purchaser, transferee or assignee in writing thereof. No such release approved pursuant to this Subsection 2.4.6 shall cause, or otherwise affect, a release of OWNER from the duties and obligations under this Agreement that are retained by OWNER and excluded from the transfer or assignment.

2.5 Amendment or Cancellation of Agreement. This Agreement may be amended or cancelled in whole or in part by either party or successor in interest only in the manner provided for in Government Code Sections 65865.1 or 65868 or as set forth in this Agreement. Any amendment of this Agreement, which amendment has been requested by OWNER, shall be considered by the CITY only upon the payment of the applicable processing charge. This provision shall not limit any remedy of CITY or OWNER as provided by this Agreement. For

purposes of this section, the term “successor in interest” shall mean any person having a legal or equitable interest in the whole of the Property, or any portion thereof as to which such person wishes to amend or cancel this Agreement as applied to the portion of the Property owned by that successor in interest. The procedure for proposing and adopting an amendment to, or cancellation of, in whole or in part, this Agreement shall be the same as the procedure for adopting and entering into this Agreement in the first instance. Notwithstanding the foregoing sentence, if the CITY initiates the proposed amendment to, or cancellation of, in whole or in part, this Agreement, CITY shall first give notice to the OWNER of its intention to initiate such proceedings at least sixty (60) days in advance of the giving the public notice of intention to consider the amendment or cancellation. CITY and OWNER acknowledge and agree that this Agreement can only be amended or cancelled by mutual agreement of the CITY and OWNER or relevant successor in interest.

2.6 Minor Modification. Upon the written application of OWNER, minor modifications and changes to the Development Plan may be approved by the City Manager without the need to amend this Development Agreement. A minor/administrative modification to the Specific Plan as described in Section 7.4.1 of the Specific Plan shall not require an amendment to this Development Agreement. It is also contemplated by CITY and OWNER that OWNER may, from time to time, seek Additional Development Approvals. Any such Development Approvals are contemplated by CITY and OWNER as being within the scope of this Agreement as long as they are consistent with the Land Use Regulations and shall, upon approval by CITY, constitute Development Approvals as referenced herein. The parties agree that any such modifications or additional Development Approvals shall not constitute an amendment to this Agreement nor require an amendment to this Agreement. Other changes to the Development Agreement shall be processed in accordance with the City’s Municipal Code and applicable state law.

2.7 Termination. This Agreement shall be deemed terminated and of no further effect upon the occurrence of any of the following events:

- (a) Expiration of the stated term of this Agreement as set forth in Section 2.3.
- (b) Entry of a final judgment setting aside, voiding or annulling the adoption of the ordinance approving this Agreement.
- (c) The adoption of a referendum measure overriding or repealing the ordinance approving this Agreement.
- (d) Completion of the Project in accordance with the terms of this Agreement including issuance of all required occupancy permits, completion of all required Improvements as required herein and acceptance by CITY or applicable public agency of all required dedications.
- (e) Termination of this Agreement based on any default of OWNER and following the termination proceedings required as set forth in this Agreement.

Termination of this Agreement shall not constitute termination of any other land use entitlements approved for the Property. Upon the termination of this Agreement, no party

shall have any further right or obligation hereunder except with respect to any obligation to have been performed prior to such termination or with respect to any default in the performance of the provisions of this Agreement which has occurred prior to such termination or with respect to any obligations which are specifically set forth as surviving this Agreement. Upon such termination, any Development Impact Fees or RTIF paid pursuant to Section 4.2 of this Agreement by OWNER to CITY for residential units on which construction has not yet begun shall be refunded to OWNER by CITY.

2.8 Notices.

(a) As used in this Agreement, “notice” includes, but is not limited to, the communication of notice, request, demand, approval, statement, report, acceptance, consent, waiver, appointment or other communication required or permitted hereunder.

(b) All notices shall be in writing and shall be considered given either: (i) when delivered in person, including, without limitation, by courier, to the recipient named below; or (ii) on the date of delivery shown on the return receipt, after deposit in the United States mail in a sealed envelope as either registered or certified mail with return receipt requested, and postage and postal charges prepaid, and addressed to the recipient named below. All notices shall be addressed as follows:

If to CITY:

City of Woodland
300 First Street
Woodland, CA 95695
Attn: City Manager
Telephone: (530) 661-5800
Email: ken.hiatt@cityofwoodland.org

Copy to:

Best, Best & Krieger, LLP
500 Capitol Mall, Suite 1700
Sacramento, CA 95814
Attn: City Attorney
Telephone: (916) 325-4000
Email: ethan.walsh@bbklaw.com

If to OWNER:

Thomas Heaton and Olga Chengaeva
871 West Southwood Dr.
Woodland, CA 95695

(c) Either party may, by notice given at any time, require subsequent notices to be given to another person or entity, whether a party or an officer or representative of a party, or to

a different address, or both. Notices given before actual receipt of notice of change shall not be invalidated by the change.

3. DEVELOPMENT OF THE PROPERTY.

3.1 Rights to Develop. Subject to the terms of this Agreement including the Reservations of Authority, OWNER shall have a vested right to develop the Property in accordance with, and to the extent of, the Specific Plan. The Project shall remain subject to all Subsequent Development Approvals required to complete the Project as contemplated by the Development Plan. OWNER shall not be required to enter into a subsequent development agreement in order to develop the Property. Except as otherwise provided in this Agreement, the permitted uses of the Property, the density and intensity of use, the maximum height and size of proposed buildings, and provisions for reservation and dedication of easements or land for public purposes shall be those set forth in the Specific Plan and this Agreement. OWNER does not have an affirmative obligation to develop the Property, but if the Property is developed it shall be developed according to the Development Approvals.

3.2 Effect of Agreement on Land Use Regulations. Except as otherwise provided under the terms of this Agreement including the Reservations of Authority, the rules, regulations and official policies governing permitted uses of the Property, the density and intensity of use of the Property, the maximum height and size of proposed buildings, and the design, improvement and construction standards and specifications applicable to development of the Property shall be in accordance with the Existing Land Use Regulations. In connection with any Subsequent Development Approval, CITY shall exercise discretion in the same manner that it exercises discretion under its police powers including the Reservations of Authority set forth herein; provided, however, that such discretion shall not prevent development of the Property for the uses and to the density or intensity of development set forth in this Agreement.

3.3 Timing of Development. The parties acknowledge that OWNER cannot at this time predict when or the rate at which phases of the Property will be developed. Such decisions depend upon numerous factors which are not within the control of OWNER, such as market orientation and demand, interest rates, absorption, completion and other similar factors. Since the California Supreme Court held in Pardee Construction Co. v. City of Camarillo, (1984) 37 Cal.3d 465, that the failure of the parties therein to provide for the timing of development resulted in a later adopted initiative restricting the timing of development to prevail over such parties' agreement, it is the parties' intent to cure that deficiency by acknowledging and providing that OWNER shall have the right to develop the Property in such order and at such rate and at such times as OWNER deems appropriate within the exercise of its subjective business judgment. Notwithstanding the foregoing, the phasing of the Project shall be conducted in accordance with the Phasing Rules as defined in Section 3.5 of this Agreement and the Infrastructure Phasing Plan submitted and approved in the manner more specifically described in Section 3.5 of this Agreement. Except as may be specifically provided elsewhere in this Agreement, OWNER has no affirmative obligation to commence development of the Property or to develop it at a specified rate. No modification of the City's ordinances, resolutions, policies, rules, or regulations adopted after the Effective Date whether by regulatory action, Council vote, voter initiative or otherwise, which purport to cap, prohibit or otherwise limit development

and/or the rate of development over time or to govern the sequence of development of land within the Specific Plan Area, shall apply to the Property.

3.4 Density Transfer Requirements. OWNER and CITY agree to the following requirements which guide unit yield assumptions within Residential Development Zones (“RDZ”) that are designated in the Specific Plan, and the process by which residential densities are established and, if permitted by the Community Development Director, transferred to other RDZ’s.

(a) Residential unit yields within each of six RDZs shall be those established by the Exhibit 6-1 and Table 6.1 in the Specific Plan. RDZ boundaries generally follow property lines for the Property and property owned by other property owners in the Specific Plan Area as existed at the time of Specific Plan approval.

(b) When any portion or all of an RDZ is mapped/subdivided (large or small lot), unit yields/densities shall be determined and allocated across the entire RDZ effected, and shall meet the Density Requirements outlined in Section 6.5.3 in the Specific Plan.

(c) OWNER may develop up to the assigned number of units within the RDZ at densities permitted by the Specific Plan for the underlying zoning (LDR, MDR, HDR).

(d) OWNER may request an increase in units up to 10 percent above the assigned units within the RDZ, subject to CEQA consistency review.

(e) If an RDZ is developed *under* the assigned number of units, an RTIF fee make up shall be required in amount necessary so that OWNER pays the RTIF fee equal to the amount required for the assigned number of units, unless at time of tentative map, an alternate RDZ picks up the unit deficit, subject to CITY approval and provided that the owner of the property located outside the RDZ enters into a written agreement to the satisfaction of the CITY that it shall adjust the density of its property to ensure consistency with the overall residential yields for the Specific Plan Area.

(f) If an RDZ is developed *over* assigned units, overage units must be removed from an alternate RDZ at tentative map, subject to CITY approval and provided that the owner of the property located outside the RDZ enters into a written agreement to the satisfaction of the CITY that it shall adjust the density of its property to ensure consistency with the overall residential yields for the Specific Plan Area.

(g) Except for the provisions stated above, the CITY has sole authority to approve the reallocation of units or to add units within each RDZ.

(h) If OWNER proposes land use changes or an increase in the number of units, then the City will reallocate units or add units within each RDZ and fees shall be updated with a nexus study and if necessary updates to the Public Facilities Financing Plan and the CIP.

3.5 Requirement for Public Infrastructure Improvements/Infrastructure Phasing Plan. Development of the Property is contingent in part on the construction of certain area-wide infrastructure improvements in accordance with certain Infrastructure Phasing Rules established

by the City for the Specific Plan Area, as attached hereto as Exhibit “D” (the “Phasing Rules”), and incorporated herein by this reference. OWNER agrees to comply with the Phasing Rules in the payment for and construction of Improvements as required for development of the Specific Plan Area.

3.5.1 Concurrent with the submission of the first tentative subdivision map, OWNER shall submit to the City an Infrastructure Phasing Plan for the Property, which shall be consistent with the Phasing Rules, for review and approval by the City Engineer. Tentative map submissions to create large parcels for financing purposes, which lots could not be developed without further subdivision, would not trigger this requirement. City Engineer shall confirm that the Infrastructure Phasing Plan is consistent with this Development Agreement, the Specific Plan, the CIP, the Phasing Rules, and all applicable tentative or final subdivision or parcel map conditions. In the event the Infrastructure Phasing Plan is consistent with the requirements described herein the City Engineer shall approve the Infrastructure Phasing Plan. If it is not consistent with such requirements the City Engineer shall indicate in writing which inconsistencies must be corrected in order for the Infrastructure Phasing Plan to be approved. The City will not approve a tentative subdivision map for any portion of the Property until an Infrastructure Phasing Plan is approved in accordance with this Section 3.5.1 and the Phasing Rules. Given the possible timing of different tentative maps proceeding in the same time period or the possibility that someone with a tentative map may decide to delay development of their property, it is likely that multiple tentative maps could have the same infrastructure requirements. Given the financing constraints of the Specific Plan that require the LDR and MDR units to construct most of the infrastructure in the Plan Area, it is imperative that every development with LDR or MDR units meet the development agreement requirement of constructing 150% or 130%, as applicable, of their RTIF infrastructure burden in accordance with the Phasing Rules. The City Engineer therefore has the authority to add replacement infrastructure conditions to an already approved tentative map (to meet the development agreement requirement of constructing 150% or 130% as applicable) if that tentative map is conditioned to construct improvements that have already been constructed. The City Engineer shall follow the same rules outlined in Exhibit D to determine the replacement infrastructure conditions. If the City anticipates multiple tentative maps may proceed with obligations to construct the same infrastructure, the City Engineer may list an alternative infrastructure requirement at the time of tentative map approval. If the City does not list an alternative infrastructure requirement, then the City still has the authority to require replacement infrastructure conditions. OWNER agrees that it will comply with the requirements to construct such replacement or alternative infrastructure as appropriate, and shall coordinate with CITY and other property owners within the Specific Plan Area in conjunction with the implementation of such replacement or alternative infrastructure requirements.

3.5.2 The OWNER shall construct public infrastructure improvements within the Specific Plan Area consistent with the Infrastructure Phasing Plan as approved by the City Engineer. City’s obligation to issue building permits for the Project shall be conditioned on construction of the public improvements consistent with the approved Infrastructure Phasing Plan and the Phasing Rules, which in some cases could restrict the cumulative number of building permits issued within the Specific Plan Area until certain public improvements are complete or until security has been provided for the required improvements in accordance with a public improvement agreement entered into by and between CITY and OWNER.

3.5.3 OWNER shall be eligible for fee credits for the RTIF to be paid pursuant to this Development Agreement and reimbursement from future development within the Specific Plan Area for public infrastructure improvements constructed pursuant to and in accordance with this Development Agreement. Such fee credits and reimbursement shall be provided in accordance with Section 4.2.5 of this Agreement, the Public Infrastructure Reimbursement Rules and the Financing Plan prepared for the Specific Plan, as approved by City Council and as it may be updated from time to time.

3.6 Changes and Amendments. The parties acknowledge that development of the Project will require Subsequent Development Approvals including but not limited to approval of tentative and final subdivision maps for large and small parcels and design review for development of new uses on the Property. As necessary or appropriate, OWNER shall apply for Subsequent Development Approvals and CITY shall process and act on such application in accordance with the Existing Land Use Regulations, except as otherwise provided by this Agreement including the Reservations of Authority. Unless otherwise required by law, as determined in CITY's reasonable discretion, Subsequent Development Approvals shall be deemed "minor" and not require an amendment to this Agreement provided such approvals do not:

- (a) Alter the permitted uses of the Property as a whole; or,
- (b) Increase the density or intensity of use of the Property as analyzed under the Specific Plan CEQA document, which may include limited adjustments as authorized by the City; or,
- (c) Increase the maximum height and size of permitted buildings beyond what is permissible under the Specific Plan; or,
- (d) Delete a requirement for the reservation or dedication of easements or land for public purposes within the Property as a whole; or,
- (e) Constitute a project requiring a subsequent or supplemental environmental impact report pursuant to Section 21166 of the Public Resources Code.

3.7 Reservations of Authority.

3.7.1 Limitations, Reservations and Exceptions. Notwithstanding any other provision of this Agreement, the CITY shall not be prevented from applying new rules, regulations and policies upon the OWNER, nor shall a development agreement prevent the CITY from denying or conditionally approving any subsequent development project application on the basis of such new rules, regulations and policies where the new rules, regulations and policies consist of the following:

- (a) Processing fees and charges of every kind and nature imposed by CITY to cover the costs of processing applications for Development Approvals or for monitoring compliance with any Development Approvals.

(b) Procedural regulations relating to hearing bodies, petitions, applications, notices, findings, records, hearings, reports, recommendations, appeals and any other matter of procedure.

(c) Regulations, policies, and rules governing engineering and construction standards and specifications applicable to public and private improvements, including all uniform codes adopted by the CITY and any local amendments to those codes adopted by the CITY; provided, however, that, OWNER shall have a vested right to develop the Property in accordance with, and to the extent of, the standards and specifications that are expressly identified in the Specific Plan. Further, for the first ten (10) years following the Effective Date, the City shall not implement a change to the City's engineering standards and specifications that would result in an increase to the cost of construction of the required public improvements for a subdivision located within the Property by more than 2% of the estimated cost of the public improvements prior to such change.

(d) Regulations imposing Development Exactions; provided, however, that no subsequently adopted Development Impact Fees or fees levied pursuant to the terms of this Agreement shall be applicable to development of the Property except for those Project Fees set forth in Exhibit K to this Agreement, which Project Fees may be increased from time to time in accordance with applicable State law, or as contemplated in this Agreement.

(e) Regulations which may conflict with this Agreement or the Development Plan but which are reasonably necessary to protect the public health and safety. To the extent possible, any such regulations shall be applied and construed so as to provide OWNER with the rights and assurances provided under this Agreement.

(f) Regulations which do not conflict with those rules, regulations and policies set forth in this Agreement or the Development Plan. Any regulation, whether adopted by initiative or otherwise, limiting the rate or timing of development of the Property shall be deemed to conflict with the Development Plan and shall therefore not be applicable to the development of the Property.

(g) Regulations which may conflict with this Agreement or the Development Plan, but to which the OWNER consents in writing.

3.7.2 Subsequent Development Approvals. This Agreement shall not prevent CITY, in acting on Subsequent Development Approvals, from applying Subsequent Land Use Regulations which do not conflict with this Development Agreement or the Specific Plan in the form in effect on the Effective Date of this Development Agreement, nor shall this Agreement prevent CITY from denying or conditionally approving any Subsequent Development Approval on the basis of the Existing Land Use Regulations or any Subsequent Land Use Regulation not in conflict with the Specific Plan.

3.7.3 Modification or Suspension by State or Federal Law. In the event that State or Federal laws or regulations, enacted after the Effective Date of this Agreement, prevent or preclude compliance with one or more of the provisions of this Agreement, such provisions of this Agreement shall be modified or suspended as may be necessary to comply with such State or

Federal laws or regulations, provided, however, that this Agreement shall remain in full force and effect to the extent it is not inconsistent with such laws or regulations and to the extent such laws or regulations do not render such remaining provisions impractical to enforce. In the event OWNER alleges that such State or Federal laws or regulations preclude or prevent compliance with one or more provisions of this Agreement, and the CITY does not agree, the OWNER may, at its sole cost and expense, seek declaratory relief (or other similar non-monetary remedies); provided, however, that nothing contained in this Section 3.7.3 shall impose on CITY any monetary liability for contesting such declaratory relief (or other similar non-monetary relief).

3.7.4 Intent. The parties acknowledge and agree that CITY is restricted in its authority to limit its police power by contract and that the foregoing limitations, reservations and exceptions are intended to reserve to CITY all of its police power which cannot be so limited. This Agreement shall be construed, contrary to its stated terms if necessary, to reserve to CITY all such power and authority which cannot be restricted by contract.

3.8 Public Works. If OWNER is required by this Agreement to construct any public works facilities which will be dedicated to CITY or any other public agency upon completion, and if required by applicable laws to do so, OWNER shall perform such work in the same manner and subject to the same requirements as would be applicable to CITY or such other public agency should it have undertaken such construction.

3.9 Acquisition of Offsite Real Property Interests. In any instance where OWNER is required pursuant to the Infrastructure Phasing Plan to construct any Improvements Outside Specific Plan Area, OWNER shall at its sole cost and expense provide or cause to be provided, the real property interests necessary for the construction of such public improvements (the "Offsite Property"). In the event OWNER is unable, after exercising reasonable efforts, including, but not limited to, the rights under Sections 1001 and 1002 of the Civil Code, to acquire the Offsite Property necessary for the construction of the Improvements Outside Specific Plan Area, and if so instructed by OWNER and upon OWNER'S provision of adequate security for costs CITY may reasonably incur, CITY agrees to use reasonable and diligent good faith efforts to acquire the Offsite Property from the owner or owners of record by negotiation to the extent permitted by law and consistent with this Agreement. If CITY is unable to acquire the Offsite Property by negotiation within sixty (60) days after OWNER's written request, CITY shall, in accordance with the procedures established by law, use its power of eminent domain to acquire the Offsite Property at a public hearing noticed and conducted in accordance with California Code of Civil Procedure Section 1245.235 for the purpose of considering the adoption of a resolution of necessity concerning the Offsite Property, subject to the conditions set forth in this Section 3.9. The CITY and OWNER acknowledge that the timelines set forth in this Section 3.9 represent the maximum time periods which CITY and OWNER reasonably believe will be necessary to complete the acquisition of any Offsite Property. CITY agrees to use reasonable good faith efforts to complete the actions described within lesser time periods, to the extent that it is reasonably able to do so, consistent with the legal constraints imposed upon CITY. OWNER shall pay all costs associated with such acquisition or condemnation proceedings. This section 3.9 is not intended by the parties to impose upon the OWNER an enforceable duty to acquire land or construct any public improvements on land not owned by OWNER, except to the extent that the OWNER elects to proceed with the development of the Project, and then only in accordance with valid conditions imposed by the CITY upon the development of the Project

under the Subdivision Map Act or other legal authority. CITY and OWNER acknowledge and agree that Government Code Section 66462.5 shall apply to the installation of public improvements on Offsite Property. CITY and OWNER further agree that the parties may explore alternative options for the required Improvements Outside Specific Plan Area, including but not limited to relocating to an alternative site, prior to proceeding with condemnation.

3.9.1 Owner's Option to Terminate Proceedings. CITY shall provide written notice to OWNER no later than fifteen (15) days prior to making an offer to the owner of the Offsite Property. At any time within that fifteen (15) day period, OWNER may, at its option, notify CITY that it wants CITY to cease all acquisition proceedings with respect to the Offsite Property, whereupon CITY shall cease such proceedings. CITY shall provide written notice to OWNER no later than fifteen (15) days prior to the date of the hearing on CITY'S intent to consider the adoption of a resolution of necessity as to any Offsite Property. At any time within that fifteen (15) day period, OWNER may, at its option, notify CITY that it wants CITY to cease condemnation proceedings, whereupon CITY shall cease such proceedings. If OWNER does not notify CITY to cease condemnation proceedings within said fifteen (15) day period, then the CITY may proceed to consider and act upon the Offsite Property resolution of necessity. If CITY adopts such resolution of necessity, then CITY shall diligently institute condemnation proceedings and file a complaint in condemnation and seek an order of immediate possession with respect to the Offsite Property.

3.9.2. Acquisition of Offsite Real Property Interests within Specific Plan Area. CITY and OWNER acknowledge that for improvements located outside of OWNER's Property but within the Specific Plan Area, the other property owners are required to dedicate property needed for public infrastructure to be constructed by OWNER pursuant to the terms of the other property owners' development agreements, including, without limitation, Section 3 of the Public Infrastructure Reimbursement Rules. Even if the property is not included in the CIP, the rules set forth in Section 3 of the Public Infrastructure Reimbursement Rules shall be followed. Notwithstanding the foregoing, in the event that another property owner within the Specific Plan Area does not dedicate such property as required by their development agreement, CITY and OWNER may take the steps set forth in this Section 3.9 to acquire such property.

3.10 Regulation by Other Public Agencies. It is acknowledged by the parties that other public agencies not within the control of CITY possess authority to regulate aspects of the development of the Property separately from or jointly with CITY and this Agreement does not limit the authority of such other public agencies. CITY agrees to cooperate, at no cost to CITY, with OWNER in obtaining any required permits or compliance with the regulations of other public agencies provided such cooperation is not in conflict with any laws, regulations or policies of the CITY.

3.11 Utilities. The Project shall be connected to all utilities necessary to provide adequate water, sewer, gas, electric, and other utility service to the Project in accordance with all applicable laws and regulations.

3.12 Wastewater Treatment Capacity. CITY and OWNER agree that there is capacity in the CITY's wastewater treatment facility to serve: (1) existing residents and businesses that are already hooked up to the facility; (2) anticipated residents and businesses through build-out

of the City's existing General Plan; and (3) the Project. CITY and OWNER acknowledge and agree that reserving this capacity for the Project, such that sewer hookups shall be available at such time as they are needed as the Project builds out, is a material element of the consideration provided by CITY to OWNER in exchange for the benefits provided to CITY under this Agreement. The Parties recognize the availability of sufficient sewer capacity may be affected by regulatory or operational constraints that are not within the CITY's discretion. To the extent the availability of sewer capacity is within the CITY's discretion (e.g., whether to extend sewer service to areas *not* currently within the CITY's service area), CITY shall not approve providing such capacity to areas currently outside the CITY's service area if this approval would prevent or delay the ability of the CITY to provide sewer hookups to the Project as the Project requires hook-ups or connections. This provision shall not affect the CITY's ability to provide sewer service within its service boundaries or within the existing CITY boundaries as they exist on the effective date of this Agreement, and as to such connections, the Parties requesting sewer service shall be connected on a first come first served basis. OWNER shall pay the applicable connection charge in effect pursuant to City-wide ordinance at the time of building permit issuance. OWNER acknowledges that connection charges may increase substantially over time and that the cost to comply with the CITY's National Pollution Discharge Elimination System ("NPDES") permit, as may be approved from time to time during the term of this Agreement, may be substantial.

3.13 Water Availability. CITY and OWNER agree that the CITY's has adequate water availability to serve: (1) existing residents and businesses that are already connected to CITY's water system; (2) anticipated residents and businesses through build-out of the City's existing General Plan; and (3) the Project. CITY and OWNER acknowledge and agree that reserving this capacity for the Project, such that water connections shall be available at such time as they are needed as the Project builds out, is a material element of the consideration provided by CITY to OWNER in exchange for the benefits provided to CITY under this Agreement. The Parties recognize the availability of sufficient water availability may be affected by environmental, regulatory or operational constraints that are not within the CITY's discretion. To the extent the availability of water is within the CITY's discretion (e.g., whether to extend water service to areas *not* currently within the CITY's service area), CITY shall not approve providing such capacity to areas currently outside the CITY's service area if this approval would prevent or delay the ability of the CITY to provide water connections to the Project as the Project requires water connections. This provision shall not affect the CITY's ability to provide water service within its service boundaries or within the existing CITY boundaries as they exist on the effective date of this Agreement, and as to such connections, the Parties requesting water service shall be connected on a first come first served basis. OWNER shall pay the applicable connection charge in effect pursuant to City-wide ordinance at the time of building permit issuance. OWNER acknowledges that connection charges may increase substantially over time.

3.14 Right to Farm. OWNER acknowledges and shall comply with the requirements of Woodland Municipal Code Chapter 9.52, "Right to Farm", including but not limited to the requirements to record deed restrictions against property located within 500 feet of agricultural land or agricultural operations in any deed transferring any right, title or interest in the Property or any portion thereof, as more specifically set forth in Section 9.52.060 of the Woodland Municipal Code.

4. PUBLIC BENEFITS.

4.1 Intent. The parties acknowledge and agree that development of the Property will result in substantial public needs which will not be fully met by the Development Plan and further acknowledge and agree that this Agreement confers substantial private benefits on OWNER which should be balanced by commensurate public benefits. Accordingly, the parties intend to provide consideration to the public to balance the private benefits conferred on OWNER by providing more fully for the satisfaction of the public needs resulting from the Project. Significant public benefits provided by OWNER pursuant to the terms of this Agreement include but are not limited to construction of or contribution to the construction portions of the Yard and greenbelt areas as contemplated by the Specific Plan, funding and constructing public infrastructure for the Specific Plan Area, contribution to the construction of the regional interchange project at State Route 113, and the provision of affordable housing within the Project.

4.2 Development Impact Fees and RTIF.

4.2.1 Amount and Components of Development Impact Fees. OWNER shall pay the Development Impact Fees listed in Exhibit “K”, W RTP Project Fees and other fees, attached hereto and incorporated herein by this reference. OWNER shall not be required to pay newly enacted Development Impact Fees or other fees that are not listed in Exhibit “K” in conjunction with the Project. The Development Impact Fee and other fee amounts to be paid by OWNER shall be the amounts that are in effect at the time such amounts are due. Nothing contained in this Agreement shall affect the ability of the CITY to amend the amounts of existing Development Impact Fees or other fees as permitted by State law, except that OWNER and CITY agree that new fee categories cannot be added to this project without mutual written agreement amending this Agreement. Additionally, nothing contained in this Agreement shall affect the ability of other public agencies that are not controlled by CITY to impose and amend, from time to time, Development Impact Fees established or imposed by such other public agencies, even though such Development Impact Fees may be collected by CITY.

4.2.2 Research and Technology Infrastructure Fee. In addition to all Development Impact Fees which shall be paid by OWNER, OWNER shall pay the Research and Technology Park Infrastructure Fee (the “RTIF”) as established by the City Council and as may be updated from time to time in accordance with this Agreement and other development agreements entered into by and between the City and OWNERS within the Specific Plan Area. The RTIF shall be paid by OWNER in the amounts as established pursuant to that certain Woodland Research and Technology Park Development Impact Fee Nexus Study dated July 2023, prepared by Economic and Planning Systems, Inc. (the “RTIF Report”), which is incorporated herein by this reference, subject to annual adjustment as set forth in the RTIF Report, and further subject to periodic updates to the RTIF report as provided for herein. OWNER acknowledges and agrees that the RTIF is established pursuant to this and other development agreements entered into by and between OWNER and other property owners within the Specific Plan Area for specified land uses in a manner so as to help ensure the completion of the public facilities contemplated by the Specific Plan and the feasibility of all proposed land uses within the Specific Plan Area. Accordingly, OWNER agrees as follows:

(a) OWNER understands, acknowledges and agrees that the RTIF is calculated to ensure sufficient funding to complete the Improvements contemplated by the Specific Plan as a whole, but that some land uses, including certain residential uses, will pay RTIF in excess of their proportionate share of the total cost of those public facilities in order to facilitate the build out of other land uses contemplated within the Specific Plan. OWNER hereby agrees to pay such fees in the amounts and the manner set forth in this Agreement and the RTIF Report, as it may be updated from time to time, to provide the public benefits that will be derived from successful development of all land uses in the Specific Plan Area.

(b) OWNER and City further acknowledge and agree that portions of the RTIF shall be updated prior to issuance of the first building permit for the Project based on more detailed engineering work that will be conducted on the improvements included in the Capital Improvement Plan. Such modifications are described in Exhibit E, "WRTP CIP Modification", attached hereto and incorporated herein by this reference. Following the completion of the modifications described in Exhibit E, the City shall update the RTIF to account for such modifications. OWNER hereby agrees and consents to such modifications of the RTIF, provided that the allocation of such fees is consistent with the methodology utilized in the RTIF Report.

(c) OWNER and CITY further acknowledge and agree that certain projects that are to be funded by the RTIF are intended in whole or in part to address impacts created by development in the Spring Lake Specific Plan Area located adjacent to the Specific Plan Area that includes the Property. These projects have been included in the projects to be funded by the RTIF as a form of equitable swap in exchange for certain projects constructed by developers in the Spring Lake Specific Plan that partially benefit the Specific Plan Area that includes the Property. OWNER acknowledges and explicitly consents to the inclusion of such projects in the calculation of the RTIF and acknowledges that the RTIF may be used to fund such projects. OWNER further acknowledges and agrees that it OWNER shall not be eligible for reimbursement from property owners or developers of property located within the Spring Lake Specific Plan Area for any projects that are funded by the RTIF.

(d) OWNER and CITY further acknowledge and agree that for properties that are designated in the Land Use section of the Specific Plan as Village Center Mixed Use (VCMU), in the event that the ground floor development fronting Road B is developed for a non-residential use, and OWNER constructs upper floor residential units, above the non-residential buildings fronting Road B, OWNER shall not be required to pay the RTIF on any such upper floor residential units. Further, for properties that are designated in the Land Use section of the Specific Plan as High Density Residential with Community Commercial Overlay (HDR/CCO), in the event that (1) the total unit yield for Residential Development Zone ("RDZ") 6 as set forth in Table 6.1 of the Specific Plan has been constructed and occupied by residents, and (2) OWNER constructs upper floor residential units above the non-residential buildings fronting Road B which upper floor residential units are in excess of the required total unit yield for RDZ 6, OWNER shall not be required to pay the RTIF on any such upper floor residential units.

4.2.3 Time of Payment. The Development Impact Fees and RTIF shall be paid to CITY prior to the issuance of building permits for each residential unit. Notwithstanding the

foregoing, deferral of the payment of any RTIF fees may be granted pursuant to a separate agreement approved by CITY pursuant to CITY's deferred impact fee policy for non-residential development, if applicable. At CITY's discretion, CITY shall be allowed to defer RTIF fees to Certificate of Occupancy provided that the fee paid is the fee in effect on the date it is paid. Payment of RTIF fees shall be subject to the provisions of credits as provided for in this Agreement and the Public Infrastructure Reimbursement Rules.

4.2.4 Minimum RTIF Fees. OWNER specifically agrees that for each Low Density Residential unit developed in a LDR or VCLDR zone shall pay, at a minimum, the RTIF fee that is established for the 2,000-3,000 square foot unit, even for those units that are less than 2,000 square feet. OWNER further agrees that for each Medium Density Residential unit developed in a MDR or VCMDR zone shall pay, at a minimum, the RTIF fee that is established for the 1,000-2,000 square foot unit, even for those units that are less than 1,000 square feet..

4.2.5 Credits. OWNER shall be entitled to credit against the fees required pursuant to Subsection 4.2.1 and 4.2.2 for the dedication of easements, land and/or the construction of improvements required pursuant to this Agreement, the CIP, the Public Infrastructure Reimbursement Rules, the Phasing Rules, OWNER's Infrastructure Phasing Plan and the applicable Subdivision Agreements/Tentative Map conditions for the Project. OWNER shall not receive credits for Improvements constructed pursuant to this Agreement in an amount greater than the Engineer's estimate of the cost of such improvements as set forth in the CIP, adjusted on an annual basis by the Construction Cost Index as published from time to time by the Engineering News-Record ("CCI"). Similarly, OWNER shall receive credits toward the RTIF for land dedicated to the CITY for public infrastructure improvements based on the costs for such land as set forth in the CIP, adjusted on an annual basis by CCI. The Public Infrastructure Reimbursement Rules provides further detail on the terms pursuant to which OWNER will receive credits and reimbursement for dedication of easements, land and construction of Improvements in conjunction with the development of the Property, and OWNER acknowledges and agrees that it is subject to and shall comply with the Public Infrastructure Reimbursement Rules.

4.3 Responsibility for Funding Master Planning and Design Documents and CIP Modification Work. OWNER shall be required to fund the cost of certain Master Plans and the design of certain public improvements, as more specifically set forth in Exhibit "F" ("**Master Planning and Design Obligations**"), attached hereto and incorporated herein by this reference, and to fund the cost of the analysis and consideration of the proposed modifications to the CIP as described in Section 4.2.2(b) and Exhibit "E" ("**CIP Modification Work**"). Such funding shall be provided by OWNER and other property owners in the Specific Plan Area at the times as required by this Agreement, including the Public Infrastructure Reimbursement Rules and the Phasing Rules. Except as otherwise set forth in the Master Planning and Design Obligations, the Master Plans and the design documents and the CIP Modification Work are the cumulative responsibility of the owners of property within the Specific Plan Area, and to the extent the OWNER is required to pay more than its proportionate share of the cost of any of such Master Plans and design documents or CIP Modification Work, OWNER shall be eligible for reimbursement from other property owners within the Specific Plan Area pursuant to the terms of the Public Infrastructure Reimbursement Rules. CITY and OWNER shall cooperate in the preparation of these documents.

4.4 Dedications for Public Improvements. OWNER agrees to dedicate to CITY certain property to be used for public facilities and improvements as more specifically set forth in Exhibit "G" ("**Public Dedications**"), attached hereto and incorporated herein by this reference. Such dedications shall be made by OWNER at the times as required by this Agreement and the Phasing Rules so as to provide dedications when needed for the extension of infrastructure or public amenities for the Project and other development in the Specific Plan Area. These dedications may be required ahead of development of OWNER's Property. OWNER may be eligible for credits and, if applicable, reimbursement from other property owners within the Specific Plan Area for the dedications required by this Agreement if the real property to be dedicated is included in the CIP and reflected in the RTIF. Credit or reimbursement for such real property shall be provided as set forth in Section 4.2.5 of this Agreement, which credits and reimbursements shall be paid in accordance with the Public Infrastructure Reimbursement Rules. Real property that is set forth in Exhibit "G" but is not included in the CIP and reflected in the RTIF shall not be eligible for credit or reimbursement from other property owners or the RTIF. If real property is needed for temporary drainage of agricultural runoff prior to the full implementation of the storm drainage system reflected in the CIP, then the dedicating property owner shall dedicate the drainage easement to the developing land owner without compensation consistent with the timing of other public dedications in this agreement. CITY and OWNER acknowledge and agree that the property that must be dedicated to CITY may be modified from time to time through updates to the CIP after approval of this Agreement or in conjunction with the processing of subdivision maps for the Property. OWNER shall make such dedications in accordance with the CIP as it may be modified from time to time, in accordance with the timing for dedication as set forth in the approved Infrastructure Phasing Plan and Exhibit G.

4.5 Responsibility for Construction of Public Improvements.

4.5.1 Timely Construction of Public Infrastructure. As part of the development of the Project, OWNER shall be required to construct portions of certain area wide infrastructure that will serve the Specific Plan Area. Such infrastructure shall be the infrastructure that will be required pursuant to the Infrastructure Phasing Plan that shall be developed by OWNER pursuant to Section 3.5.1 of this Agreement. OWNER shall be responsible for the timely construction and completion of all Improvements required for the Project in accordance with the Infrastructure Phasing Plan and any and all tentative subdivision map conditions. All required Improvements for each Subdivision Map, shall be completed and operational prior to City approval of the final subdivision map, unless OWNER enters into a Public Improvement Agreement with the City for such Improvements and provides adequate security for such improvements in accordance with the Subdivision Map Act and Woodland Municipal Code Chapter 16.52, as it may be amended from time to time, in which case such Improvements shall be constructed within the times provided in the Public Improvement Agreement.

4.5.2 Reimbursement for Public Infrastructure. Upon completion of the Improvements for an applicable portion of the development of the Property as required pursuant to this Agreement, CITY and OWNER shall enter into a reimbursement agreement that will provide for reimbursement of OWNER to the extent that the Engineers estimate of the cost of such improvements as set forth in the CIP (and adjusted by CCI) exceeds the amount of the RTIF applicable to the applicable portion of the Property developed by OWNER. Such reimbursement

agreement shall be consistent with the Public Infrastructure Reimbursement Rules and the Phasing Rules. In the event OWNER/Developer builds MPFP projects, they are eligible for reimbursement consistent with the policies in the City's MPFP fee program and the City's MPFP administrative guidelines.

4.6 Parks Impact Fee. OWNER agrees that it shall pay the Parks Impact Fee adopted for the Specific Plan Area in the amount of \$9,279 per single family unit or \$6,959 per multi-family unit (as of January 1, 2023), which fee shall be adjusted on an annual basis by CCI. OWNER shall not be eligible to receive credits toward the Parks Impact Fee for dedication of park acreage or greenbelts or for construction of park or green belt improvements within the Specific Plan Area.

4.7 Affordable Housing. OWNER will comply with the requirements of Chapter 15.18 of the Woodland Municipal Code (the "Affordable Housing Ordinance") through the implementation of the Affordable Housing Plan for the Specific Plan (the "**WRTP Affordable Housing Plan**"), which is attached hereto as Exhibit "H" and incorporated herein by this reference. In the event of any inconsistencies between the Affordable Housing Ordinance and the WRTP Affordable Housing Plan, the WRTP Affordable Housing Plan shall apply to the Project.

4.8 Supplemental School Fee. OWNER acknowledges that Costalotta Partners, LLC, the owners of the "Beeman North" property will be entering into good faith negotiations with Woodland Joint Unified School District ("WJUSD") for the potential purchase of property to be used as a school campus. OWNER will participate in good faith negotiations involving the payment of a supplemental school fee towards the construction of facilities that provide capacity for students generated by the Specific Plan. OWNER agrees that if a supplemental fee shall be paid by OWNER, then such supplemental fee shall be deposited with the City of Woodland at the time of building permit issuance, placed in a segregated account, and held by City for future payment to WJUSD for the construction of the WRTP elementary school, or as otherwise specified in the School Site Purchase and Sale Agreement. In the event WJUSD does not proceed with construction of a school at the School Site, or other project(s) specified in the School Site Purchase and Sale Agreement by issuance of the 800th residential building permit in the Specific Plan Area, then the supplemental fee funds may be used by the City to construct public improvements included in the CIP, as it may be amended from time to time, at the discretion of the City

4.9 Right to Continue Use of Agricultural Well. CITY and OWNER understand and acknowledge that there exists within the Specific Plan Area agricultural wells that provide irrigation for certain other property that remains in agricultural use. The Parties agree that OWNER may operate any such agricultural wells owned by OWNER to serve agricultural uses on OWNER's property or other property, provided that such use must be in compliance with all applicable federal, state and local laws, including but not limited to the Yolo Subbasin Groundwater Sustainability Plan adopted by the Yolo Subbasin Groundwater Agency, and any regulations or directives promulgated thereunder. OWNER shall be solely responsible to retain any and all property interests necessary for continuing operation of any such agricultural well, and for ensuring compliance with all applicable laws and regulations, as well as the Groundwater Sustainability Plan.

4.10 Abandonment of County Road 100A. OWNER shall work with the California Department of Transportation (“CalTrans”), Yolo County and CITY to take such steps as are necessary to abandon County Road 100A, which is located adjacent to OWNER’s Property. OWNER shall, at no cost or expense to CITY, and with no credits or reimbursements through this Agreement or the Public Infrastructure Reimbursement Rules, ensure that such public right of way or private access easements are provided to ensure that any and all properties that would be landlocked as a result of the abandonment of County Road 100A have adequate access to public roads from their property, and OWNER, in conjunction with its neighboring property owner that also fronts County Road 100A, shall be responsible to secure all necessary approvals, consents and actions as necessary to effectuate the abandonment of County Road 100A. OWNER shall work expeditiously to accomplish this provision in a timely manner.

4.11 Build to Rent Development. OWNER agrees that neither it nor any successor or assign to this Agreement shall develop single family residences in the Low Density Residential, Village Center Low Density Residential, Village Center Medium Density Residential or Medium Density Residential zones located north of Marston Drive in the Specific Plan Area as shown on the Development Plan attached hereto as Exhibit “C”, as a “build to rent single family development”. For purposes of this Agreement, a “build to rent single family development” is a single family residential subdivision or a portion of such subdivision that is built for the purpose of renting, rather than selling the constructed homes.

5. FINANCING OF PUBLIC IMPROVEMENTS.

5.1 Financing Districts or Alternative Mechanisms. If deemed appropriate, CITY and OWNER will cooperate in the formation of any special assessment district, community facilities district or alternate financing mechanisms to pay for the construction and/or maintenance and operation of public infrastructure facilities or Improvements required as part of this Agreement, the CIP and the approved Infrastructure Phasing Plan, provided, however, that to the extent that a district or alternative financing mechanism is established for the purpose of bonding to raise funds for construction of infrastructure or payment of fees, the boundaries of such district will be limited to separate improvement areas that correspond with the boundaries of the tentative map (or tentative maps) within each Infrastructure Phasing Plan. The RTIF fees generated from the improvement area may be used to fund any improvement in the CIP. Such improvement areas shall be shown in the Infrastructure Phasing Plan approved by the City pursuant to this Development Agreement. CITY also agrees that, to the extent any such district or other financing entity is formed and sells bonds in order to finance such Improvements, OWNER may receive credits for the RTIF to be paid by OWNER, and may be reimbursed to the extent that OWNER spends funds or dedicates land for the establishment of public improvements that are included in the CIP, provided that such fee credits and reimbursements must be in conformance with the Public Infrastructure Reimbursement Rules and any individual reimbursement agreements entered into by and between CITY and OWNER. Notwithstanding the foregoing, it is acknowledged and agreed by the parties that nothing contained in this Agreement shall be construed as requiring CITY or the City Council to form any such district or to issue and sell bonds. If bonds are sold then the proceeds of those bonds shall be used to reimburse the public improvements that are listed in the CIP and required by the conditions of the associated development.

CITY agrees to use reasonable efforts to develop and implement such financing mechanisms subject to applicable public hearing and election requirements of applicable State and, if tax-exempt bonds are to be issued, federal law, the existing regulations and the customary and reasonable industry standards for the development of such financings. OWNER and CITY acknowledge and agree that the establishment of a financing district and the issuance of bonds supported by the special taxes are dependent on many factors that are not known at this time. The viability of the financing, the amount of special taxes for debt service, and available bond proceeds will be dependent on several factors existing at the time the bonds are sold, including, but not limited to, the financial markets, interest on tax exempt financings, housing market, value of homes in the area, absorption rates for home sales in the area, bond underwriting criteria and ratings by bond-rating agencies. Fee credits that are generated from bond sales shall remain with the land that they were bonded against and can be used as a credit against RTIF fee payments. These fee credits cannot be sold or transferred.

CITY and OWNER acknowledge the infrastructure costs needed to support the project are substantial and may compromise the feasibility or timely build out of the Project and its associated benefits. CITY and OWNER further acknowledge this is especially the case for the development of residential units in the MDR and HDR zones. As such, both parties agree to work cooperatively to identify and pursue external funding sources, multiple financing strategies and tools to defray project infrastructure improvement costs. Further, the City anticipates that adjustments to the Specific Plan and associated approvals may be needed in the future, and the City will conduct further evaluation of the Specific Plan, CIP and City fee program after Specific Plan approval to determine what adjustments are appropriate.

5.2 Sports Park Community Facilities District. OWNER acknowledges the existence of the Spring Lake Community Facilities District (“**Sports Park CFD**”) which was created pursuant to the Mello-Roos Community Facilities Act, as set forth in Government Code Section 53311 *et seq.* for the purpose of funding the ongoing operation of the Woodland Sports Park, which provides regional park facilities that will serve the Property. OWNER voluntarily consents to and prior to recordation of each small lot final subdivision map or large lot map (for High Density and Mixed Use Residential units) for the Project shall take whatever affirmative action it needs to take on its part to ensure that all portions of the Project and Property that are designated as Low Density Residential, Village Center Low Density Residential, Medium Density Residential, Village Center Medium Density Residential and High Density Residential (including units above Village Center Mixed Use and Community Commercial Overlay for which such small lot final subdivision map or large lot map - for High Density and Mixed Use Residential units) is recorded is subject to the assessments of the Sports Park CFD, which includes without limitation, voting to annex to said Sports Park CFD.

5.3 Maintenance Community Facilities District(s).

5.3.1 Formation, Consent, Waiver, and Benefit. No building permits shall be issued for the residential units or commercial development provided for in the first subdivision map for the Project until a Community Facilities District has been formed for the purpose of funding public services and maintenance costs associated with the Project for services identified in Exhibit I or the Property has been annexed into such a Community Facilities District that has already been formed to fund public services and maintenance costs for the Specific Plan Area

(the “**Maintenance CFD**”), or OWNER participates in the formation of an equivalent funding mechanism for public services and maintenance purpose in a form satisfactory to the City Engineer. OWNER consents to and shall cooperate in such formation or annexation of the Maintenance CFD or the formation of an equivalent financing mechanism for maintenance and services purposes. OWNER also consents to the levy of such special taxes or assessments as are necessary to fund the maintenance and service obligations described herein, pursuant to and consistent with the requirements of this Agreement, Government Code Section 53111, et seq., and the City's Capital Financing and Debt Management Policy, adopted by City Council on June 20, 2017 and incorporated herein by this reference.

5.3.2 Annexation of Subsequent Phases. No building permits shall be issued for subsequent phases of the Project until the such phase is annexed into the Maintenance CFD or an equivalent funding mechanism for public services and maintenance costs has been established for such subsequent phase in accordance with Section 5.3.1.

5.3.3 Uses of Funds Collected. The Maintenance CFD will fund maintenance of certain landscaping, public improvements and public facilities as more specifically set forth in Exhibit “I”, attached hereto and incorporated herein by this reference (“**Maintenance Services**”).

5.4 Maximum Effective Tax Rate. CITY and OWNER agree that the maximum effective tax rate for assessor’s parcels within the Property from all applicable financing districts, including without limitation, any financing districts established as contemplated in Section 5.1 of this Agreement, the Sports Park CFD, the Maintenance CFD and any CFD or Assessment District established pursuant to the Statewide Community Infrastructure Program, may not exceed one and 8/10 percent (1.8%) of the reasonably expected value of the parcel with planned vertical improvements determined at the time of approval of the applicable financing district and the Rate and Method of Apportionment.

6. REVIEW FOR COMPLIANCE.

6.1 Periodic and Special Reviews.

6.1.1 Time for and Initiation of Periodic Review. The CITY shall review this Agreement as determined by the City, in order to ascertain the good faith compliance by OWNER with the terms of this Agreement. OWNER shall submit an Annual Monitoring Report to CITY, in a form acceptable to the City Manager, along with any applicable processing charge, within ten (10) days after each anniversary date of the Effective Date of this Agreement. Within thirty (30) days after the receipt of the Annual Monitoring Report, CITY shall either issue a notice of continuing compliance or a notice of non-compliance and a notice of CITY’s intent to conduct a Special Review pursuant to Sections 6.1.2 through 6.1.6. Issuance of a notice of continuing compliance may be issued by the City Manager or his designee. The cost of this review shall be funded by the OWNER on a time and materials basis.

6.1.2 Initiation of Special Review. A special review may be called either by agreement of the parties or by unilateral initiation by the CITY in one or more of the following ways:

- (a) Recommendation of the Community Development Director;

(b) Affirmative vote of at least four (4) members of the Planning Commission; or

(c) Affirmative vote of at least three (3) members of the City Council.

6.1.3 Notice of Special Review. The City Manager shall begin the special review proceeding by giving notice to OWNER that the CITY intends to undertake a special review of this Agreement. Such notice shall be given at least ten (10) days in advance of the time at which the matter will be considered by the Planning Commission.

6.1.4 Public Hearing. The Planning Commission shall conduct a hearing at which OWNER must demonstrate good faith compliance with the terms of this Agreement. The burden of proof on this issue shall be on OWNER.

6.1.5 Findings upon Public Hearing. The Planning Commission shall determine, upon the basis of substantial evidence, whether OWNER has, for the period under review, complied in good faith with the terms and conditions of this Agreement.

6.1.6 Procedure upon Findings.

(a) If the Planning Commission finds and determines on the basis of substantial evidence that OWNER has complied in good faith with the terms and conditions of this Agreement, during the period under review, the review for that period shall be concluded.

(b) If the Planning Commission finds and determines on the basis of substantial evidence that OWNER has not complied in good faith with the terms and conditions of this Agreement, during the period under review, the Planning Commission may recommend to the City Council to modify or terminate this Agreement.

(c) OWNER may appeal a determination pursuant to paragraph (b) to the City Council in accordance with CITY's rules for consideration of appeals in zoning matters generally.

6.2 Proceedings Upon Modification or Termination. If, upon a finding under Section 6.1.6(b), CITY determines to proceed with modification or termination of this Agreement, CITY shall give written notice to OWNER of its intention so to do. The notice shall be given at least ten (10) calendar days prior to the scheduled hearing and shall contain:

(a) The time and place of the hearing;

(b) A statement as to whether or not CITY proposes to terminate or to modify the Agreement; and,

(c) Such other information CITY considers necessary to inform OWNER of the nature of the proceeding.

6.3 Hearing on Modification or Termination. At the time and place set for the hearing on modification or termination, OWNER shall be given an opportunity to be heard. OWNER

shall be required to demonstrate good faith compliance with the terms and conditions of this Agreement. The burden of proof on this issue shall be on OWNER. If the City Council finds, based upon substantial evidence in the administrative record, that OWNER has not complied in good faith with the terms or conditions of the Agreement, the City Council may terminate or modify this Agreement and impose such conditions to the action it takes as it considers necessary to protect the interests of the CITY. The decision of the City Council shall be final, subject only to judicial review pursuant to Section 1094.5 of the Code of Civil Procedure.

6.4 Certificate of Agreement Compliance. If, at the conclusion of a Periodic or Special Review, OWNER is found to be in compliance with this Agreement, CITY shall, upon written request by OWNER, issue a Certificate of Agreement Compliance ("Certificate") to OWNER stating that after the most recent Periodic or Special Review and based upon the information known or made known to the Community Development Director and City Council that (1) this Agreement remains in effect and (2) OWNER is not in default. The Certificate shall be in recordable form, shall contain information necessary to communicate constructive record notice of the finding of compliance, shall state whether the Certificate is issued after a Periodic or Special Review and shall state the anticipated date of commencement of the next Periodic Review. OWNER may record the Certificate with the County Recorder.

Whether or not the Certificate is relied upon by assignees or other transferees or OWNER, CITY shall not be bound by a Certificate if a default existed at the time of the Periodic or Special Review, but was concealed from or otherwise not known to the Community Development Director or City Council.

7. DEFAULT AND REMEDIES.

7.1 Remedies in General. It is acknowledged by the parties that CITY would not have entered into this Agreement if it were to be liable in damages under this Agreement, or with respect to this Agreement or the application thereof.

In general, each of the parties hereto may pursue any remedy at law or equity available for the breach of any provision of this Agreement, except that CITY shall not be liable in damages to OWNER, or to any successor in interest of OWNER, or to any other person, and OWNER covenants not to sue for damages or claim any damages:

(a) For any breach of this Agreement or for any cause of action which arises out of this Agreement; or

(b) For the taking, impairment or restriction of any right or interest conveyed or provided under or pursuant to this Agreement; or

(c) Arising out of or connected with any dispute, controversy or issue regarding the application or interpretation or effect of the provisions of this Agreement.

7.2 Specific Performance. The parties acknowledge that money damages and remedies at law generally are inadequate and specific performance and other non-monetary relief are particularly appropriate remedies for the enforcement of this Agreement and should be available to all parties for the following reasons:

(a) Money damages are unavailable against CITY as provided in Section 7.1 above.

(b) Due to the size, nature and scope of the project, it may not be practical or possible to restore the Property to its natural condition once implementation of this Agreement has begun. After such implementation, OWNER may be foreclosed from other choices it may have had to utilize the Property or portions thereof. OWNER has invested significant time and resources and performed extensive planning and processing of the Project in agreeing to the terms of this Agreement and will be investing even more significant time and resources in implementing the Project in reliance upon the terms of this Agreement, and it is not possible to determine the sum of money which would adequately compensate OWNER for such efforts.

7.3 Release. Except for non-damage remedies, including the remedy of specific performance and judicial review as provided for in Sections 7.2 and 6.3, respectively, OWNER, for itself, its successors and assignees, hereby releases the CITY, its officers, agents and employees from any and all claims, demands, actions, or suits of any kind or nature arising out of any liability, known or unknown, present or future, including, but not limited to, any claim or liability, based or asserted, pursuant to Article I, Section 19 of the California Constitution, the Fifth Amendment of the United States Constitution, or any other law or ordinance which seeks to impose any other liability or damage, whatsoever, upon the CITY because it entered into this Agreement or because of the terms of this Agreement.

7.4 Termination of Agreement for Default of OWNER. Subject to the provisions contained in Subsection 6.3 herein, in addition to the remedy of specific performance as set forth in Section 7.2, CITY may terminate this Agreement for any failure of OWNER to perform any material duty or obligation of OWNER under this Agreement, or to comply in good faith with the terms of this Agreement (hereinafter referred to as "default"); provided, however, CITY may terminate this Agreement pursuant to this Section only after providing written notice to OWNER of default setting forth the nature of the default and the actions, if any, required by OWNER to cure such default and, where the default can be cured, OWNER has failed to take such actions and cure such default within 60 days after the effective date of such notice or, in the event that such default cannot be cured within such 60 day period but can be cured within a longer time, has failed to commence the actions necessary to cure such default within such 60 day period and to diligently proceed to complete such actions and cure such default.

7.5 Termination of Agreement for Default of CITY. OWNER may terminate this Agreement only in the event of a default by CITY in the performance of a material term of this Agreement and only after providing written notice to CITY of default setting forth the nature of the default and the actions, if any, required by CITY to cure such default and, where the default can be cured, CITY has failed to take such actions and cure such default within 60 days after the effective date of such notice or, in the event that such default cannot be cured within such 60 day period but can be cured within a longer time, has failed to commence the actions necessary to cure such default within such 60 day period and to diligently proceed to complete such actions and cure such default.

8. THIRD PARTY LITIGATION.

8.1 General Plan Litigation. CITY has determined that this Agreement is consistent with its General Plan, as such called General Plan exists as of the Effective Date ("General Plan"), and that the General Plan meets all requirements of law. OWNER has reviewed the General Plan and concurs with CITY's determination.

CITY shall have no liability in damages under this Agreement for any failure of CITY to perform under this Agreement or the inability of OWNER to develop the Property as contemplated by the Development Plan of this Agreement as the result of a judicial determination that on the Effective Date, or at any time thereafter, the General Plan, or portions thereof, are invalid or inadequate or not in compliance with law.

8.2 Third Party Litigation Concerning Agreement. OWNER shall defend, at its expense, including attorneys' fees, indemnify, and hold harmless CITY, its agents, officers and employees from any claim, action or proceeding against CITY, its agents, officers, or employees to attack, set aside, void, or annul the approval of this Agreement or the approval of any permit granted pursuant to this Agreement. CITY shall promptly notify OWNER of any such claim, action or proceeding, and CITY shall cooperate in the defense. If CITY fails to promptly notify OWNER of any such claim, action or proceeding, or if CITY fails to cooperate in the defense, OWNER shall not thereafter be responsible to defend, indemnify, or hold harmless CITY. CITY may in its discretion participate in the defense of any such claim, action or proceeding.

8.3 Indemnity. In addition to the provisions of 8.2 above, OWNER shall indemnify and hold CITY, its officers, agents, employees and independent contractors free and harmless from any liability whatsoever, based or asserted upon any act or omission of OWNER, its officers, agents, employees, subcontractors and independent contractors, for property damage, bodily injury, or death (OWNER's employees included) or any other element of damage of any kind or nature, relating to or in any way connected with or arising from the activities contemplated hereunder, including, but not limited to, the study, design, engineering, construction, completion, failure and conveyance of the public improvements, save and except claims for damages arising through the sole active negligence or sole willful misconduct of CITY. OWNER shall defend, at its expense, including attorneys' fees, CITY, its officers, agents, employees and independent contractors in any legal action based upon such alleged acts or omissions. CITY may in its discretion participate in the defense of any such legal action.

8.4 Environment Assurances. OWNER shall indemnify and hold CITY, its officers, agents, and employees free and harmless from any liability, based or asserted, upon any act or omission of OWNER, its officers, agents, employees, subcontractors, predecessors in interest, successors, assigns and independent contractors for any violation of any federal, state or local law, ordinance or regulation relating to industrial hygiene or to environmental conditions on, under or about the Property, including, but not limited to, soil and groundwater conditions, and OWNER shall defend, at its expense, including attorneys' fees, CITY, its officers, agents and employees in any action based or asserted upon any such alleged act or omission. CITY may in its discretion participate in the defense of any such action.

8.5 Reservation of Rights. With respect to Sections 8.2, 8.3 and 8.4 herein, CITY reserves the right to either (1) approve the attorney(s) which OWNER selects, hires or otherwise engages to defend CITY hereunder, which approval shall not be unreasonably withheld, or (2) conduct its own defense, provided, however, that OWNER shall reimburse CITY forthwith for any and all reasonable expenses incurred for such defense, including attorneys' fees, upon billing and accounting therefor.

8.6 Survival. The provisions of this Sections 8.1 through 8.6, inclusive, shall survive the termination of this Agreement.

9. MORTGAGEE PROTECTION.

The parties hereto agree that this Agreement shall not prevent or limit OWNER, in any manner, at OWNER's sole discretion, from encumbering the Property or any portion thereof or any improvement thereon by any mortgage, deed of trust or other security device securing financing with respect to the Property. CITY acknowledges that the lenders providing such financing may require certain Agreement interpretations and modifications and agrees upon request, from time to time, to meet with OWNER and representatives of such lenders to negotiate in good faith any such request for interpretation or modification. CITY will not unreasonably withhold its consent to any such requested interpretation or modification provided such interpretation or modification is consistent with the intent and purposes of this Agreement. Any Mortgagee of the Property shall be entitled to the following rights and privileges:

(a) Neither entering into this Agreement nor a breach of this Agreement shall defeat, render invalid, diminish or impair the lien of any mortgage on the Property made in good faith and for value, unless otherwise required by law.

(b) The Mortgagee of any mortgage or deed of trust encumbering the Property, or any part thereof, which Mortgagee, has submitted a request in writing to the CITY in the manner specified herein for giving notices, shall be entitled to receive written notification from CITY of any default by OWNER in the performance of OWNER's obligations under this Agreement.

(c) If CITY timely receives a request from a mortgagee requesting a copy of any notice of default given to OWNER under the terms of this Agreement, CITY shall provide a copy of that notice to the Mortgagee within ten (10) days of sending the notice of default to OWNER. The Mortgagee shall have the right, but not the obligation, to cure the default during the remaining cure period allowed such party under this Agreement.

(d) Any Mortgagee who comes into possession of the Property, or any part thereof, pursuant to foreclosure of the mortgage or deed of trust, or deed in lieu of such foreclosure, shall take the Property, or part thereof, subject to the terms of this Agreement. Notwithstanding any other provision of this Agreement to the contrary, no Mortgagee shall have an obligation or duty under this Agreement to perform any of OWNER's obligations or other affirmative covenants of OWNER hereunder, or to guarantee such performance; provided, however, that to the extent that any covenant to be performed by OWNER is a condition precedent to the performance of a covenant by CITY, the performance thereof shall continue to

be a condition precedent to CITY's performance hereunder, and further provided that any sale, transfer or assignment by any Mortgagee in possession shall be subject to the provisions of Section 2.4 of this Agreement.

10. MISCELLANEOUS PROVISIONS.

10.1 Recordation of Agreement. This Agreement and any amendment or cancellation thereof shall be recorded with the Yolo County Recorder by the City Clerk within ten (10) days of CITY's entry into this Agreement, as required by Section 65868.5 of the Government Code. If the parties to this Agreement or their successors in interest amend or cancel this Agreement as provided for herein and in Government Code Section 65868, or if the CITY terminates or modifies the agreement as provided for herein and in Government Code Section 65865.1 for failure of the applicant to comply in good faith with the terms or conditions of this Agreement, the City Clerk shall have notice of such action recorded with the Yolo County Recorder.

10.2 Entire Agreement. This Agreement sets forth and contains the entire understanding and agreement of the parties, and there are no oral or written representations, understandings or ancillary covenants, undertakings or agreements which are not contained or expressly referred to herein. No testimony or evidence of any such representations, understandings or covenants shall be admissible in any proceeding of any kind or nature to interpret or determine the terms or conditions of this Agreement.

10.3 Severability. If any term, provision, covenant or condition of this Agreement shall be determined invalid, void or unenforceable, the remainder of this Agreement shall not be affected thereby to the extent such remaining provisions are not rendered impractical to perform taking into consideration the purposes of this Agreement. Notwithstanding the foregoing, the provision of the Public Benefits set forth in Section 4 of this Agreement, including but not limited to the payment of the fees set forth therein, are essential elements of this Agreement and CITY would not have entered into this Agreement but for such provisions, and therefore in the event such provisions are determined to be invalid, void or unenforceable, this entire Agreement shall be null and void and of no force and effect whatsoever.

10.4 Interpretation and Governing Law. This Agreement and any dispute arising hereunder shall be governed and interpreted in accordance with the laws of the State of California. This Agreement shall be construed as a whole according to its fair language and common meaning to achieve the objectives and purposes of the parties hereto, and the rule of construction to the effect that ambiguities are to be resolved against the drafting party shall not be employed in interpreting this Agreement, all parties having been represented by counsel in the negotiation and preparation hereof.

10.5 Section Headings. All section headings and subheadings are inserted for convenience only and shall not affect any construction or interpretation of this Agreement.

10.6 Singular and Plural. As used herein, the singular of any word includes the plural.

10.7 Joint and Several Obligations. Subject to Section 2.4, if at any time during the term of this Agreement the Property is owned, in whole or in part, by more than one owner, all obligations of such owners under this Agreement shall be joint and several, and the default of

any such owner shall be the default of all such owners. Notwithstanding the foregoing, no owner of a single lot which has been finally subdivided and sold to such owner as a member of the general public or otherwise as an ultimate user shall have any obligation under this Agreement except as provided under Section 4 hereof.

10.8 Time of Essence. Time is of the essence in the performance of the provisions of this Agreement as to which time is an element.

10.9 Waiver. Failure by a party to insist upon the strict performance of any of the provisions of this Agreement by the other party, or the failure by a party to exercise its rights upon the default of the other party, shall not constitute a waiver of such party's right to insist and demand strict compliance by the other party with the terms of this Agreement thereafter.

10.10 No Third Party Beneficiaries. This Agreement is made and entered into for the sole protection and benefit of the parties and their successors and assigns. No other person shall have any right of action based upon any provision of this Agreement.

10.11 Force Majeure. Neither party shall be deemed to be in default where failure or delay in performance of any of its obligations under this Agreement is caused by floods, earthquakes, other Acts of God, fires, wars, riots or similar hostilities, strikes and other labor difficulties beyond the party's control, (including the party's employment force), government regulations, court actions (such as restraining orders or injunctions), or other causes beyond the party's control. If any such events shall occur, the term of this Agreement and the time for performance by either party of any of its obligations hereunder may be extended by the written agreement of the parties for the period of time that such events prevented such performance, provided that the term of this Agreement shall not be extended under any circumstances for more than five (5) years.

10.12 Mutual Covenants. The covenants contained herein are mutual covenants and also constitute conditions to the concurrent or subsequent performance by the party benefited thereby of the covenants to be performed hereunder by such benefited party.

10.13 Successors in Interest. The burdens of this Agreement shall be binding upon, and the benefits of this Agreement shall inure to, all successors in interest to the parties to this Agreement. All provisions of this Agreement shall be enforceable as equitable servitudes and constitute covenants running with the land. Each covenant to do or refrain from doing some act hereunder with regard to development of the Property: (a) is for the benefit of and is a burden upon every portion of the Property; (b) runs with the Property and each portion thereof; and, (c) is binding upon each party and each successor in interest during ownership of the Property or any portion thereof.

10.14 Counterparts. This Agreement may be executed by the parties in counterparts, which counterparts shall be construed together and have the same effect as if all of the parties had executed the same instrument.

10.15 Jurisdiction and Venue. Any action at law or in equity arising under this Agreement or brought by a party hereto for the purpose of enforcing, construing or determining the validity of any provision of this Agreement shall be filed and tried in the Superior Court of

the County of Yolo, State of California, and the parties hereto waive all provisions of law providing for the filing, removal or change of venue to any other court.

10.16 Project as a Private Undertaking. It is specifically understood and agreed by and between the parties hereto that the development of the Project is a private development, that neither party is acting as the agent of the other in any respect hereunder, and that each party is an independent contracting entity with respect to the terms, covenants and conditions contained in this Agreement. No partnership, joint venture or other association of any kind is formed by this Agreement. The only relationship between CITY and OWNER is that of a government entity regulating the development of private property and the owner of such property.

10.17 Further Actions and Instruments. Each of the parties shall cooperate with and provide reasonable assistance to the other to the extent contemplated hereunder in the performance of all obligations under this Agreement and the satisfaction of the conditions of this Agreement. Upon the request of either party at any time, the other party shall promptly execute, with acknowledgment or affidavit if reasonably required, and file or record such required instruments and writings and take any actions as may be reasonably necessary under the terms of this Agreement to carry out the intent and to fulfill the provisions of this Agreement or to evidence or consummate the transactions contemplated by this Agreement. The City Manager may delegate his or her powers and duties under this Agreement to the Community Development Director or other management level employee of the CITY. CITY shall cooperate in good faith with OWNER in the implementation of the Development of the Property to support successful development of each of the allowed land uses in the Specific Plan Area. The City acknowledges that OWNER has made and will be required to make additional investments to implement the Plan. This Agreement provides assurance to OWNER that the City will cooperate and assist in completion of the annexation process. City agrees that it will accept, in good faith, for processing, review and action, including but not limited to all applications for lot line adjustments, large lot subdivision maps, zoning, special permits, development permits, tentative maps, subdivision maps or other entitlements for use of the Property in accordance with the General Plan and this Agreement.

10.18 Eminent Domain. No provision of this Agreement shall be construed to limit or restrict the exercise by CITY of its power of eminent domain.

10.19 Agent for Service of Process. In the event OWNER is not a resident of the State of California or it is an association, partnership or joint venture without a member, partner or joint venturer resident of the State of California, or it is a foreign corporation, then in any such event, OWNER shall file with the Community Development Director, upon its execution of this Agreement, a designation of a natural person residing in the State of California, giving his or her name, residence and business addresses, as its agent for the purpose of service of process in any court action arising out of or based upon this Agreement, and the delivery to such agent of a copy of any process in any such action shall constitute valid service upon OWNER. If for any reason service of such process upon such agent is not feasible, then in such event OWNER may be personally served with such process out of this County and such service shall constitute valid service upon OWNER. OWNER is amenable to the process so served, submits to the jurisdiction of the Court so obtained and waives any and all objections and protests thereto.

10.20 Estoppel Certificate. Within thirty (30) days following a written request by any of the parties, the other party shall execute and deliver to the requesting party a statement certifying that (i) either this Agreement is unmodified and in full force and effect or there have been specified (date and nature) modifications to the Agreement, but it remains in full force and effect as modified; and (ii) either there are no known current uncured defaults under this Agreement or that the responding party alleges that specified (date and nature) defaults exist. The statement shall also provide any other reasonable information requested. The failure to timely deliver this statement shall constitute a conclusive presumption that this Agreement is in full force and effect without modification except as may be represented by the requesting party and that there are no uncured defaults in the performance of the requesting party, except as may be represented by the requesting party. OWNER shall pay to CITY all costs incurred by CITY in connection with the issuance of estoppel certificates under this Section 10.20 prior to CITY's issuance of such certificates.

10.21 Authority to Execute. The person or persons executing this Agreement on behalf of OWNER warrants and represents that he or she/they have the authority to execute this Agreement on behalf of his or her/their corporation, partnership or business entity and warrants and represents that he or she/they has/have the authority to bind OWNER to the performance of its obligations hereunder.

IN WITNESS WHEREOF, the parties hereto have executed this Development Agreement on the day and year set forth below.

INFRASTRUCTURE PHASING RULES

In order to proceed with development of their property, each owner within the Woodland Research and Technology Park Specific Plan Area is required by the Development Agreement entered into with the City to submit to City and obtain approval of an Infrastructure Phasing Plan (“Phasing Plan”) for each phase of development prior to approval of a tentative subdivision map for the property included in such phase. Owners are not required to seek approval of a Phasing Plan as described herein until they or their successor in interest to the Development Agreement apply for a tentative subdivision map for all or a portion of their property. The Phasing Plan must be consistent with these Infrastructure Phasing Rules (the “Rules”). For these Rules, all references to LDR also includes VCLDR and all references to MDR also includes VCMDR.

Each Phasing Plan shall ensure that the Improvements required for the development of the Property consistent with the Development Plan shall be completed prior to or concurrently with the development of the Property in accordance with the Phasing Plan for the Property. The Improvements included in the Plan must be supported by engineering studies that are based on sound engineering judgment and the technical studies and documents that provide support for the adoption of the Specific Plan.

The City and all property owners within the Specific Plan Area anticipate that the residential units in the LDR and MDR zones of the Specific Plan will be developed early in the overall build out of the Specific Plan Area, and generally prior to the development of high density residential and commercial development contemplated by the Specific Plan. In order to ensure that the Improvements required for the development of the Specific Plan Area are constructed in a manner that will serve that early development in a functional manner and ensure that there is not a delay in the provision of necessary infrastructure, each Plan that includes residential units in an LDR or MDR zone must construct infrastructure that is equal in value, based on the Engineer’s Estimate of Costs set forth in the CIP (as amended and adjusted for CCI) to not less than 145% or more than 150% of the RTIF (excluding the RTIF administration category) required to be paid for LDR units and not less than 125% or more than 130% of the RTIF (excluding the RTIF administration category) required to be paid for MDR units (based on the then current RTIF at the time the Phasing Plan was approved) for the residential units that are to be constructed in the LDR and/or MDR zones as part of such phase. .

The infrastructure to be counted toward the 150% or 130%, as applicable, of total value shall not include any dedications of right of way required to be made by the Owner or future developer of the Property. Such dedications, which shall be made as conditions on the applicable tentative subdivision map, shall be subject to reimbursement from future development in accordance with the Public Infrastructure Reimbursement Rules if the right of way is included in the CIP.

Each Phasing Plan that includes residential units in a LDR and/or MDR zone shall include all Improvements required for the development of the property included in the applicable phase, plus additional backbone and off-site improvements as determined to be appropriate for

the applicable phase in consultation with the City Engineer. In determining the backbone and off-site improvements to be included in the Plan, Developer and City shall work to design, fund and construct the following improvements as determined by the City Engineer:

- The Developer shall obtain approval from the City Engineer for improvement plans and shall provide improvement security in amounts consistent with the requirements Government Code Section 66499-66499.10 for all improvements set forth in the Plan prior to or concurrently with recordation of the first final subdivision map for the phase covered by the Plan.
- The City may, at its discretion, require additional on-site Improvements as part of the phase that are not specifically included in the engineering analysis for the applicable phase, but are deemed appropriate by the City Engineer, in consultation with Owner's Engineer for such development (e.g., traffic calming measures, left turn lanes for the benefit of bicycle and pedestrian safety, design requirements for roundabouts).
- In order to facilitate the construction of non-residential development, the first Plan including LDR or MDR units submitted to and approved by City shall include the extension of underground utilities to the Road B/County Road 25A ("CR 25A") intersection. This Plan shall also include the construction of Road A and Road B south of CR 25A, and Road G between Road A and Road B. Alternatively, the Owner may instead propose to construct non-residential infrastructure on the north side of CR 25A, and City may, in its sole discretion, allow for this alternative to be included in the first Plan rather than the extension of roads south of CR 25A.
- The Plan for the first 500 residential units¹ to be developed cumulatively in the MDR and LDR zones in the Specific Plan shall require the Owner to provide sufficient funding to design and construct the CR 25A/State Route 113 ("SR 113") interchange. Each of the first five hundred units shall contribute toward the CR 25A/State Route 133 ("SR 113") interchange according to the following formula:
Per unit contribution = project cost * 1.2 * 0.53/500 units
The project cost is the amount listed in the CIP with an annual adjustment by CCI
The 1.2 factor provides an extra contingency amount to make sure the project is adequately funded
0.53 is the cost share for the WRTP as reflected in the CIP
The first 350 units shall make this contribution at building permit. Any units from 351-500 shall make this contribution at final map.
The Owner may elect to perform a traffic study in order to defer the collection of project funds and the timing of construction. The City Engineer shall review the results of the traffic study and determine the timing of the collection of project funds and the timing of construction.
- The Plan that includes the 600th residential unit shall include the completion of Road B between CR 25A and Parkland.
- The Plan that includes the 750th residential unit shall include the mobility hub improvements if they have not been constructed previously.

¹ All references to the number of residential units in these Phasing Rules refer to the cumulative number of residential units developed in the LDR and MDR zones of the Specific Plan. Residential units in other zones are not counted toward the threshold number of residential units triggering various public improvements as set forth in these Rules.

- The Parkland Ave Overcrossing abutment fill slope, dirt placement, compaction to CalTrans standards and stabilization must be included in the Plan that includes the first storm drainage pond.
- Any phase that will include the cumulative approval of more than 450 residential units must include construction of at least 1/3 of the Yard park improvements.
- The Plan for any phase of development of land that accesses Marston Drive must provide for the construction of a connection of Marston Avenue to CR 25A from either Road D or Road B if such a connection was not previously constructed, to ensure that any development that accesses Marston Avenue will be able to connect to the CR 25A/SR 113 interchange without traveling through the Spring Lake Specific Plan Area.
- The Plan for the first phase of development of land north of Parkland Avenue must provide for the construction of at least one eastbound lane and one westbound lane of Parkland Avenue between Road B and Harry Lorenzo Avenue.
- Greenbelts and park infrastructure that is included on the eastern and northern edges of the Specific Plan shall be included with the phase that includes any adjacent development. Further, any phase that includes residential development adjacent to a greenbelt shall include improvement of that greenbelt area within the Plan for that phase of development.
- The City may, at its option, require Owner to construct the Improvements described in the approved Plan or City may construct such improvements itself. Responsibility for construction of the improvements shall be indicated in the approved Plan. In the event the City constructs some or all of the Improvements included in the Plan, Owner shall be required to pay the full cost of the Improvements (or Owner's proportionate share of the cost, as indicated in the Plan), even if the reimbursement available through the RTIF is less than the actual cost of constructing the improvements.
- The City may, at its discretion, reject a Plan that includes partially constructed infrastructure. In the alternative, the City may reduce the amount of reimbursement that Owner may receive based on a determination by the City Engineer of the estimated additional costs that will be incurred by future developers to complete such infrastructure, which costs would not be incurred if the infrastructure was completed as a single project. Such determination shall be made in accordance with the Public Infrastructure Reimbursement Rules.
- Certain infrastructure improvements included in the CIP are not triggered by specific development and are not required based on a specific number of units (e.g., Gateway Monuments and enhanced landscaping). Those improvements shall be included in Plans in consultation with the City as needed to comply with the requirement to provide Improvements equal to 150% of the applicable phase's RTIF obligation for LDR units and 130% for MDR units.
- City may, at its discretion, delay the timing of infrastructure such that it falls to a future developer, then that future developer waives the right to contest the change in infrastructure requirements.
- All Improvements that are included in the CIP must be funded, constructed, or the Owner shall have entered into a public improvement agreement and provided the required security for such Improvements prior to recordation of the final subdivision map that includes the final residential units to be developed in the LDR and MDR zones.

EXHIBIT E

WRTP CAPITAL IMPROVEMENT PLAN MODIFICATIONS

It is understood that the following CIP items will need additional work after Specific Plan approval in order to provide a more accurate project cost for the CIP and fee program. The following items shall be investigated further so that the CIP and the fee program can be updated prior to the issuance of the first building permit in the Specific Plan. The CIP shall be updated consistent with the review and update of all of these items prior to the approval of the first phasing plan. These items need to be updated prior to first tentative map and phasing plan (because of right of way and cost implications). Tentative Map submissions to create large parcel maps do not trigger this requirement if they do not allow for development of LDR, VCLDR, MDR, or VCMDR residential units. The City shall enter into the contracts required to complete the work required to complete the following items with funding provided by the Owner and other property owners within the Specific Plan Area. OWNER and CITY agree that the City's staff time and legal expenses will be paid from the administrative portion of the RTIF.

- The CIP was developed assuming that the existing cross section for CR 25A can be reused for the future alignment of this roadway. If this is not true then there could be significant additional costs added to the CIP. Applicant to perform preliminary design work to verify horizontal and vertical alignment and update the cost estimate for CR 25A.

- Applicant to obtain survey information for Parkland Ave OC design to verify the amount of fill material needed for the abutment fill section. This information is also needed to set the right of way footprint for the abutment.

- The interchange footprint needs to be verified and included in the CIP update and in the dedication exhibit.

- The Miscellaneous segment of the CIP needs to be broken down in more detail by location so that the City can determine which developer to reimburse for what work.

- The Greenbelts, Parks and Ponds section of the CIP needs to be broken down in more detail by location so that the City can determine which developer to reimburse for what work.

- The development team will need to perform earthwork testing to determine if the pond excavation can be used as abutment fill material. Abutment backfill estimate to consider meeting Caltrans specifications. Surveying to be performed to determine quantities more accurately. If this earthwork testing is not performed, then the cost estimates shall be increased to account for off-hauling of the pond material and importing of the abutment material.

- Section N-N needs to be updated to account for modifications associated with the CR 25A/SR 113 interchange plans. The north side of section N-N and O-O will be modified to construct the landscaping and sidewalk. The south side of section N-N and O-O will not have a sidewalk (unless required by Caltrans).

-Review whether to add a sound wall to the CIP on the north side of CR 25A from the eastern edge of the Specific Plan to Road D.

-HCP/Ag mitigation to be included in the off site projects (if it applies).

-The size of roundabouts needs to be reviewed and approved by City staff prior to the update of the CIP and the dedication exhibit update.

-The City plans to change the name of County Road 25A (name is still not determined). The cost estimate will include the changes to any signs as part of the interchange project or the improvements to CR 25A.

-Subject to Caltrans approval, the City may choose to add minor landscaping improvements on the east side of SR 113 adjacent to the W RTP (planting/watering of trees and/or planting vines on the sound wall).

-The development team shall update unit costs in the CIP prior to updating the RTIF fee. The most recent cost estimate for the interchange will be included in the CIP update and the RTIF update.

EXHIBIT F

MASTER PLANNING AND DESIGN OBLIGATIONS

OWNER agrees that it will provide funding for certain master planning and design efforts that are required as part of the Specific Plan. These master planning and design efforts are required by the Specific Plan to be completed prior to the issuance of certain development approvals within the Specific Plan collectively, and as a result, certain developers within the Specific Plan may fund these master planning and design efforts in order to proceed with development and seek reimbursement from the other property owners within the Specific Plan Area pursuant to the Public Infrastructure Reimbursement Rules. In the event that other property owners have funded any of the master planning and design efforts set forth below, OWNER shall provide reimbursement for OWNER's proportionate share of the costs of such master planning and design efforts pursuant to the Public Infrastructure Reimbursement Rules. OWNER and CITY agree that the City's staff time and legal expenses will be paid from the administrative portion of the RTIF.

The master planning and design efforts are as follows:

- Master Parks Plan for Design of "The Yard" park as described in Section 6.2.3 of the Specific Plan. The Master Parks Plan for the Yard shall be consistent with and shall include the amenities set forth in the concept plan for The Yard that is attached to the CIP and will include a master plan level of design for The Yard. The Master Parks Plan shall be funded by contributions by OWNER and/or other property owners within the Specific Plan Area. The Master Parks Plan must be complete prior to the approval of the first tentative subdivision map or any other Subsequent Development Approval within the Specific Plan Area (excepting development of the Business Incubator property as set forth in the Development Agreement or development of affordable housing on a land dedication site as set forth in the WRTP Affordable Housing Plan). Tentative Map submissions to create large parcel maps do not trigger this requirement if they do not allow for the development of LDR, VCLDR, MDR or VCMDR residential units .
- Comprehensive Planting and Street Tree Palette. OWNER and other property owners within the Specific Plan Area shall fund the preparation of a comprehensive planting and street tree palette for both private and public landscaping improvements within the Specific Plan Area as more particularly described in Section 6.2.3 of the Specific Plan. This effort shall also include guidance on street furnishings, street lighting palettes and the conceptual design of Gateway monuments at the intersections of Road 25A and Road B and Road B and Marston Road. The Planting and Street Tree Palette shall be funded by contributions by OWNER and/or other property owners within the Specific Plan Area. The Planting and Street Tree Palette must be complete prior to the approval of the first tentative subdivision map or any other Subsequent Development Approval within the Specific Plan Area (excepting development of the Business Incubator property as set forth in the Development Agreement or development of affordable housing on a land dedication site as set forth in the WRTP Affordable Housing Plan).

- TDM/VMT Program. OWNER and other property owners shall fund the preparation of a Comprehensive Transportation Demand Management/Vehicle Miles Traveled Reduction Program (“TDM/VMT Program”) that shall (1) establish transportation strategies, programs, facilities or services for the purpose of VMT reduction and (2) provide specific VMT reduction strategies that all property owners/tenants shall be required to implement through individual Project-level TDM Plans consistent with the TDM/VMT Program. The TDM/VMT Program is more particularly described in Section 6.2.3 of the Specific Plan. The measures included in the TDM/VMT Program shall in combination achieve a 10 percent reduction in Plan Area VMT per capita compared to baseline conditions by 2035. The TDM/VMT Program shall be funded by contributions by OWNER and/or other property owners within the Specific Plan Area. The TDM/VMT Program must be complete prior to the approval of the first tentative subdivision map or any other Subsequent Development Approval within the Specific Plan Area. Prior to or as a condition of approval of OWNER’s first tentative subdivision map for the Property, OWNER must demonstrate to the satisfaction of CITY that a funding mechanism has been established to the satisfaction of CITY that will provide sufficient funding on an on-going basis to implement and maintain the Project-level TDM Plan or Plans for the Property.
- Infrastructure Study Report. OWNER and the other property owners within the Specific Plan Area shall fund the preparation of an Infrastructure Study Report which shall include the following items:
 - sound wall layout
 - signal interconnect exhibit
 - right of way dedication exhibit
 - greenway dedication exhibit
 - the yard exhibit and cost estimate
 - mobility hub exhibit and cost estimate
 - CFD map showing what will be maintained
 - Map and description for wells and pipes
 - Technical memos including correspondence (if necessary) and appendices (storm drainage, sewer, water, traffic etc)

EXHIBIT G
PUBLIC DEDICATIONS

1. THIS EXHIBIT IS BASED ON BEST AVAILABLE INFORMATION AT THE TIME OF PREPARATION. IN ALL CASES THE REQUIREMENTS OF THE WOODLAND RESEARCH AND TECHNOLOGY PARK SPECIFIC PLAN TAKE PRECEDENCE. IT SHOULD BE ASSUMED THAT FURTHER ADJUSTMENT FOR ACTUAL GREENWAY AND PARK DEDICATION MAY BE REQUIRED. DISTANCES ARE APPROXIMATE AND SUBJECT TO CHANGE WITH FORMAL BOUNDARY SURVEY(S) AND/OR DESIGN. ANY CHANGE IN GREENWAY DIMENSIONS TO BE CONSISTENT WITH ACREAGE IN SPECIFIC PLAN.
3. PROPERTY LINES BASED ON RECORD INFORMATION. ACTUAL PROPERTY LINE LOCATIONS MAY CHANGE UPON FIELD SURVEYING.

	GREENWAY AREA
	AREA OUTSIDE MASTER PLAN
	SEE DETENTION POND NOTE #1
	SEE DETENTION POND NOTE #2
	DIMENSIONS OF WIDENED AREAS AT KEY INTERSECTIONS TO BE DETERMINED WITH TENTATIVE MAPPING
	EXISTING PROPERTY LINE
	EXISTING RIGHT OF WAY
	AREA TO BE DEDICATED AS STREET RIGHT OF WAY OR EASEMENT

1. PROPOSED DETENTION POND - DIMENSIONS SUBJECT TO CHANGE BASED ON FINAL STORM WATER CALCULATIONS AND TENTATIVE MAP LAYOUT.
2. PROPOSED DETENTION POND - DIMENSIONS SUBJECT TO CHANGE BASED ON FINAL STORM WATER CALCULATIONS.

NOTES:

1. THIS EXHIBIT IS BASED ON BEST AVAILABLE INFORMATION AT THE TIME OF PREPARATION. IN ALL CASES THE REQUIREMENTS OF THE WOODLAND RESEARCH AND TECHNOLOGY PARK SPECIFIC PLAN TAKE PRECEDENCE. IT SHOULD BE ASSUMED THAT FURTHER ADJUSTMENT FOR ACTUAL RIGHT-OF-WAY DEDICATION MAY BE REQUIRED. BEARINGS AND DISTANCES ARE APPROXIMATE AND SUBJECT TO CHANGE WITH FORMAL BOUNDARY SURVEY(S) AND/OR DESIGN.
2. ALL INTERSECTIONS INVOLVING COLLECTORS AND/OR ARTERIALS AND/OR ROUNDABOUTS WILL LIKELY NEED ADDITIONAL RIGHT-OF-WAY FOR WIDENING TO ACCOMMODATE TURNING LANES. PLACEMENT OF TURNING LANES CAN NOT REDUCE FRONTAGE LANDSCAPE WIDTHS. ADDITIONAL INTERSECTIONS MAY REQUIRE WIDENING DEPENDING ON FUTURE TRAFFIC STUDIES.
3. AREA REQUIRED FOR SPRING LAKE MONUMENTS TO BE DETERMINED.
4. PROPERTY LINES BASED ON RECORD INFORMATION. ACTUAL PROPERTY LINE LOCATIONS MAY CHANGE UPON FIELD SURVEYING.
5. STREETS WITH BUS TURNOUTS WILL REQUIRE ADDITIONAL RIGHT-OF-WAY THAT MAY BE TAKEN FROM FRONTAGE LANDSCAPING WITH APPROVAL FROM THE CITY ENGINEER.
6. BICYCLE / PEDESTRIAN OVERCROSSINGS WILL LIKELY REQUIRE ADDITIONAL RIGHT-OF-WAY (TO BE DETERMINED).

* ADDITIONAL RW FOR MOBILITY HUB WILL BE REQUIRED, DIMENSIONS TO BE DETERMINED.

WOODLAND RESEARCH AND TECHNOLOGY PARK AFFORDABLE HOUSING PLAN

1. All residential development in the Woodland Research and Technology Park Specific Plan Area is subject to the Affordable and Inclusionary Housing obligations as set forth in the City of Woodland's Affordable Housing Ordinance (Woodland Municipal Code Chapter 15.16) as modified by this Plan to ensure the inclusion of Affordable Housing within the Specific Plan Area. Provisions of this Plan that specifically apply in the Specific Plan Area and are not otherwise set forth in the Affordable Housing Ordinance are specified as being "Specific to WRTP".
2. **Specific to WRTP** – A minimum of 160 units within the Specific Plan Area at build out of the Specific Plan are planned to be constructed and rented at an affordable rent or sold at an affordable housing cost to low income households. The payment of in-lieu fees is anticipated to provide supplemental funding to support the construction of these units. Further, a minimum of 279 units in the Specific Plan Area (inclusive of 160 units for low income households) shall be constructed at or above 30du/ac consistent with the requirements of the City's Housing Element. The requirements set forth below are intended to implement these goals.
3. Inclusionary Obligation – Consistent with the City of Woodland's Affordable Housing Ordinance all development within the Specific Plan Area must meet the following affordable housing requirement either through the construction and sale/rental of affordable units, or one of the alternative compliance methods set forth in this policy:
 - a. In all **For-Sale** projects of at least 10 units in size, 10% of new for-sale units shall be affordable to low income households.
 - b. Calculations of required affordable units that result in a fraction of a **For-Sale** unit shall be rounded up to the nearest whole unit.
 - c. Ten percent (10%) of all **multifamily rental units** shall be affordable to low income households.
 - d. These requirements shall apply to all **multifamily rental projects** of at least 20 units. Projects with fewer than 20 units are exempt from affordable housing requirements.
 - e. Calculations of required affordable **multifamily rental** units that result in a fraction of a unit shall be rounded up to the nearest whole unit.
 - f. **Specific to WRTP** – Residential units that are developed within the Village Center Mixed Use Zone are exempt from the requirements of this Policy and the Affordable Housing Ordinance.

4. In-Lieu Fees – Consistent with the requirements of the City of Woodland’s Affordable Housing Ordinance:
- a. Owner is permitted to pay in-lieu fees to satisfy all or a part of the Owner’s affordable housing obligation as set forth in Section 3 of this Plan, except that in those instances where Owner is required pursuant to section 5.b below to make a land dedication as part of Owner’s satisfaction of this Plan and the Affordable Housing Ordinance, Owner must first make the required land dedication and may only pay in-lieu fees to the extent that there is a remaining obligation after the land dedication is complete.
 - b. **Specific to WRTP** – In-lieu fee shall be paid at the following rates (which rates shall be adjusted by the City annually by the Construction Cost Index as published from time to time by the Engineering News-Record):
 - i. \$3.00/sf on all market rate Low Density Residential units
 - ii. \$2.50/sf on all market rate Medium Density Residential units
 - iii. \$2.00/sf on all market rate High Density Residential units
 - c. **Specific to WRTP** – In-lieu fees collected within the WRTP Specific Plan Area shall first be prioritized to support the construction of the required 160 low income affordable units within the Specific Plan Area. City will explore development of a program specific to the WRTP pursuant to which developers of property may receive credits toward their in-lieu fee obligations for the amounts being spent for public infrastructure in excess of their RTIF obligations. Under the contemplated program future RTIF funds would be deposited into the City’s housing trust fund rather than being used to reimburse or provide RTIF credits to developers. Any such program, if adopted, will provide considerations to ensure that in-lieu fees are available on a time-frame as needed to develop the affordable housing units contemplated by this Affordable Housing Plan. The priority focus of the program should be to incentivize the construction of MDR units. Any program adopted should ensure that the housing trust fund does not have more RTIF credits that can reasonably be used by affordable housing developers.
5. Land Dedication - In accordance with the City of Woodland’s Affordable Housing Ordinance:
- a. A developer of property located within the Medium Density Residential (MDR), Village Center Medium Density Residential (VCMDR) or High Density Residential (HDR) zone(s), may be allowed to make an irrevocable offer of dedication to the City or its designee of sufficient land to satisfy the affordability requirement. Any land dedication site shall be consistent with the requirements for land dedication **Specific to WRTP:** Land within the Low Density Residential (LDR) or

Village Center Low Density Residential (VCLDR) zones may not be dedicated to the City for purpose of meeting the Owner's affordable housing obligations.

- b. **Specific to WRTP** – Concurrently with the recordation of the first final subdivision map for properties designated as Urban Village North or South, High Density Residential in the Specific Plan, the Owner of such property shall dedicate a parcel of a minimum size of two and one half acres (unless the City, in its sole discretion, agrees to a smaller site based on a special housing need, or because the another High Density Residential parcel of greater than two and one-half acres was previously dedicated to affordable housing in the Specific Plan Area that would provide for greater than 80 units of affordable housing) to a non-profit or for-profit affordable housing developer, which developer must be approved by the City in its sole discretion, for the construction of an affordable rental housing project. The City may, at its discretion, allow the Owner to make an irrevocable offer of dedication of the parcel directly to the City in the event that the City has not approved an affordable housing developer at the time of recordation of the first final subdivision map for the applicable property. The dedicated parcel is not required to be located within the Property governed by this Development Agreement, provided that the parcel meets the requirements below, is located within the Specific Plan Area, and is designated for High Density Residential. The dedicated site must additionally conform with the following requirements:
 - i. The dedicated parcel shall be of a sufficient size and configuration to accommodate/provide a minimum of 80 residential units consistent with all applicable zoning and Specific Plan requirements (provided, however, that in the event that a prior land dedication site has been developed with greater than 80 units affordable to low income households, the City, may in its sole discretion approve a site that will provide a lesser number of residential units, so long as the minimum number of units will still allow for 160 total low income affordable housing units within the Specific Plan Area.
 - ii. Prior to acceptance of the offer of dedication by the affordable housing developer or City, as applicable, the dedicated parcel shall be fully improved with, or bonds shall be provided to ensure the construction of, infrastructure, frontage improvements (i.e., curb, gutter, walk), paved street access, utility (i.e., water, gas, sewer and electric) service connections stubbed to the property lines, and other such off-site improvements as may be necessary for development of the required affordable units or as required by the City.
- c. An owner who dedicates a land dedication parcel pursuant to this Section 5 shall receive credit toward its inclusionary obligation for HDR project(s) based on the appraised FMV of the land dedication site. In-lieu fee credits may not be

transferred to other lower density zones without separate City approval, in City's sole discretion. The value of the site will be treated as equivalent to a payment of affordable housing in-lieu fees based on the rates set forth in Section 4.b. Any remaining affordable housing obligation shall be provided in the form of affordable housing in-lieu fees paid as set forth in Section 4.b or through the construction of affordable units within the Project.

EXHIBIT I

MAINTENANCE SERVICES TO BE FUNDED BY MAINTENANCE CFD

Following improvements shall be maintained with funding to be established through the Maintenance CFD

- Landscape maintenance for any parks, landscaped medians, and greenbelts located within the Specific Plan Area, including but not limited to sidewalks, play equipment, lighting, and irrigation
- Tree-related services for all street trees within the Specific Plan Area, including tree inspections, planting, watering, re-staking, mulching and weeding, fertilization, insect and disease control, pruning, and hazardous tree removal.
- Maintenance of the improvements included as part of any detention pond/open space areas within the Specific Plan Area, including walking paths and other amenities included with the detention pond
- Fair share cost for maintenance of any storm drainage features downstream of the Specific Plan Area, including but not limited to the following:
 - East Regional Pond
 - North Regional Pond
 - County Road 25A Channel
 - Outfall Channel and Outfall Channel Outlet Structure
 - Farmers Central Drainage Channel
 - Any drainage features conveying storm drainage between the features listed above
- Lighting and landscape maintenance for one-half of the Pedestrian Overcrossing. The City will designate the portion of the Pedestrian Overcrossing funded by the Maintenance CFD at its discretion in conformance with all applicable law..
- Lighting and landscape maintenance, including any enhanced landscaping/public art/entry monument at the roundabouts, for which the City is responsible on the east side of the State Route 113/County Road 25A interchange. The specific area in the interchange funded by the Maintenance CFD shall be determined by the City at its discretion in conformance with all applicable law.
- Lighting and landscape maintenance for the east side of the future Parkland Avenue Overcrossing.
- Maintenance of traffic signals and street lights within the Specific Plan Area
- Funding of requirements identified in the Transportation Demand Management (TDM) plan, VMT, and Transit Program, as being funded through the Maintenance CFD.
- Maintenance of Specific Plan Area multi-use pedestrian/bike paths, sound walls, street furniture, public art, entry monument/enhanced landscaping, and mobility hub/transit
- Maintenance of any landscaping on the east side of SR 113 adjacent to the project limits of the WRTP.

EXHIBIT J

PUBLIC INFRASTRUCTURE REIMBURSEMENT RULES

PUBLIC INFRASTRUCTURE REIMBURSEMENT RULES FOR THE WOODLAND RESEARCH AND TECHNOLOGY PARK SPECIFIC PLAN

1. Construction of Public Infrastructure and Dedication of Land Owned by Owner.

a. Parties agree that each Owner shall, for the collective benefit of all Owners in the Specific Plan Area (1) dedicate such real property located on their property that is required for public infrastructure as set forth in the Capital Improvement Program (the “CIP”) and (2) design and construct public infrastructure required to serve the Specific Plan Area in accordance with the requirements of their respective development agreements, infrastructure phasing plans, tentative subdivision maps and public improvement agreements. Owners dedicating real property for public infrastructure projects included in the CIP and reflected in the RTIF and/or constructing such public infrastructure shall receive RTIF fee credits and reimbursement pursuant to the terms of these rules and the Individual Reimbursement Agreements to be entered into by and between individual Owners and the City, as more specifically described herein.

b. Prior to dedication of real property for public infrastructure projects included in the CIP and reflected in the RTIF and/or commencement of construction of any public infrastructure as required pursuant to an approved infrastructure phasing plan, and pursuant to the CIP the Owner shall enter into an individual reimbursement agreement in a form approved by the City Attorney. The individual reimbursement agreement shall establish the manner in which the Property Owner will solicit bids for construction of the public infrastructure, administer the applicable contracts, document costs incurred in connection with the public infrastructure work, and shall more specifically establish the manner in which the Owner shall receive fee credits and reimbursement for such construction work, as well as any dedication of real property associated with such construction work. The terms of the individual reimbursement agreement shall be consistent with these Reimbursement Rules.

2. Master Planning and Design Work.

a. Owners are collectively responsible pursuant to the terms of their respective development agreements for funding the analysis and consideration of certain modifications to the CIP as more specifically described in each Development Agreement as Exhibit E (the “CIP Modification Work”) and certain master planning and design work as is more specifically described in each Development Agreement as Exhibit F (the “Master Planning and Design Work”).

b. Owners agree that the first Owner to submit an application to the City for a tentative subdivision map within the Specific Plan Area shall provide advance funding for all CIP Modification Work and Master Planning and Design Work described in each Development Agreement as Exhibits E and F. Prior to submission of an application for such first tentative subdivision map, the applicable Owner shall enter into an advance funding agreement with the City in a form as approved by the City Attorney for the cost of such CIP Modification and Master Planning and Design Work, and shall continue to fund such costs through completion of the work. All CIP Modification and Master Planning and Design Work described in Exhibits E and F must be completed prior to City approval of the first tentative subdivision map or other discretionary development approval for property within the Specific Plan Area. The Owner that funds the CIP modification work and the master planning and design work shall be eligible for reimbursement from other Owners in accordance with the terms of the respective Development Agreements and as set forth in Section 4(h) of this Exhibit. The CIP Modification and Master Planning and Design Work shall be conducted by the City, unless the City directs the Owner to contract for such work directly with the applicable consultants.

3. Dedication of Land for Public Infrastructure Constructed by Others..

a. Owners acknowledge and agree that their respective properties will not develop at the same time, and that initial development in the Specific Plan will require certain backbone infrastructure such as public right of way, public utility easements, stormwater detention facilities and other facilities that will be necessary for that initial development to proceed. Therefore, there is a likelihood that the Owners developing their property first will require one or more other Owners to dedicate right of way, easements, rights of access and egress and/or fee title to property (the "Dedication Property") for public infrastructure required under the Specific Plan in order for the first Owner to complete the public infrastructure required under its infrastructure phasing plan and applicable public improvement agreement.

b. In order to ensure the orderly and efficient construction of public infrastructure to serve the entirety of the Specific Plan Area, each Owner agrees that in the event that Dedication Property within the boundaries of one Owner is required by the approved infrastructure phasing plan of another Owner, the first Owner (for purposes of this Section, the "Dedicating Property Owner") shall dedicate such required Dedication Property to the City in accordance with the terms and conditions of these rules.

c. At such time that the City and the Owner planning to construct public infrastructure on the Dedication Property (for purposes of this Section, the "Constructing Property Owner") determine that the Dedicating Property Owner's Dedication Property will be required, the City shall notify the

Dedicating Property Owner, and shall request rights of access and egress to the Dedicating Property Owner's property as necessary to prepare any surveys or other analysis as necessary or appropriate to effectuate the transfer of the Dedication Property. Upon receipt of such notification, the Dedicating Property Owner shall grant rights of access and egress to their property at no cost other than the amount paid through the RTIF program, subject to an access agreement with terms as reasonably agreed to between City and Dedicating Property Owner, to complete such survey work and additional analysis required for such dedication.

d. The City shall thereafter submit to the Dedicating Property Owner the documentation required for the granting of such Dedication Property as well as any temporary construction easements and rights of access and egress as required to complete the construction of the public infrastructure, and the Dedicating Property Owner shall execute such documentation, in recordable form as applicable, and return to the City for recordation. Said documentation shall be delivered to the City in a reasonable time frame with the goal being within ten (10) days of the date of receipt by Dedicating Property Owner of such documentation. Failure by the Dedicating Property Owner to execute and deliver the documentation within thirty (30) days of receipt by Dedicating Property Owner shall be a material default under the terms of the Development Agreement and the City may bring an action for specific performance to compel the dedication of the required lands in accordance with this Section. Prior to initiating litigation, the City shall enter into an advance funding agreement with the Constructing Property Owner to fund the cost of such litigation.

4. Fee Credits and Reimbursement for Costs Incurred by Owners.

a. Each Owner shall be entitled to fee credits and reimbursement for construction of public infrastructure, for the dedication of Property for construction of public infrastructure by other Owners, for dedication of real property upon which they construct public infrastructure, and CIP Modification and Master Planning and Design Work funded by an Owner as set forth in the respective Development Agreements.

b. Valuation of Construction Costs. Owners may receive credit and reimbursement for the lesser of the cost established for public infrastructure as set forth in the Schedule of Costs contained in the CIP, subject to any modification that may be made by and in the sole discretion of the City Engineer or designee, or the actual cost of construction of the applicable public improvements. For purposes of determining the cost of the public improvements in comparison to the amounts in the CIP, the Owner may group the calculation of all improvements constructed with the same tentative map, constructed during the same time period and submitted for City documentation at the same time. The valuation for the cost of such construction work shall be established based on the valuations contained in the CIP (as will be amended from time to time and as

updated annually based on the Construction Cost Index (“CCI”)) at the time the Owner awards the construction contract for the applicable public improvement. If construction is not completed in the same calendar year as the contract is awarded, then the CIP valuation may be increased by up to one year of CCI (in addition to any other changes to the CIP that may have occurred between contract award and July 1 of the following year). If the Owner requests credit and reimbursement in the same year that the contract is awarded (either through this subsection b. or through subsection f. below), then they shall not be eligible for the additional year of CCI. Following completion of the applicable public improvements, the Owner shall provide to the City Engineer or designee documentation of actual construction costs for the applicable public improvements. Credit and reimbursement shall be provided based on the lesser of the CIP valuation established at the time of contract award (and if applicable as amended by one year of CCI), or actual costs documented by the Owner. Soft costs associated with the applicable public improvement shall be valued based on valuations contained in the CIP, except that the City has the discretion to request documentation of the soft costs actually incurred by Property Owner, and may value such soft costs based on the costs actually incurred if they are less than the values set forth in the CIP. In the event that a Owner constructs a portion of public infrastructure in a manner that will increase the costs to future Owners that will be required to complete such infrastructure as determined by the City Engineer, the City has the discretion to reduce the valuation of the completed improvement in an amount equal to the City Engineer’s estimate of the increased cost to such future Owner. Examples of this reduced reimbursement include but are not limited to: the partial construction of a road that would make the remaining portion less efficient to construct or the realignment of utilities such that the unbuilt segment is deeper or has a longer distance to travel. City shall have final approval authority regarding whether a particular cost will be approved as a credited cost under these rules, which approval shall not be unreasonably withheld.

c. Valuation of Real Property Dedicated for Public Use. To determine the value of real property to be dedicated by each Owner, the City shall use the value of such property set forth in the Schedule of Costs contained in the CIP (as will be adjusted from time to time based on the Construction Cost Index as published by the Engineering News-Record (“CCI”) through City annual updates to the CIP) for the applicable dedicated real property interests on the date that such dedicated real property is accepted by the City. This applies whether such real property is dedicated for public infrastructure constructed by the dedicating Owner or is property dedicated for improvements to be constructed by other Owners.

d. Valuation of CIP Modification and Master Planning and Design Work. The City will determine the value of CIP Modification and Master Planning and Design Work completed by each Owner as follows: In the event that the City completes CIP Modification and Master Planning and Design Work

required of the Owner, the valuation for that work shall be established on the date that the funds for such work are deposited with the City. In the event that the Owner completes certain CIP Modification and Master Planning and Design Work, the valuation for that work shall be established on the date that the Owner executes a contract for such CIP Modification and Master Planning and Design Work, provided that the Owner shall not be eligible for reimbursement until the work is complete and accepted or approved by the City, as applicable. All contracts (including contract amendments) entered into directly by the Owner for CIP Modification and Master Planning and Design Work must be reviewed by the City and approved in writing prior to contract execution (or contract amendment execution) in order to be eligible for reimbursement. The City shall notify the Owners of the total amount of such costs at such time that the valuation for such costs is established and that amount shall be added to the Reimbursement Account for the Owner funding such costs. Thereafter, the costs will be annually adjusted as set forth in paragraph e. below.

e. Annual Adjustments to Valuations. The outstanding amount of costs incurred by each Owner shall be determined and maintained by City as a “Credit/Reimbursement Account” for each Owner. The balance of each Credit/Reimbursement Account shall be adjusted annually by a percentage amount equal to the Construction Cost Index as published from time to time by the Engineering News-Record Twenty City Index or other index adopted by the City Council (“CCI”) at the same time and by the same percentage that the City adjusts the RTIF. The value of the outstanding costs shall only be adjusted when and if the RTIF is adjusted, and in the event, or any reason, the City does not adjust the RTIF in a given year, the outstanding value of any outstanding costs contained in a Credit/Reimbursement Account similarly shall not be adjusted. Notwithstanding the foregoing, the balance associated with any public improvements constructed by a Owner shall not be adjusted by CCI until such time that the public improvements are accepted by the City, after which the City shall adjust such balances in accordance with this paragraph.

f. Fee Credits. Each Owner shall receive fee credits against its overall RTIF obligation equal to the total value of the construction of the RTIF public infrastructure funded by Owner and dedication of real property by the Owner. Owners will not receive fee credits for the costs of CIP Modification and Master Planning and Design Work. Those costs will be reimbursed pursuant to the terms described in paragraph h, below. Fee credits will be applied toward Owner’s RTIF obligations so long as Owner has available fee credits, except that such credits shall not be applied toward the portion of the RTIF that is attributable to administration costs (the “Administration Portion”). The Administration Portion of the RTIF shall be paid at the time of building permit issuance, and shall be accounted for by the City separately from the remainder of the RTIF. Upon application of any fee credit to units to be constructed by Owner, Owner’s Credit/Reimbursement Account will be reduced in the amount of the fee credit. Fee credits that are based on dedication of real property shall be

available to be used by Owner only after the real property dedication is accepted by the City. Fee credits that are based on construction of public infrastructure shall be available to be used by Owner only after the public infrastructure has been accepted by the City and the City Engineer or designee has verified the costs incurred by Owner for such infrastructure. Notwithstanding the foregoing, Owners may request authorization to utilize fee credits for the construction of public infrastructure prior to acceptance of such public infrastructure by the City, provided that the City will only authorize the utilization of fee credits prior to completion one time for each public infrastructure project. The authorized fee credit shall be limited to 85% of the value of the public infrastructure as set forth in the CIP at the time of Property Owner's request, excluding values in the CIP for soft costs and contingency. Any such request for fee credits prior to acceptance of the applicable partially completed public infrastructure shall be made in writing, and approved by the City in writing based on the sole discretion of the City Engineer. The City Engineer shall verify that the requested amount of fee credits is justified based on the amount of completed infrastructure, including testing of infrastructure. Each Owner that funds the design and construction for the CR 25A/SR 113 interchange shall receive fee credits at the time of payment to the City. Further, the City may collect RTIF funding for other specific capital improvement projects to be constructed by the City. If the City collects RTIF funding from a Owner for a specific capital improvement project as contemplated herein, the Owner shall receive fee credits at the time of payment to the City.

g. Reimbursement Process for Public Infrastructure and Real Property Dedication. Reimbursement will be paid on a "first in, first out" basis, with the first public infrastructure and/or real property accepted by the City eligible for the first reimbursement payments from available RTIF; (excluding the portion of the RTIF attributable to Administration Portion of the RTIF), and subsequent construction and/or dedications being eligible for reimbursement in the chronological order in which they are accepted by the City. In the event that there is not available RTIF to reimburse the Owner at the time the public infrastructure and/or real property is accepted by City, the reimbursements shall be paid as RTIF funds become available.

h. Reimbursement Process for CIP Modification and Master Planning and Design Costs. Reimbursement for CIP Modification and Master Planning and Design Work costs incurred by an Owner shall be paid from the Administration Portion of the RTIF collected by the City. The City will provide reimbursement to the Owners that incur such CIP Modification and Master Planning and Design Work costs pursuant to an individual reimbursement agreement to be entered into by and between City and Owner that will establish the amount of reimbursement available to the Owner, and subject to the terms of these Reimbursement Rules. Reimbursement for the CIP Modification and Master Planning and Design Work costs will be paid on a "first in, first out" basis, with the first CIP Modification and Master Planning and Design Work accepted or approved by the City eligible for the first reimbursement payments

from the available Administration Portion of the RTIF, and subsequent CIP Modification and Master Planning and Design Work being eligible for reimbursement in the chronological order in which the work is accepted or approved by the City. In the event that there is not available Administration Portion of the RTIF to reimburse the Owner at the time the CIP Modification and Master Planning and Design Work is accepted or approved by City, the reimbursements shall be paid as the Portion of the RTIF becomes available. The City's Director of Administrative Services will determine, in their sole discretion, when sufficient funding from the Administration Portion of the RTIF is available for reimbursement, taking into account other costs required to be paid from the Administration Portion of the RTIF, such as City Attorney or staff costs.

i. City Will Reimburse Only From Cash Available. City shall only reimburse Owners from cash that is available for such reimbursement from CFD bond proceeds, cash payments made pursuant to agreements entered into with other Property Owners to fund the costs of such public improvements, or proceeds of RTIF payments. Reimbursement shall be limited to available CFD bond proceeds or funds obtained from other Owners. Nothing in this Agreement obligates, or shall be deemed to obligate, City to use General Fund monies or any other source of City revenues to satisfy any Owner's claim for reimbursement. City's obligation to reimburse Owner pursuant to this Agreement shall be limited to CFD bond proceeds or other funds actually received by City from other owners in accordance with the terms of existing agreements and procedures. Owners acknowledge and agree that the City shall collect RTIF funding for specific capital improvement projects to be constructed by the City, including but not limited to the CR 25A/SR 113 Interchange Project. The funding the City receives toward the CR 25A/SR 113 Interchange Project or any other RTIF funded capital improvement project to be constructed by the City will not be available for reimbursement to Property Owners. Following completion of the CR 25A/SR 113 Interchange Project, the City will review whether an adjustment to the CIP and fee program for the RTIF is possible, based on the amount of funding available at that time.

EXHIBIT K

WRTP PROJECT FEES

CITY shall collect any of the following fees based on the project conditions of approval, the WRTP approval documents and as defined in this Exhibit K. The fees set forth herein do not include fees imposed by other agencies, such as the County of Yolo or Woodland Joint Unified School District. Actual fee amounts owed by OWNER will be the then-current amounts of such fees at the time they are paid by OWNER. All fees are subject to annual Construction Cost Increases (CCI) and may be subject to increases based on City evaluation of the various fee programs in accordance with applicable State law, or with regard to the RTIF, in accordance with the Development Agreement and the RTIF Report. The Engineering News-Record Twenty City Index or other index adopted by the City Council shall be used for the calculation of CCI.

Development Impact Fees for the following categories and amounts are shown as of September 2023. The Administrative Guidelines in effect on the date of the approval of this Agreement shall be used for the duration of this Agreement.

Development Impact Fee	Greenfield SFD (Single Family Dwelling)	Greenfield MFU (Multi-family Unit)
General City	\$1,005	\$755
Fire	\$3,406	\$2,042
Library	\$628	\$471
Police	\$823	\$616
Wastewater	\$7,524	\$5,642
Water Capacity Fee	\$6,174	\$4,630*
Parks & Recreational Facilities	\$9,279	\$6,959
Roads	\$9,915	\$4,063
Admin Fee (.75%)	\$291	\$189
Storm Drainage Facilities	\$0	\$0
Total	\$39,045	\$25,367
Storm drainage is \$0 for the WRTP, as it is all paid in the RTIF. Water fee is reduced (to 75% of the SF rate) for multifamily. *Water Capacity Fee will be determined by meter size		

Other fees include all fees identified in this Agreement or conditions of approval which are linked to final map approval or issuance of a building permit, as follows:

- RTIF fees for the cost of the backbone infrastructure to the Woodland Research and Technology Park plan area (September 2023 fees) are as listed in Attachment No. 1 to this Exhibit.
- Habitat Conservation Obligation. Before any ground-disturbing activities, the City will require project proponent/s to submit the Yolo HCP/NCCP *Application Form* for non-member agency projects and *Member Agency Reporting Form* for member agency projects, as applicable, and pay applicable fees to the Yolo Habitat Conservancy as specified in the appropriate form.
- Affordable Housing. All residential projects are subject to the Citywide Affordable Housing

Ordinance (WMC Chapter 15.16) which requires a 10 percent inclusionary housing obligation, except where modified by the W RTP Project Development Agreement (Exhibit H). Applicants shall comply with their inclusionary obligation through on site construction of affordable units, through the payment of in-lieu fees, and/or through land dedication as specified in Exhibit H. The current in-lieu fees are as follows: for LDR \$3.00/building sq ft, for MDR \$2.50/building sq ft and for HDR \$2.00/building sq ft

- Conversion of Prime Agricultural Land. Project applicants for future projects proposed within the W RTP Specific Plan Area are required to comply with Woodland Municipal Code Chapter 15.33, which requires replacement of Prime Farmland at a 1:1 ratio. In addition, the South Regional Pond development area is subject to the County's agricultural conservation ordinance (Section 8-2.404 and Section 8.2-405 of the Yolo County Code), which requires replacement of Prime Farmland at a ratio of three acres of conserved farmland to one acre of converted land and replacement of other types of farmland at a ratio of two acres to one; small projects of less than 20 acres may pay an in-lieu fee rather than conserve farmland directly.
- Fair Share Cost of public facilities, services and improvements as determined by the City of Woodland nexus study (MPFP fee triggered at building permit)
- Public transit capital fee of \$311 for LDR, \$212 for MDR and \$159 for HDR. This fee will be used to pay for the construction of transit capital improvements.
- Installation of or payment of fees consistent with the City's Public Art Ordinance.
- Tentative Map processing shall be paid on a time and materials basis based on the City's current liability account procedures (at the time of project application).
- With regard to Engineering fees: Plan Check fees shall be 3% of the value of the improvements or as modified based on the engineering fees in effect at time of Development Agreement approval. At the City's option, inspection fees will be paid for on a time and materials basis or on a fee basis per the engineering fees in effect at the time of Development Agreement approval.
- Building permit fees, planning fees, fire department fees and all other development processing fees not mentioned in this Exhibit will be those fees in effect at the time the various documents are submitted to the City for approval; provided that the Property shall only be subject to City fees to the extent they existed at the time this Agreement was approved by City Council. City has disclosed and Owner has acknowledged that City may during the term of this Agreement adopt new and different City-wide processes and labels for processing development approvals and development processing fees. Owner will comply with changes as they apply to the Property, provided that in no case shall such changes adversely affect or modify Owner's rights under this Agreement, nor shall such changes increase the total costs payable by Owner for development processing fees above what would have been charged for the applicable development approvals immediately prior to such change, without a mutually agreed amendment to this Agreement.
- If any fees are modified or new fees are created based on County, State or Federal requirements (or in response to County, State and Federal requirements), then those fees shall be paid based on the fees in effect at the time the various documents are submitted to the City for approval, provided that any increased cost to Owner shall be limited to the costs related to County, State and Federal requirements). If any building fees are modified or new fees are created based on the International Code Council (ICC) or similarly used resources in the building industry, then those fees shall be paid based on the fees in effect at the time the various documents are submitted to the City for approval.

FORM OF ASSIGNMENT AND ASSUMPTION AGREEMENT

RECORDING REQUESTED BY AND
WHEN RECORDED MAIL TO:

Attention: _____

Space Above this Line Reserved for Recorder's Use

**ASSIGNMENT AND ASSUMPTION
OF DEVELOPMENT AGREEMENT**

THIS ASSIGNMENT AND ASSUMPTION OF DEVELOPMENT AGREEMENT (this “**Assignment**”) is made effective as of _____, 20__ (the “**Effective Date**”), by and between _____, L.P., a California limited partnership (“**Assignor**”), and _____, L.P., a California limited partnership (“**Assignee**”).

RECITALS

A. The City of Woodland (“**City**”) adopted Ordinance Number ____ on _____, 20__, authorizing entry into that certain Development Agreement by and between the City of Woodland (the “**City**”) and Assignor, dated on or about _____ (the “**Development Agreement**”), as Document No. ____ - _____ in the Official Records of the County Recorder for Yolo County, California (the “**Official Records**”). The Development Agreement as used herein shall mean, refer to, and include the Development Agreement, as well as any exhibits, addenda, operating memoranda, implementation agreements, amendments, and attachments thereto (which are hereby incorporated herein by this reference) as well as other documents expressly incorporated by reference in the Development Agreement. Capitalized terms not defined herein shall have the meanings ascribed to them in the Development Agreement.

B. The Development Agreement grants certain rights, duties, and obligations with respect to the development and improvement of certain real property in the City of Woodland, County of Yolo, State of California, as more particularly described in **Exhibit “A”** attached hereto and incorporated herein (the “**Property**”) as more particularly set forth in the Development Agreement (the “**Development Agreement Rights, Duties and Obligations**”).

C. Paragraph 2.4 of the Development Agreement describes the process for assignment of the Development Agreement Rights, Duties and Obligations.

D. Assignor desires to assign to Assignee, and Assignee desires to accept and assume, each and all of Assignor’s Development Agreement Rights, Duties and Obligations.

AGREEMENT

NOW THEREFORE, for good and valuable consideration, the receipt and adequacy of which are hereby acknowledged, Assignor and Assignee hereby agree as follows:

1. Assignment. Effective as of the date of recordation of this Assignment, Assignor hereby assigns to Assignee all of the Development Agreement Rights, Duties and Obligations.

2. Acceptance and Assumption. Effective as of the date of recordation of this Assignment, Assignee hereby accepts the foregoing assignment of the Development Agreement Rights, Duties and Obligations from Assignor and unconditionally assumes and agrees to perform each and all of the duties, covenants, and obligations comprising the Development Agreement Rights, Duties and Obligations, first arising from and after the date of recordation of this Assignment pursuant to the Development Agreement (collectively, the “**Assumed Obligations**”).

3. Assignor Not Released. Assignor and Assignee acknowledge and agree that, pursuant to Section 2.4.2 of the Development Agreement, Assignor shall continue to be obligated under the Development Agreement unless and until Assignor is given a release in writing by the City.

4. Assignee Address. The principal address of Assignee for purposes of the Development Agreement is as follows:

Attention: _____

E-mail: _____

5. Miscellaneous.

(a) This Assignment shall be determined in accordance with and governed by the laws of the State of California.

(b) This Assignment may be executed in counterparts, each of which shall be deemed an original and which, when taken together, shall constitute a complete instrument.

(c) Each party agrees to perform any further acts, and to execute and deliver any further documents that may be reasonably necessary or required to carry out the intent and provisions of this Assignment and the transactions contemplated hereby.

(d) This Assignment shall bind and inure to the benefit of the respective heirs, personal representatives, grantees, successors, and assigns of the parties hereto.

IN WITNESS WHEREOF, the parties hereto have caused this Assignment to be signed by their duly authorized officers as of the day and year first written above.

FORM OF PARTIAL ASSIGNMENT AND ASSUMPTION AGREEMENT

RECORDING REQUESTED BY AND
WHEN RECORDED MAIL TO:

Attention: _____

Space Above this Line Reserved for Recorder's Use

**PARTIAL ASSIGNMENT AND ASSUMPTION
OF DEVELOPMENT AGREEMENT**

THIS PARTIAL ASSIGNMENT AND ASSUMPTION OF DEVELOPMENT AGREEMENT (this "**Assignment**") is made effective as of _____, 20__ (the "**Effective Date**"), by and between _____, a _____ ("**Assignor**"), and _____, a _____ ("**Assignee**").

RECITALS

A. The City of Woodland ("**City**") adopted Ordinance Number _____ on _____, 20__, authorizing entry into that certain Development Agreement by and between the City of Woodland (the "**City**") and Assignor, dated on or about _____, (the "**Development Agreement**") which was recorded on _____, 20__, as Document No. _____ - _____ in the Official Records of the County Recorder for Yolo County, California (the "**Official Records**"). The Development Agreement as used herein shall mean, refer to, and include the Development Agreement, as well as any exhibits, addenda, operating memoranda, implementation agreements, amendments, and attachments thereto (which are hereby incorporated herein by this reference) as well as other documents expressly incorporated by reference in the Development Agreement. Capitalized terms not defined herein shall have the meanings ascribed to them in the Development Agreement.

B. The Development Agreement grants certain rights, duties, and obligations with respect to the development and improvement of certain real property in the City of Woodland, County of Yolo, State of California, as more particularly described in **Exhibit "A"** attached hereto and incorporated herein (the "**Entire Property**"), including, without limitation, with respect to the property described in attached **Exhibit "B"** (the "**Transferred Property**") as more particularly set forth in the Development Agreement (the "**Development Agreement Rights, Duties and Obligations**").

C. Paragraph 2.4.6 of the Development Agreement describes the process for the partial assignment of the Development Agreement Rights, Duties and Obligations.

D. Assignor desires to assign to Assignee, and Assignee desires to accept and assume, each and all of Assignor's Development Agreement Rights, Duties and Obligations as they pertain and relate to the Transferred Property.

AGREEMENT

NOW THEREFORE, for good and valuable consideration, the receipt and adequacy of which are hereby acknowledged, Assignor and Assignee hereby agree as follows:

6. Assignment. Effective as of the date of recordation of this Assignment, Assignor hereby assigns to Assignee all of the Development Agreement Rights, Duties and Obligations relating or pertaining to the Transferred Property.

7. Acceptance and Assumption. Effective as of the date of recordation of this Assignment, Assignee hereby accepts the foregoing assignment of the Development Agreement Rights, Duties and Obligations from Assignor and unconditionally assumes and agrees to perform each and all of the duties, covenants, and obligations comprising the Development Agreement Rights, Duties and Obligations relating or pertaining to the Transferred Property, first arising from and after the date of recordation of this Assignment pursuant to the Development Agreement (collectively, the "**Assumed Obligations**").

8. Assignor Not Released. Assignor and Assignee acknowledge and agree that, pursuant to Section 2.4.6 of the Development Agreement, Assignor shall continue to be obligated under the Development Agreement unless and until Assignor is given a release in writing by the City.

9. Assignee Address. The principal address of Assignee for purposes of the Development Agreement is as follows:

Attention: _____
E-mail: _____

10. Miscellaneous.

(a) This Assignment shall be determined in accordance with and governed by the laws of the State of California.

(b) This Assignment may be executed in counterparts, each of which shall be deemed an original and which, when taken together, shall constitute a complete instrument.

(c) Each party agrees to perform any further acts, and to execute and deliver any further documents that may be reasonably necessary or required to carry out the intent and provisions of this Assignment and the transactions contemplated hereby.

(d) This Assignment shall bind and inure to the benefit of the respective heirs, personal representatives, grantees, successors, and assigns of the parties hereto.

IN WITNESS WHEREOF, the parties hereto have caused this Assignment to be signed by their duly authorized officers as of the day and year first written above.

1. Introduction and Executive Summary

This Public Facilities Financing Plan (Financing Plan) presents a strategy to finance backbone infrastructure and other public facilities required to serve the proposed land uses in the Woodland Research and Technology Park Specific Plan Area (WRTP). The financing strategy is designed to be flexible enough to accommodate the development plans of different WRTP property owners while assuring the City of Woodland (City) that the required facilities are constructed when necessary. The Financing Plan includes the use of the following funding mechanisms: existing development impact fee programs, a new Woodland Research and Technology Infrastructure Fee Program (RTIF Program), land-secured debt financing, developer funding, City funding, and funding from other plan areas.

Project Description and Proposed Land Uses

The WRTP is located on approximately 350 acres just south of the City and borders the Spring Lake Specific Plan Area (SLSP), which is located to the east and north of the WRTP. **Map 1-1** shows the WRTP location in relation to the City of Woodland. The WRTP is included in the City's 2035 General Plan as a natural extension of the City and is planned for annexation into the City. As stated in the Public Review Draft WRTP Specific Plan, the WRTP is planned to be a "self-sustaining, enterprising mixed-use community anchored by a technology and innovation campus, with vibrant retail and supporting uses, integrated residential neighborhoods, recreation, open space and public uses." The planned uses in the WRTP at buildout include 1,670 residential dwelling units and approximately 2.3 million square feet of nonresidential retail and office development. **Chapter 2** further details the land use plan.

Map 1-1. Plan Area Location

Backbone Infrastructure and Public Facilities

Definitions of Backbone Infrastructure and Public Facilities

This Financing Plan will use the following definitions to more precisely define backbone infrastructure and public facilities:

- **Backbone Infrastructure:** This term includes most of the essential public service-based items that are underground or on the surface. These items include storm drainage, water, reclaimed water, sewer, and major roads. Backbone infrastructure is sized to serve numerous individual development projects in the WRTP and in some cases serves the broader region's development areas.
- **Public Facilities:** This group of items provides amenities to the WRTP (e.g., park facilities and libraries) or houses employees providing services to the area (e.g., fire facilities). In this Financing Plan, this term includes the following public facilities:
 - Parks and Open Space
 - Schools
 - Libraries
 - Fire Stations and Equipment
 - Police Facilities
 - City and County General Government Facilities
 - Public Transit
 - Agricultural and Habitat Mitigation Land
 - Affordable Housing
- **Public Improvements:** This term is used generically in the Financing Plan to include a combination of backbone infrastructure and public facilities when a precise breakdown is not required.

Total Public Improvements Cost Estimates

This Financing Plan includes approximately \$255.5 million in public improvement requirements associated with WRTP Buildout. The public improvements consist of the improvements specifically required to serve the WRTP that are included in the WRTP Capital Improvement Program prepared by Cunningham Engineering Corporation, as well as additional City, County, and school district public improvements toward which the WRTP must contribute. The public improvement costs are detailed in **Chapter 4**.

Financing Strategy Summary

The purpose of this Financing Plan is to propose a financing strategy to fund the necessary public improvements required to serve the WRTP. The financing strategy is flexible enough to ensure the required improvements are constructed when necessary. The financing mechanisms used will depend on the types and timing of the needed facilities and are guided by objectives and policies established by the Specific Plan.

A combination of funding sources will be used to fund the costs of the public improvements, as summarized below:

- The proposed new WRTP development impact fee program, the RTIF Program (defined earlier in this chapter), will help fund those backbone infrastructure and public facilities costs that are not funded by existing fee programs or other funding sources identified below. Facilities included in the RTIF Program include those facilities with plan-wide benefits (i.e., serve multiple individual subdivisions), the costs of which should be distributed among RTIF land uses and ownership interests.
- Existing City, Yolo County (County), and school district development impact fee programs fund public improvements that benefit the WRTP as well as other developments. The WRTP will contribute to the construction of these public improvements through participation in the existing fee programs. Examples of these fee programs are the City Major Projects Financing Plan Fee Program and the Woodland Joint Unified School District Impact Fee Program.
- Other plan areas will participate in funding facilities for which they have a shared benefit with the WRTP.
- The WRTP developers will be responsible for privately funding a portion of the streets, storm drainage, water, and sewer costs.
- The City will contribute to the funding of several projects with Citywide benefit.
- One or more Mello-Roos Community Facility Districts (CFDs) or other public financing mechanisms will fund infrastructure improvements needed during the development of the WRTP before the collection of sufficient fees or other sources of revenue for reimbursement. The bonds will be repaid through special taxes levied on property through the CFDs. One or more CFDs also will be formed to fund annual maintenance and services costs.
- Developers will be conditioned through development agreements (DAs) to construct and fund certain public improvements needed in the initial phases of the WRTP before the collection of sufficient fees or other funds to construct the improvements. Fee credits and reimbursements for advance-funded facilities included in the RTIF Program will be available to the developers.

Supporting Documents

This Financing Plan relied on the following documents that have been prepared by or for the City or are being prepared in conjunction with this analysis:

- WRTP Specific Plan
- Development Agreements between the City and WRTP Property Owners
- Master Reimbursement Agreement between the City and WRTP Property Owners
- WRTP Development Impact Fee Nexus Study
- WRTP Capital Improvement Program

Organization of Report

This Financing Plan is organized into the following chapters:

- **Chapter 1** included an introduction and executive summary of the Financing Plan.
- **Chapter 2** details the WRTP land uses and population estimates.
- **Chapter 3** details the policy and financing framework for the Financing Plan established in the WRTP Specific Plan.
- **Chapter 4** details the required backbone infrastructure and public facility requirements and associated costs.
- **Chapter 5** describes the overall financing strategy and funding sources.
- **Chapter 6** summarizes the proposed RTIF Program.
- **Chapter 7** examines the feasibility of the WRTP Financing Plan.

In addition, the Financing Plan contains the following appendices:

- **Appendix A:** Summary of WRTP Capital Improvement Program
- **Appendix B:** Development Impact Fee Analysis
- **Appendix C:** Infrastructure Cost Burden Comparison

2. WRTP Land Uses and Phasing

Land Use Summary

The WRTP is located on approximately 350 gross acres, with an estimated 150 acres planned for residential development and 130 acres planned for nonresidential retail and office development. The remaining WRTP areas are planned for public uses, including parks, trails, greenbelts, other open space, roads, and a school. **Table 2-1** summarizes the planned acres, dwelling units, and nonresidential building square feet by land use. It also includes the average square feet per unit for each residential category. These average square feet were estimated based on building permit data provided by the City, as detailed in the WRTP Nexus Study (Nexus Study). **Table 2-2** further details the planned acres, dwelling units, and nonresidential building square feet by the specific plan land uses. A total of 1,670 dwelling units and approximately 2.3 million square feet of nonresidential building space are planned in the WRTP. **Map 2-1** depicts the WRTP land use plan.

Population Summary

Table 2-3 summarizes the estimated population at buildout of the WRTP. For each land use, the population is estimated as the number of dwelling units multiplied by the estimated persons per household (PPH). It is estimated that the WRTP will have a population of approximately 4,300 people at buildout. The methodology for estimating the PPH factors is detailed in the Nexus Study.

Development Phasing

A WRTP development phasing plan has not been developed, but it is anticipated that low density and medium density residential units generally will develop concurrently with or just ahead of commercial development and before high-density residential units. Development phasing will be driven by market demand.

Each developer will be required to submit a Phasing Plan for each development phase prior to approval of a tentative subdivision map for the property in the development phase. The Phasing Plan will be consistent with the infrastructure phasing rules detailed in the DA between the City and the developer and will include the required infrastructure to be constructed by the developer. Phasing of infrastructure will be guided by development phasing. The required infrastructure that the developer must construct could include both onsite and offsite infrastructure and will be determined in consultation with the City Engineer.

3. Policy and Financing Framework

Overview

This chapter provides an overview of the WRTP policy framework related to the Financing Plan. The Financing Plan must be prepared in accordance with the requirements of the WRTP Specific Plan document (Specific Plan), the DAs, and the Master Reimbursement Agreement. The purpose of each of these documents is described briefly below:

- **Specific Plan.** The Specific Plan establishes the land use plan and zoning regulations for development within the WRTP. The Specific Plan governs the development of the WRTP and requires completion of this Financing Plan to describe the financing strategy and mechanisms to fund the backbone infrastructure and public facilities needed for the WRTP development.
- **DAs.** Each property owner is entering into a DA with the City that allows the property owner vested rights to develop their property in accordance with the terms and conditions of the Specific Plan. The DAs detail the specific requirements for the property owners to be allowed to develop, including requirements for the construction of certain backbone infrastructure and public facilities.
- **Master Reimbursement Agreement.** The Master Reimbursement Agreement is an agreement between all of the developers and the City that details the procedures and requirements for the developers to receive RTIF Program credits and reimbursements for the dedication of land and construction of backbone infrastructure and public facilities.

Financing Plan Requirements

As stated in the Specific Plan, “the Financing Plan will serve as a framework to guide and support the objectives of the Specific Plan.” This Financing Plan provides the estimated costs to construct identified public improvements needed to implement the Specific Plan and describes the proposed funding mechanisms to fund those costs.

The overall costs and funding sources in the Financing Plan have been estimated for the purpose of providing feasible financing strategies and mechanisms to construct the backbone infrastructure and public facilities required for WRTP development. The development, costs, and funding sources in this Financing Plan are based on the best information available at this time and may need to be updated as development progresses.

The Specific Plan includes the following requirements for the Financing Plan:

- Describe the project and sequencing of needed infrastructure.
- Provide a summary of the infrastructure and public facility requirements to serve future development within the Plan Area.
- Include infrastructure cost estimates by land use and by development phase per acre, and the estimated infrastructure cost at build-out of the Plan Area.
- Include summarized costs for infrastructure and public facilities needed to serve the Specific Plan, including costs needed to serve the Plan Area at buildout.
- Review and include existing fees, taxes and assessments which may be applicable to new development in the Specific Plan.
- Present cost estimates for operating and maintaining the required infrastructure and for ongoing municipal services.
- Identify potential funding sources for both the construction of infrastructure and provision of municipal services.
- Present the overall cost burden by land use and by development area on a per acre basis.
- Provide recommended action steps for implementation of the infrastructure financing.

Financing Plan Goals

The elements of the Financing Plan must work together to provide the optimal balance of fees, private, and other financing to not overly burden undeveloped land, while assuring that necessary facilities are constructed when needed. The goals of the Financing Plan are summarized below:

1. Fully fund all facility and infrastructure improvements when the improvements are needed to serve the Project.
2. Use existing fee programs to the extent possible.
3. Identify new fee programs or increases in existing fee programs to the extent required.
4. Make use of “pay-as-you-go” mechanisms, while allowing for timely construction of public improvements.
5. Make appropriate use of private financing, existing fee programs, new fee programs, and credit/reimbursement agreements to fund improvements when needed.

4. Backbone Infrastructure and Public Facilities

This chapter summarizes the WRTP backbone infrastructure and public facilities (public improvements) that are required to serve the WRTP. The backbone infrastructure and public facilities consist of the improvements specifically required to serve the WRTP that are included in the WRTP Capital Improvement Program (CIP) prepared by Cunningham Engineering Corporation, as well as additional City, County, and school district public improvements toward which the WRTP must contribute. **Table 4-1** summarizes public improvements and the WRTP estimated cost obligation for these improvements.

Appendix A contains a summary of the CIP. The additional public improvements not included in the CIP, such as citywide road improvements, schools, and libraries are generally located off-site and funded through existing development impact fee programs.

Backbone Infrastructure

As shown in **Table 4-1**, the WRTP has a backbone infrastructure cost obligation of approximately \$156.9 million. The CIP contains an estimated \$100.6 million of improvements. The WRTP will have an additional \$56.2 million obligation for other Citywide backbone infrastructure. All costs are expressed in 2023 dollars. The following types of backbone infrastructure are included:

- Streets
- Storm Drainage
- Water
- Sewer

Streets

Map 4-1 displays the road circulation plan for the WRTP. The CIP includes an estimated \$71.0 million in land acquisition, right of way and utilities, agricultural mitigation and habitat conservation plan (HCP), and construction costs for transportation improvements required to serve the WRTP. An additional \$29.7 million in Citywide transportation improvements will be payable through the City Major Projects Financing Plan (MPFP) Fee Program.

Table 4-1
Woodland Research and Technology Park Financing Plan
Estimated Backbone Infrastructure and Public Facilities Costs (2023\$)

Item	Total	WRTP CIP	Other Improvements
Backbone Infrastructure			
Streets	\$100,727,322	\$71,046,000	\$29,681,322
Storm Drainage	\$20,841,000	\$20,841,000	\$0
Water	\$15,792,537	\$5,228,000	\$10,564,537
Sewer	\$19,547,446	\$3,549,000	\$15,998,446
Subtotal Backbone Infrastructure	\$156,908,304	\$100,664,000	\$56,244,304
Public Facilities			
Parks and Open Space	\$44,413,170	\$30,119,000	\$14,294,170

-  SIGNALIZED INTERSECTION
-  ROUNDABOUT

Map 4-1. Road Circulation Diagram

The street improvements below are included in the CIP and described in the remainder of this section:

- County Road 25A
- Parkland Avenue
- Parkland Avenue Overcrossing
- Main Internal Roadways
- Road B
- Highway 113 and County Road 25A Interchange

County Road 25A

County Road 25A (CR 25A) will be the primary entryway to the WRTP. The RTIF Program includes construction of the section of CR 25A from Highway 113 on the west to Harry Lorenzo Avenue on the east. There will be a signalized intersection at Road B and CR 25A that will serve as the main entryway to the WRTP.

Parkland Avenue Overcrossing

The parkland avenue overcrossing over Highway 113 will connect the west side of Highway 113 to the future Parkland Avenue in the WRTP. It will provide access from the WRTP to other future City plan areas west of Highway 113.

Parkland Avenue

Parkland Avenue is the principal arterial street within the WRTP. The CIP includes funding for the extension of Parkland Avenue from Harry Lorenzo Avenue on the east side of the WRTP to the future Parkland Avenue Overcrossing on the west side of the WRTP.

Main Internal Roads

The CIP includes construction of the main internal streets. These streets are designed to connect different parts of the WRTP and provide access into and out of the project.

Road B

Road B is a minor arterial street that serves as the main north to south road linking different areas of the WRTP. All intersections on Road B will be signalized and include enhanced pavement, landscaping, and aesthetic features. Road B includes a mobility hub that will serve as a point of arrival or departure for employees and residents traveling to, from, and within the WRTP by different transportation modes.

Harry Lorenzo Avenue – Half Section North

The CIP includes construction of the western half section of Harry Lorenzo Avenue from the northern WRTP boundary at Farmer's Central Road to Parkland Avenue. This improvement has been completed and included grading and erosion control, street work and concrete, and streetlights.

Highway 113 and County Road 25A Interchange (Double Roundabout Option)

Interchange improvements at Highway 113 and CR 25A include ramp improvements and the construction of roundabouts on both the east and west sides of the interchange.

Storm Drainage

Map 4-2 displays the planned storm drainage system plan for the WRTP. The CIP includes a total of \$20.8 million in land acquisition, agricultural mitigation and HCP, and construction costs for on-site and off-site storm drainage improvements. On-site improvements consist of a system of collection and conveyance facilities located in and adjacent to collector and arterial streets and in greenbelt corridors. Off-site improvements consist of upgrades to the recently constructed South Regional Pump Station.

The WRTP does not have an obligation for any additional storm drainage improvements outside of those in the CIP.

Water

Map 4-3 displays the proposed water distribution system for the WRTP, and **Map 4-4** shows the proposed recycled water distribution system. The CIP includes a total of \$5.2 million in construction costs for water improvements, including recycled water improvements. Water facilities consist of the pipelines needed to connect to existing transmission mains and distribute water throughout the WRTP. The water pipelines will be located within the right-of-way of public streets, and the recycled water pipelines will be located within the right-of-way of public streets and greenways.

An additional \$10.6 million in Citywide water improvements will be payable through the City MPFP Fee Program.

Sewer

Map 4-5 displays the proposed wastewater system for the WRTP. The CIP includes a total of \$3.5 million in construction costs for on-site and off-site sewer improvements. On-site improvements consist of a system of collection and conveyance facilities located in and adjacent to internal streets. Off-site improvements include upgrades to the existing SLSP pump station.

- 15"SS PROPOSED WASTEWATER LINE (NOT YET CONSTRUCTED, ASSUMED TO BE IMPLEMENTED PRIOR TO SP-1A)
- 24"SS EXISTING WASTEWATER LINE

An additional \$16.0 million in Citywide sewer improvements will be payable through the City MPFP Fee Program.

Public Facilities

As shown in **Table 4-1**, the WRTP has a public facilities cost obligation of approximately \$98.6 million. The WRTP CIP contains an estimated \$30.1 million of parks and open space. The WRTP will have an additional \$68.5 million obligation for other City, County, and school district improvements. All costs are expressed in 2023 dollars. The following types of public facilities will be required to serve the WRTP:

- Parks and Open Space
- Schools
- Libraries
- Fire
- Police
- General Government
- Public Transit
- Affordable Housing
- Agricultural Mitigation
- County Facilities
- Habitat

Parks and Open Space

Map 4-6 shows the proposed parks and open space sites in the WRTP. The CIP includes a total of \$30.1 million in land acquisition, agricultural mitigation and HCP, and construction costs for parks and open space. The planned parks and open space system includes parks, open space, and green belts throughout the WRTP. The land use plan includes an 11.6-acre neighborhood park to serve the WRTP and 6 acres of open space and greenbelts.

An additional \$14.3 million in Citywide parks and recreation improvements will be payable through the City MPFP Fee Program.

Schools

Map 4-7 shows a possible WRTP school site. It is currently undecided if a school will be constructed in the WRTP. However, land has been zoned and reserved for a 12-acre school campus if the Woodland Joint Unified School District (WJUSD) determines that there is a need for a school in the plan area. Public school students from the WRTP may be served by existing or new schools in neighboring areas of Woodland. The CIP does not contain any school costs, as schools will be constructed by the WJUSD.

Map 4-6. Proposed Parks/Open Space Sites

LEGEND

	VCOS	VILLAGE CENTER OPEN SPACE - THE YARD
	OS	OPEN SPACE - GREENBELTS

Map 4-7. Possible School Site

The WRTP is anticipated to contribute an estimated \$13.5 million to school construction costs through the payment of WJUSD school development fees.

Libraries

New or expanded library facilities may be needed to serve the residents of the WRTP, but a library is not planned in the WRTP. The residents of the WRTP will be served by the existing public library in the City or by potential new facilities. The CIP does not contain any library costs, as required new library facilities will be constructed by the City. The WRTP will contribute an estimated \$1.0 million to library improvement costs through the payment of City MPFP fees.

Fire

Fire facilities will be needed to serve the residents of the WRTP, but a fire station is not planned in the WRTP. The City plans to relocate the existing Fire Station Three from its current location two miles north of the WRTP to a site one-half mile north of the WRTP, so that this station can provide service with the required response times to the WRTP. The CIP does not contain fire facility costs, as required new fire facilities will be constructed by the City. The WRTP will contribute an estimated \$9.9 million to fire facilities and equipment costs through the payment of City MPFP fees.

Police

Expanded police facilities and equipment will be needed to provide adequate law enforcement services to the residents of the WRTP, but a police station is not planned in the WRTP. The Woodland Police Department plans to add additional police officers to serve the new City residents, resulting in the need for additional equipment and vehicles. However, the City has determined that its existing police station is sufficiently sized to provide required police service levels through buildout of the WRTP. The CIP does not include police improvement costs, as the City will acquire the required new equipment and vehicles and make any facility improvements. The WRTP will contribute an estimated \$2.7 million to police improvement costs through the payment of City MPFP fees.

General Government Facilities

Improvements to general government facilities, such as City Hall and other City buildings may be needed to serve the new residents and employees of the WRTP. The CIP does not include general government facilities costs, as any required improvements will be constructed by the City. The WRTP will contribute an estimated \$3.3 million to general government facilities costs through the payment of City MPFP fees.

Public Transit

A public transit system will be needed to serve the new residents and employees of the WRTP. Transit improvement costs for the mobility hub are included with the Streets costs (see prior discussion in Road B section). The City may require additional start-up capital investment for vehicles and operations and maintenance costs. The City has established a Public Transit fee to fund these additional costs. The WRTP will contribute an estimated \$471,000 to transit improvements through the payment of the City Public Transit Fee.

Affordable Housing

As stated in the WRTP Affordable Housing Plan, ten percent of all units developed in the WRTP shall be made available to low income residents, as defined in the City's Affordable Housing Ordinance. The developers may pay in-lieu fees established for WRTP market rate residential development to satisfy the affordable housing obligation. In addition, five acres of land shall be dedicated in the plan area for the construction of at least 160 low-income housing units. The WRTP will contribute to the construction of affordable housing through a combination of affordable housing in-lieu fees and land dedication.

Agricultural Mitigation

Development of the WRTP will result in the loss of agricultural land. The City of Woodland and Yolo County have implemented agricultural land conservation policies and mitigation programs to permanently protect agricultural land in Yolo County. The adopted conservation and mitigation programs allow for the recordation of agricultural conservation easements and/or payment of an in-lieu mitigation fee at a ratio of 1 to 3 acres of agricultural land for each acre of development (i.e. loss of prime agricultural land). The WRTP will contribute toward establishing agricultural conversation easements in Yolo County through payment of City and County agricultural land mitigation fees and/or the recordation of easements.

County Facilities

New or expanded County facilities will be needed to provide services to the residents and employees of the WRTP. The County has a County Facilities and Services Authorization development impact fee program to fund the construction of County facilities. The WRTP is estimated to contribute an estimated \$6.3 million toward County facilities construction through the payment of the County FSA fees.

Habitat

Development of the WRTP will result in the loss of plant and wildlife habitats. The WRTP is within the Yolo Habitat Conservation Plan/Natural Community Conservation Plan (HCP/NCCP) coverage area, which encompasses the whole of Yolo County. The HCP/NCCP was adopted in 2018 to mitigate the impacts of development on habitats within Yolo County. A fee program is established under the HCP/NCCP to mitigate for the loss of land cover types, covered species habitat, and other biological values on a per acre basis. The WRTP is estimated to contribute \$4.9 million in development-based fees to fund mitigation that will offset those losses listed above.

5. Financing Strategy and Funding Sources

Overview

The backbone infrastructure and public facilities required to serve development in the WRTP will be funded using a combination of public and private funding sources. **Table 5-1** summarizes the estimated costs and anticipated funding sources for the WRTP backbone infrastructure and public facilities. The funding sources and amounts are shown separately for improvements included in the WRTP CIP and other improvements funded through existing development impact fee programs. The funding for each of these types of improvements is discussed in the remainder of this chapter.

WRTP CIP Improvements

Developers will construct and privately finance the construction costs for most of the WRTP backbone infrastructure and public facilities included in the WRTP CIP. Specific requirements for developer construction of backbone infrastructure and public facilities will be identified in tentative map conditions and DA requirements. The developers will be required to submit an Infrastructure Phasing Plan to the City with the submission of the first tentative map for the property to be developed. The Infrastructure Phasing Plan will include the required infrastructure that the developer must construct.

For developer constructed improvements that are included in the proposed WRTP Infrastructure Fee Program (RTIF Program) the developer may receive credits or reimbursements from the proposed RTIF Program, subject to the credit and reimbursement requirements in the DA and the Master Reimbursement Agreement.

Some of the CIP improvements are not included in the RTIF Program and either will be constructed and privately funded by developers or will be constructed by the City. The Spring Lake Specific Plan area (SLSP) and future specific plan areas 1B and 1C (SP-1B and SP-1C) will contribute to the funding of some of the street improvements.

Additionally, the financing strategy includes formation of one or more land-secured bond financing districts (e.g., Mello-Roos CFD or Assessment District), which may be used to fund a portion of the total backbone infrastructure and public facilities needed at the outset of development.

Table 5-1
Woodland Research and Technology Park Financing Plan
Estimated Sources and Uses of Funding (2023\$)

Item	Total	WRTP CIP							Existing Fee Programs				
		RTIF Program	Developer	City	SP-1B/1C	SLSP	Other	Subtotal	City MPFP Fees	Other City Fees	WJUSD	County	Subtotal
Backbone Infrastructure													
Streets [1]	\$100,727,322	\$48,702,000	\$9,377,000	\$3,428,000	\$6,524,000	\$3,015,000	-	\$71,046,000	\$29,681,322	-	-	-	\$29,681,322
Storm Drainage	\$20,841,000	\$11,338,000	\$2,012,000	-	-	-	\$7,491,000	\$20,841,000	-	-	-	-	-
Water	\$15,792,537	\$4,343,000	\$375,000	\$510,000	-	-	-	\$5,228,000	\$10,564,537	-	-	-	\$10,564,537
Sewer	\$19,547,446	\$1,879,000	\$1,131,000	\$539,000	-	-	-	\$3,549,000	\$15,998,446	-	-	-	\$15,998,446
Subtotal Backbone Infrastructure	\$156,908,304	\$66,262,000	\$12,895,000	\$4,477,000	\$6,524,000	\$3,015,000	\$7,491,000	\$100,664,000	\$56,244,304	-	-	-	\$56,244,304
Public Facilities													
Parks and Open Space	\$44,413,170	\$28,946,000	-	-	-	\$1,173,000	-	\$30,119,000	\$14,294,170	-	-	-	\$14,294,170
Schools	\$13,452,711	-	-	-	-	-	-	-	-	-	\$13,452,711	-	\$13,452,711
Libraries	\$967,434	-	-	-	-	-	-	-	\$967,434	-	-	-	\$967,434
Fire	\$9,856,258	-	-	-	-	-	-	-	\$9,856,258	-	-	-	\$9,856,258
Police	\$2,720,698	-	-	-	-	-	-	-	\$2,720,698	-	-	-	\$2,720,698

[1] WRTP CIP Streets costs differ from costs on Table A-1 because this table includes a \$1.45 million interchange contingency that is not included in the CIP costs shown in Table A-1.

Existing Fee Programs

The WRTP will have an obligation to contribute to construction of other backbone infrastructure and public facilities not included in the CIP. For these public improvements, the developers will pay applicable City, County and WJUSD development impact fees.

Detailed Sources of Funding

The following sections detail the currently available sources identified to fund WRTP Facilities:

- RTIF Program
- Existing City and Other Agency Fee Programs
- Other Funding Sources

As shown in **Table 5-1**, approximately \$95.2 million will be funded through the proposed RTIF Program, approximately \$124.7 million will be funded by the existing fee programs, and approximately \$35.6 million will be funded from other funding sources.

RTIF Program

Detailed further in **Chapter 6**, the proposed RTIF Program will help fund those backbone infrastructure and public facilities costs that are not funded by existing fee programs or other funding sources identified in the sections to follow. Facilities included in the RTIF Program include those facilities with plan-wide benefits (i.e., serve multiple individual subdivisions), the costs of which should be distributed among RTIF land uses and ownership interests.

The RTIF Program will be a City-implemented, plan area-specific development fee program applicable only to new RTIF development. The RTIF Program will fund the following types of improvements:

- Streets
- Storm Drainage
- Water
- Sewer
- Parks and Open Space

The estimated buildout fee revenue generated by the RTIF Program is detailed in **Appendix B**.

Existing City and Other Agency Fee Programs

The WRTP will be subject to all applicable City and other agency development impact fees in place at the time of acceptance of the building permit application. The WRTP will contribute to the construction of City, County, and regional backbone infrastructure and public facilities through payment of existing development impact fees. The existing fee programs in which the WRTP will participate are summarized below and were further detailed in the previous chapter:

- City MPFP Fee Program (Streets, Water, Sewer, Parks, Fire, Police, General Government)
- City Transit Fee Program
- City Affordable Housing Fee Program
- City Agricultural Mitigation Fee Program
- Yolo County Facilities and Services Authorization Fee Program

The estimated WRTP buildout fee revenue generated by these fee programs is summarized in **Table 5-1** and detailed in **Appendix B**.

Other Funding Sources

Other funding sources anticipated to fund a portion of required backbone infrastructure and public facilities are summarized below.

Other Development Projects

Other plan areas will participate in funding facilities for which they have a shared benefit with the WRTP. Specifically, future plan areas SP-1B and SP-1C will have a funding share for construction of the Parkland Avenue overcrossing, and the SLSP will have a funding share for the Highway 113/County Road 25A interchange.

Private Developers

Certain facilities will be the responsibility of individual project developers to fund. The WRTP developers will be responsible for funding a portion of the streets, storm drainage, water, and sewer costs associated with the main internal roads and Road B.

City

The City will contribute to the funding of several projects. Specifically, the City will help fund the Highway 113/County Road 25A interchange with MPFP funding and the existing sewer lift station upgrades with sewer enterprise funding and will fully fund the water system for the parks and open space.

Other

Offsite storm drainage improvements will benefit the WRTP and other areas of the City. The RTIF Program includes some funding for these improvements, but the source of the remaining required funding (approximately \$7.5 million) has not been decided. It is anticipated that a portion of the funding will come from citywide development fees.

Land-Secured Financing

This Financing Plan includes the potential use of land-secured financing for a portion of the backbone infrastructure and public facilities costs. Although this Financing Plan identifies sources of funding for all the included backbone infrastructure and public facilities, major facility oversizing and substantial up-front capital outlays may be required for certain projects. Land-secured financing, in the form of either a Mello-Roos CFD or an Assessment District, may be used to provide debt financing for some of these oversized Facilities:

- **Mello-Roos CFD.** The Mello-Roos Community Facilities Act of 1982 enables public agencies to form CFDs and levy a special tax on property owners in those CFDs. These special taxes may be used to pay debt service on CFD bonds or to finance public improvements directly on a pay-as-you-go (PAYGO) basis.
- **Assessment Districts.** California statutes give local governments the authority to levy several special assessments for specific public improvements such as streets, storm drains, sewers, streetlights, curbs, gutters, and sidewalks. The agency creates a special Assessment District that defines both the area to benefit from the improvements and the properties that will pay for the improvements.

A CFD is the most likely form of land-secured financing to be used to mitigate up-front costs of construction or acquisition of backbone infrastructure and public facilities in the Project, and it is anticipated that Project developers may request that the City form a CFD on all or a portion of the Project.

The proceeds from a CFD bond sale can be used for direct funding of improvements, to acquire facilities constructed by the developer, to reimburse developers for advance-funding improvements, or to pay certain development fees. The annual special tax can be used toward bond debt service or to build or reimburse for infrastructure as needed. The proceeds of the Mello-Roos special tax can be used for direct funding of facilities or to service bond debt.

Tables 5-2 and 5-3 show a preliminary estimate of the Mello-Roos CFD bonding capacity of the Project, based on assumptions regarding tax rates, reserve fund requirements, and interest rates. Based on current assumptions, which are estimates for purposes of example in this document, the Project is estimated to have capacity to bond for approximately \$86.4 million, of which \$71.4 million could be available to fund Project infrastructure costs. Actual tax rates and related bond capacity will be established at the time of formation of the CFD. **Table 5-4** shows an overall estimated value to lien ratio of 20:1 at buildout.

CFD Boundaries and Improvement Areas

The City anticipates one or more property owners may wish to use land-secured financing to help fund a portion of WRTP infrastructure and public facility costs. In anticipation of these requests, this Financing Plan sets forth City preferences regarding future infrastructure CFD formations in the WRTP. A current trend for land-secured infrastructure financing for larger master-planned projects is to include phases of development (or even sub-phases) as Improvement Areas either on a stand-alone basis or within one "project-wide CFD." The City has indicated a preference for one project-wide CFD that could accommodate a number of separate Improvement Areas within that project-wide CFD. The way this structure is anticipated for WRTP is that an initial phase of the Project will be included in the formation of the projectwide CFD, as Improvement Area No. 1, with remaining phases identified in the formation documents and CFD boundary maps as a "future annexation area."

Under the Mello-Roos Act, each Improvement Area is its own geographical area which can be stand-alone or more typically within the framework of a larger, project-wide CFD that will serve as the umbrella CFD for the Project. What this means is that special taxes imposed within each Improvement Area will be the sole source of repayment for debt service for CFD Bonds issued under the authorization for that Improvement Area. Parcels and landowners in other Improvement Areas of the CFD will not be obligated to bond repayment obligations of other Improvement Areas. This CFD bond structure is favored by bond underwriters and investors and is commonly used throughout the state.

Under the proposed structure, Improvement Area No. 1 would be the initial Improvement Area under a projectwide WRTP CFD. Future areas desiring to use land secured financing may elect to annex into the existing Improvement Area No. 1 or may elect to form a new Improvement Area No. 2. The City retains discretion regarding whether to permit annexations into prior Improvement Areas. One important consideration for City policymakers is whether the proposed annexation might lengthen the duration of the special tax levy for the initial property owners within the initial Improvement Area.

Table 5-2
Woodland Research and Technology Park Financing Plan
Estimated Bond Sizing (2023\$)

Item	Assumption	Estimated Bond Sizing
Maximum Special Taxes Available for Debt Service		
Estimated Annual Maximum Special Taxes [1]		\$6,337,090
Less Estimated Administration Costs	4.00%	(\$254,000)
Less Delinquency Coverage	10.00%	(\$634,000)
Adjustment for Rounding		\$910
Estimated Gross Debt Service (Rounded)		\$5,450,000
Total Bond Size		
Total Bond Size without Tax Escalation		\$75,019,000
Adjustment for Rounding		\$81,000
Total Bond Size (Rounded)		\$75,100,000
Increase for Annual Escalation [2]	15%	\$11,265,000
Total Bond Size (Rounded)		\$86,365,000
Estimated Bond Proceeds		
Total Bond Size (Rounded)		\$86,365,000
Less Capitalized Interest	12 months	(\$5,182,000)
Less Bond Reserve Fund	1-yr. debt service	(\$5,450,000)
Less Issuance Cost	5.00%	(\$4,318,000)
Estimated Bond Proceeds		\$71,415,000
Assumptions [3]		
Interest Rate	6.00%	
Term	30 years	
Annual Escalation	2%	

Source: City of Woodland; EPS.

[1] See Table 5-3.

[2] Assumes special taxes are escalated 2.0% annually for 30 years, which increases total bond size by approximately 15% to 20%. This estimate uses 15% to be conservative.

[3] Estimated bond sizing based on conservative assumptions. The interest rate will be determined at the time of the bond sale. This analysis is based on an assumed bond term of 30 years.

Finally, although this Financing Plan includes placeholder special tax estimates for nonresidential land uses, for purposes of stimulating economic development and encouraging nonresidential development in the Project, the City may wish to exclude nonresidential development from the CFD or not have nonresidential development annex into the CFD. This Financing Plan is identifying this City preference and does not preclude inclusion or exclusion of nonresidential property from the proposed infrastructure CFD.

Phasing and the Financing Strategy

Phasing of public facility construction is an important component of the overall financing strategy. The ability to sequence public facilities will depend on the type of facility and the pace of new development. When possible, construction of public facilities will be sequenced over time as needed to serve new development. The sequencing of public facility costs will help ensure that adequate monies are available from the various financing sources to fund the public facility improvements.

Completion of backbone infrastructure and other public facilities will be phased to serve logical increments of development, based on the demand for such facilities as the WRTP builds out. The timing and amount of development in each increment will depend on many factors, such as market demand. In the normal course of the development approval process, the City will condition the WRTP's tentative maps with backbone infrastructure and other public facility requirements.

The Financing Plan is designed to be flexible enough to accommodate faster or slower growth of WRTP development in response to the market for housing and nonresidential development.

The developers of the WRTP will be responsible for advance funding and constructing all of the backbone infrastructure and public facilities needed to serve the WRTP, unless the City and WRTP proponents agree otherwise to City construction of specific improvements. Subject to the City's fee credit and reimbursement policies and the terms of the Master Reimbursement Agreement entered into by the City and all landowners/developers, some or all of this private funding will be reimbursed to the landowners/developers over time as the City is able to issue public debt through the CFD, issue credits due for landowner/developer proportionate share of fees and collect fees from other developers that will provide reimbursements. The timeframe for reimbursement is unknown and could be a considerable period of time depending on market conditions and the actual absorption of the development projects. There is no guarantee the initial developers will be fully reimbursed for the costs to oversize facilities for later development projects.

6. Woodland Research and Technology Park Plan-Area Fee Program

This Financing Plan proposes adoption of a new plan area development impact fee program, the Woodland Research and Technology Park Infrastructure Fee Program (RTIF Program), that will fund the backbone infrastructure and public facilities needed to serve the WRTP. The proposed RTIF Program is designed to fund construction of backbone infrastructure and public facilities necessary to accommodate new residents and employees generated by WRTP development after taking into consideration a variety of other funding sources for the improvements. The costs to be funded through the RTIF Program were detailed in **Chapter 4**.

The Draft WRTP Nexus Study was prepared to establish the RTIF Program and the legally required nexus findings for the City to implement the RTIF Program and to set the initial development impact fees (RTIF or fees). The Nexus Study also details key components of the implementation and administration of the proposed RTIF Program. The RTIF Program may be updated periodically to reflect changes in land uses, facilities requirements, improvement costs, and other fee program information over time.

The key features of the RTIF program are summarized in this chapter.

RTIF Program Overview

The RTIF Program will be a City-implemented plan-area-specific development impact fee program applicable only to WRTP land uses. It will be used as a mechanism to fund backbone infrastructure and public facilities needed to serve the projected new residents and employees that are not funded by other sources. The RTIF Program will contain the following fee components:

- Streets
- Parks
- Storm Drainage
- Water
- Sewer
- Administration

Table 6-1 summarizes the proposed RTIF by residential and commercial land use for each of the fee components. For each land use, the administration component fee is calculated as four percent of the sum of all other fees and will fund administration of the RTIF Program. All RTIF components will be charged and collected per residential dwelling unit or commercial acre and are consistent with the requirements of California Assembly Bill (AB) 1600 legislation, as codified by the Mitigation Fee Act (California Government Code sections 66000 et. seq.).

While the commercial fee categories (Village Commercial/Community Commercial and Business Park) are the same for all RTIF components, there are different residential fee categories for different fee components to address provisions of California Assembly Bill 602 (AB 602), enacted in 2021. AB 602 modified the Mitigation Fee Act and stipulates that a jurisdiction must calculate residential fees proportionately to the square footage of the dwelling units, with the exception of water and sewer fees and any other fees for which specific findings can be made as to why the fees should not be enacted on a square foot basis.

In response to the provisions of AB 602, some of the RTIF components must have fees that differ by dwelling unit size while other components do not need to have different fees for different unit sizes. The proposed residential fee land uses for all fee components are summarized below:

Streets and Parks Residential Fee Components

- Single Family <1,000 sq. ft.
- Single Family 1,000 – 1,999 sq. ft.
- Single Family 2,000 – 2,999 sq. ft.
- Single Family >2,999 sq. ft.
- Multifamily <1,000 sq. ft.
- Multifamily ≥1,000 sq. ft.

Storm Drainage, Water, and Sewer Residential Fee Components

- Low Density
- Medium Density
- High Density

The proposed fees are based on the best land use information, backbone infrastructure and public facilities costs estimates, funding source information, and administrative cost estimates available at this time. The land uses, cost estimates, and funding sources are detailed in prior chapters of this report and are also included in the Nexus Study.

Table 6-1
Woodland Research and Technology Park Financing Plan
RTIF Program Fee Summary (2023\$)

Land Use Category	Streets	Parks	Storm Drainage	Water	Sewer	Subtotal	Admin.	Total
<i>Percentage</i>							4.00%	
Residential by Land Use	<i>per unit</i>							
Low Density (LDR)	-	-	\$6,952	\$2,907	\$1,176	\$11,036	\$441	\$11,477
Medium Density (MDR)	-	-	\$4,742	\$2,475	\$910	\$8,127	\$325	\$8,452
High Density (HDR)	-	-	\$3,085	\$1,759	\$819	\$5,663	\$227	\$5,890
Residential by Square Foot Range								
Single Family (LDR and MDR)	<i>per unit</i>							
< 1,000 sq. ft.	\$12,800	\$8,199	-	-	-	\$20,999	\$840	\$21,839

RTIF Program Implementation and Administration

Implementation

The proposed RTIF Program is anticipated to be approved by the City through an ordinance establishing and authorizing collection of the fee and a resolution setting the amount of the fees. The RTIF Program will be independent and separate from all other City, County, other agency, or regional development impact fees that will be applicable to W RTP development.

Note that as part of the tentative map process, the developers will be required to submit proposed development plans. If there has been a change to the proposed land uses or number of dwelling units that results in less RTIF revenue generation than anticipated under the original land uses, then the developer will be required to make a shortfall payment to cover the difference at the time that a final map is filed.

Administration

The City will administer the RTIF Program. The RTIF Program includes a four-percent planning and administration component to fund RTIF Program administration. Administration of the RTIF Program includes, but is not limited to, the following major tasks:

- Tracking all RTIF Program payments and assignment of fee credits and reimbursements for improvements constructed privately by developers.
- Tracking the progress of construction contracts for RTIF Program improvements.
- Performing annual fee adjustments to account for the inflation of infrastructure and public facilities costs.
- Conducting periodic reviews of development projections, facilities requirements, improvement costs, funding sources, and cost allocation methodologies and making necessary adjustments to the RTIF Program.
- Preparing the required annual and five-year reports on the status of the RTIF Program.

The RTIF Program implementation and administration are further detailed in the Nexus Study.

7. Feasibility of the Financing Plan

This chapter quantifies and evaluates the total estimated infrastructure cost burden and total effective annual tax rate anticipated for new WRTP development and makes observations regarding the financial feasibility of the Financing Plan. The financial feasibility is addressed by reviewing a total infrastructure burden analysis, as well as bond issuance guidelines, to ensure the Finance Plan will meet the required financial tests.

Description of Static Feasibility Analyses

This analysis includes the following static methods for evaluating the financial feasibility of the WRTP:

- Total Backbone Infrastructure and Public Facilities Cost Burden.
- Total Taxes and Assessments as a Percentage of Sales Price.

Each of these methods is based on a static financial feasibility evaluation. To be considered financially feasible, the Project should meet each of the static feasibility tests.

It is important to note that these feasibility metrics, described in detail below, should be considered initial diagnostics, offering a general indicator of whether or not a project is likely to meet financial feasibility criteria or whether measures should be taken to improve viability, either through a reduction in cost burdens, identification of other funding sources, or other approaches. None of the indicators, by themselves, should be considered absolute determinations regarding Project feasibility.

Total Backbone Infrastructure and Public Facilities Cost Burden

It is common for developers of major development projects to advance-fund and carry infrastructure costs for some timeframe. The impact of the land developer's cost burden depends on several factors, including the timeframe for the reimbursements and the extent to which full reimbursement is received, either through public funding programs or through adjustments in land sales prices.

The purpose of the total backbone infrastructure and public facilities cost burden feasibility test is to assess the financial feasibility of the WRTP, given all current and proposed fees and the additional burden of WRTP-specific infrastructure costs. This feasibility test assesses the total fee burden on residential dwelling units associated with the proposed backbone infrastructure and public facilities.

The total backbone infrastructure and public facilities cost burden feasibility test provides a performance indicator of a project's feasibility. For each residential land use, the total cost burden per dwelling unit and nonresidential building square foot is expressed as a percent of the finished sales price. Project feasibility is evaluated based on the following general guidelines or benchmarks:

- Burdens below 15 percent generally are considered financially feasible.
- Burdens between 15 and 20 percent may be feasible depending on the specific circumstances of the project.
- Burdens above 20 percent suggest a project may not be financially feasible unless other components of the project pro forma are particularly advantageous to the developer, thus allowing the project to bear unusually high backbone infrastructure and public facilities costs.¹

These static feasibility benchmarks are based on EPS's experience conducting financial feasibility analyses for numerous projects throughout the Sacramento Region and Central Valley over the last 3 decades. This feasibility diagnostic is merely a tool that can be used—along with other tools—as a general measure of financial feasibility. This measure should not automatically be interpreted to mean that if one land use type exceeds the threshold, the project definitely is infeasible. In certain circumstances, there are ways in which a development project can mitigate against a high cost burden. In addition, the backbone infrastructure and public facilities costs will be fine-tuned and possibly reduced as engineering studies are completed closer to actual construction.

¹ Such other components may include extraordinarily low land basis (e.g., land has been in the family for a long time, land acquired during severe real estate market downturn, etc.), development phasing (e.g., fast early absorption ahead of a major infrastructure cost such as a new water treatment plant), or low or no environmental mitigation requirements (e.g., through avoidance or on-site preservation).

As summarized in **Table 7-1** (and further detailed in **Appendix B**), the total backbone infrastructure and public facilities cost burden accounts for between approximately 19.2 percent and 19.8 percent of the estimated sales price of residential units in the W RTP. Cost burdens of this magnitude are at the upper end of the diagnostic range indicating that the Project may be financially feasible if home sales values do not taper or if infrastructure costs don't continue to escalate rapidly. Other factors such as the magnitude of advance funding requirements within each development phase, anticipated reimbursement timeframes, and development absorption would also factor into the feasibility of individual development phases. Although fee burdens for new development in Woodland plan areas typically are close to 20 percent, the City generally experiences strong building permit activity except under the most difficult economic circumstances.

The infrastructure cost burden could change for several reasons, including a re-allocation of costs among land uses and cost reductions resulting from fine-tuning the estimates as engineering studies are completed and the W RTP development becomes closer to implementation. The cost burden estimates will continue to be examined and may be refined as the W RTP development is implemented.

Total Taxes and Assessments as a Percentage of Sales Price

The Total Taxes and Assessments as a Percentage of Sales Price feasibility test often is referred to as a "two-percent test." This test provides another measure of the financial feasibility of a project that is used by land developers, builders, and municipal governments to evaluate development projects. The Total Taxes and Assessments as a Percentage of Sales Price test provides a general rule for the feasibility of proposed annual special taxes and assessments. In general, if the sum of property taxes, other ad valorem taxes, and all annual special taxes and assessments is less than 2 percent of the average finished home sales price, then the burden of annual taxes and assessments is considered financially feasible. In the Sacramento Region, jurisdictions and developers typically target total taxes and assessments at levels no greater than approximately 1.6 percent to 1.8 percent of the finished home sales price.

Table 7-2 shows the estimated taxes and assessments as a percentage of home sales prices for three different proposed Project land uses. The total annual amount includes the following taxes and assessments:

- Property taxes
- Other general ad valorem taxes (e.g., school/other General Obligation bonds)
- Services CFD taxes
- Infrastructure CFD taxes (proposed in this Finance Plan)

Table 7-1

Taxes & Assessments as % of Sales Price		1.80%	1.79%	1.79%	1.27%	1.28%

Source: City of Woodland; EPS.

[1] Maintenance CFD residential rates set equal to SLSP rates; nonresidential rates estimated by EPS. Per the City, the following SLSP rates are assumed for the WRTP land use categories:

LDR: average of SLSP R-5 and R-8 rates

MDR: SLSP R-15 rate

HDR: SLSP R-25 rate

[2] Sports Park maintenance CFD rates set equal to SLSP rates. Assumed Spring Lake categories are the same as those shown above in footnote [1].

[3] Residential rates set so that taxes and assessments=1.80% of sales price. Nonresidential rates set at \$10,000 per acre.

It is proposed that development in the WRTP participate in two services CFDs to pay for required services and ongoing maintenance of public improvements. One of the two districts would be a general maintenance CFD to provide funding for services, operations, and maintenance specifically required for WRTP development. In addition, the WRTP will be required to participate in the Citywide Sports Park maintenance CFD. When combined with the potential implementation of infrastructure special taxes that range from \$2,000 to \$3,700 per unit, the WRTP total special taxes and assessments would equal approximately 1.80% of the home sales prices.

8. Financing Plan Implementation

This Financing Plan establishes a detailed and specific financing strategy for the WRTP. This chapter identifies the key administration and implementation actions and policies that will be required to carry out the financing strategy.

Implementation of the Financing Plan, along with EIR mitigation measures, DA provisions, and Master Reimbursement Agreement provisions will ensure that the public improvements needed to serve the WRTP are constructed consistent with the Specific Plan requirements. The City will implement the Financing Plan, which will include the following near-term and ongoing actions related specifically to the WRTP:

- Approval of the Specific Plan.
- Approval of the DAs and the Master Reimbursement Agreement between the developers and the City.
- Adoption of the Nexus Study and establishment of the RTIF Program.
- Coordinating closely with all appropriate City departments and other service providers to implement the Financing Plan.
- Working with State and Federal agencies to secure State and Federal funding, where available and applicable.
- Coordinating the infrastructure construction program and funding sources with the developers.
- Periodically reviewing and updating the CIP.
- Monitoring identified revenue sources.
- Estimating fee program cash flows.
- Forming CFD(s) or other financing districts and administering subsequent bond sales and tax collection.
- Accounting for RTIF payments, credits, and reimbursements.
- Updating and adjusting the RTIF Program as new infrastructure cost, land use, and revenue information become available.

Updates

It is anticipated that as the Financing Plan is implemented, there may be changes to anticipated development, public facilities costs, and funding sources. Changes should be evaluated in the context of the overall financing strategy framework, ensuring that required funding is available when needed. The costs and funding sources for the Project may need to be adjusted periodically to reflect changes in the Specific Plan.

Such changes over time may be updated or reflected in the documents and City actions taken to implement various financing mechanisms identified in this document rather than revisiting or updating the Financing Plan itself. The City has the discretion to determine whether the Financing Plan itself should be updated or whether applicable updates should be made to the implementing documents themselves.

1. Introduction and Executive Summary

The Woodland Research and Technology Park Specific Plan Area (WRTP or Plan Area) is located on approximately 350 acres just south of the City of Woodland (City) and borders the Spring Lake Specific Plan Area (SLSP), which is located to the east and north of the WRTP. **Map 1-1** shows the WRTP location in relation to the City of Woodland. The WRTP is included in the City's 2035 General Plan as a natural extension of the City and is planned for annexation into the City. As stated in the Public Review Draft WRTP Specific Plan, the WRTP is planned to be a "self-sustaining, enterprising mixed-use community anchored by a technology and innovation campus, with vibrant retail and supporting uses, integrated residential neighborhoods, recreation, open space and public uses."

Under the direction of the City, Cunningham Engineering Corporation (CEC) prepared the Capital Improvement Program (CIP) that details the costs of backbone infrastructure and public facilities needed to serve the projected new residents and employees of the WRTP. The subject of this WRTP Development Impact Fee Program Nexus Study (Nexus Study) is the proposed development impact fee program that will serve as a major funding source for the construction of WRTP backbone infrastructure and public facilities included in the CIP. This fee program is referred to hereafter as the Woodland Research and Technology Infrastructure Fee (RTIF) Program.

RTIF Program Overview

The purpose of the Nexus Study is to establish the RTIF Program and the legally required nexus findings for the City to implement the RTIF Program and to set the initial development impact fees (RTIF or fees). This Nexus Study also summarizes key components of the implementation and administration of the proposed RTIF Program. As described herein, the RTIF Program may be updated periodically to reflect changes in land uses, facilities requirements, improvement costs, and other fee program information over time.

The RTIF Program will be a City-implemented plan-area-specific development impact fee program based in part on the development agreements entered into between the City and the land owners within the Plan Area and applicable only to WRTP land uses. It will be used as a mechanism to fund backbone infrastructure and public facilities needed to serve the projected new residents and employees that are not funded by other sources. The RTIF Program will contain the following fee components:

Map 1-1. Plan Area Location

- Streets
- Parks
- Storm Drainage
- Water
- Sewer
- Administration

Table 1-1 summarizes the proposed RTIF by residential and commercial land use for each of the fee components. For each land use, the administration component fee is calculated as 4 percent of the sum of all other fees and will fund administration of the RTIF Program. All RTIF components will be charged and collected per residential dwelling unit or commercial gross developable acre and are consistent with the requirements of California Assembly Bill (AB) 1600 legislation, as codified by the Mitigation Fee Act (California Government Code sections 66000 et. seq.). Gross developable acres are acres zoned for private development and exclude parks, open space, schools, and public right of way.

While the commercial fee categories (Village Commercial/Community Commercial and Business Park) are the same for all RTIF components, there are different residential fee categories for different fee components to address provisions of California Assembly Bill 602 (AB 602), enacted in 2021. AB 602 modified the Mitigation Fee Act and stipulates that a jurisdiction must calculate residential fees proportionately to the square footage of the dwelling units, with the exception of water and sewer fees and any other fees for which specific findings can be made as to why the fees should not be enacted on a square foot basis. The Mitigation Fee Act requirements are detailed in the next section.

In response to the provisions of AB 602, some of the RTIF components must have fees that differ by dwelling unit size while other components do not need to have different fees for different unit sizes. The proposed residential fee land uses for all fee components are summarized below:

Streets and Parks Residential Fee Components

- Single Family <1,000 sq. ft.
- Single Family 1,000 sq. ft.–1,999 sq. ft.
- Single Family 2,000 sq. ft.–2,999 sq. ft.
- Single Family >2,999 sq. ft.
- Multifamily <1,000 sq. ft.
- Multifamily ≥1,000 sq. ft.

Storm Drainage, Water, and Sewer Residential Fee Components

- Low Density
- Medium Density
- High Density

Source: City of Woodland; EPS

[1] Commercial fees will be charged per gross developable acre. The amount per bldg. sq. ft. is shown for informative purposes only.

The proposed fees are based on the best land use information, backbone infrastructure and public facilities costs estimates, funding source information, and administrative cost estimates available at this time. The cost estimates presented in this report are in constant 2023 dollars. The following chapters of this report detail the land uses, facilities requirements, cost estimates, and cost allocation methodology used to estimate the fees.

Nexus Study Requirements

California Government Code 66000

The purpose of a Nexus Study is to establish the legally required nexus (or reasonable relationship) between projected new residential and nonresidential development and the capital facilities that will be required to serve that new development.

As briefly described in the previous section, the nexus requirements for imposing development impact fees were established under AB 1600 legislation, as codified by the Mitigation Fee Act (the Act; California Government Code section 66000 and following). The Act sets forth the procedural requirements for establishing and collecting development impact fees. The procedures require that a “reasonable relationship or nexus must exist between a governmental exaction and the purpose of the condition.”¹ Specifically, each local agency imposing a fee must:

- Identify the purpose of the fee.
- Identify how the fee is to be used.
- Determine how a reasonable relationship exists between the fee’s use and the type of development project on which the fee is imposed.
- Determine how a reasonable relationship exists between the need for the public facility and the type of development project on which the fee is imposed.
- Determine how a reasonable relationship between the amount of the fee and the cost of the public facility or portion of the public facility attributable to the development on which the fee is imposed.

¹ *Public Needs & Private Dollars*; William Abbott, Marian E. Moe, and Marilee Hanson, page 109.

City Policy Affecting Nexus Findings

To better ensure the feasibility of the commercial development contemplated in the WRTP and buildout of the Plan Area as a whole, the City has made a policy decision to adjust the commercial cost allocation factors to be 25 percent of the original factors that were established as measures of the proportional demand generated by each nonresidential development type. The landowners for each of the properties in the Plan Area have agreed through their respective development agreements that in exchange for the consideration of the vested rights granted through the development agreement, and the benefits to the commercial properties and the development as a whole, that the costs allocated to WRTP residential development should be adjusted (i.e., increased) to account for the downward adjustment in the cost allocation factors for commercial properties. These adjustments to the fees have been agreed to by the landowners as a public benefit pursuant to the terms and conditions of their respective development agreements. Consequently, the last nexus finding requiring a “reasonable relationship between the amount of the fee and the cost of the public facility or portion of the public facility attributable to the development on which the fee is imposed” is made for the Plan Area as a whole, with the acknowledgment that allocations between commercial and residential properties have been modified by agreement between the City and the landowners, pursuant to the terms of the individual development agreements.

Assembly Bill 602

In addition, in 2021, AB 602 amended the requirements that would apply to new or updated impact fees by creating a “standards and practices” section to the Act, codified as Government Code Section 66016.5. This section is both declaratory of previously existing law and added certain new requirements. A new provision that pertains to this report requires that a nexus study “shall calculate a fee imposed on a housing development project proportionately to the square footage of proposed units of the development” [66016.5(a)(5)(A)], and “large jurisdictions shall adopt a capital improvement plan as a part of the nexus study” [66016.5(a)(6)]. Although Woodland is not considered a large jurisdiction, the City has prepared a WRTP Capital Improvement Plan that is summarized in **Appendix B** of this Nexus Study.

Water and sewer systems are specifically exempt from the requirements of Section 66016.5. An exemption to the square footage allocation method may be made for other backbone infrastructure if the nexus study makes the following three findings:

- An explanation as to why square footage is not an appropriate metric to calculate fees imposed on a housing development project.
- An explanation that an alternative basis of calculating the fee bears a reasonable relationship between the fee charged and the burden posed by the development.
- That other policies in the fee structure support smaller developments, or otherwise ensure that smaller developments are not charged disproportionate fees.

Section 66016.5 [66016.5(a)(5)(C)] also states that the square footage allocation method “does not prohibit an agency from establishing different fees for different types of developments.”

In response to these provisions of AB 602, this Nexus Study makes findings justifying the use of the residential fee land uses summarized above for the various fee components. **Chapter 5** details all required nexus findings. For all fee components, the City has decided to establish separate fees for single family and multifamily units in recognition of different persons per household for these different types of units.

Senate Bill 13 and Accessory Dwelling Units

In addition to the considerations discussed above pursuant to AB 602, a separate piece of legislation, California Senate Bill 13 (SB 13,) passed in 2019, establishes a new system for assessing fees on accessory dwelling units (ADUs). It amended California Government Code Section 65852.2(3)(A)(f)(3) to read:

“A local agency, special district, or water corporation shall not impose any impact fee upon the development of an accessory dwelling unit less than 750 square feet. Any impact fees charged for an accessory dwelling unit of 750 square feet or more shall be charged proportionately in relation to the square footage of the primary dwelling unit.”

Based on this section of the California Government Code, any ADU smaller than 750 square feet is exempt from RTIF Program fees. Fees on ADUs larger than 750 square feet require the City to perform the following calculations:

- 1) Determine the total habitable building square footage of both the proposed ADU and the primary residential unit on the lot on which the ADU is proposed.
As an example, assume that a primary single family dwelling unit has 2,000 habitable building square feet and the proposed ADU has 1,000 habitable building square feet.
- 2) Calculate the ADU's habitable building square feet as a percentage of the primary unit's habitable building square feet.
In the example from step 1), the size of the ADU is 50 percent of the primary residential unit.
- 3) Identify the RTIF category and fee that would have applied to the primary residential unit. In the RTIF Program, the fee category would differ for the different fee components.
In the example from step 1), the RTIF category is "Single Family 2,000 sq. ft.—2,999 sq. ft." for Streets and Parks fees and either LDR or MDR for the other fee components.
- 4) For each fee component, calculate the ADU fees as the percentage from step 2) multiplied by the RTIF for the fee category identified in step 3).
In the example from step 1), the ADU RTIF for each fee component is 50 percent of the primary unit RTIF.

RTIF Program Implementation and Administration

Implementation

The proposed RTIF Program will be approved by the City through an ordinance establishing and authorizing collection of the fee and a resolution setting the amount of the fees. The RTIF Program will be independent and separate from all other City, Yolo County (County), other agency, or regional development impact fees that will be applicable to WRTP development.

Administration

The City will administer the RTIF Program. The RTIF Program will include a 4 percent planning and administration component to fund RTIF Program administration. The administration component of the RTIF must be paid in cash at the issuance of a building permit to provide the City with funding to administer the RTIF Program, while RTIF credits may be available for the other fee components (as detailed in **Chapter 6**). Administration of the RTIF Program will include the following major tasks:

- Tracking all RTIF Program payments and assignment of fee credits and reimbursements for improvements constructed privately by developers.
- Tracking the progress of construction contracts for RTIF Program improvements.
- Performing annual fee adjustments to account for the inflation of infrastructure and public facilities costs.
- Conducting periodic reviews of development projections, facilities requirements, improvement costs, funding sources, and cost allocation methodologies and making necessary adjustments to the RTIF Program.
- Preparing the required annual and five-year reports on the status of the RTIF Program.

The RTIF Program implementation and administration are detailed in **Chapter 6** of this report. Using its authority to implement the RTIF Program, the City reserves the right to make interpretations, clarifications, or other modifications to the RTIF Program implementation and administration provisions summarized in this Nexus Study, subject to the provisions of the Development Agreements.

Supporting Documents

The following documents produced by or for the City are being prepared in conjunction with this analysis:

- WRTP Specific Plan.
- Development Agreements between the City and each individual WRTP Property Owner.
- Master Reimbursement Agreement between the City and all WRTP Property Owners.
- WRTP Plan Area Specific Plan Public Facilities Financing Plan.
- CIP prepared by CEC. A summary of the CIP is included as **Appendix B** of this report.

Organization of Report

This Nexus Study is organized into the following chapters:

- **Chapter 1** summarizes the proposed RTIF Program.
- **Chapter 2** identifies the land uses that will be subject to the RTIF Program.
- **Chapter 3** details the RTIF Program improvements and costs.
- **Chapter 4** details the cost allocation and fee estimate methodology.
- **Chapter 5** summarizes the nexus findings for each RTIF Program component.
- **Chapter 6** describes RTIF Program implementation and administration.

In addition, the Nexus Study contains the following appendices:

- **Appendix A:** Dwelling Unit Average Size Backup Data.
- **Appendix B:** Summary of WRTP CIP.

2. WRTP Land Uses and Demographics

The WRTP is located on approximately 350 gross acres, with approximately 150 acres planned for residential development and 130 acres planned for nonresidential retail and office development. The remaining WRTP areas are planned for public uses, including parks, trails, greenbelts, other open space, roads, and a school. **Table 2-1** summarizes the planned acres, dwelling units, and nonresidential building square feet by land use. It also includes the average square feet per unit for each residential category. These average square feet were estimated based on building permit data provided by the City, as summarized in **Appendix A. Table 2-2** further details the planned acres, dwelling units, and nonresidential building square feet by the specific plan land uses. A total of 1,670 dwelling units and approximately 2.3 million square feet of nonresidential building space are planned in the WRTP. **Map 2-1** depicts the WRTP land use plan.

Demographic Information

Population Summary

Table 2-3 summarizes the estimated population at buildout of the WRTP. For each land use, the population is estimated as the number of dwelling units multiplied by the estimated persons per household (PPH). It is estimated that the WRTP will have a population of approximately 4,300 at buildout. The backup for the PPH factors is provided in **Table 2-4** and **Table 2-5** and detailed in the following section.

Persons per Household and Trips per Household Factors

Persons per household factors are used in the Streets, Parks, and Sewer cost allocations, and trips per household factors are used in the Streets cost allocation. As discussed in **Chapter 1**, in response to the provisions of AB 602, different fee components have different residential fee categories, as summarized below:

Streets and Parks Residential Fee Components

- Single Family <1,000 sq. ft.
- Single Family 1,000 sq. ft.–1,999 sq. ft.
- Single Family 2,000 sq. ft.–2,999 sq. ft.
- Single Family >2,999 sq. ft.
- Multifamily <1,000 sq. ft.
- Multifamily ≥1,000 sq. ft.

1,000	≥1000	2.46	8.06

Source: EPS; U.S. Census Bureau PUMS data; Solano County Assessor; National Household Travel Survey

- [1] Persons per household factors are from Vacaville Nexus Study, using the following process:
- Compile data on PPH by number of bedrooms for homes constructed in Solano and Yolo Counties using U.S. Census Bureau PUMS data.
 - Estimate average square feet by number of bedrooms using Solano County Assessor data for Vacaville.
 - Use interpolation of above data to develop the following equations for the average PPH by square feet per unit:

Single Family: $PPH = 2.2979 * \ln(\text{avg. sq. ft.}) - 14.651$

Multifamily: $PPH = 2.9252 * \ln(\text{avg. sq. ft.}) - 17.744$
 - Use equations to estimate PPH for the average square feet for each square foot range.
- [2] See Table 2-6.

[2] Percentages from City of Woodland.

Storm Drainage, Water, and Sewer Residential Fee Components

- Low Density (LDR)
- Medium Density (MDR)
- High Density (HDR)

Because the Streets and Parks fee categories differ from the Wastewater fee categories, two sets of persons per household factors need to be established: one for the Streets and Parks fee categories, which vary by square foot range, and one for the Wastewater categories, which vary by unit type. In addition, trips per household factors need to be estimated for the Streets fee categories.

The methods for estimating the two sets of persons per household factors and the trips per household factors are detailed in the remainder of this section.

Persons per Household Factors by Square Foot Range

Table 2-4 details the calculation of the single family and multifamily persons per household factors by residential square foot range. The factors were developed using Solano and Yolo County data and the methodology outlined in the steps below. These steps were performed separately for single family and multifamily data, and separate single family and multifamily PPH factors were established for the different unit sizes.

- 1) Compile US Census Bureau Public Use Microdata Sample (PUMS) data on Solano and Yolo County persons per household by number of bedrooms.
- 2) Estimate average square feet by number of bedrooms per unit using Solano County Assessor data for the City of Vacaville.
- 3) Use interpolation of the data in steps 1) and 2) to develop an equation to calculate the average persons per household as a function of the average square feet per unit.
- 4) For each square foot range, do the following:
 - a) Establish the average square feet for the square foot range.
 - b) Using the equation from step 3), estimate persons per household for the average square feet. This persons per household factor serves as the estimated persons per household for the square foot range.

Persons per Household Factors by Unit Type

Table 2-5 shows the calculation of the population per household by unit type (LDR, MDR, and HDR). The following steps are taken to estimate the persons per household by unit type:

- 1) For each unit type, the City estimated the percentage of total units that are attributable to each square foot range. For example, the City estimates that 20 percent of the LDR units are in the Single Family 1,000 sq. ft.–1,999 sq. ft. range, and the remaining 80 percent are in the Single Family 2,000 sq. ft.–2999 sq. ft. range.
- 2) For each unit type, the percentages from step 1) are multiplied by the total number of units for the unit type to estimate the distribution of the units by square foot range.
- 3) For each unit type, the units by square foot range are multiplied by the persons per household for the square foot range to estimate population by unit type and square foot range. These population estimates are summed for each unit type to estimate total population by unit type.
- 4) The total population by unit type is divided by the total units by unit type to arrive at persons per household by unit type.

Trips per Household Factors by Square Foot Range

Table 2-6 details the calculation of the single family and multifamily daily trips per household for each Streets fee category (square foot range). The steps to develop the factors are outlined below:

- 1) Obtain 2017 National Household Travel Survey on average daily trips per household for standard household sizes (1 to 5 persons). These factors are shown in the top part of **Table 2-6**.
- 2) Record the persons per household factors from **Table 2-4** for each fee category.
- 3) Use linear interpolation of the National Household Travel Survey trips per household by household size to estimate the trips per household for each persons per household factor recorded in step 2).

Table 2-6

3. Infrastructure and Public Facilities

This chapter summarizes the WRTP planned backbone infrastructure and public facilities (public improvements) and related costs and funding sources, which are based on the WRTP CIP prepared by CEC. A summary of the CIP is included as **Appendix B** of this Nexus Study. The following types of public improvements are included in the CIP:

- Streets
- Storm Drainage
- Water
- Sewer
- Parks and Open Space

Capital Improvement Program

Table 3-1 summarizes the CIP improvements, costs and funding sources. As detailed in **Appendix B**, the CIP contains approximately \$129.3 million in backbone infrastructure and public facilities construction, land acquisition, utilities, and agricultural and habitat mitigation costs. In addition, the City has included an interchange contingency cost of approximately \$1.5 million, for a total cost of \$130.8 million. All costs are expressed in 2023 dollars. The CIP costs are anticipated to be funded by a variety of sources, including the RTIF Program, developers, the City, future planning areas (SP-1B and SP-1C), the SLSP, and other as yet unidentified sources.

RTIF Program Costs

Table 3-2 summarizes the RTIF Program improvements and costs. In addition to the construction costs, the Streets, Storm Drainage and Parks and Open Spaces improvement categories also include land acquisition, agricultural mitigation, and habitat conservation plan (HCP) costs. The agricultural mitigation and HCP costs are required to mitigate for the loss of agricultural and habitat land because of using the land for infrastructure, parks and greenways. The Water and Sewer improvements are located within the streets, so the land acquisition and associated agricultural mitigation and HCP costs are included in the Streets costs.

The RTIF Program also includes an Administration component that is calculated as four percent of all other RTIF Program costs. The RTIF Program includes approximately \$95.2 million in improvement costs and \$3.8 million in administration costs, for a total of \$99.0 million, with the remaining \$35.6 million funded by other sources. The RTIF Program improvements and costs are discussed in the remainder of this chapter.

Table 3-1

[1] See Table 3-1 for cost details.

[2] Street construction costs differ from costs on Table B-1 because this table includes a \$1.45 million interchange contingency that is not included in the CIP costs shown in Table B-1.

Streets

The RTIF Program includes a total of \$48.7 million in land acquisition, right of way and utilities, agricultural mitigation and HCP, and construction costs for street improvements. The improvements below are included in the RTIF Program and are briefly described in the remainder of this section:

- County Road 25A
- Parkland Avenue
- Main Internal Roadways
- Road B
- State Route 113 (Highway 113) and County Road 25A Interchange

County Road 25A

County Road 25A (CR 25A) will be the primary entryway to the WRTP. The RTIF Program includes construction of the section of CR 25A from Highway 113 on the west to Harry Lorenzo Avenue on the east. There will be a signalized intersection at Road B and CR 25A that will serve as the main entryway to the WRTP.

Parkland Avenue

Parkland Avenue is the principal arterial street within the WRTP. The RTIF Program includes funding for the extension of Parkland Avenue from Harry Lorenzo Avenue on the east side of the WRTP to the future Parkland Avenue Overcrossing on the west side of the WRTP. The earthen abutment and road section are included in the RTIF Program, but the overcrossing structure is the responsibility of SP-1B.

Main Internal Roads

The RTIF Program includes construction of the main internal collector streets. These streets are designed to connect different parts of the WRTP and provide access into and out of the project. These roads are partially reimbursable through the RTIF program.

Road B

Road B is a minor arterial street that serves as the main north to south road linking different areas of the WRTP. All intersections on Road B will be signalized and include enhanced pavement, landscaping, and aesthetic features. Road B includes a mobility hub that will serve as a point of arrival or departure for employees and residents traveling to, from, and within the WRTP by different transportation modes.

Highway 113 and County Road 25A Interchange (Double Roundabout Option)

Interchange improvements at Highway 113 and CR 25A include ramp improvements and the construction of roundabouts on both the east and west sides of the interchange. Funding for a portion of the costs is included in the RTIF

Program, with the remainder of the funding to be provided by the City and the SLSP.

Storm Drainage

The RTIF Program includes a total of \$11.3 million in land acquisition, agricultural migration and HCP, and construction costs for on-site and off-site storm drainage improvements.

On-site improvements consist of a system of collection and conveyance facilities located in and adjacent to collector and arterial streets and in greenbelt corridors. The improvements located in and adjacent to the streets will be partially funded through the RTIF Program, with developers also contributing to the funding. The improvements in greenbelt corridors will be totally funded by the RTIF Program.

Off-site improvements consist of upgrades to the recently constructed South Regional Pump Station. The RTIF Program will fund a pro rata share of the offsite improvements based on the benefit received by the WRTP, with the rest of the funding to be provided by other developments that will also benefit from the improvements.

Water

The RTIF Program includes a total of \$4.3 million in construction costs for water improvements. Water facilities consist of the pipelines needed to connect to existing transmission mains and distribute water throughout the WRTP. These pipelines will be located within the right-of-way of public streets. The majority of these improvements will be funded through the RTIF Program, with the developers and the City also providing some funding.

Sewer

The RTIF Program includes a total of \$1.9 million in construction costs for on-site and off-site sewer improvements.

On-site improvements consist of a system of collection and conveyance facilities located in and adjacent to internal streets. These improvements will be partially funded through the RTIF Program, with developers also contributing to the funding.

Off-site improvements include upgrades to the existing SLSP pump station. The RTIF Program will partially fund the upgrades, with the City providing the rest of the funding.

Parks and Open Space

The RTIF Program includes a total of \$28.9 million in land acquisition, agricultural mitigation and HCP, and construction costs for parks and open space. The planned parks and open space system includes parks, open space, and greenbelts throughout the WRTP. The land use plan includes an 11.6-acre neighborhood park to serve the WRTP and 6.0 acres of open space and greenbelts. The Parks and Recreation improvements will be mostly funded through the RTIF Program, with the SLSP contributing approximately \$1.2 million of funding.

4. Cost Allocation Methodology and Fee Calculation

For each improvement type, the RTIF is estimated by allocating the RTIF Program costs (detailed in the previous chapter) to the various land uses based on each land use's relative demand for and benefit received from the improvement type. Recall from **Chapter 1** that to comply with the requirements in AB 602, the residential land use categories for Streets and Parks are based on ranges of unit square feet, while the residential land use categories for the other fee components are based on the type of unit.

Table 4-1 provides a cost allocation summary and fee estimate. The fee components consist of five backbone infrastructure and public facilities components, as well as an Administration component. For each residential and commercial land use, the backbone infrastructure and public facilities component fees are established by a cost allocation methodology, while the Administration fees are established as four percent of the total of the other fees. Although the residential land use categories vary for the different fee components, the cost allocation and fees for all fee components will be charged per residential unit or commercial acre. The commercial fees are also shown on a per building square foot basis for informational purposes.

The general steps to allocate the costs and estimate the fees for each backbone infrastructure and public facilities fee component are outlined below:

- 1) Determine the RTIF Program costs. These costs were detailed in the previous chapter.
- 2) Determine the Dwelling Unit Equivalent (DUE) factor for each land use that serves as a measure of demand placed on the improvement relative to the demand of either a "Low Density" dwelling unit (for Storm Drainage, Water, and Sewer fees) or a "Single Family 2,000 sq. ft.–2,999 sq. ft." dwelling unit (for Streets and Parks fees).
- 3) For the commercial uses, adjust the DUE factor to be 25 percent of the factor from step 2). These adjusted DUE factors reflect the agreement of the parties to lower the fees for commercial uses and to allocate the costs as contemplated and agreed to pursuant to the development agreements with each of the landowners.

Source: City of Woodland; EPS

[1] Commercial fees will be charged per gross developable acre. The amount per bldg. sq. ft. is shown for informative purposes only.

- 4) For each land use, multiply the DUE factor by the number of units (dwelling units or commercial bldg. sq. ft.) and sum across land uses to derive the total DUEs.
- 5) Calculate the cost per DUE as the total cost divided by the total DUEs.
- 6) For each land use, calculate the cost per unit or building square foot as the DUE factor multiplied by the cost per DUE.
- 7) For the commercial land uses, convert the cost per building square foot to a cost per acre by applying the floor area ratio.

Cost Allocation by Component

As outlined above, DUE factors are used to allocate improvement costs to each land use based on the land use's demand placed on an improvement type relative to the demand from a single-family unit. The remainder of this chapter summarizes the DUE factors and details the cost allocation for each backbone infrastructure and public facilities fee component.

Streets

DUE Factors

The streets DUE factors are established using daily vehicle miles traveled (VMT) to measure relative demand for roadway infrastructure by land use. The DUE factors by land use are calculated as the estimated VMT per household relative to the VMT per household for a "Single Family 2,000 sq. ft.–2,999 Sq. Ft." unit.

Residential Factors

Residential VMT factors are established using a two-part process. Original VMT factors for each land use are calculated as a combination of the estimated PM Peak Hour trips, average trip length, and percentage of trips considered to be newly originated trips. Each VMT factor is then adjusted by a trip factor based on daily trips per household that scales the VMT up or down depending on number of persons per household for the different unit size categories. The calculation of the estimated daily trips per household for each residential fee category was detailed in **Chapter 2**.

Commercial Factors

As with the residential factors, original commercial VMT factors for each land use are calculated as a combination of the estimated PM Peak Hour trips, average trip length, and percentage of trips considered to be newly originated trips. These VMT factors are then adjusted to be 25 percent of the original factors to reflect the lowering of the fees for commercial uses as agreed to pursuant to the development agreements with each of the landowners.

Table 4-2 summarizes the VMT factors adjustments described above and the calculation of the final DUE factors. **Table 4-3** provides the backup for the original VMT factors.

Cost Allocation

Table 4-4 details the streets cost allocations using the road costs established in the previous chapter, the DUE factors from **Table 4-2**, and the methodology outlined at the beginning of this chapter.

Storm Drainage

DUE Factors

Table 4-5 details the storm drainage DUE factors. The DUE factors are established using runoff estimates, as measured by impervious surface factors, to estimate relative demand for storm drainage improvements by land use. The DUE factors by land use are calculated as the impervious surface percentage per acre relative to the impervious surface percentage for a low-density single-family acre. The impervious surface factors per acre were obtained from the City of Woodland Storm Drainage Master Plan. For commercial uses, the DUE factors are adjusted to be 25 percent of the original factors to reflect the agreement to lower the fees for commercial uses as prescribed in the development agreements with each of the landowners.

Cost Allocation

Table 4-6 details the storm drainage cost allocation using the storm drainage costs established in the previous chapter, the DUE factors from **Table 4-5**, and the methodology outlined at the beginning of this chapter.

Water

DUE Factors

Table 4-7 details the water DUE factors. The DUE factors are established using maximum daily water usage, as measured in gallons per minute (GPM) and obtained from the City Water Master Plan, to estimate relative demand for water facilities by land use. The DUE factors by land use are calculated as the GPM per unit (residential dwelling unit or commercial building square foot) relative to the GPM for a low-density single-family unit. For commercial uses, the DUE factors are adjusted to be 25 percent of the original factors to reflect the agreement to lower the fees for commercial uses as prescribed in the development agreements with each of the landowners.

Cost Allocation

Table 4-8 details the water cost allocation using the water costs established in the previous chapter, the DUE factors from **Table 4-7**, and the methodology outlined at the beginning of this chapter.

Sewer

DUE Factors

Table 4-9 details the sewer DUE factors. The DUE factors are established using average daily sewage generation, as measured in daily gallons per person for residential uses and daily gallons per acre for commercial uses and provided by the City, to estimate relative demand for sewer facilities by land use. The DUE factors by land use are calculated as the daily sewage gallons per unit (residential dwelling unit or commercial building square foot) relative to the daily sewage gallons for a low-density single-family unit. For commercial uses, the DUE factors are adjusted to be 25 percent of the original factors to reflect the agreement to lower the fees for commercial uses as prescribed in the development agreements with each of the landowners.

Cost Allocation

Table 4-10 details the sewer cost allocation using the water costs established in the previous chapter, the DUE factors from **Table 4-9**, and the methodology outlined at the beginning of this chapter.

Parks and Open Space

DUE Factors

Table 4-11 details the parks and open space DUE factors. The DUE factors are established using population, as measured by persons per household, to estimate relative demand for parks and open space by land use. The DUE factors by residential land use are calculated as the estimated persons per household relative to the persons per household for a "Single Family 2,000 sq. ft.–2,999 Sq. Ft." unit. The calculation of the estimated daily persons per household for each residential fee category was detailed in **Chapter 2**. Parks and open space costs are not allocated to commercial development, as the parks and open space system is primarily planned to serve the residents of the W RTP.

Cost Allocation

Table 4-12 details the parks and open space cost allocations using the Parks and Open Space costs established in the previous chapter, the DUE factors from **Table 4-11**, and the methodology outlined at the beginning of this chapter.

5. Nexus Findings

This report has been prepared to establish the RTIF Program fees in accordance with the procedural guidelines established in the Mitigation Fee Act, which are codified in California Government Code (CGC) Section 66000 et. seq. The Mitigation Fee Act sets forth the procedural requirements for establishing and collecting development impact fees.

In particular, CGC Section 66001 includes specific requirements for establishing a reasonable relationship or nexus between the development impact fee, and CGC Section 66016.5 (added in 2021 to address the newly enacted AB 602) includes additional requirements for development impact fees. The remainder of this chapter addresses the requirements of CGC Section 66001 and CGC Section 66016.5.

California Government Code Section 66001

CGC Section 66001 requires that a “reasonable relationship or nexus must exist between a governmental exaction and the purpose of the condition.”² Specifically, each local agency imposing a development impact fee must make the following findings:

- Identify the purpose of the fee.
- Identify how the fee is to be used.
- Determine how a reasonable relationship exists between the fee’s use and the type of development project on which the fee is imposed.
- Determine how a reasonable relationship exists between the need for the public facility and the type of development project on which the fee is imposed.
- Demonstrate how a reasonable relationship exists between the amount of the fee and the cost of the public facility or portion of the public facility attributable to the development on which the fee is imposed.

This section details these findings for each RTIF Program component that is addressed in this report. To better ensure the feasibility of the commercial development contemplated in the WRTP and build out of the Plan Area as a whole,

² *Public Needs & Private Dollars*; William Abbott, Marian E. Moe, and Marilee Hanson, page 109.

the City has made a policy decision to adjust the commercial cost allocation factors to be 25 percent of the original factors that were established as measures of the proportional demand generated by each nonresidential development type. The landowners for each of the properties in the Plan Area have agreed through their respective development agreements that in exchange for the consideration of the vested rights granted through the development agreement, and the benefits to the commercial properties and the development as a whole that the costs allocated to WRTP residential development should be adjusted (i.e., increased) to account for downward adjustment in the cost allocation factors for commercial properties. These adjustments to the fees have been agreed to by the landowners as a public benefit pursuant to the terms and conditions of their respective development agreement. Consequently, the last nexus finding requiring a “reasonable relationship between the amount of the fee and the cost of the public facility or portion of the public facility attributable to the development on which the fee is imposed” is made for the Plan Area as a whole, with the acknowledgment that allocations between commercial and residential properties have been modified by agreement between the City and the landowners, pursuant to the terms of the individual development agreements.

Roadways

Purpose of Fee

The purpose of the RTIF Program streets fee is to provide funding to construct new street infrastructure required to serve the new WRTP residents and employees.

Use of Fee

The RTIF Program streets fees will be used to construct and expand roadway facilities needed to accommodate future traffic volumes projected as a result of new development. The streets fee will be used to fund streets land acquisition, right of way and utilities, and construction costs.

Relationship Between Use of Fee and Type of Development

The RTIF Program streets fees will be used to construct street improvements needed to adequately serve an increased service population as the result of the new development. A reasonable relationship exists between the use of the streets fee and the residential and commercial development on which the fees are imposed because the fees will be used to construct the roadway system needed to serve the new residents and employees generated by the new development.

Relationship Between Need for Facility and Type of Development

New residential and commercial development in the WRTP will generate new residents and employees that will result in new vehicular trips and the need for additional street improvements to maintain adequate levels of service.

A reasonable relationship exists between the need for street improvements and the type of new residential and nonresidential development projects because the street improvements must be constructed to accommodate the new development types that will place an increased demand on the roadway system.

Relationship Between Amount of Fee and Cost of Facility or Portion of Facility Attributed to Development on Which Fee is Imposed

The total cost of improvements funded by the RTIF Program streets fee is allocated among the projected new residential and nonresidential land uses in the WRTP at buildout based on the relative demand each land use is anticipated to place upon the improvements. Cost allocation factors based on vehicle miles travelled are used to measure the relative demand generated by each land use and to allocate the street costs across all benefiting land uses in the WRTP. A reasonable relationship exists between the amount of the RTIF Program streets fees and the costs of the facilities attributable to the new residential and nonresidential development on which the fees are imposed because the fees are derived using appropriate cost allocation factors as measures of the proportional demand generated by each development type.³

Storm Drainage

Purpose of Fee

The purpose of the RTIF Program storm drainage fee is to provide funding to construct new storm drainage infrastructure required to provide flood protection to the new WRTP residents and employees.

Use of Fee

The RTIF Program storm drainage fees will be used to construct and expand storm drainage infrastructure to accommodate increased demand for flood protection as a result of new development. The storm drainage fees will be used to fund storm drainage land acquisition, agricultural and HCP costs, and construction costs.

Relationship Between Use of Fee and Type of Development

The RTIF Program storm drainage fees will be used to construct storm drainage improvements needed to adequately serve an increased service population as the result of the new development. A reasonable relationship exists between the use of the storm drainage fee and the residential and commercial development on which the fees are imposed because the fees will be used to construct the storm drainage infrastructure needed to serve the new residents and employees generated by the new development.

³ This nexus finding is subject to the modification of cost allocations as agreed to between the City and the landowners in the Plan Area pursuant to their respective development agreements.

Relationship Between Need for Facility and Type of Development

New residential and commercial development in the WRTP will generate new residents and employees that will result in the need for additional storm drainage infrastructure to provide adequate flood protection to the WRTP service population. A reasonable relationship exists between the need for storm drainage improvements and the type of new residential and commercial development projects because the storm drainage infrastructure must be constructed to accommodate the new development types that will place an increased demand on the storm drainage system.

Relationship Between Amount of Fee and Cost of Facility or Portion of Facility Attributed to Development on Which Fee is Imposed

The total cost of improvements funded by the RTIF Program storm drainage fee is allocated among the projected new residential and commercial land uses in the WRTP at buildout based on the relative demand each land use is anticipated to place upon the improvements. Cost allocation factors based on the need for drainage improvements, as measured by impervious surface area generated by each land use type, are used to measure the relative demand generated by each land use and to allocate the storm drainage costs across all benefitting land uses in the WRTP. A reasonable relationship exists between the amount of the RTIF Program storm drainage fees and the costs of the facilities attributable to the new residential and commercial development on which the fees are imposed because the fees are derived using appropriate cost allocation factors as measures of the proportional demand generated by each development type.⁴

Water

Purpose of Fee

The purpose of the RTIF Program water fee is to provide funding to construct new water infrastructure required to serve the new WRTP residents and employees.

Use of Fee

The RTIF Program water fees will be used to construct water facilities needed to accommodate increased demand projected as a result of new development. The water fees will be used to fund construction of the pipelines needed to connect to existing transmission mains and distribute water throughout the WRTP.

Relationship Between Use of Fee and Type of Development

The RTIF Program water fees will be used to construct the water system infrastructure needed to adequately serve the new WRTP service population as the result of new development. A reasonable relationship exists between the use

⁴ This nexus finding is subject to the modification of cost allocations as agreed to between the City and the landowners in the Plan Area pursuant to their respective development agreements.

of the water fees and the residential and commercial development on which the fees are imposed because the fees will be used to construct the water system infrastructure needed to serve the new residents and employees generated by the new development.

Relationship Between Need for Facility and Type of Development

New residential and commercial development in the WRTP will generate new residents and employees that will result in the need for new water system capacity to provide adequate service to the WRTP's service population. A reasonable relationship exists between the need for water system improvements and the type of new residential and commercial development projects because the new water system improvements must be constructed to accommodate the new development types that will place an increased demand on the water system.

Relationship Between Amount of Fee and Cost of Facility or Portion of Facility Attributed to Development on Which Fee is Imposed

The total cost of improvements funded by the RTIF Program water fee is allocated among the projected new residential and commercial land uses in the WRTP at buildout based on the relative demand each land use is anticipated to place upon the improvements. Cost allocation factors based on water usage, as measured in maximum day water demand, are used to measure the relative demand generated by each land use and to allocate the water costs across all benefiting land uses in the WRTP. A reasonable relationship exists between the amount of the RTIF Program water fees and the costs of the facilities attributable to the new residential and commercial development on which the fees are imposed because the fees are derived using appropriate cost allocation factors as measures of the proportional demand generated by each development type.⁵

Sewer

Purpose of Fee

The purpose of the RTIF sewer fee is to provide funding to construct new sewer infrastructure required to serve the new WRTP residents and employees.

Use of Fee

The RTIF sewer fees will be used to construct sewer facilities needed to accommodate increased demand projected as a result of new development. The sewer fees will be used to fund construction of collection and conveyance facilities and upgrades to an existing sewer pump station.

⁵ This nexus finding is subject to the modification of cost allocations as agreed to between the City and the landowners in the Plan Area pursuant to their respective development agreements.

Relationship Between Use of Fee and Type of Development

The RTIF Program sewer fees will be used to construct the sewer system infrastructure needed to adequately serve the new WRTP service population as the result of new development. A reasonable relationship exists between the use of the sewer fees and the residential and commercial development on which the fees are imposed because the fees will be used to construct the sewer system infrastructure needed to serve the new residents and employees generated by the new development.

Relationship Between Need for Facility and Type of Development

New residential and commercial development in the WRTP will generate new residents and employees that will result in the need for new sewer system improvements to provide adequate service to the WRTP's service population. A reasonable relationship exists between the need for sewer system improvements and the type of new residential and commercial development projects because the new sewer system improvements must be constructed to accommodate the new development types that will place an increased demand on the sewer system.

Relationship Between Amount of Fee and Cost of Facility or Portion of Facility Attributed to Development on Which Fee is Imposed

The total cost of improvements funded by the RTIF Program sewer fee is allocated among the projected new residential and commercial land uses in the WRTP at buildout based on the relative demand each land use is anticipated to place upon the improvements. Cost allocation factors based on sewage generation, as measured in gallons per day, are used to measure the relative demand generated by each land use and to allocate the sewer costs across all benefitting land uses in the WRTP. A reasonable relationship exists between the amount of the RTIF Program sewer fees and the costs of the facilities attributable to the new residential and commercial development on which the fees are imposed because the fees are derived using appropriate cost allocation factors as measures of the proportional demand generated by each development type.⁶

Parks and Open Space

Purpose of Fee

The purpose of the RTIF Program parks and open space fee is to provide funding to construct new parks and open space required to serve the new WRTP residents.

⁶ This nexus finding is subject to the modification of cost allocations as agreed to between the City and the landowners in the Plan Area pursuant to their respective development agreements.

Use of Fee

The RTIF Program parks and open space fees will be used to construct parks and open space improvements needed to accommodate increased demand projected as a result of new development. The parks and open space fees will be used to fund construction of parks, open space, and greenbelts throughout the WRTP.

Relationship Between Use of Fee and Type of Development

The RTIF Program parks and open space fees will be used to construct the parks and open space system needed to adequately serve the new WRTP residents as the result of new development. A reasonable relationship exists between the use of the parks and open space fees and the residential development on which the fees are imposed because the fees will be used to construct the parks and open space needed to serve the new residents generated by the new development.

Relationship Between Need for Facility and Type of Development

New residential development in the WRTP will generate new residents that will result in the need for new parks and open space. A reasonable relationship exists between the need for new parks and open space and the type of new residential development projects because the new parks and open space must be constructed to accommodate the new development types that will benefit from the parks and open space.

Relationship Between Amount of Fee and Cost of Facility or Portion of Facility Attributed to Development on Which Fee is Imposed

The total cost of improvements funded by the RTIF Program parks and open space fee is allocated among the projected new residential land uses in the WRTP at buildout based on the relative demand each land use is anticipated to place upon the improvements. Cost allocation factors based on people who will use the parks, as measured by persons per household, are used to measure the relative demand generated by each land use and to allocate the parks and open space costs across all benefitting residential land uses in the WRTP. A reasonable relationship exists between the amount of the RTIF Program parks and open space fees and the costs of the improvements attributable to the new residential development on which the fees are imposed because the fees are derived using appropriate cost allocation factors as measures of the proportional demand generated by each residential development type.

Administration

The administration component of the RTIF funds City costs associated with fee program administration and implementation, including credit and reimbursement agreement negotiations and implementation, credit and reimbursement tracking, annual reporting requirements, periodic updates to the Nexus Study, and other related costs. Collection and implementation of the RTIF, inclusive of the constituent fee components described above, is reliant upon funding from the administration component.

For each land use, the administration component is calculated as four percent of the total of all other RTIF components. Costs of the administration component are therefore based on each fee component and subcomponent, and associated nexus findings for the administration component are established by the nexus finding for each fee component documented above.

California Government Code Section 66016.5 (AB 602)

As noted earlier in this document, this nexus analysis must consider the newly created CGC Section 66016.5. This section stipulates that a jurisdiction must calculate residential development impact fees proportionately to the square footage of the dwelling units, with the exception of water and sewer fees and any other fees for which specific findings can be made as to why the fees should not be enacted on a square foot basis.

In this report, residential fees are calculated as shown below:

- **Streets and Parks and Open Space**
Fees by dwelling unit square foot ranges
- **Storm Drainage, Sewer, and Water**
Fees by unit type

The sewer and water fees need no further justification as they are exempted from the proportionality requirement of CGC Section 66016.5. However, the required findings detailed in CGC Section 66016.5 must be made for streets, parks and open space, and storm drainage fees. The specific requirements and findings for streets, parks and open space, and drainage fees are detailed in the remainder of this chapter.

Requirements for Exceptions to Fee Proportional to Housing Square Footage

CGS Section 66016.5(a)(5)(A) states, among other things, that fees “imposed on a housing development project proportionately to the square footage of the proposed units of the development shall be deemed to have used a valid method to establish a reasonable relationship between the fee charged and the burden posed by the development.” However, Section 66016.5(a)(5)(B) states that a nexus study “is not required to comply with this proportionality requirement if the local agency makes the following findings:

- a) An explanation as to why square footage is not an appropriate metric to calculate fees imposed on a housing development project.
- b) An explanation that an alternative basis of calculating the fee bears a reasonable relationship between the fee charged and the burden posed by the development.
- c) That other policies in the fee structure support smaller developments, or otherwise ensure that smaller developments are not charged disproportionate fees.”

Streets

a) An explanation as to why square footage is not an appropriate metric to calculate fees imposed on a housing development project.

The W RTP streets costs are allocated to dwelling units on a trips basis in the form of VMT per unit, which relies on transportation factors (number of trips, length of trips), as well as on persons per household, as persons per household has a direct relationship to the number of daily trips. The persons per household data provided in this report supports identification of an increasing number of people per household and trips per household as a dwelling unit size increases. However, the data present limitations on both the lower/smaller unit size range and on the higher/larger unit size range. For example, regardless of how small a dwelling unit may be, the minimum assumed persons per unit would be 1. Similarly, as home size continues to increase, the data are not as conclusive that the number of persons per unit and daily trips per unit continue to increase in a linear or otherwise determinant fashion. For these reasons, deriving a fee directly calculated on residential building square footage alone is not an appropriate metric to calculate the RTIF Program streets fees.

b) An explanation that an alternative basis of calculating the fee bears a reasonable relationship between the fee charged and the burden posed by the development.

As detailed in **Chapter 2**, the number of people per household, trips per household, and VMT per household show a pattern of increasing as unit size increases. Thus, implementing the fee based on ranges of building square feet for residential development bears a reasonable relationship between the fee charged and the burden posed by the development because units that fall in the lower building unit size range pay a lower fee than units that fall in a higher building unit size range, which is proportional to the estimated number of people per household by unit size within each size range.

c) That other policies in the fee structure support smaller developments, or otherwise ensure that smaller developments are not charged disproportionate fees.

Implementation of the RTIF Program streets fees for residential development by building square foot range achieves the objective that smaller residential units would be charged a lower fee than larger units and ensures proportionality of fees based on relative demand for the facilities, as documented in this report.

Parks and Open Space

a) An explanation as to why square footage is not an appropriate metric to calculate fees imposed on a housing development project.

The WRTP parks and open space costs are allocated to dwelling units on a persons served basis in the form of persons per unit. The persons per household data provided in this report supports identification of an increasing number of people per household as a dwelling unit size increases. However, the data present limitations on both the lower/smaller unit size range and on the higher/larger unit size range. For example, regardless of how small a dwelling unit may be, the minimum assumed persons per unit would be 1. Similarly, as home size continues to increase, the data are not as conclusive that the number of persons per unit continues to increase in a linear or otherwise determinant fashion. For these reasons, deriving a fee directly calculated on residential building square footage alone is not an appropriate metric to calculate the RTIF Program parks and open space fees.

b) An explanation that an alternative basis of calculating the fee bears a reasonable relationship between the fee charged and the burden posed by the development.

As detailed in **Chapter 2**, the number of people per household shows a pattern of increasing as unit size increases. Thus, implementing the fee based on ranges of building square feet for residential development bears a reasonable relationship between the fee charged and the burden posed by the development because units that fall in the lower building unit size range pay a lower fee than units that fall in a higher building unit size range, which is proportional to the estimated number of people per household by unit size within each size range.

c) That other policies in the fee structure support smaller developments, or otherwise ensure that smaller developments are not charged disproportionate fees.

Implementation of the RTIF Program parks and open space fees for residential development by building square foot range achieves the objective that smaller residential units would be charged a lower fee than larger units and ensures proportionality of fees based on relative demand for the facilities, as documented in this report.

Storm Drainage

a) An explanation as to why square footage is not an appropriate metric to calculate fees imposed on a housing development project.

New impervious surfaces drive the demand for drainage facilities. In housing developments, new impervious surfaces incorporate the footprint on a parcel, capturing ground floor living spaces as well as driveways, sidewalks, patios and other such surfaces. A square footage of proposed units basis would introduce inequities. For example, a two-story home with the same footprint as a single-story home would pay twice the fee while causing an identical impact on the drainage system. This inequity would be amplified in multistory apartment and condominium buildings or towers.

b) An explanation that an alternative basis of calculating the fee bears a reasonable relationship between the fee charged and the burden posed by the development.

For storm water runoff, the standard, customary and equitable method to establish a reasonable relationship between the fee charged, the facilities required, and the type of development on which the fee is imposed is with a direct measure of new impermeable surfaces. New runoff as a result of development establishes the demand for new or improved capacity, the cost of which is the basis of the fee.

c) That other policies in the fee structure support smaller developments, or otherwise ensure that smaller developments are not charged disproportionate fees.

A fee basis of impermeable square footage ensures equity for the allocation of the cost of the impact from development. The fee is proportional to the impact caused by new impermeable surfaces. Smaller developments with identical unit footprints will have the same fees. Smaller footprints will have proportionately lower fees. Similarly, multifamily apartment buildings will have lower impacts and fees on a per unit basis as the size of the units decline and/or the number of floors increase.

6. Fee Program Implementation and Administration

This chapter identifies tasks that the City will complete when implementing the RTIF Program.

The RTIF Program fees presented in this report are based on the best improvement cost estimates, funding source information, administrative cost estimates, and land use information available at this time. If costs change significantly, if the type or amount of new development changes, if other assumptions significantly change, or if other funding becomes available (as a result of legislative action on state and local government finance, for example), the RTIF Program should be updated accordingly.

After the fees presented in this report are established, the City will conduct periodic reviews of the public improvement costs and other assumptions used as the basis of this Nexus Study. Based on these reviews, the City may make necessary adjustments to the RTIF Program through subsequent RTIF Program updates.

Inflation Adjustment

The costs in this report are shown in 2023 dollars based on the WRTP CIP prepared by CEC. To ensure that the RTIF Program stays current with the prevailing cost of construction, the proposed fees will be automatically adjusted by the City annually to account for the inflation (or deflation) of construction, right-of-way acquisition, environmental, and design costs. Consistent with other City-administered fee programs, annual fee adjustments shall occur automatically on January 1 of each calendar year.

The RTIF will be adjusted automatically by the percentage change in the average of the Engineering-News Record's San Francisco and 20-City Construction Cost Indices for the 12-month period ending in October of the previous year, or equivalent, as determined by the Finance Director if these numbers are not available. For example, the adjustment for January 2024 will be determined by calculating the percentage change from October 2022 to October 2023 in the average of the ENR 20-city and San Francisco CCIs. The resulting value will be the adjustment factor that will be applied to the RTIF in January 2024.

Implementing Ordinances/Resolutions

The proposed RTIF would be adopted by the City through one or more ordinances authorizing collection of the fees and through one or more fee resolutions establishing the fees. The fee will be effective 60 days following the City's final action on the ordinances authorizing collection of the fee and on the fee resolutions establishing the fee. The new ordinances and resolutions should reference the automatic inflation adjustment factor discussed in this section.

Fee Administration

The RTIF will be collected from new development in the WRTP subject to the fee at the time of building permit issuance; use of these funds may need to wait until a sufficient fund balance can be accrued. According to CGC Section 66000, the City is required to deposit, invest, account for, and expend the fees in a prescribed manner.

Fee Exemptions, Reductions, and Waivers

Public Agencies

All federal and state agencies, public school districts, and the City may be exempt from the RTIF Program fees. Other non-City public agencies shall be subject to payment of the RTIF Program fees.

Replacement/Reconstruction

Any replacement or reconstruction (no change in use) of any residential unit or any nonresidential structure that is damaged or destroyed as a result of fire, flood, explosion, wind, earthquake, riot, or other calamity, or act of God shall be exempt from the RTIF. However, if the replacement or reconstructed residential unit exceeds the documented total number of units or unit size of the damaged/destroyed residential structure, or the replacement or reconstructed nonresidential building exceeds the documented total floor area of the damaged/destroyed building, the excess units or building square footage is subject to the RTIF.

Additions/Alterations/Modifications/Temporary Facilities

The following rules shall apply to additions, alterations, modifications, and temporary facilities:

- 1) Consistent with current State law, ADU and Junior ADU that are fewer than 750 building square feet shall not be assessed the RTIF.
- 2) Additions to residential structures where the total square footage of the dwelling remains within a fee category range, provided no change in use occurs and a second full kitchen is not added, shall not be charged a fee. If the square footage of the dwelling increases into a new fee category range, the difference of the two fee category ranges shall be collected before building permit issuance.
- 3) Except as otherwise provided, when an existing residential dwelling is converted into two primary units, or a new primary dwelling is added to the property, that new unit shall be assessed a fee consistent with the provisions of this Nexus Study.
- 4) Supporting use square footage in multi-unit residential projects, such as the office and recreation areas required to directly serve the multifamily project, shall not be subject to a fee. The residential unit fee will provide the full mitigation required in multi-unit residential projects.
- 5) Non-habitable residential structures, including decks, pools and spas, pool cabanas, sheds, and detached garages, shall not be assessed a fee. An attached garage shall not count towards the square footage of the dwelling.

Accessory Dwelling Units

Fees on ADUs larger than 750 square feet require a two-part calculation. First the City will determine the total habitable building square footage of the proposed ADU and the primary residential unit on the lot on which the ADU is proposed. The City will determine the ADU building square footage as a proportion of the primary residential unit. As an example, if the primary residential dwelling unit is 2,000 building square feet and the proposed ADU is 1,000 building square feet, then the ADU would be 50 percent of the primary residential unit. The City would then identify the RTIF that will apply to the primary residential unit and apply 50 percent to that amount as the RTIF applicable to the ADU. In this example, the categories would be the Single Family 2,000 – 2,999 sq. ft. category for streets and parks and open space fees and either low density residential or medium density residential for the other fee categories.

Credit for Replacement of Existing Buildings

New development that replaces existing development is eligible for a fee credit to the extent the facilities to be funded by the new development are already provided to the existing development. For example, a 4-unit apartment complex that is replaced by an 8-unit apartment complex could receive up to a 50 percent credit in the fee ($4/8 = 50$ percent). The City's Community Development Director will determine the amount of the fee credit at the time a site plan is submitted to the City. No credit will be provided for development that existed at the time of Specific Plan approval.

Fee Credit and Reimbursement to Developers

As is typical with development impact fee programs, many of the public infrastructure facilities are needed up front before adequate revenue from the fee collection would be available to fund such improvements. Consequently, some type of private funding may be necessary to pay for the public improvements when they are needed. This private financing may be in the form of land-secured bonds, developer equity, or other forms of private financing.

In cases where a private party (e.g., developer) has advance-funded an eligible RTIF Program facility, the party will be due fee credits or reimbursements from the fee program. Note that the RTIF administration component must be paid in cash at the issuance of a building permit to provide the City with funding to administer the RTIF Program. RTIF credits or reimbursements will be provided under the following conditions:

- Developer-installed improvements shall be considered for reimbursement. Only funds collected from the RTIF shall be used to reimburse a developer who installed eligible RTIF Program improvements identified in the WRTP CIP.
- The value of any developer-installed improvement for fee credit or reimbursement purposes shall be based on the lesser of the actual cost of eligible facilities (as determined at the sole discretion of the City via a review of the construction contract and payments made, plus an allowance determined by the City for soft costs directly associated with the facility design and construction) or the total eligible facility costs based on the cost schedule and estimate set forth in the CIP, subject to the automatic annual inflation adjustment described previously in this chapter. The Master Reimbursement Agreement governs how the RTIF reimbursements will be provided.
- All construction contracts, construction work, and requests for reimbursement are performed in conformance with the most current City policies governing such construction of eligible improvements and the Master Reimbursement Agreement.

Impact Fee Program Adoption Process

Impact fee program adoption procedures are found in CGC Section 66016 through CGC Section 66019. Adoption of this impact fee program requires the City Council to follow certain procedures, including holding a public hearing with at least 30 days' notice for the hearing (Gov. Code § 66016.5(a)(7)). The City is required to post a public notice at least 30 days before the public hearing considering the fee. The City shall notify any member of the public that requests notice of intent to begin an impact fee nexus study of the date of the hearing.

Mailed notice 14 days before the public hearing is required for those individuals who request such notification. Data, such as this Nexus Study and referenced material, must be made available at least 10 days before the public hearing. Any new or increased fees would be effective 60 days after adoption.

Programming Revenues and Projects with the Capital Improvement Plan

The City will update its CIP to identify specific projects and program fee revenues to those projects. Use of the CIP in this manner documents a reasonable relationship between new development and the use of fee revenues.

The City shall plan its CIP expenditures at least 5 years in advance and show where all collected development impact fee revenues will be spent. The City can hold funds in a project account for longer than 5 years, if necessary, to collect sufficient funds to complete a given project. See Compliance Requirements below for the specific CIP update requirements stated in CGC Section 62000.

Compliance Requirements

The California Mitigation Fee Act (CGC Section 66000 et seq.) mandates procedures for administration of impact fee programs, including collection, accounting, refunds, updates, and reporting. The City must comply with the annual and 5-year reporting requirements. For facilities to be funded with a combination of impact fees and other revenues, the City must identify the source and amount of the other revenues. The City must also identify when the other revenues are anticipated to be available to fund the project. The City's compliance obligations regarding the act include the specific requirements detailed below.

Earmarking of Fee Revenues

CGC Section 66006 mandates that the City deposit fees for the improvements in a separate capital facilities account or fund to avoid any commingling of the fees with other revenues and funds of the City, except for temporary investments. Fees must be expended solely for the purpose for which they were collected. Interest earned on the fee revenues must also be placed in the capital account and used for the same purpose. The California Mitigation Fee Act is not clear as to whether depositing fees "for the improvements" refers to a specific capital improvement or a class of improvements (e.g., fire or police facilities). The City maintains discretion as to how it will collect and account for RTIF fees, while maintaining compliance with CGC requirements.

Reporting

CGC Section 66006 requires that once each year, within 180 days of the close of the fiscal year, the City must make available to the public the following information for each account established to receive impact fee revenues:

- 1) The amount of the fee.
- 2) The beginning balance and the ending balance of the account or fund.
- 3) The amount of the fees collected and interest earned.
- 4) Identification of each public improvement on which fee revenues were expended and the amount of the expenditures on each improvement, including the percentage of the cost of the public improvement that was funded with fee revenues.
- 5) Identification of the approximate date by which the construction of a public improvement will commence, if the City determines sufficient funds have been collected for financing of an incomplete public improvement.
- 6) A description of each interfund transfer or loan made from the account or fund, including interest rates, repayment dates, and a description of the improvements on which the transfer or loan will be expended.
- 7) The amount of any refunds or allocations made pursuant to CGC Section 66001, paragraphs (e) and (f).

The above-listed information must be reviewed by the City Council at its next regularly scheduled public meeting, but not fewer than 15 days after the statements are made public.

Findings and Refunds

CGC Section 66001 requires that, for the fifth fiscal year following the first deposit of any impact fee revenue into an account or fund as required by CGC Section 66006, and every 5 years thereafter, the City must make all the following findings for any fee revenues that remain unexpended, whether committed or uncommitted:

- 1) Identify the purpose to which the fee will be put.
- 2) Demonstrate the reasonable relationship between the fee and the purpose for which it is charged.
- 3) Identify all sources and amounts of funding anticipated to complete financing of incomplete improvements for which the impact fees are to be used.
- 4) Designate the approximate dates on which the funding necessary to complete financing of those improvements will be deposited into the appropriate account or fund.

Updating of the Impact Fee Nexus Study

According to CGC Section 66016.5(a)(8), impact fee nexus studies shall be updated at least every 8 years from the date of adoption. This requirement became effective on January 1, 2023.

In future updates, the City may use the impact fee nexus study template developed by the California Department of Housing and Community Development pursuant to Section 50466.5 of the Health and Safety Code to update the nexus study.

Annual Update of the Capital Improvement Plan

CGC Section 66002 provides that if the City adopts a CIP to identify the use of impact fees, that program must be adopted and annually updated by a resolution of the governing body at a noticed public hearing. The City maintains two CIPs: one includes the programming of all projects funded or partly funded by impact fee revenues (WRTP CIP prepared by CEC, a summary of which is contained in this nexus study in **Appendix B**) and an overall citywide 5-year CIP that is adopted annually during the City budget process.

M. LAND ALLOCATIONS	\$5,052,000	\$4,510,000	\$0	\$0	\$542,000	\$0	\$0

BACKBONE INFRASTRUCTURE TOTAL COST:	\$132,392,000	\$97,270,000	\$12,356,000	\$4,476,000	\$6,524,000	\$4,189,000	\$7,491,000
-------------------------------------	---------------	--------------	--------------	-------------	-------------	-------------	-------------

NOTES:

(1) This opinion of probable cost was based on Infrastructure Study Report exhibits for the Woodland Research and Technology Park (SP-1A) dated January 2020. In addition, CR25A/HWY 113 and Parkland O.C. costs are based on MTC's Preliminary Project Cost Estimate Summaries dated June 13, 2022 with soft costs (PA&ED, Final Design, and Contingency) included. Sewer Pump Station Upgrades are based on Waterworks' Spring Lake Pump Station Capacity Enhancement Assessment, dated 9/29/20 with total soft costs of 35%. All other projects assume 10% contingency and 15% soft costs.

(2) Additional Notes:

- A. In providing opinions of probable construction cost, the Client understands that the Engineer has no control over costs or the price of labor, equipment or materials, or over the Contractor's method of pricing, and that the opinions of probable construction cost provided herein are to be made on the basis of the Engineer's qualifications and experience. The Engineer makes no warranty, expressed or implied, as to the accuracy of such opinions as compared to bid or actual costs.
- B. This opinion of costs assumes that all the civil improvements for each phase are to be constructed in one phase. If the project is built out in additional multiple sub-phases, additional costs may be incurred. Costs also assume competitive bidding.
- C. This opinion of costs DOES NOT include costs for the following items:
- i. Undergrounding or relocation of existing overhead utility lines excepting from CR25A to SR 113 (electric only). All other instances of main line joint trench installation to include cost of removal of existing overhead utility lines (where present).
 - ii. Any costs related to environmental assessment of the mitigation of any contamination, endangered species or archeological resources.
 - iii. Costs for financing, bonds and easements.
 - iv. Costs associated with coordination with other contractors working within the Spring Lake area (e.g. offsite storm drainage, water well(s), intract improvements, etc.)
- D. Unit costs are 2021 basis estimates with an additional 5% escalation. A 10% contingency is also included.
- E. This opinion assumes payment of prevailing wages.
- F. This opinion includes soft costs (engr, landscape design, construction management, staking, plan check fees, inspection, soils testing,) of 15%.
- G. The 'other' column encompasses shares of costs associated with off-site storm drainage improvements (Item J) for which funding sources are yet to be determined.

REVISED: 03/03/23

APPROX.

		REVISED: 03/03/23 APPROX.		ENGINEER'S ESTIMATE				
ITEM	DESCRIPTION	QTY.	UNIT	UNIT COST	TOTAL COST	COST INCL. IN CIP	NET DELTA	Comments:
PAVING								
1	STANDARD CONCRETE PAVING (PEDESTRIAN SECTION)	4,340	SF	\$15	\$65,100	\$80,280	-\$15,180.00	Standard concrete paving with broom finish located at each corner.
2	STANDARD CONCRETE PAVING (VEHICULAR SECTION)	2,270	SF	\$20	\$45,400	\$0	\$45,400.00	Standard concrete paving with broom finish located at the bus/ride share drop off.
3	STRIPING	1	LS	\$12,000	\$12,000	\$0	\$12,000.00	Bus Stop/Ride Share Striping and bike lane striping.
4	DECORATIVE PAVING (PEDESTRIAN SECTION)	6,520	SF	\$30	\$195,600	\$0	\$195,600.00	Depending on the type of decorative paving installed (stamped, pavers, etched/sandblasted, etc.) unit cost could be \$25-\$45. Cost shown assumes colored concrete with saw cut joints and sand blast finish.
5	CURB RAMPS	2	EA	\$10,000	\$20,000	\$5,200	\$14,800.00	Enlarged curb ramp area located at each corner to accommodate pedestrians and cyclists. Includes truncated domes.
6	BIKE RAMPS	2	EA	\$2,000	\$4,000	\$0	\$4,000.00	Enlarged curb ramp area located at each corner to accommodate pedestrians and cyclists. Includes truncated domes.
PAVING TOTAL:							\$256,620.00	
SITE UTILITIES								
7	UTILITIES	1	LS	\$50,000.00	\$50,000.00	\$0	\$50,000.00	Allowance for utility installation.
SITE UTILITIES TOTAL:							\$50,000	
SITE AMENITIES AND FURNISHINGS								
8	BOLLARDS	18	EA	\$1,500.00	\$27,000.00	\$0	\$27,000.00	Lighted bollard to bicycle traffic entering into mobility hub.

9	BIKE RACKS (SHORT TERM PARKING)	15	EA	\$500.00	\$7,500.00	\$0	\$7,500.00	Depending on product and mounting type, unit cost could be \$300-\$500 installed. Two bikes per rack.
10	BIKE LOCKERS (LONG TERM PARKING)	3	EA	\$3,900.00	\$11,700.00	\$0	\$11,700.00	Must be installed on hard surface such as concrete as shown on concept.
11	BIKE REPAIR DOCK	1	EA	\$4,000.00	\$4,000.00	\$0	\$4,000.00	Bike repair post with air pump.
12	KIOSK	1	EA	\$15,000.00	\$15,000.00	\$0	\$15,000.00	Unit is expected to be prefabricated, freestanding 5' X 5' structure. Message kiosk for interpretive signage and/or information.
13	THEMED WAYFINDING SIGN	1	LS	\$15,000.00	\$15,000.00	\$0	\$15,000.00	Unit cost shown is a starting point as cost can vary widely based on artist, material, and size of art piece.
14	PUBLIC ART	1	LS	\$75,000.00	\$75,000.00	\$0	\$75,000.00	Unit cost shown is a starting point as cost can vary widely based on artist, material, and size of art piece.
15	BENCHES	3	EA	\$5,000.00	\$15,000.00	\$0	\$15,000.00	Pricing is slightly higher than typical bench to provide some buffer for more decorative options or materials.
16	BOTTLE FILLER	1	EA	\$3,000.00	\$3,000.00	\$0	\$3,000.00	Bottle filling post only. Domestic water connection is required and is covered in utility cost section.
17	COVERED WAITING AREAS FOR TRANSIT	1	EA	\$80,000.00	\$80,000.00	\$0	\$80,000.00	Unit cost shown is a starting point as cost can vary depending on the complexity and customization.
18	PEDESTRIAN LIGHTING	7	EA	\$12,000.00	\$84,000.00	\$0	\$84,000.00	Pedestrian lighting located along entire stretch of mobility hub.
SITE AMENITIES TOTAL:							\$337,200.00	

LANDSCAPE							
19	STREET TREES	10	EA	\$1,750	\$17,500	\$0	\$17,500
20	ORNAMENTAL TREES	11	EA	\$1,750	\$19,250	\$0	\$19,250
21	SHRUBS AND GROUNDCOVERS	4,550	SF	\$6	\$27,300	\$27,654	-\$354
22	TREE WELLS	4	EA	\$2,000	\$8,000	\$0	\$8,000
23	IRRIGATION CONTROLLER EXPANSION	1	EA	\$5,000	\$5,000	\$0	\$5,000
24	IRRIGATION SYSTEM	4,550	SF	\$4	\$18,200	\$18,436	-\$236
LANDSCAPE TOTAL:							\$46,090.00
MOBILITY							
25	MIROMOBILITY STATION (E-BIKE AND E-SCOOTER PARKING AND CHARGING)	-	EA	-	-	-	-
SITE AMENITIES TOTAL:							TBD
TOTALS							
				TOTAL COST	COST INCL. IN CIP	NET DELTA	
BASE SUB TOTAL				\$824,550	\$131,570	\$689,910	
25% BASE CONTINGENCY						\$172,477.50	
GRAND TOTAL:						\$862,387.50	

Notes:

1.In providing opinions of probable construction cost, the Client understands that the Engineer has no control over costs or the price of labor, equipment or materials, or over the Contractor's method of pricing, and that the opinions of probable construction costs provided herein are to be made on the basis of the Engineer's qualifications and experience. The Engineer makes no warranty, expressed or implied, as to the accuracy of such opinions as compared to bid or actual costs.

2.Costs are generated for comparison with base CIP Development. It is assumed where Mobility Concept is duplicative of the CIP development costs will offset. Refer to CIP Buildout cost estimate for additional information.

3.Actual quantities may vary during the construction of this project.

4.This opinion of costs DOES NOT include costs for the following items:

- a.Any costs related to environmental assessment or the mitigation of any contamination, endangered species or archeological resources.
- b.Costs for land, financing, bonds and easements or rights of way.
- c.Soft costs including engineering, surveying, construction managemnet and soils testing.
- d.Import or export of fill material
- e.Demolition of existing structures.
- f.Future phases of construction, such as the planned expansion of the parking area.
- g.All accessibility improvements such as ramps, railines, signage, striping, and truncated domes.
- h.Permit or other city fees.
- i.Street lighting.

5.Unit costs are 2022 basis and does not assume payment of prevailing wages.

6.This opinion of costs assumes that all improvements will be constructed in one phase. If the project is built out in multiple sub-phases, additional costs may be incurred.

7.Costs assume competitive bidding.

¹ Cut through segments (pathway connections from subdivision cul-de-sacs) from local roads to parks/greenbelts are not included in the RTIF and are assumed to be a cost to the developer. Cut through segments from adjacent Oyang subdivision have been included in the RTIF.

² Soil excavated from the project detention ponds shall be reserved for the Parkland Avenue Overcrossing.

³ Improvements to be constructed under future City of Woodland project(s). City will not contribute funds toward the construction of the surrounding greenbelt.

⁴ This funding to be provided by the SLIF to the WRTP developer that is required to construct this section of the green belt. WRTP developer to construct the improvements with SLIF reimbursement. Reimbursement is limited to the amount shown in the WRTP CIP document.

TOTAL SEWER & STORM DRAINAGE UPGRADE COST:						\$8,650,000	\$1,159,000	\$0		

NOTES

- (1) This is the new development cost for the sewer improvement. Because it occurs during the timeframe of the WRTP, it is a 100% cost share for the Technology Park.
- (2) This is a maintenance cost for the City.
- (3) Total Capital Cost estimate for Trash Screens is very rough \$7.5M estimate from City. This cost assumes the Project will be for screening the entire City, including north area stormwater. The cost split is based on 60 CFS/446 CFS, which is the SUGA pumping divided by the entire City pumping (note that there may be some adjustment to this proportion when looking at total flow instead of total pumping capacity).
- (4) The \$4.2 M is the current project cost. This cost assumes the Project will be for screening the entire City, including north area stormwater. The cost split is based on 60 CFS/446 CFS, which is the SUGA pumping divided by the entire City pumping.
- (5) City staff anticipate the need to update the storm drainage master plan once during the life of the specific plan

Notes:

Notes: Arterial Roadways are 100% RTIF Fee

1. In providing opinions of probable construction cost, the Client understands that the Engineer has no control over costs or the price of labor, equipment or materials, or over the Contractor's method of pricing, and that the opinions of probable construction costs provided herein are to be made on the basis of the Engineer's qualifications and experience. The Engineer makes no warranty, expressed or implied, as to the accuracy of such opinions as compared to bid or actual costs.

2. Costs are generated for comparison with base CIP Development. It is assumed where Mobility Concept is duplicative of the CIP development costs will offset. Refer to CIP Buildout cost estimate for additional information.

3. Actual quantities may vary during the construction of this project.

4. This opinion of costs DOES NOT include costs for the following items:

- Any costs related to environmental assessment or the mitigation of any contamination, endangered species or archeological resources.
- Costs for land, financing, bonds and easements or rights of way.
- Soft costs including engineering, surveying, construction management and soils testing.
- Import or export of fill material
- Demolition of existing structures.
- Future phases of construction, such as the planned expansion of the parking area.
- All accessibility improvements such as ramps, railings, signage, striping, and truncated domes.
- Permit or other city fees.
- Street lighting

5. Unit costs are 2022 basis and does not assume payment of prevailing wages.

6. This opinion of costs assumes that all improvements will be constructed in one phase. If the project is built out in multiple sub-phases, additional costs may be incurred.

7. Costs assume competitive bidding.

Re: Woodland Research and Technology Park Fiscal Impact Analysis

INTRODUCTION

To understand the fiscal implications of the proposed Woodland Research and Technology Park (WRTP) project, the City of Woodland engaged BAE Urban Economics to conduct a fiscal impact analysis. The following memorandum summarizes the results of the fiscal impact model, including the expected revenues and City expenditures to provide ongoing services to the WRTP residents and employees if developed according to the proposed plan.

Project Description

The WRTP is located along Woodland's southern boundary, at the intersection of Highway 113 and County Road 25A. In total, the project encompasses nearly 350 acres and includes residential and non-residential development proposed for construction over the next 25 years. As summarized in more detail below in Table 1, at full buildout the WRTP project would include nearly 1,675 residential units ranging from low-density single-family homes to high-density multifamily units. The project also proposes roughly 1.1 million square feet of research park space, 625,000 square feet of light industrial space, 250,000 square feet of retail space, and 200,000 square feet of hotel space.

As also shown in Table 1, the project is expected to develop over a 25-year period. The earlier development years include a larger portion of the residential units, with absorption of all units expected by Year 15. The non-residential development is expected to occur over the full 25-year time frame, with a fairly equal delivery of space each of the five-year increments shown in the table below.

Table 1: Woodland Research and Technology Park (WRTP) Development by Absorption Period

Use Type	Year of Delivery				
	0-5 Years	5-10 Years	10-15 Years	15-20 Years	20-25 Years

FISCAL IMPACT ANALYSIS

Methodology

To estimate the fiscal impacts of the WRTP project, BAE developed a fiscal model to assess the expected General Fund revenues and expenditures associated with the proposed project. To estimate the projected revenues, BAE assessed the current market values for the land uses proposed in the WRTP, in order to estimate property-related tax revenue, as well as the average per-capita and per-employee sales tax generation. The remaining revenue items, including permits, fees, and charges for service, are assumed to increase based on the City's existing average annual per-service population¹ revenue. To estimate the future Woodland General Fund expenditures associated with the WRTP, BAE conducted interviews with the City's fire, police, and finance departments. These interviews indicated that additional costs to provide fire service to the WRTP area will be associated with the future planned fire station (i.e., estimated on a case study basis) to serve the southern expansion of the City, while costs to provide police service will increase commensurate with service population growth (i.e., estimated on an average cost per service population basis). Aside from roadway maintenance, which is calculated based on an average annual cost per-lane mile, and custom calculations to demonstrate transfers out from the General Fund for future capital expenditures and a reduction in transit subsidies, the remaining expenditures are based on the existing average

¹ Service population is defined as the City resident population plus one-half of the number of local employees.

annual costs for City services such as library (costs per resident), community development (per service population), and administration (per service population). Similar to nearby developments in the City of Woodland, costs to maintain the parks, greenbelts, and street lighting will be covered through a supplemental levy (e.g., Community Facilities District) and therefore are not included in the following General Fund fiscal impact analysis.

Service Population

As shown below in Table 2, at full buildout the WRTP will include an estimated 4,316 total residents and roughly 4,912 total employees. The expected residents are fairly evenly distributed between the various residential unit types, while the majority of the employment growth is driven by the Research Park land use. Because employees do not generate the same demand for city services as full-time residents, BAE estimates the future service population as the total number of residents and half of the total employees. BAE utilizes these future service population figures to estimate the future demand for services and associated City expenditures. Based on this methodology, BAE estimates a total of 6,773 new service population at full buildout of the WRTP project.

Table 2: WRTP New Service Population by Absorption Period

Residential	Population Density	Planned Units (New Residents)				
		0-5 Years	5-10 Years	10-15 Years	15-20 Years	20-25 Years

		New Service Population				
New Population		0-5 Years	5-10 Years	10-15 Years	15-20 Years	20-25 Years
Total Residents		1,436	2,872	4,319	4,319	4,316
Total Employees		797	1,912	2,912	3,912	4,912
Total Persons Served (b)		1,835	3,828	5,775	6,275	6,773

Notes:

(a) Assumes a five percent vacancy rate across all property types.

(b) Persons served is defined as residents plus 50% of employees.

Sources: City of Woodland; AECOM; BAE, 2021.

Revenue

The following section summarizes the projected WRTP revenue generation, including property-related revenue, sales tax revenue, and other City revenue. In order to better understand the revenue generated during the 25-year buildout timeline, the analysis projects revenues in five-year increments, following the absorption schedule shown above in Table 1. The revenue estimates for each five-year increment represents the expected annual revenue at the end of that five-year period. For example, the projected revenue in the “5-10 Years” period represents the annual revenue by year 10 of the WRTP buildout.

Property-Related Revenue

By full buildout, BAE estimates the WRTP project will have an assessed value of nearly \$1.2 billion, based on the assumptions regarding average value per residential unit and average value per non-residential square foot shown in Table 3. Residential value estimates are based on recent sales of new comparable residential units in Woodland, while non-residential values are based on recent sales or newly assessed non-residential properties in the City. Particularly in the case of the Research Park and Industrial land use category, the new buildings that are expected to be developed in the WRTP will likely be more modernized and involve a higher level of improvements than most of the space that currently exists in the city; therefore, these assessed values are likely conservative and may underestimate the total assessed value of the WRTP project.

The total projected assessed value drives direct property tax and property transfer tax revenue to the City, shown in Table 3 and Table 4 on the following pages. As shown in Table 3, based on the allocation of property tax to the City of Woodland, at roughly 16.5 percent of the ad-valorem tax amount, the City is expected to receive roughly \$2.0 million in annual property tax from the WRTP project by full buildout. In addition to secured and unsecured property tax, the City is also projected to receive approximately \$986,000 per year of In-Lieu of Vehicle License Fee (ILVLF) revenue at full buildout.

In addition to property tax and ILVLF revenue, the City will also receive a tax upon transfer of the real estate in the WRTP. Based on assumed turnover rates shown below in Table 4, BAE projects roughly \$62,000 of additional annual revenue generated by the property transfer tax allocated to the City at full buildout of the WRTP.

Table 3: Property-Related Revenue by Absorption Period

Sales Tax Revenue

Based on average annual per-resident and per-employee taxable sales assumptions, the WRTP is projected to generate approximately \$118 million of additional retail sales within the City of Woodland yearly. This assumes new residents spend money in the WRTP and elsewhere throughout the City at a rate that is equal to the Yolo County countywide average per capita figure. This is more conservative than using the current citywide per capita rate, which is relatively high. The per-employee taxable sales estimate includes business-to-business taxable transactions, estimated as the average per-employee taxable sales amount in the Sacramento Region. Again, this is more conservative than assuming that new employees would generate taxable sales at a rate equal to the current citywide rate.

Spurred by the increase in taxable sales, the City is projected to receive nearly \$1.3 million annually in additional sales tax revenue by project buildout. This includes \$1.2 million in the base Bradley Burns sales tax amount, plus an additional \$172,000 annually from the pooled base sales tax revenue, and \$14,150 annually from the Proposition 172 public safety sales tax. Note that this analysis excludes both revenues and expenditures of Measure F and Measure J sales tax revenues.

This analysis does also take into account the City-County revenue sharing agreement, which states that Yolo County will receive 15 percent of any annual sales tax generated above \$155,000 within the WRTP. This amounts to roughly \$110,000 annually allocated to the County at full buildout of the WRTP.

Table 5: Sales Tax Generation by Absorption Period

Spending Type	Estimated Taxable Sales	New Taxable Sales				
		0-5 Years	5-10 Years	10-15 Years	15-20 Years	20-25 Years
New Residents		1,436	2,872	4,319	4,319	4,316

Notes:

(a) Based on the 2019 Yolo County per capita retail sales.

(b) Based on the 2019 Sacramento MSA average non-retail sales per employee.

(c) According to the Revenue Sharing Agreement, the County receives 15% of any sales tax generated above \$155,000 within the WRTP.

Sources: City of Woodland; State Board of Equalization; BAE, 2021.

Other Revenue

At full buildout, the WRTP is projected to generate an additional \$750,000 of other annual revenue to the City. As shown in Table 6 below, the majority of this revenue is associated with permits, fees, and charges for service, followed by Transient Occupancy Tax revenue.

Table 6: Other General Fund Revenue by Absorption Period

Revenue Source	Revenue Generation (a)	Other Revenue				
		0-5 Years	5-10 Years	10-15 Years	15-20 Years	20-25 Years
<i>New Service Population</i>		1,835	3,828	5,775	6,275	6,773
Transient Occupancy Tax	\$21.74 per person served	\$39,891	\$83,227	\$125,555	\$136,427	\$147,237
Permits, Fees and Charges	\$71.09 per person served	\$130,451	\$272,168	\$410,590	\$446,144	\$481,494
Fines and Forfeitures	\$3.93 per person served	\$7,219	\$15,062	\$22,722	\$24,690	\$26,646
Charges for Services	\$9.47 per person served	\$17,371	\$36,243	\$54,676	\$59,410	\$64,118
Charges to Other Departments (b)	\$4.94 per person served	\$9,058	\$18,898	\$28,510	\$30,978	\$33,433
Total "Other" Revenue Sources		\$203,991	\$425,598	\$642,052	\$697,649	\$752,928

Note:

(a) Calculated using the General Fund Revenue estimates from the City of Woodland Fiscal Year 2020/21 Budget, divided by the service population, which includes 100% of the City's population and 50% employees working in the City.

2020 Population 60,742

2020 Jobs 27,459

Service Population 74,472

(b) Assumes that Charges to Other Departments is 10% variable.

Sources: BAE, 2021.

Total Revenue

Based on the above revenue items, the W RTP is projected to generate a total of roughly \$5.2 million in annual revenues to the City of Woodland General Fund by project buildout. As seen below, the majority of these revenues are associated with property-related taxes, including direct property tax and ILVLF revenues, as well as sales tax. Based on the breakdown by five-year increments shown below in Table 7, it is apparent that the majority of revenues are generated by year 15, driven by the absorption of all residential units and a large share of the non-residential development. In fact, nearly 85 percent of the final annual revenues are expected by year 15, with the remaining 15 percent driven by the buildout of the remaining non-residential space in the following decade.

Table 7: Total General Fund Revenue by Absorption Period

Revenues	General Fund Revenue				
	0-5 Years	5-10 Years	10-15 Years	15-20 Years	20-25 Years
Property Tax					
Secured	\$505,685	\$1,154,401	\$1,704,008	\$1,836,942	\$1,969,876
Unsecured	\$50,569	\$115,440	\$170,401	\$183,694	\$196,988

Sources: BAE, 2021.

Expenditures

The following estimates the total annual General Fund expenditures associated with the buildout of the W RTP. Similar to revenue estimates, the anticipated expenditures are broken down into five-year increments driven by the buildout of specific land uses over the 25-year buildout time frame. Similar to the projected revenue, the expenditure estimates for each five-year period represent the annual expenditures at the end of that absorption period. For example, the projected expenditures shown in the “5-10 Years” time period reflect the annual expenditures in Year 10 of the W RTP buildout.

Fire Department Costs

As the new fire station (Station #4) will serve the W RTP project as well as other neighborhoods and developments in the City of Woodland, BAE allocated the expected per-service population cost of the entire Woodland fire department, including future Station #4, to the projected service population of the W RTP. As seen below, this results in roughly \$1.1 million of annual fire service costs allocated to the W RTP at full buildout. Note that this analysis also incorporates the expiration of the SAFER Grant which currently supports fire service costs in the City. This grant of roughly \$475,000 expires in 2024, at which time the City General Fund will absorb those additional costs.

Table 8: Fire Department Costs by Absorption Period

Fire Expenditures							
Current Expenditures	\$10,873,729						
SAFER Grant Expiration (2024)	\$474,696						
Future Fire Station #4 Cost	\$2,400,000						
Total Future Fire Budget	\$13,748,425						
Existing Service Population	74,472						
Build Out Service Pop	6,775						
Total Future Service Pop	81,247						
		Fire Department Expenditures					
		0-5 Years	5-10 Years	10-15 Years	15-20 Years	20-25 Years

Sources: City of Woodland; BAE, 2021.

Roadway Maintenance Costs

To estimate roadway maintenance expenditures, the City of Woodland provided an average maintenance cost per lane-mile throughout the City, of \$2,897 per lane-mile plus a 13.8 percent public works overhead charge. Assuming all roadway infrastructure will be delivered commensurate with the residential growth, BAE assumes all 30.5 lane-miles within the W RTP will be delivered by Year 15. In total, BAE estimates the roadway maintenance cost will amount of roughly \$100,500 annually by Year 15 and will continue at that level through project buildout.

Table 9: Roadway Maintenance Costs by Absorption Period

Expenditure	Existing Demand	General Fund Cost				
		0-5 Years	5-10 Years	10-15 Years	15-20 Years	20-25 Years
Road Lane Miles		10.2	20.3	30.5	30.5	30.5
Maintenance Cost	\$2,897 Per Lane-Mile	\$29,431	\$58,862	\$88,293	\$88,293	\$88,293
Public Works Overhead	13.82% of Maint. Cost	\$4,069	\$8,137	\$12,206	\$12,206	\$12,206
Total Roadway Maintenance Cost		\$33,499	\$66,999	\$100,498	\$100,498	\$100,498

Sources: City of Woodland; BAE, 2021.

Increased Transit Costs

According to City of Woodland staff, the City's allocation of Transportation Development Act (TDA) subsidy is projected to decline by roughly \$25,000 per year through the WRTP buildout. This amount will compound over the next 25 years, suggesting that the decline in subsidy, or increase in transit costs, by Year 10 will be \$250,000 per year. At full buildout, this amounts to \$625,000 per year in additional costs from the reduced TDA subsidy.

Table 10: Transit Costs by Absorption Period

Other General Fund Cost	Cost Factor	General Fund Cost				
		0-5 Years	5-10 Years	10-15 Years	15-20 Years	20-25 Years
Increased Transit Cost (a)	\$25,000 per year	\$125,000	\$250,000	\$375,000	\$500,000	\$625,000

Note:

(a) Based on reduced subsidy from the Transportation Development Act (TDA).

Sources: City of Woodland; BAE, 2021.

Police Service and Other City Costs

All other city General Fund costs, including police, community services, library, etc. are calculated on the basis of the existing per-service population expenditure estimate times the projected WRTP increase in service population, accounting for the variability of expenditures for each department. The analysis excludes any expenditures currently supported by Measure J sales tax revenue, as this source is not included as a revenue source in the revenue projections. As seen in Table 11 below, the per-service population cost ranges from roughly \$8 per year for public works to \$289 for police service. Based on the projected service population of the WRTP, these additional City costs amount to roughly \$2.6 million annually at full buildout, with nearly \$2.0 million in new annual police costs. As stated previously, this does not include expenditures associated with parks, greenbelts, and streetlights within the WRTP which will be maintained using a supplemental revenue source, such as a CFD.

Table 11: Other General Fund Expenditures by Absorption Period

Other General Fund Cost	FY 20/21	Removal of	Adjusted	Persons	Service Demand	General Fund Cost (a)				
	Budget	Measure J	Expenditures	Served		0-5 Years	5-10 Years	10-15 Years	15-20 Years	20-25 Years
Administration (b)	\$3,177,732	\$250,000	\$2,927,732	74,472	\$9.83 per person served	\$18,034	\$37,625	\$56,761	\$61,676	\$66,563

Note:

(a) Based on new service population or new residents depending on cost item.

(b) Assumes Administration expenditures are 25% variable.

Sources: City of Woodland; BAE, 2021.

Total Annual Cost

As seen below in Table 12, the total General Fund expenditures to support the full buildout of the WRTP amounts to nearly \$4.5 million annually by WRTP buildout. The largest share of these costs is associated with police and fire services. Based on the buildout plan, nearly 85 percent of these annual expenditures, or \$3.7 million annually, will be required by Year 15. This is primarily driven by the delivery of all residential units by Year 15, with only a limited amount of non-residential development remaining through the final buildout year.

Table 12: Total General Fund Expenditures by Absorption Period

Net Fiscal Impact

At full buildout of the WRTP, the development is projected to generate an annual surplus of nearly \$740,000 to the City's General Fund. After the first five years, which includes a large portion of residential development and more modest non-residential development, the initial phase is projected to generate an annual fiscal surplus of \$163,000. This surplus ramps up significantly between Years 5 and 15 (reaching \$720,000 annually by Year 15), as the project delivers all of the residential units and a larger share of the non-residential uses. Between Year 15 and full buildout in Year 25 the project reaches the full projected annual surplus of approximately \$740,000.

Fiscal Impact Sensitivities

To account for potential changes in market conditions and demand, BAE tested the fiscal impacts of two different sensitivities. The first sensitivity estimates the impact of less non-residential space delivered by Year 25, given the strong demand for residential units and potential uncertainty around demand for the non-residential space. The second scenario assesses the impact of lower per-employee business-to-business sales tax generation, given that the potential tenants of the WRTP may or may not produce taxable goods.

Reduced Commercial Buildout - As a simplified approach to assessing the fiscal impact of less commercial space delivered in the WRTP, BAE created a version of the fiscal model that assumes zero non-residential space delivers while all the residential units would be absorbed. While this is not the intention of the project, nor ideal for the City, it merely represents the relative importance of the non-residential space. Based on these assumptions, the project yields a fiscal deficit of nearly \$110,000 at full buildout. This is primarily driven by the assumed increase in transit costs over the 25-year buildout timeline, of \$625,000 annually. This cost is not assumed to decrease despite the elimination of the non-residential component, as demand for transit services is primarily driven by the City's resident population. To yield a marginal annual fiscal surplus, the project would need to deliver at least 15 percent of all proposed non-residential land uses.

Reduced Per-Employee Sales Tax Generation - The fiscal analysis currently assumes employees of the new non-residential spaces will generate non-retail taxable sales equal to the average \$13,212 annual per-employee amount in the four-county Sacramento region. This taxable sales amount generally corresponds to business-to-business sales that generate sales tax revenue. Given the uncertainty around the future users of the WRTP space, BAE tested the sensitivity of the fiscal model to a reduction in this assumed per-employee taxable sales amount. Even with a 50 percent reduction in the per-employee taxable sales estimate, the project would still generate a fiscal surplus, albeit reduced to roughly \$360,000 per year by buildout.

Fiscal Impact Analysis Takeaways

- The WRTP project is projected to generate a fiscal surplus of approximately \$740,000 per year to the City's General Fund.
- Based on the absorption schedule, the City would realize a significant fiscal surplus by Year 15, estimated at nearly \$720,000 per year. This is driven by the delivery of all residential units and nearly two-thirds of the non-residential space by Year 15. Between Year 15 and full buildout in Year 25, the annual fiscal surplus is projected to increase to \$773,000 annually.

REVENUE

- The primary sources of General Fund revenue that WRTP would generate are property-related taxes (i.e., ad valorem property tax, ILVLF, transfer tax) and sales tax. Although not modeled in this analysis, the project would also generate substantial new sales tax revenues from Measures F and J, to the extent that they are extended through the life of the WRTP project. Together, these account for 86 percent of the projected revenue.
- Approximately 63 percent of the estimated new assessed value associated with the WRTP would be generated by the residential component.
- Approximately 55 percent of the estimated sales tax is generated by the non-residential component, including taxable business-to-business retail transactions.

EXPENDITURES

- The primary sources of annual General Fund expenditures associated with WRTP would be Police Service (\$2.0 million annually at buildout) and Fire Service (\$1.1 million annually at buildout). Together these account for 68 percent of the expenditures to serve the WRTP.
- The third largest expenditure is associated with the need for backfill of Public Works Department expenditures due to the loss of Transportation Development Act (TDA) dollars to support transit provision. Driven by growth in the City, this loss of revenue is estimated at nearly \$625,000 annually at full buildout of the WRTP. While this loss of revenue is not directly driven by the WRTP project, this project represents the major growth area within the City and therefore bears the full burden of reduced revenues from this source.

FISCAL IMPACT SENSITIVITIES

- The fiscal impact of the WRTP is sensitive to a reduction in the non-residential space. Any reduction from the proposed amount of non-residential space developed and occupied will result in lower fiscal surpluses than projected above. The project must provide at least 15 percent of the proposed non-residential space to achieve General Fund fiscal break even.

WOODLAND RESEARCH AND TECHNOLOGY PARK CLIMATE ACTION PLAN CHECKLIST

All projects shall complete and submit this checklist with new development applications and major expansion projects within the Woodland Research and Technology Park Specific Plan Area to ensure project compliance with the City of Woodland Climate Action Plan

Woodland Research and Technology Park Climate Action Plan Consistency Checklist Introduction

The City of Woodland encourages and prioritizes sustainable design and development practices throughout the community. The 2035 General Plan advocates responsible growth while seeking to conserve energy, water, and other resources; reducing greenhouse gas (GHG) emissions; promoting infill, green and net-zero energy development; and building community resiliency to the effects of climate change. The Woodland Research and Technology Park (WRTP) will serve as a leader in eco-innovation and sustainability. Implementation of the City's Climate Action Plan (CAP) requires that new development projects in the plan area incorporate inventive sustainable design practices and apply GHG reduction measures consistent with the CAP. This CAP Checklist was developed to help companies and builders plan and design projects consistent with the CAP and to assist City staff in implementing CAP strategies. The following sustainable design policies were adopted on _____ for the WRTP Plan Area:

1. **Consistency with the Climate Action Plan-** Ensure new development is consistent with the objective and targets of the City's Climate Action Plan with the goal of striving to achieve zero net energy at the building and neighborhood level. (Policy 2.C.2/2.L.2)
2. **Resource Efficiency-** Encourage and incentivize building construction that consumes less energy, water, and other resources; allows natural ventilation; uses daylight effectively; reduces storm water runoff; and facilitates the use of clean energy whenever possible. Use trees for cooling, energy conservation and to improve air quality. (Policy 2.C.4)
3. **Electric/Alternative Fuel Vehicle Parking-** Parking facilities in non-residential zones shall provide for alternative fueling and electric vehicle charging. Residential development shall provide EV-capable facilities in all garages and parking lots. (Policy 3.H.7)
4. **Agricultural Interface-** Where development within the Plan Area occurs at the edge of the Urban Limit Line adjacent to agricultural land, a buffer of 150-feet shall be incorporated, where feasible, to minimize potential incompatibilities of the adjoining uses. (Policy 7.C.4/7.C.5)
5. **Agricultural Uses-** Where agricultural activity exists within the Plan Area boundary, the agricultural uses shall be permitted to continue until urban development occurs on the active agricultural properties. (Policy 7.C.2)

This Checklist allows proposed development projects that are subject to the California Environmental Quality Act (CEQA) to demonstrate consistency with Woodland's CAP, and with applicable WRTP Environmental Impact Report (EIR) analysis and findings. CEQA Guidelines require the analysis of GHG emissions as well as any potential impacts that the proposed project might have on the environment. Projects that demonstrate consistency with the CAP are eligible to streamline the review process. The CAP is a verified GHG emissions reduction plan in accordance with CEQA Guidelines Section 15183.5. Projects that do not display consistency may, at the City's discretion, prepare an independent comprehensive project-specific GHG emissions analysis consistent with CEQA requirements. This Checklist identifies measures that are required in order to support CEQA streamlining, and includes examples of how to implement exceptional sustainable design practices and technology in architectural or landscape plans.

The following policies will be used to ensure all new WRTP projects and major expansions adhere to Climate Action Plan Consistency:

- A.** All new development projects and major expansion projects shall provide a summary of incorporated conservation measures consistent with the City's 2035 Climate Action Plan (CAP), adopted with the General Plan in 2017. For each CAP strategy and related "action" relevant to new development projects, the City will determine: (a) the project is consistent; (b) the project with conditions or when modified would be consistent; (c) the strategy is relevant for new development, but not the subject project; or (d) the project includes one or more replacement strategies that would be equally or more effective in reducing GHG emissions and such replacement strategy or strategies are not included in the CAP or required by any other regulation, standard, design criteria, or other existing requirement.
- B.** All projects shall complete and submit the city's Climate Action Plan Consistency Checklist for review and approval by the city prior to project approval. The CAP Checklist allows proposed development projects to demonstrate consistency with the Climate Action Plan.
- C.** Consistent with General Plan Policy 2.L.2, all projects shall strive to meet net zero energy consumption through the incorporation of conservation measures above Title 24 standards and shall, at minimum, demonstrate consistency with Cal Green Tier One standards.
- D.** GHG reductions strategies and sustainability measures shall be considered in major expansion projects and in the ongoing operations and use of all commercial and residential projects within the Plan Area including, but not limited to Energy Conservation, Water Conservation/Quality and Low Water Landscape measures as outlined in Sustainability Guidelines Sections 3.5.3.B for commercial uses and Section 3.5.12.B for residential of the Specific Plan.

This CAP Checklist identifies GHG reduction strategies that may be incorporated into proposed development projects. By encouraging development strategies and designs that conserve resources and reduce project-related GHG emissions, the Checklist supports Woodland's sustainability efforts and policies that encourage the advancement of sustainable growth, including implementation of the CAP.

There are five steps to this application:

- 1) CAP Consistency Checklist Application Form
- 2) Land Use Element Consistency
- 3) CAP Strategy Consistency
- 4) Additional Questions
- 5) Certification

Applicability:

All projects located within the Woodland Research and Technology Park Specific Plan Area shall complete and submit the city's Climate Action Plan Consistency Checklist for review and approval by the city prior to project approval. The CAP Checklist allows proposed development projects to demonstrate consistency with the Climate Action Plan.

Step 1: CAP Consistency Checklist Application Form

Project Information

Project Name: _____

Project Address: _____

Project Type: _____

Project Size: _____

Proposed Land Uses: _____

Service Population (Residents + Employees): _____

Brief Project Description: _____

Applicant Information

Applicant Name: _____

Company: _____

Contact Phone: _____

Contact Email: _____

Was a consultant retained to complete this checklist? ☐ Yes ☐ No

If yes, complete the following:

Consultant Name: _____

Company: _____

Contact Phone: _____

Contact Email: _____

Step 2: Land Use Consistency

This section allows the City to determine a project's consistency with the land use assumptions used in the development of the CAP. The growth projections outlined in the 2035 General Plan Land Use Element were used in Woodland's CAP to estimate community-wide GHG emissions over time. Therefore, new development projects must be consistent with the Land Use Element to be consistent with Woodland's CAP. For specific examples, see Attachment 1- The Living Building Challenge.

Land Use Consistency	Yes	No
Is the proposed project consistent with the existing General Plan land use and Specific Plan zoning designations?		
If "Yes", please explain how the project is consistent with the existing General Plan land use and zoning designations in the space provided below and then proceed to Step 3 of the Checklist.		
If "No", the proposed project must prepare a comprehensive project-specific analysis of GHG emissions and incorporate the measures in this Checklist to the extent feasible.		

 *Does your site plan prioritize resource efficiency and leave room for usable open space areas? Does it respect native wildlife, and work with, not against natural site features?*

Step 3: CAP Strategy Consistency

Energy

Incorporating energy efficiency and/or renewable energy into a project can have long-term benefits for reducing utility bills and GHG emissions while adding value to the property. The City encourages all projects to incorporate energy efficiency and renewable energy into project design and construction. See Attachment 2- *Daylighting* for more examples.

Projects subject to CEQA that are using the Checklist for CEQA streamlining eligibility must incorporate the GHG reduction strategies marked as “**(Required)**.” If “no” is marked for a required measure, the project will not be eligible to use the checklist for CEQA streamlining.

GHG Reduction Strategy	Sustainable Development Measures	Yes	No
E-1: Lighting Efficiency Upgrades (Required)	Installation of high-efficiency lighting: Does the project include LED lights, solar tubes, sky lights, and take consideration of room orientation to maximize the use of natural lighting? Are the work spaces designed to support direct access to natural light for as many occupants as possible to reduce the demand and use of artificial lighting and improve worker comfort and efficiency?		
E-2: Comprehensive Building Efficiency	Energy efficiency: Does the project incorporate sustainable construction and development practices in the CalGreen Code such as cool roofs, vegetation, permeable or other special pavements, shading devices, operable windows placed for cross ventilation, or other passive temperature control factors to reduce building energy use and heat island effects on and around buildings?		
E-3: Improved Building Temperature Controls (Required)	Natural climate control features: Are natural temperature control factors such as cross ventilation, wind protection, and shade considered in site and building design for the project? For example, does the plan utilize heat recovery ventilation within residential or nonresidential buildings, which, rather than venting warm exhaust air outside, captures the exhaust air and uses it to preheat incoming air?		

E-4: Improved Building Temperature Controls	Innovative site designs: Does the project include innovative site designs and building orientations for new construction that incorporate passive and active solar designs and natural cooling techniques?		
	Efficient heating and cooling: Does the project include buildings with mechanical HVAC systems to decrease energy use and increase reliance on natural heating, cooling, and ventilation? Does the design use high-performance building envelopes, including insulation of floors, walls, and ceilings that exceed Title 24 standards, use of low-e glass and other high-performance curtain wall or glazing systems?		
E-5: Renewable energy generation and procurement	Renewable energy (residential): Does the project include solar installations of 3 kW or larger to accommodate electric vehicle charging and achieve net zero carbon footprint without future need to increase inverters?		
	Renewable energy use (residential): Will homes be constructed for the subsequent installation of solar photovoltaic and/or solar water heaters?		

Please explain how the proposed project incorporates the required measures and any additional sustainable development measures consistent with the CAP and Cal Green Tier One standards as applicable.

 *Does your energy plan utilize location and natural daylight patterns to minimize energy use? Does your plan leave space for improvement and innovation?*

Transportation and Land Use

Practices and infrastructure that promote ease and convenience of pedestrian, bicycle, and transit travel for daily trips that situate residents in proximity to workplaces, goods and services, and recreational opportunities, are essential to reducing the use of passenger vehicles locally and regionally. The City encourages all projects to incorporate sustainable development measures into project design and construction to support the reduction of single-occupancy motor vehicle use and increase the use of efficient and alternative modes of transportation. For specific examples, see Attachment 3- *Transit Innovation*.

Projects subject to CEQA that are using the Checklist for CEQA streamlining eligibility must incorporate the GHG reduction strategies marked as “**(Required)**.” If “no” is marked for a required measure, the project will not be eligible to use the checklist for CEQA streamlining.

GHG Reduction Strategy	Sustainable Development Measures	Yes	No
T/LU-1: Infill Development, Redevelopment, and Repurposing	Density (residential): Does the project incorporate the highest level of residential density allowed in the zoning code?		
	Infill development: Does the project develop on an underutilized or unused infill site?		
	Use of existing structures: Does the project reuse an existing structure(s)?		
T/LU-2: Smart Growth in New Development	Infill and proximity of housing: Does the project include infill housing and housing built within walking distance to jobs, transportation, and amenities?		
	Transit services: Is the provision of public transportation abundantly prioritized?		
	Proximity of transit services: Will the project be served by public transit within ¼ mile of the site, or closer, for the elderly or disabled?		
	Mixed use development: Does the project incorporate mixed uses within the development?		
	Proximity to retail (residential): Does the project's plan support convenient walking and biking distances for daily shopping trips?		
T/LU-3: Smart Growth in New Development (Required)	Alternative transportation (commercial): Does the project include bicycle parking, electric vehicle charging stations, and/or other Transportation Demand Management (TDM) incentives for non-fossil-fuel transportation?		

T/LU-4: Increase Mass Transit Use, Walking, and Bicycling (Required) (Specific Plan Requirement above CAP)	Bicycle-friendly design: Does the project provide secure bicycle storage options and/or bike share programs? Does the project provide well-lit, covered bicycle parking and storage options equal to at least 10% of the number of vehicle parking spaces credited to the project? In industrial, office, and research/tech buildings over 50,000 sq ft, are locker rooms and showers (2 minimum) or similar facilities provided for employees?		
T/LU-5: Increase Mass Transit Use, Walking, and Bicycling	Bike Share: Does the project provide bicycle share programs?		
T/LU-6: Increased Use of Alternative-Fuel Vehicles	Electric vehicle (EV) chargers (residential): Does the project include EV charging infrastructure?		
Please explain how the proposed project incorporates the required measures and any additional sustainable development measures consistent with the CAP and Cal Green Tier One standards as applicable.			

If the proposed project incorporates sustainable development measures beyond what is included in the CAP, please explain.

Does your plan include designs that serve the needs of everyone, including the elderly populations, or those disabled?

Urban Forest & Open Space

Trees help reduce GHG emissions in several ways: reducing the heat island effect, reducing indoor building temperatures, and carbon sequestration. Planting trees strategically can have long-term benefits for beautifying streets, reducing utility bills and GHG emissions, and increasing comfort inside and outside of buildings. The City encourages all projects to incorporate appropriate placement and planting of trees into project design and construction. See Attachment 4 for examples of ideal urban forestry implementation.

Projects subject to CEQA that are using the Checklist for CEQA streamlining eligibility must incorporate the GHG reduction strategies marked as “**(Required)**.” If “no” is marked for a required measure, the project will not be eligible to use the checklist for CEQA streamlining.

GHG Reduction Strategy	Sustainable Development Measures	Yes	No
UF-1: Urban Forest Management Plan	Urban Forest Management Plan: Does the project include planting mediums, planting techniques, and soil amendments that can provide multiple benefits as identified in Woodland’s Urban Forest Master Plan?		
UF-2: Increased Tree Planting (Required)	Shade tree cover (residential): Does the project include two shade trees per home on east, west, or south face of the home with trees located to prevent interference with solar PV production? Shade tree cover: Does this project include the planting of larger trees to maximize the GHG reduction benefit? Shade tree cover: Does this project include street trees to shade asphalt and parked cars?		
Please explain how the proposed project incorporates the required measures and any additional sustainable development measures consistent with the CAP and Cal Green Tier One standards as applicable.			

If the proposed project incorporates sustainable development measures beyond what is included in the CAP, please explain.

 *Does your plan include the preservation of native greenery? Does it aid in the preservation/restoration of endangered wildlife?*

Water & Solid Waste

Incorporating water conservation and waste reduction measures into project design and construction supports long-term reductions in GHG emissions. The City encourages all projects to incorporate water conservation and waste reduction measures into project design and construction. Attachment 5- *Production Waste* provides further examples of water conservation and solid waste reduction strategies.

GHG Reduction Strategy	Sustainable Development Measures	Yes	No
W/W-1: Increased Water Conservation	Water conservation: Does the project meet or exceed Title 24 water conservation building requirements? Does project landscaping utilize climate sensitive irrigation systems and other water-efficient bubblers and drip irrigation systems?		
	Drought-tolerant landscaping: Does the project include at least 50% drought-tolerant native landscaping features in the landscape design?		
W/W-2: Solid Waste Reduction and Waste Processing Improvements	Construction Recycling: Will steps be taken to ensure that the project meets or exceeds the minimum requirement for construction and demolition debris recycling in accordance with the City's ordinance?		
	Recycling: Does the project allow adequate space for future collection of recyclable materials?		
	Organics Recycling: Does the project allow adequate space for future collection of food waste for large-scale processing as compost or into biofuels?		
Please explain how the proposed project incorporates the sustainable development measures consistent with the CAP and Cal Green Tier One standards as applicable.			

If the proposed project incorporates sustainable development measures beyond what is included in the CAP, please explain.

Does your design include organics and recycling bins throughout the site? Are the bins placed frequently, to prevent litter and unnecessary waste?

Step 4: Additional Questions

1. Please provide a statement indicating the manner in which the project will meet sustainability goals and polices contained in the City's General Plan and Climate Action Plan. Examples of measures that may be utilized include, renewable energy, cross ventilation, operable windows, efficient heating and cooling systems, window awnings, light roofs, electric vehicle charging infrastructure, secure bicycle parking, and other measures.
2. Urban development and increases in paved surfaces can increase the heat island effect resulting in an urban area that is significantly warmer than surrounding rural areas. Please provide a statement summarizing the measures that have been taken to reduce heat related concerns. Examples may include: covered and shaded walkways, extensive tree canopy, awnings or other shade structures, outdoor rooms or courtyards, indoor ceiling fans, and other measures.

Step 5: Certification

I hereby certify that the statements furnished herein and in the attached exhibits present the data and information required for this initial evaluation to the best of my ability and that the facts, statements and information presented are true and correct to the best of my knowledge.

Signature: _____ Date: _____

ATTACHMENT 1- ABOVE AND BEYOND: THE LIVING BUILDING CHALLENGE

The innovative nature of architecture and design requires the progression of sustainable practices, and state-of-the-art invention. The Woodland Research and Technology Park CAP Checklist is comprehensive, but there are even more ways to have a positive impact, and go beyond the base requirements.

One example of such originality is the Living Building Challenge. The International Living Future Institute developed a standard for buildings “that, like a flower, give more than they take”.

Living Buildings are:

- Regenerative buildings that connect occupants to light, air, food, nature, and community.
- Self-sufficient and remain within the resource limits of their site.
- Create a positive impact on the human and natural systems that interact with them.

Such buildings can be found as close as Sacramento, where the Arch Nexus building on R Street utilized the existing structure and reclaimed materials to fabricate a state-of-the-art architecture office that prioritizes conservation and a sustainable vision for the future. To learn more, visit the Living Building challenge website at <https://living-future.org/lbc/>.

The Sacramento Valley Station is another example of local design planning, using the Living Building Challenge as a cornerstone of the reimagining of the sixth-busiest Amtrak station in the country. The new plan utilizes the existing historic railyard building and draws inspiration from transit centers around the world, culminating in a modern, multi-use epicenter. The Master Plan is the completed concept design of varied multi-use spaces near the Downtown Sacramento Area, a future magnet for innovative residential and office spaces surrounding the latest implementation of human ingenuity. To learn more about the Station plans, visit <http://www.cityofsacramento.org/Public-Works/Sacramento-Valley-Station>.

ATTACHMENT 2- ABOVE AND BEYOND: DAYLIGHTING
WBDG.ORG/RESOURCES/DAYLIGHTING

Daylighting is the controlled allowance of natural light into a building, in an effort to curb energy usage and GHG emissions, while saving money on operating and production cost. Daylighting can be maximized by optimizing building, skylight, and window orientation. In addition to directing light admission, integrating shading technology is crucial to averting unwanted side effects of daylighting, like glare and overheating. Some examples of such techniques include:

- High performance window glazing
- Skylights
- Daylight redirection devices
- Daylight-responsive electric lighting controls
- Solar shading devices

Common uses of daylighting in museums involve the integration of light with whole building design. When directing light in an exhibit, the architect must take the comfort of the patrons, the preservation of the artwork, and the best lighting, into account. More information on the subject can be found by visiting <https://www.archdaily.com/tag/daylight>.

Get Inspired

Such challenges render stunning examples of modern architecture, and can be found in the Jumex Museum of Mexico City, and the Kult Museum in Vreden, Germany. Both buildings are examples of balancing design with the natural world, while accounting for human comfort. More information on the subject can be found by visiting <https://www.archdaily.com/960558/beyond-artificial-lighting-museums-exploring-the-benefits-of-daylight>.

**ATTACHMENT 3- ABOVE AND BEYOND: TRANSIT INNOVATION-
YOLOCOMMUTE.NET/EMPLOYER-PROGRAMS/**

The Yolo Commuter Club is a branch of the Sacramento Region 511, which is an incentive-based commute tracking system. Businesses and building owners that opt in to this public program on behalf of their members experience tax breaks for the ability to reimburse tenants and employees for using the following commute methods:

- Vanpool/Carpool
- Biking
- Walking
- Public Transit

This program may act as an incentive for building owners to offer businesses, or businesses to offer to tentative employees. The Commuter Club involves benefits of up to \$25/month for 3 consecutive months of biking, walking, and carpooling, and \$50/month for 3 consecutive months of using public transit. The member has the option to track trip miles on a smartphone app called Commute Tracker, or keeping track on their SacRegion511.org dashboard. Incentivizing a smaller Carbon footprint while attracting businesses and residents with monetary benefits is a great long-term investment option. To register or learn more, visit <https://sacregion511.org/#/>.

ATTACHMENT 4- ABOVE AND BEYOND: THE “CITY IN A GARDEN” POLICY

As land availability decreases with agriculture and climate change, the need for carbon sequestration and greenery grows. The benefits of green buildings are largely justified by lower temperature control costs, healthier populations, and a higher return on building value. Green buildings are an excellent option for those working with limited land space, and a need for carbon sequestration. In addition to ornamental foliage, green spaces can be used to cultivate produce in learning gardens, which feed the residential population.

Read On:

In 1967, the Prime Minister of Singapore introduced the Garden City policy in an effort to make the city more pleasant to live in, and revive the greenery of the island, previously stripped by British colonists. The policy foundation highlighted tree planting as the first step in beautifying the urban streetscapes, focusing on over-built and skyscraper-heavy areas. Over 55,000 trees were planted by the end of 1970, and grew to 1.4 million by 2014, achieving 56% vegetation cover by 2010. In an effort to maximize their new vision, the Singapore government moved from “Garden City”, to “City in a Garden”, with the idea that the city should be within the environment, and nature should be enjoyed by all. State of the art gardens and nature parks were installed, with immediate benefits, such as less reliance on fuel-based temperature control, and an average outside temperature of three degrees lower. Urban areas were then optimized to support greenery and recreation, with government incentives for building owners and developers to install rooftop and vertical greenery. Skyrise greenery is a versatile idea that inspires myriad possibilities, for example:

- Growing Food on Rooftops
- Do-it-Yourself Green Wall
- Creating Educational Gardens
- Cultivating Native Plants
- Aesthetics of Skyrise Greenery

All of the above projects are in new development stages in Singapore, and can be tested in small batch methods. Singapore currently boasts 330 acres of skyrise greenery cover, and aims to increase to almost 500 acres by the year 2030. The implementation of these policies led to Singapore’s rank as one of the most eco-friendly countries in the world, and renown for urban planning restoration and innovation. For more information on urban forestry and greenery cover, visit nparks.gov.sg/skyrisegreenery.

ATTACHMENT 5- ABOVE AND BEYOND: PRODUCTION WASTE

Reusing waste in the building and design of new construction is a great way to combat landfill emissions, and push creative design boundaries. One such idea is utilizing existing plastic to manufacture building materials. Some examples of this include recycled plastic and asphalt roads, and recycled plastic bricks for building homes. Because of the durability and resilience of plastic, construction companies are finding new ways to reuse old materials.

Get Inspired:

One such company is Technisoil- a Redding, CA based pavement company that specializes in the latest asphalt technology. Technisoil studies observed that, by combining the original asphalt in an old road, with recycled plastic, the resulting material renders a road that lasts two to three times longer than asphalt, with five times the strength. The process of producing such roads actually saves money, by only using non-virgin materials that taxpayers have already paid for.

Another example of plastic innovation is its use in construction materials. Manufacturing companies like Gjenge Makers are discovering the benefits of creating plastic based building materials. Gjenge Makers serves the Nairobi, Kenya area, and uses the plastic in local communities to generate mixed plastic pieces, which are mixed with sand at high heat, and then pressed into blocks. The blocks are lighter, cheaper, and more durable than concrete bricks. The lighter bricks make transportation and building faster and more efficient than using concrete, and help clean up plastic pollutants.

By contracting a company that uses non-virgin materials, you can support an environmental economy, save money, and reduce waste. For more information on project examples, visit technisoilnd.com, or gjenge.co.ke.

RESOURCES

Listed below are resources and incentives for participating in innovative sustainability practices:

- **The Energy Partnership Program**
The California Energy Commission's Energy Partnership Program offers services to help identify cost-saving opportunities for buildings and new construction. This program can be used to audit energy costs for existing buildings and review proposals and designs. Applications are accepted on a first-come-first-served basis, with no final filling date. More information can be found at <https://www.energy.ca.gov/programs-and-topics/programs/energy-partnership-program>.
- **U.S. Department of Energy Office of Energy Efficiency and Renewable Energy**
The U.S. Department of Energy offers a solar investment tax credit (ITC) that can be claimed on federal income taxes for up to 30% of the cost of a solar photovoltaic system that is placed in service during the tax year. To check eligibility and learn more, visit energy.gov/eere/solar.
- **CA Strategic Growth Council- Affordable Housing and Sustainable Communities**
AHSC provides funding for affordable housing development and transportation infrastructure. Its goal is to create sustainable communities by building affordable housing near transportation, thus reducing individual car use. One example of a funded project includes West Gateway Place, an affordable housing community built next to a major transportation improvement. To learn more about the grant project and eligibility, visit <https://sgc.ca.gov/programs/ahsc/resources/>.
- **CalRecycle Reuse Grant Program From California Climate Investments**
CalRecycle offers grants to reduce greenhouse gas emissions through technology and innovation. Such projects include affordable housing, renewable energy, public transportation, zero-emission vehicles, environmental restoration, more sustainable agriculture, recycling and much more. At least 35 percent of these investments are made in disadvantaged communities and low-income communities and households. For more information, visit <https://www.caclimateinvestments.ca.gov/>.

Summary of Amendments to the W RTP Specific Plan since Public Review Draft Release

Since the City released the Public Review Draft Specific Plan, and as a result of public input and meetings, the City made various changes to the plan. The City made numerous non-substantive text changes to the to clarify terms, correct grammatical errors, correct figures, and place headers and other identifying information in the correct places. These changes did not substantively change the text of the W RTP Specific Plan. Rather, the changes corrected errors and provided additional clarity. A summary of Specific Plan changes is provided below, however, this is not a precise or exhaustive list. Please also visit <https://www.cityofwoodland.org/585/Documents> for redlined edits of the Public Review Draft Specific Plan Chapters. In some cases, updated exhibits must be compared with the original Public Review Draft Chapters, also available online at <https://www.cityofwoodland.org/585/Documents>.

Chapter 1, “Introduction and Vision”

- Update to Exhibit 1-1, Vision Concept Diagram to correct and remove “open space” area shown at the southeast corner of the plan area.

Chapter 2, “Land Use Framework”

- Within Exhibit 2-1, Land Use Plan, and Table 2.1, Land Use Summary, the proposed detention pond in the southeast corner of the W RTP Specific Plan Area was differentiated from the other open space land uses of the W RTP Specific Plan. Similarly, the general area available to serve a potential school was identified in Exhibit 2-1, Land Use Plan.

Chapter 3, “Land Use Regulations, Development Standards & Guidelines”

- Section 3.3.2 Performance Standards – A new Section, *E. Truck Trips*, has been added under Section 3.3.2, Performance Standards, to specifically clarify that large-scale logistics/distribution uses are not permitted in the Specific Plan Area including uses with substantial diesel-powered truck trips. While light manufacturing uses are permitted and some distribution of finished product is anticipated, no individual use shall exceed 50 truck trips per day. Where ancillary to permitted uses, storage areas shall be limited to not more than fifty percent (50%) of gross building square footage and not more than 89,000 square feet, whichever is less. Warehouse, Storage and Distribution/Logistics uses were removed from the Permitted Use Table 3.1 entirely.
- The definitions of Open Space/Park Zones in Section 3.2.4, Description of Zoning Categories, was refined for clarity.
- Table 3.1 Permitted Uses – Permitted use “K-12 Public/Private School” was amended to “TK-12 Public/Private School,” to clarify that Transitional Kindergarten is also an anticipated grade level in the Plan Area. Further, clarification was provided that greenhouses and agricultural test plots are permitted as accessory uses in the RTP and RTP/RFO zones when associated with Research and Development.
- Table 3.3, Site Development Standards for Residential Zones updated to require 1 bike parking space minimum per Medium Density Residential unit, and a requirement that within VCMDR and MDR zones, units fronting Marston or the liner park, The Yard, shall be developed at or above 15du/ac, consistent with a townhome or row house product type (to maintain a more urban feel in this area).

- Table 3.3, Site Development Standards for Residential Zones updated to provide an exception to ground floor commercial development along Road B in the HDR/CCO zone, if restricted affordable housing development is proposed.
- Section 3.5.3 General DS/DG for all Zones within the Research and Technology Park District, and Section 3.5.12 General DS/DG for all Residential District Zones –Additional guidelines have been included in Sections B and D, *Sustainable Design*, respectively, to further implement the sustainable design goals and vision for the Plan Area including guidance on the use of sustainable materials and construction practices.
- Electric Vehicle Charging pursuant to California Green Building Standards Code, Tier I requirements have been added to all Zones/Planning Districts.
- Section 3.5.3 General DS/DG for all Zones within the Research and Technology Park District – Guidelines pertaining to “Parking Lot Landscaping and Shading” were inadvertently left out of Section 3.5.3.G, Vehicle and Bicycle Parking, and have now been added.
- Modifications to residential development guidelines throughout chapter to better align guidance with State required objective criteria for residential development.

Chapter 4, “Circulation and Mobility”

- Additional detail regarding design features such as bicycle facilities, landscaping, walkways, car-share/vanpool spaces and EV charging in the parking areas of the shared mobility hub, *The Union*, were added to Section 4.2.2, including Exhibit 4-1, Concept Site Plan of the Mobility Hub, The Union.
- Street classifications in Exhibit 4.3, Road Circulation Diagram, were refined and clarified to be consistent with the City’s General Plan, and detailed descriptions were refined throughout Section 4.5 for clarity.
- Clarifying and correctional updates to all trail, path and street section graphics.

Chapter 5, “Public Utilities and Services”

- Edits were made throughout Chapter 5, Public Utilities and Services, to reflect more current conditions and plans, such as reference to the more recently adopted 2020 Urban Water Management Plan, notation to the planned expansion of the recycled water utility into the Spring Lake and W RTP areas in 2024, and clarifications regarding proposed stormwater management systems. Additionally, changes to the green belt cross sections were made to accommodate the future recycled water line and provide at least 22 feet of clear distance between the underground utility and the western green belt property line in order to allow for a significant amount of tree coverage in the green belt.
- Removal of 4.2 acre detention basin from park and open space acreage, Table 5.6.
- Updates to Section 5.12, Schools, to show up to a 12-acre (rather than 10 acre) portion of the MDR parcel located at the northeast corner of Road B and E will be reserved for a potential school site in accordance with the terms of the development agreement.

Chapter 6, “Implementation”

- Additional language has been added to Section 6.2.3 Subsequent Implementation Documents/Analysis pertaining to future concept plans, implementation of and/or construction

of The Yard (11-acre linear park), the Mobility Hub, a comprehensive plant and street tree palette, and the Transportation Demand Management plan to clarify expectations and provide additional guidance for the future development and planning of these amenities and/or implementation documents.

- A new Section, *6.5 Density Transfer*, has been added to ensure diversity of housing types and densities while ensuring residential development consistency with Specific Plan environmental analysis and development assumptions including the anticipated development of 1,600 residential units and a minimum average residential density of eight dwelling units per acre (8 du/ac).

Chapter 7, “Administration”

- Section 7.4.1.2 Minor Administrative Modifications – Additional provisions have been added to allow some flexibility around final and precise zoning district boundaries to ensure optimal and efficient land use for residential development, so long as zone boundaries remain compatible with and not detrimental to adjacent properties or uses; residential densities proposed along the Harry Lorenzo/linear greenbelt do not change; overall development densities remain consistent with development concepts set forth in the Specific Plan.

Summary of Community and Stakeholder Outreach

Since the release of the Public Review Draft Woodland Research and Technology Park Specific Plan in November 2020, and the release of the Draft EIR in May 2021, staff and representatives of the applicant team have held or participated in several community and stakeholder outreach meetings to share information about the project, obtain feedback and respond to questions about the proposed plan. Stakeholder organizations include:

- the Woodland Chamber of Commerce Public Policy Committee;
- the Woodland Technology Alliance;
- Yolo County Association of Realtors;
- Woodland and Davis Rotary and Woodland Kiwanis clubs; and
- the Greater Sacramento Economic Council's Food and Ag Innovation Council.

Two virtual community meetings facilitated by city staff were held in February 2021 with approximately 100 attendees present at each meeting. Additionally, the Specific Plan was shared at public meetings of the Woodland Planning Commission, Parks and Recreation Commission, and the Sustainability Advisory Committee. Staff and the applicant team have responded to several phone calls and emails from the public regarding the plan and have met with a neighborhood working group, predominately comprised of Spring Lake residents, over the course of plan review. A summary of comments received is provided below.

Stakeholder Organizations: As listed above, staff and representatives of the applicant team have met with several local and regional professional organizations representing a variety of industry sectors to share information about the proposed plan and, more importantly, to obtain feedback and guidance on the viability of the proposal. Across the board, feedback received from these organizations was positive and enthusiastic. Specifically, comments focused on the positive economic benefits the Research and Technology Park would have on the community and the opportunity for local professional and career development. Partners in the ag, food and health sectors highlighted the need for this type of development project in the region and the ideal location of this facility in Woodland, recognizing proximity to world leading research at UC Davis and the existing strengths of the local ag and food economy. While some individuals questioned the need for new office space citing COVID19 related changes in the workplace, a majority of the feedback supported and encouraged the Research and Technology campus where innovations require in person and technical facilities and where there is a recognized deficit of similar facilities in the region.

Community Informational Meetings (Virtual): On February 9 and 11, 2021, City staff hosted two virtual webinar style community meetings to provide a detailed overview of the proposed Specific Plan (recording of the meetings available here: (<https://www.cityofwoodland.org/ResearchParkOutreach>)). To get the word out about the meetings, over 3,000 postcards were mailed to Spring Lake property owners and residents, notification was provided in the Daily Democrat and on various city and neighborhood social media channels, and newsletters were emailed to approximately 300 community residents on the project's email listserv. Approximately 100 attendees were present at each meeting and in total, approximately 140 questions were submitted via the webinar "chat" function or orally during the

question and answer period. Staff and the applicant addressed most questions during the live webinars and followed up with a Frequently Asked Questions (FAQ) page on the project website, synthesizing all questions received into 30 categories and responding to each (<https://www.cityofwoodland.org/ResearchParkFAQ>) (see also FAQ section below). To date, the FAQ page has received over 890 unique page views and over 1,000 page views in total. FAQs were most recently updated in July and August 2023.

While many questions were received during the webinars, a majority of questions focused on the following six categories:

- Affordability and diversity of housing, primarily the desire for more affordable housing and variety of housing types in Woodland. Conversely, concerns were also expressed about too much high density housing in the plan area;
- Provision and desire for an elementary school in the plan area;
- Sustainability aspects of the plan, including the desire for solar and electric vehicle chargers as well as other more progressive sustainability measures;
- Circulation and infrastructure improvements, primarily pertaining to the Spring Lake area, CR25A, CR102 and Hwy 113/CR25A interchange improvements;
- Public services, primarily police and fire; and
- Project phasing, timing of amenities and financing plan.

A majority of the questions received have been addressed in the Specific Plan, EIR, Development Agreement or have been more appropriately addressed separately from the plan, including questions specific to Spring Lake or other areas of the city.

As noted above, a group of community residents requested meetings with staff and the applicant team over the course of developing the Public Review Draft Specific Plan to better understand the project and make recommendations. This group of residents as well as individual community members apart from the group have provided helpful feedback with regard to specific elements of the plan including circulation, schools, infrastructure and sustainability. Additionally, the group provided recommendations on community outreach strategy, future entitlement review, and potential concerns of adjacent Spring Lake residents.

City Commissions/Committees: In March, April and June 2021 respectively, staff presented the Draft Specific Plan to the City of Woodland's Parks and Recreation Commission, Sustainability Advisory Committee and Planning Commission. Feedback from the Parks and Recreation Commission and from the Sustainability Advisory Committee was positive and supportive of the plan as presented.

Comments from the Parks and Recreation Commission centered around the provision of solar panels and facilities, consistency with the city's Climate Action Plan, native landscaping, and support and excitement around the greenbelt and trail circulation network and the 11-acre linear park as a non-traditional park intended for gathering purposes.

Comments from the Sustainability Advisory Committee focused on specific recommendations around sustainable design measures individual development projects may consider in addition to those already outlined in the plan. The committee expressed appreciation for the plan's consistency with the City's Climate Action Plan and greenhouse gas reduction strategies.

Members from both the Sustainability Advisory Committee and the Planning Commission expressed strong support to see a correlation and balance of nonresidential "jobs" buildout in relation to residential buildout to ensure the plan delivers the needed economic benefits to the community and does not become a "bedroom community." The Planning Commission also expressed support for the development of the Specific Plan to date, offering comments around specific design elements including gateway elements and enhanced corridor features and recommendations around specific uses. The Planning Commission acknowledged public concerns around the provision of an elementary school in the plan area. The Planning Commission will be asked to take formal action (a recommendation to City Council) on the project prior to City Council's final action on the adoption of the Specific Plan and the certification of the EIR.

FAQs

Also available on the project webpage <https://www.cityofwoodland.org/1282/Frequently-Asked-Questions>

1. What are the required project approvals/entitlements, timeline, and process going forward? When can I provide comments?

Prior to implementation of the Woodland Research and Technology Park Specific Plan, and prior to future development within the plan area, various entitlements are required and entail approval action by the Woodland City Council as the lead agency and/or other responsible agencies such as the Yolo Local Agency Formation Commission (LAFCo). The following entitlements (typical of specific plans generally) will apply to the proposed Woodland Research and Technology Park project:

1. Certification of the project Environmental Impact Report (EIR) and Mitigation Monitoring Plan - City Council will take action to approve and certify the project EIR and Mitigation Monitoring Program for the Specific Plan.
2. Specific Plan Approval/Adoption and General Plan Amendment - City Council will take action to approve and adopt the Specific Plan and amend the General Plan to create a new City of Woodland land use designation of Woodland Research and Technology Park Specific Plan and amend the Woodland City Limits boundary. This action will also include approval of the LAND PLAN, project design guidelines and performance standards, affordable housing plan and climate action/greenhouse gas reduction strategies for the research/technology park and residential neighborhoods.
3. Prezoning - City Council will take action to approve the "pre-zoning" of the land within the specific plan area boundary based on the approved land plan in preparation of subsequent annexation of the project site into the Woodland City Limit.

4. Development Agreement - City Council will approve a Development Agreement for the W RTP to provide certainty and mutual assurances to the City and the project applicant regarding plan build out.
5. Annexation - City Council will authorize and direct staff to pursue annexation of the project area into the city limits through LAFCo.

Prior to City Council action on the above listed entitlements, a fiscal impact report and establishment of project financing mechanisms ("Project Financing Plan") will be provided to council for its consideration.

The Draft W RTP Specific Plan was made available for public review in November 2020. Community and stakeholder meetings and presentations began in January 2021 and will continue through the Spring to provide information about the project and allow attendees to ask questions and provide comments on the proposed Specific Plan. **Comments and questions are encouraged now and throughout the process and can be provided via email to: ResearchPark@cityofwoodland.org, or during any future public hearing at the Planning Commission or City Council.**

A detailed project schedule and information regarding opportunities for public comment can be found online at <https://www.cityofwoodland.org/584/Community-Outreach-Public-Hearing-Inform>, or by clicking [HERE](#). Please note, the schedule is subject to change and will be updated online accordingly.

To keep apprised of future meeting and/or public hearing dates, and the availability of documents, please email ResearchPark@cityofwoodland.org and request to be added to the project's email listserv.

2. When will the Draft Environmental Impact Report and technical studies be released? When can I comment on this document?

The Draft Environmental Impact Report (DEIR) and associated technical studies were released for public review and comment in May 2021. The DEIR and associated technical studies are available online [HERE](#). Hard copies of the document can be viewed at City Hall, 300 First Street, Community Development Department.

Upon release of the DEIR, a 45-day public review and comment period was held, during which time the report was presented to the Woodland Planning Commission at a noticed public hearing. The formal comment period closed on July 2, 2021. Since this date, the city staff have worked with its environmental consultant and the project applicant team to incorporate recommendations received, where feasible, and/or respond to comments provided.

Prior to City Council approval and adoption of the W RTP Specific Plan, the Woodland Planning Commission and City Council will receive and be asked to certify the Final Environmental Impact Report (FEIR), which will include a "response to comments" received during the 45-day public comment period and any final edits/updates to the EIR and Mitigation Monitoring and Reporting Plan. The Final EIR and related documents will be made available to the public prior to the Planning Commission and City Council hearings. It is anticipated that the City Council will take action on the FEIR during a public hearing in late Summer 2023.

[Updated July 2023]

3. When will the Technology Park start construction? What is the anticipated timeline for plan area build out?

It is anticipated that phase one of project development could begin as early as 2024, upon adoption of the Specific Plan by the Woodland City Council. The 350-acre plan area will likely build out over 15 to 20 years and dependent on market demand.

[Updated July 2023]

4. What are the prospective anchor tenants in the Technology Park? Is there still a need for this type of facility given the “new normal” of working remotely?

The Specific Plan is not prescriptive with regard to businesses that locate in the plan area provided they are consistent with the plan area zoning requirements. However, it is expected users will include companies involved in ag technology, seed technology, life sciences, environmental science, food science, advanced manufacturing, professional office and numerous related fields. The market will determine the business absorption rate, but it is expected there will continue to be demand for these uses and at this location.

Companies focused on research and development, laboratory science, and advanced manufacturing will continue to need a physical location to do business and development new and cutting edge technologies. Regionally and throughout the Bay Area, demand for lab space is growing and vacancy rates are extremely low. In Woodland, Light Industrial and Flex space that would accommodate growing and new companies is at less than 1% vacancy, an all-time low. Woodland is the center of agriculture in Northern California and located strategically near UC Davis. Companies locating or expanding in the Technology Park will look to take advantage of Woodland's long history and industry strengths in the food and agricultural sector, the project's proximity to UC Davis, a leading research university in crop science, and to adjacent agricultural land and open space for field trials.

5. Will local independent businesses be given priority in locating in the Technology Park? Will the city allocate funds for startup businesses in the plan area?

While priority will not be expressly granted to any businesses allowed under the zoning, the City of Woodland Economic Development Division actively works with local businesses to assist in their expansion or relocation needs. Given these existing relationships, the city has already begun to develop a list of local businesses that have expressed interest in (re)locating in the project and will work to facilitate placement of local businesses in the Technology Park. Additionally, incubating new companies is a core objective of the project. To that end the City will be partnering with the developer and other organizations such as Woodland-based AgStart to invest in facilities and programs to support start up companies.

6. Is the City working with Woodland Community College to focus on long-term workforce development initiatives that will support efforts to train Woodland residents to be competitive for jobs that will

A key guiding principle of the project is talent retention and the creation of career opportunities and upward mobility for Woodland residents. The City and applicant team have met with representatives of Woodland Community College and the Woodland Joint Unified School District on long-term workforce development initiatives to prepare Woodland residents for the careers the plan area will provide. Already underway, and continuing as the Research and Technology Park builds out, the city and applicant team will engage with representatives from industry and academia to identify skillset needs of existing and prospective technology-based companies. New career training pathways as well as mentorship and internship programs will be formally developed for Woodland residents seeking local career opportunities with higher earning potential.

7. Will UC Davis be a development partner, like with Aggie Square in Sacramento?

UC Davis does not have a formal development partnership in the project and unlike Aggie Square, they do not own the land. However, the project will provide opportunities for UC Davis to develop facilities and/or programs aligned with the project plan should they desire to do so. The City and development team have had preliminary discussion with University representatives and once a project is entitled will re-engage to explore potential opportunities to partner.

8. How will the Village Center be developed?

The 44-acre Village Center is specifically planned as the core center of the entire development. The size and the location is planned based on successful mixed use developments in a similar context. The Village Center's 3.5 acre mixed use zone will allow for a mix of smaller format commercial spaces and mixed-use buildings that will accommodate uses such as retail/food venues and co-working spaces on the ground floor, with residential and office uses permitted on second and third floors. The retail uses are anticipated to serve both the surrounding office/Technology Park and residential neighborhoods.

"The Yard," an 11-acre linear park, located immediately north of the mixed-use retail zone, is the physical center and social heart of the Village Center and the broader plan area. Envisioned as a largely passive green space, The Yard will serve as a shared "front porch" for the broader Tech Park community.

A mix of low density (VCLDR) and medium density (VCMDR) residential units are located on the eastern portion of the Village Center District. Contemporary row house, townhouse, small lot and detached units will provide a variety of housing opportunities for those that desire a more centrally located and lively residential experience. Residential units within the Village Center will help foster an active mixed-use District well past traditional office hours, bolstering the viability of retail and commercial uses.

It is anticipated that the Village Center mixed use zone will build out as commercial/office uses in the Technology Park and the residential area also build out creating demand for retail/restaurant amenities. See [Chapter 2](#), Section 2.4.2 of the Specific Plan for a more detailed description of the Village Center planning district.

9. What businesses and uses are permitted in the Specific Plan area? Will there be a market or medical clinics, such as an urgent care clinic?

Uses allowed in the Specific Plan Area are outlined in the “Permitted Use Table” found in Chapter 3 of the Specific Plan or [HERE](#). Whether a listed use is allowed in a particular zone (i.e. a business or commercial zone versus a residential zone) is determined by the corresponding letter found in the table and further defined in the table’s legend. Generally, a use is “permitted” and allowed by right, allowed through issuance of a zoning administrator permit, a conditional use permit, is an ancillary use or is not permitted. When a use is not specifically listed in the table, the use may be permitted if the City determines that the use is similar to other uses listed.

As identified in the Permitted Use Table, a grocery store and a medical or dental office are permitted uses in the project area, in the Research Technology Park, Village Center and High Density Residential/Community Commercial Overlay Zones. These uses are not required or mandated by the plan, but are welcomed and encouraged as neighborhood and community serving amenities.

10. When will design of the 11-acre linear park take place? Will there be an opportunity for community input?

Following the adoption of the Specific Plan and prior to first phase development, the project applicant in partnership with the City will prepare a conceptual plan for the park to guide phased park improvements, design and amenities and ensure pedestrian and bike paths internal to the park connect to the external network trail and greenbelt system. Prior to construction of the park, the community will have an opportunity to review and provide feedback on the proposed park design plan. To keep apprised of the park planning schedule and updates, please email ResearchPark@cityofwoodland.org and request to be added to the project’s email listserv.

11. How wide will the greenbelt be?

As described in [Chapters 4 and 5](#) of the Specific Plan, the project’s interconnected system of sidewalks, bike lanes and multi-use trails/paths are intentionally designed to link seamlessly throughout the Plan Area and to the shared mobility hub promoting more active and healthier transportation choices as well as recreational opportunities. The Plan Area’s greenbelt and linear greenway network consists of 3.1 miles of class 1 Multi-Use Trails. These facilities are more informal in nature with a 10-foot wide shared use path that gently meanders through landscaped open spaces. The overall width of the greenbelts and greenways will vary to reinforce the more informal nature of these spaces. The larger greenbelts are at least 50-feet in width and will be no less than 24-feet at neighborhood connectors or where located along the street right-of-way. The Multi-Use trails include a 2-foot gravel shoulder or low landscape edge with bi-level motion sensing LED path lighting. Trails will be well shaded with trees and have amenities such as exercise stations, benches, drinking fountains and occasional open turf areas to encourage passive and active recreational use.

A greenway along the eastern edge of the Plan Area will serve as a central spine, connecting the Plan Area to the existing Spring Lake development to the east. Located along the western edge of Harry Lorenzo Avenue, the greenway will extend the entire length of the Plan Area between CR 25A and Farmers Central Road. South of Marston Drive, the existing pavement in Harry

Lorenzo Ave will be removed and the existing right-of-way will be utilized for the greenway. This facility will be more informal in nature with a 10-foot wide shared use path that gently meanders through landscaped open spaces. Multiple trail connections to Plan Area subdivisions will be provided to connect pedestrian and bicycle traffic to the linear greenway and to/from the adjacent Spring Lake community. Intersections with Marston, Parkland, and Road F will be designed with a distinctive treatment to clearly delineate each crossing.

The Plan Area's greenbelt and linear greenway network transitions to a more formal path facility within the more active urban areas of the plan. The 1.8 miles of Multi-Use Paths are a linear 10-foot wide shared use path that anticipates a higher utilization by all modes including bikes, scooters, pedestrians, and other forms of active transportation. Lighting will be integrated with the street lighting system and supplemented with pathway or bollard lighting where needed. Bike parking, scooter docks, and transit shelters will be strategically located along the Paths to support utilization of alternative transportation modes.

12. On the circulation map (Chapter 4, Exhibit 4-2), there is an arrow indicating a future Woodland-Davis bikeway. What is that and when is it planned?

In 2001, the Davis-Woodland Bikeway Feasibility Study was completed through a partnership between Yolo County, the cities of Davis and Woodland, and the Yolo-Solano Air Quality Management District. A total of six routes were studied that could serve commute and recreational purposes. The desired alternative, taking into account commuter, recreational and aesthetic objectives, runs primarily along the east side of CR 101B, south of CR25A. The bikeway project is not currently funded, however remains a project of mutual interest of the cities and county. The project plan has been designed to provide a primary point of connection to this future project.

13. How is it ensured that the Tech Park builds out the way it is envisioned today?

Development within the Technology Park Specific Plan area will be subject to the approved land use plan, zoning and development requirements outlined in the document. The project development team in partnership with the City carefully considered the appropriate mix of land use types, development requirements and residential densities based on anticipated market demands and in consultation with regional developers familiar with similar projects. The Specific Plan incorporates flexibility to allow for changing market conditions while still retaining the core vision for the plan area. As such, it is not anticipated that substantial modifications to the Specific Plan will be required. However, if plan modifications are requested by future property owners or as a result of new technologies, those changes would require approval by the Planning Commission and/or City Council at a public hearing, and may require additional environmental review, also subject to a noticed, public hearing and governing board approval.

14. How much will it cost to build out the project? How is it being funded?

The W RTP Public Facilities Financing Plan ("Financing Plan") completed in July 2023, outlines a strategy to fund public facilities and project infrastructure through Plan Area buildout. The Financing Plan identifies an estimated \$255.5 million in public improvements needed to implement the Specific Plan and describes the proposed funding mechanisms to complete required improvements.

A WRTP Capital Improvement Program (“CIP”) prepared for the project, identifies approximately \$156.9 million in backbone infrastructure cost obligation for parks, streets, storm drainage, water and sewer improvements. Completion of backbone infrastructure and other public facilities will be phased to serve logical increments of development, based on the demand for such facilities as the WRTP builds out. The timing and amount of development in each increment will depend on many factors, such as market demand.

Additionally, the WRTP will have an obligation to contribute to the construction of other infrastructure and public facilities not included in the CIP. For these public improvements, the developers will pay applicable City, County and WJUSD development impact fees. The cost obligation for these facilities is estimated at approximately \$98.6 million for parks and open space, schools, libraries, fire, police, general government, public transit, affordable housing, habitat and agricultural mitigation and County facilities.

The developers of the WRTP will be responsible for advance funding and constructing all of the backbone infrastructure and public facilities needed to serve the WRTP, unless the City and WRTP proponents agree otherwise to City construction of specific improvements. The project includes the adoption of a new Plan Area development impact fee program, the Woodland Research and Technology Park Infrastructure Fee Program (“RTIF Program”) to fund backbone infrastructure and public facilities as described above to accommodate new residents and employees of the project area that are not funded by existing fee programs or other funding sources. Facilities included in the RTIF Program include those facilities with plan-wide benefits (i.e., serve multiple individual subdivisions), the costs of which should be distributed among RTIF land uses and ownership interests. Additionally, the financing strategy includes formation of one or more land secured bond financing districts (e.g., Mello-Roos CFD or Assessment District), which may be used to fund a portion of the total backbone infrastructure and public facilities needed at the outset of development.

[Updated July 2023]

15. Will the housing component have Mello-Roos?

It is anticipated that residential development will have a Mello Roos (or special tax assessment district) to help pay for project infrastructure and services.

16. How will the Technology Park project impact property taxes in Spring Lake? Will residents in the Technology Park plan area pay the same special tax to the City of Woodland as that paid by residents

Spring Lake related property taxes (Community Facilities Districts and the Landscaping and Lighting District) have their own formation agreements which would not change with WRTP Specific Plan approval. City policy requires new development to “pay its own way” with regard to maintenance of infrastructure and amenities serving the plan area. The Technology Park will have its own financing district and will likely pay similar taxes to Spring Lake.

17. Has there been any analysis on the potential effect on home/property values in Spring Lake?

Not at this time, however it is anticipated that with the build out of a successful Research and Technology Park, the 11-acre linear park and other plan area amenities, impacts to Spring Lake property values will be positive. Strong design guidelines will ensure that the project will be an asset to the City and to the adjacent Spring Lake residential community.

18. Will Spring Lake parks be completed before the Technology Park begins construction?

Remaining improvements at Jack Slaven, Rick Gonzales Sr., and Spring Lake Parks are all under construction with estimated completion timelines in late Summer and Fall 2023. The timing of completion of the 4-acre Spring Lake Central Park will coincide with the development of the adjacent high-density housing and commercial center.

The earliest construction of any housing is projected to begin in the Technology Park is late 2024 with occupancy of the first housing units not anticipated until well into 2025/26. The first phase of development will include portions of the greenbelt and park amenities that will be funded by development of the Technology Park.

[Updated August 2023]

19. Will commercial development in the Technology Park keep pace with residential development? How will this be guaranteed?

Yes, the project Development Agreement, a 20-year agreement entered into by the project applicant and City concurrent with Specific Plan adoption, will outline specific ties between residential unit development and commercial/office development within the Technology Park. Specific details of how this will occur will be outlined in the Development Agreement incorporated as part of the final entitlement documents that will require City Council review and approval prior to project approval.

20. Will the Specific Plan accommodate a new public elementary school? Where would a school be located and how would it be paid for? How will infrastructure be provided?

Based on the Woodland Joint Unified School District's 2020 School Fee Justification Study it is projected that the Woodland Research and Technology Park would generate at build out an additional (376) K-6, (104) Middle School, and (222) High School Students. The actual student generation rates would likely be less than these estimates given the current capture rates. To account for the facility needs for these additional students, all residential and commercial construction within the project area will be subject to the District's adopted School Impact fees.

The District's Facility Master Plan anticipates capacity to be available at the current middle school and high school sites to accommodate the students at these grade levels. At the primary grades, it is projected that the District will need to construct an additional K-6 school in the southeast area of the city. To accommodate this projected need, the Woodland Research and Technology Park Specific Plan identifies the location of a future 12 acre school site just north of The Yard, at the southeast corner of the Parkland Avenue extension and Road B in the Medium Density Residential Zone. The City will require the Developer to commit to set aside the land for

the school site for sufficient time for the District to determine if and when it will proceed with construction of the elementary school. The specific terms of this commitment are being discussed between the City and the District and will be incorporated into the Development Agreement between the City and Developer as part of the final project entitlements. Should the District elect not to proceed with construction of the elementary school, the identified site would develop consistent with the underlying residential zoning.

[Updated July 2023]

21. How does the Specific Plan address greenhouse gas (GHG) emissions and sustainability? Specifically what features will the plan area incorporate to meet the City's Climate Action Plan goals and GHG

As outlined in [Chapter 3](#), Section 3.3.1 and 3.3.3 of the Specific Plan, all residential and commercial development projects in the plan area are subject to the city's [Climate Action Plan \(2017\)](#). Development within the plan area will strive to achieve zero net energy consumption at the building and neighborhood level. All projects will be subject to Cal Green Tier 1 building standards which are 15% higher energy efficiency standards than current State of California Title 24 (Building Standards). Building construction will require the use of solar on single-family and multi-family residential products. It is anticipated that solar technology will be utilized on all commercial development in order for projects to comply with Cal Green Tier 1 standards. The plan will focus on the use of green building products, consumption of less energy, water and other resources as well as reduction of storm water runoff and the use of trees for cooling, energy conservation and improving air quality. The plan will utilize City recycled water for public landscaping. Pollinator friendly planting and maintenance practices will be integrated into each site's landscaping in addition to native and drought tolerant plant species.

This development will provide electric vehicle (EV) charging capable facilities in all residential garages and commercial parking lots. It is anticipated that all residential products (single-family homes and apartments) will be 100% electric. GHG reduction strategies and sustainability measures will be considered in future expansion projects and in the ongoing operations and use of all commercial and residential projects within the Plan Area including, but not limited to Energy Conservation, Water Conservation/Quality and Low Water Landscape measures as outlined in Sustainability Guidelines Sections 3.5.3.B for commercial uses and Section 3.5.12.B for residential.

22. How will the existing agricultural uses be impacted by the project and what is the required mitigation to offset those impacts?

The W RTP Specific Plan is located in an area within the city that is currently farmed, consisting primarily of row crops, and a small almond orchard in the southeastern corner. Areas south, southeast, and west of the Specific Plan area consist largely of agricultural production, including commercial almond orchards and open field crops. Current farming activities within the plan area are permitted to continue until such time the land is developed consistent with the city's Right to Farm ordinance. The Specific Plan area is subject to the city's [Agricultural Mitigation ordinance](#) which requires that for every acre of agricultural land converted to urban development, a minimum of one acre of mitigation shall be required (1:1 ratio) through

conservation easements or through an in-lieu fee payment that shall be used for agricultural mitigation purposes including purchase of conservations easements.

23. Is the processing of marijuana allowed in the Specific Plan area? Are their requirements for odor control?

Commercial cannabis lab testing, manufacturing and distribution are permitted in the Research and Technology Park (RTP) and Research Flex Overlay (RTP/RFO) Zones (see Zoning map [HERE](#)). Retail sales are not permitted in the plan area. Cannabis testing and manufacturing/distribution are subject to the city's Commercial Cannabis Business Ordinance and permitting process which requires odor control, including a detailed ventilation plan describing the air treatment system, or other methods that will be implemented to prevent offensive odors generated from the manufacturing, testing and/or storage of cannabis from being detected outside the buildings on the site. Further, no cannabis business may be located within a 600-foot radius of a school providing K-12 instruction, a day care center or a youth center in existence at the time the license is issued. Additionally, no cannabis business may be located within a 600-foot radius of a public park.

24. Is the applicant team working with the Woodland Tree Foundation for plan area tree planting and placement?

The project applicant team is in communication with the Woodland Tree Foundation regarding future plans for tree planting and in particular how the plan area can support the repopulation of Native Valley Oak trees in strategic and appropriate locations within the 11-acre linear park, greenbelt trail system and as site plan "focal features" in the Tech Park campus itself. Consistent with the Urban Forestry Master Plan, Climate Action Plan and Municipal Code standards, a substantial number of new trees will be planted throughout the Plan Area concurrent with plan area development and right of way improvements. The planting and tree palette will take into account "right tree in the right place" considerations, including evaluation of hardscape and utilities, soil and water conditions, planter size and intended use and mature canopy spread. Woodland Municipal Code Section 17.112, *Landscaping*, outlines the technical requirements of public and private landscaping within the Plan area, including spacing of street trees (e.g. every 35-feet along a public right of way) and coverage (e.g. 75 percent vegetative matter coverage in all landscaped areas). Additional plan area specific guidelines are provided in Chapter 3, including priority for native plant species, inclusion of Native Valley Oak trees where appropriate, and 50 percent shade/coverage requirement for all parking lots within 15 years of tree planting.

25. Are apartments or "high density" housing included in the Plan Area and where will it be located?

The Specific Plan provides the opportunity for a variety of housing product types throughout the Plan Area consistent with the City's housing goals and policies outlined in the 2035 General Plan including Policy 2.D.1 which speaks to the importance of a jobs/housing balance. Specifically there are three residential zones, Low-, Medium- and High-Density Residential (see Land Plan [HERE](#)). The Medium Density Residential (MDR) zone allows for a variety of product types including small lot single-family detached units, attached walk-ups and townhomes, and smaller apartment or loft style residential units. Medium Density Residential is permitted directly adjacent to the 11-acre linear park, central to the overall project area, and in two locations along the west side of Harry Lorenzo Avenue/greenbelt, opposite Spring Lake Central near

Pioneer/Parkland and at the southeast corner of the plan area. Where Medium Density Residential is proposed adjacent to Low Density or single family residential zones, Specific Plan Design Guidelines speak to appropriate transitions including height and setbacks. High Density Residential zones are located near the interior of the plan area along Road B, providing nearby access to transit and other amenities. High Density Residential zones allow for townhomes, and lofts as well as more traditional apartment development.

26. What is the plan to make sure that diversity is maintained and to ensure neighborhoods are not designed only for elites and wealthy?

A key guiding principle of the project speaks to the provision of diverse, high quality housing options. The plan area will accommodate up to 1,600 housing units of a variety of product types and densities. Medium and high density housing and residential product types are generally more affordable by design due to smaller unit and/or lot sizes as compared to typical low-density suburban neighborhoods. As regulated by zoning density requirements, approximately two-thirds of the residential units developed within the project area will be medium and high density product types (an estimated 600 and 500 units respectively), including small lot detached single family homes, duplexes, townhomes, and apartments or loft style development. The remaining approximately 500 residential units will be developed in the lower density range. The diversity of residential zoning designations, including minimum density requirements, will ensure the plan retains a diversity of housing options at varying affordability levels. The plan area is additionally subject to the City's Affordable Housing Ordinance which outlines obligations around housing affordability and buyer income restrictions for a percentage of housing units developed within the plan area.

27. How is affordable housing addressed?

Affordable housing is addressed in two ways in the project area. The Specific Plan area is subject to the city's Affordable Housing Ordinance (found [HERE](#)) which requires that a percentage of all residential units be made available to low-income renters and/or home buyers. Alternatively, the housing developer can pay an in-lieu fee to the City. Fees collected are used to support the development of affordable housing in the plan area and throughout the city. In addition to the requirements of the Affordable Housing Ordinance, the variety of housing product types and relatively smaller unit and lot sizes anticipated within the Medium and High Density Residential Zones will result in more affordable housing opportunities for future Specific Plan area residents.

28. How is the Specific Plan addressing police and fire safety? Will police and fire response times be adequate in the Tech Park?

The Woodland Police Department will provide law enforcement services in the Plan Area. The Department currently services the community through a four police beat deployment model. With the geographic expansion of the city as the General Plan Growth areas build out, up to two additional police beats are planned to be added to provide sufficient patrol resources and response times. The existing Police Station and Administration building at Lincoln Avenue and 6th Street is sufficiently sized to provide Police service levels through build out of the Plan Area. The Police Department also provides parking enforcement services for the community. With the mixed use and denser nature of the project, the need for permit parking

and time parking zones is likely. In the event this occurs, use of new technologies will be utilized to reduce department resources needed for monitoring and enforcement.

The project site is within the jurisdiction of the Woodland Fire Department which provides fire protection services and emergency medical services within the City and to unincorporated areas in the vicinity. The nearest station to the Plan Area is Station Three located at 1550 Springlake Court, on the east side of SR 113, approximately 2 miles north of the Plan Area. The City recently underwent an Insurance Services Office (ISO) rating review and improved to a level two rating. ISO ratings range from 1-10 with one indicating excellent service and ten indicating minimal or no protection. ISO ratings assess a range of fire safety factors including; firefighting personnel, equipment, water infrastructure, and response times. The City staffs 3 fire stations, with a minimum of 13 personnel on duty per day. This provides enough personnel to meet the National Fire Protection Association's Standard 1910 for residential structure fire responses. The City utilizes robust automatic aid agreements with neighboring jurisdictions to ensure sufficient firefighting personnel arrive at a fire in a commercial building. The City has a maximum "first response" standard of four minutes, 90% of the time. Currently, portions of the southeast area do not fall within this response time standard due to the distance between the current Fire Station 3 location, and the most southern areas of the Spring Lake development. The City plans to relocate Fire Station Three to the former Willow Spring Elementary school site, which is located at the northwest corner of Bourn Drive and Gibson Road. The future Fire Station Three, which will continue to serve the Plan Area, will be located approximately one-half mile north of the Plan Area, and will ensure that the southeast area, including the Tech Park, would fall within the four minute response time standard.

Additionally, Yolo County maintains an agreement with American Medical Response (AMR) to provide advanced life support (ALS) transport services to the entire County, including the City of Woodland and the Plan Area. AMR maintains a response time standard of 8 minutes, 90% of the time for any incorporated area within the County.

29. Will there be a new cell tower given the increased population in this location?

The installation of new Wireless Telecommunication Facilities or cell towers is typically initiated by private carriers such as AT&T or T-Mobile when gaps in coverage occur. It is anticipated that additional facilities will be requested in the Specific Plan area or within close proximity as the plan area develops. Wireless telecommunication facilities are permitted within the plan area through the issuance of a Conditional Use Permit by the Woodland Planning Commission after a noticed public hearing. Any new facility would be encased within planned street light or signal poles or other utilities or adequately "stealthed" to minimize their visibility within the community.

30. Will the project include Public Art?

Yes, consistent with the city's [Public Art Ordinance](#), all new development shall devote one percent (1%) of the construction cost for public art within the plan area. The public art may be located on the project site in a publicly visible location, or the project applicant can pay an in-lieu fee. The collected in-lieu fee will go toward a public art project(s) in the Specific Plan area

including areas such as the primary entrance/gateway to the Tech Park, within public medians or landscaped areas, within the greenbelt trail system, or in the 11-acre linear park.

31. How is parking addressed throughout the Specific Plan area, in the commercial/Technology Park and residential areas? How and where will visitor/public parking be accommodated? Will there be electric vehicle charging stations?

Vehicle parking requirements within the Specific Plan area seek to balance both the need and desire for parking near businesses, shopping and residential uses while also encouraging the use of alternative forms of transportation to reduce greenhouse gas emissions and minimize oversized asphalt parking lots that contribute to urban “heat island” effect.

For Village Center commercial and Technology Park/office uses, parking requirements are based on a “Parking Use and Needs Statement” prepared by the business owner/applicant as outlined in Table 3.2 and Section 3.5.3.F and 3.5.9.G.6 of the Specific Plan. The statement includes the known or anticipated number of business employees and anticipated visitors or patrons throughout the day as well as any ride-share or van-pool incentives such as priority parking spaces. The statement is reviewed and ultimately approved by the City Planning Department which will ensure ample parking is provided for business employees and guests onsite and that adjacent uses are not negatively impacted by lack of onsite or adjacent public/on-street parking opportunities.

The Specific Plan includes “parking maximums” to ensure any particular business does not over-park for their use, resulting in unnecessary paving and oversized parking lots. Shared parking facilities/lots are encouraged throughout the plan area to minimize the underutilization of land for parking. Bicycle parking is required for all commercial/office uses and shall be a minimum of 10 percent of the total number of vehicular parking spaces provided by the project (e.g. where 200 vehicle parking spaces are provided, 20 bicycle parking spaces or bike lockers shall be provided onsite in a secured and lighted location).

For residential uses, onsite parking requirements are as follows:

- Low Density Residential (i.e. detached single family and duplex development) = 2 garage/covered spaces per unit, minimum
- Medium Density Residential (i.e. small lot family, townhome and small multifamily/apartment development) = 1 garage/covered space per 1 bedroom unit, 2 garage/covered spaces per 2+ bedroom units, minimum
- High Density Residential (i.e. apartment, lofts) = 1 space per studio or 1 bedroom unit, 1.5 spaces per 2 bedroom unit, 2 spaces per 3+ bedroom unit; plus 1 guest parking space per 5 units and 1 manager space.

For high density residential apartments, 1 bike parking space is required per residential unit. See Specific Plan Table 3.3 for residential parking standards.

Electric vehicle charging stations are required for all new commercial/office and retail development. The number of charging stations required is dependent on the square footage of the building. All single family residential development shall have electrical conduit pre-installed

for EV charging in each garage. High density residential development, including apartments shall provide EV charging stations on-site, the number of which will depend on the number of units. Public EV charging stations will be provided as feasible along key corridors, such as along the east side of Road B adjacent to the 11-acre linear park. On-street “public” parking will be provided throughout the Plan area including along the east side of Road B and along most primary and local roadways in the commercial and residential zones.

32. Have traffic impacts to Spring Lake been analyzed? How will traffic impacts be addressed?

Key roadway segments in Spring Lake including Parkland Avenue and Marston Drive will extend and connect into the proposed WRTP Plan Area as described in Chapter 4 of the Specific Plan. Buffered bike lanes and off street Class 1 bike trails will similarly extend into the plan area along Marston and Parkland between Harry Lorenzo and Road B (see [Land Use Plan](#)). Parkland Avenue will eventually extend west over Highway 113, but the overpass extension will not take place until future build out of Specific Plan areas “SP-1B” or “SP-1C”, located west of Hwy 113, as described in the 2035 General Plan. All segments of CR25A between CR102 and Hwy 113 will be completed with Plan Area build out, or earlier, including the extension of the urban forest trail on the north side of CR25A.

Circulation planning for the Woodland Research and Technology Park Plan Area took into account potential increased traffic volumes that may impact the Spring Lake neighborhood. Where existing roadway networks within Spring Lake were designed to extend into the Tech Park plan area (Parkland, Marston) roadway design incorporates a variety of design features including roundabouts, signalized intersections, narrow roadway widths, enhanced pedestrian crossings, and on street parking and bike lanes that have the effect of reducing vehicle speeds.

A [Traffic Impact Study](#) (“TIS”) was completed for the project in April 2021, which analyzed Level of Service impacts for road segments and intersections throughout the WRTP Plan Area as well as in Spring Lake as a result of Plan Area build out. Level of Service or LOS, is a term used to quantitatively describe the operating conditions of a roadway based on factors such as speed, travel time, and delay. The TIS demonstrated that build out of the WRTP Plan Area will not result in roadway capacity issues in Spring Lake, due to the fact that arterial roadways in Spring Lake were sized in anticipation of future build out of the WRTP to the west. There are two intersections adjacent to Spring Lake that do not meet the General Plan LOS policy goals, the Gibson Road/Pioneer Avenue and Gibson Road/Harry Lorenzo Avenue/bourn Drive intersections. However, these intersections were already projected to not meet the General Plan LOS policy goals with buildout of the south area.

While traffic volume is expected to increase with the build out of Spring Lake and the build out of the WRTP Plan Area, design and traffic calming measures will help maintain appropriate vehicle speeds within both the Tech Park and Spring Lake neighborhoods and discourage cut through traffic through existing and future local roads and neighborhoods.

One of the more extensive circulation related improvements in the Plan Area will include modification to the CR25A / Hwy 113 interchange to accommodate increased traffic volumes and peak hour trips at this facility. City staff will continue to work with Caltrans on the timing, design and construction of necessary improvements.

[Updated July 2023]

33. When will CR 25A be completed? Is a traffic signal planned at Hwy 113 and CR 25A interchange?

The City recently determined that, pending favorable construction bids, sufficient funding will be available in the Spring Lake Capital Improvement budget to construct the remaining segment of CR25A. Construction is currently planned for 2024. Additional project details and updates can be found online at the following link:

<https://gis.cityofwoodland.org/portal/apps/storymaps/stories/6b53e7556e7643aa9611e611edefbfb6>

[Updated August 2023]

34. Will there be transit options in the Specific Plan, specifically connecting the plan area to UC Davis/City of Davis Amtrak?

Described in Chapter 4, the plan area includes a shared mobility hub, *The Union*, that will at project build out serve as the nucleus of the alternative transportation system providing integrated access to intra-city as well as inter-city transit service. The Union will be designed to accommodate a range of potential alternative transportation choices such as:

1. Fixed route bus and micro-transit
2. Car/vanpool/parking
3. Designated car share spaces
4. Electric vehicle charging stations
5. Ride hailing services
6. Bike/scooter share docking stations

Development of The Union will be planned and coordinated with local and regional transit service providers including YCTD and UC Davis Transportation and Parking Services/Unitrans, anticipating service from the Technology Park to UC Davis and the City of Davis. The shared mobility hub is planned to be the primary point of connection to fixed route bus service as part of the City's planned transit system provided by YCTD's YoloBus service.

35. Why is the South Regional Pond footprint split roughly 50% within the Specific Plan area and 50% outside the Urban Limit Line south of CR 25A?

The South Urban Growth Area Storm Drain Facilities Master Plan (SDFMP) identifies offsite drainage sheds located west of SR 113 that drain to the WRTP site. The highway embankment of SR 113 forms a north-south barrier to agricultural drainage runoff originating from the west. As development of the WRTP proceeds, existing agricultural flows from west of SR 113 will, in general, continue to be routed around the south side of the WRTP along CR25A. As part of this storm water conveyance, it is anticipated that an approximately 4.5-acre storm detention basin will be adequate to manage development from a portion of the sheds located east of Hwy 113. Similar to other components of the City's stormwater management system as well as other public infrastructure, the pond is proposed to be located immediately adjacent to, just south of the planning area, south of CR25A and connect directly into an adjacent facility east of CR 101.

RE: Woodland Research and Technology Park

Dear Mayor Fernandez and Councilmembers,

The Woodland Chamber of Commerce Board of Directors supports the proposed development project at County Road 25A and Highway 113 (Specific Plan Area 1A in the Woodland 2035 General Plan), the Woodland Research and Technology Park (WTRP).

The current development plan to combine a high-technology campus with mixed-use infrastructure is consistent with the 2035 General Plan Policy 2.D.1 on jobs and housing and the Chamber's mission of fostering an economic climate in which business, industry, and agriculture can flourish. The jobs envisioned for this space are high-wage and technology-focused, providing valuable resources for Woodland's economy's agriculture, biomedical, and energy sectors, with the technology campus being a critical element of this development.

The planned location for this project is perfect for its purposes. As the "Southern Gateway to the City," the WTRP will connect UC Davis, Woodland Community College, and Woodland's industrial and downtown areas.

For these reasons, the Chamber of Commerce encourages you to work with City staff and the developers to complete the Woodland Research and Technology Park as soon as possible.

Thank you for your time and consideration.

Sincerely,

Kayla Rodriguez

RE: Woodland Research & Technology Park – Letter of Support

Dear Mayor Fernandez and Councilmembers:

AgStart is pleased to provide this letter of support for the proposed Woodland Research and Technology Park, to be located at County Road 25 and Hwy 113 in Woodland. We see this development as adding critical industrial space to the City and to the region, to support the city's vision of an environment where business, industry, and agriculture flourish, and where innovation and new technology can drive economic growth.

As a non-profit incubator in Woodland supporting early-stage startup companies commercializing agriculture and food technology innovations (AgriFoodTech), AgStart has a unique perspective on the needs of startup companies for expansion space. Our 13,000 sq.ft. Lab@AgStart incubator in downtown Woodland currently houses the largest wet-lab incubator for startup companies in California's Central Valley region, and since its opening in 2021, has grown science-based jobs and employment in downtown Woodland as well as seen startup companies housed here raise over \$49 million in private investment capital to further their innovations. We have helped startup companies from global locations such as Singapore and Chile establish research facilities in Woodland to leverage available local talent and expertise. However, as our startup companies progress from bench-level commercialization in our Lab@AgStart facility to needing scale-up facilities to expand their efforts to pilot and commercial scale, graduates from our Lab@AgStart facility have struggled to find appropriate commercial space for their needs. Three recent graduates from our Lab@AgStart facility have had to relocate to other municipalities in our Sacramento region to find appropriate commercial space suitable for science-based pilot-scale facilities, and even then they struggled to find the right facilities.

We believe the Woodland Research and Technology Park, as proposed, will provide much-needed space for these technology-focused companies to expand and grow, while remaining within the City of Woodland, and continue to expand the innovation-led development in our region. Furthermore, we believe having available expansion spaces such as the W RTP will benefit Woodland and our region in being able to recruit firms from many parts of the world who are looking to establish a landing spot in California.

We encourage you and the City Council to support this project so that it can be brought to fruition as soon as practical.

Thank you in advance for your time, attention and consideration.

Sincerely,

A handwritten signature in black ink, appearing to read "John Selep", written over a horizontal line.

RE: Woodland Research & Technology Park – Letter of Support

Dear Mayor Fernandez and Councilmembers:

Greater Sacramento Economic Council (GSEC) is pleased to support the proposed Woodland Research and Technology Park. As the region's economic development organization, we know that Woodland Research and Technology Park will be an important and integral part of growing the agrifoodtech ecosystem for the region, driving economic growth and creating high wage jobs for the community.

Food and agriculture is an important industry for the Greater Sacramento region. Not only does the region have agriculture in its history, but UC Davis, the nation's number one university in Agriculture Sciences is located here. Given the strong R&D capabilities at UC Davis along with a supportive food and agriculture business environment, Greater Sacramento is the place to be for companies looking to innovate in agrifoodtech.

That is why the Woodland Research and Technology Park is such an integral part of continuing to build out the food and agriculture ecosystem. Almost all agrifoodtech companies come into the region and want to be located near UC Davis to access the talent. However, there is barely any physical infrastructure space available to meet their needs. Woodland Research and Technology Park will provide the physical infrastructure and space needed for companies to grow, and it will put our region on the map for the rest of the world to know we are serious about developing our food and agriculture ecosystem. It will create high value innovation jobs and major economic impact for the communities of Greater Sacramento.

GSEC encourages Woodland's City Council to move forward with this project as it will not only benefit the City of Woodland but the entire region in creating a more prosperous, sustainable and innovative region.

Sincerely,

A handwritten signature in black ink, appearing to read "Barry Broome".

Barry Broome
President and CEO
Greater Sacramento Economic Council

Subject: Tech Park Planning Meeting Comment

Hello,

I am writing in regards to item H 2 on your agenda.

I am a resident of Woodland in the Spring Lake area. My children are lucky to be able to attend spring lake elementary, but there are many in my neighborhood who cannot.

Woodland Joint Unified School District continues to collect builder fees from houses being built in Spring Lake, but there is no space for more students at that school or at Tafoya or at Prairie, the three schools listed in your assessment. Further, you note that Spring Lake is where students would attend based on attendance boundaries. As far as I am aware, Spring Lake has no real attendance boundaries and you could live right next to the school and not be able to attend (that is not hypothetical, that is true for some families).

Ultimately, on this side of town, there is insufficient school capacity. A plan that plans for the district to increase that capacity merely by selling them land and offering builder fees that are inadequate for the construction of a school will result in failure. Especially if this land is on a timebomb of 350 houses sold.

The school district needs land GIVEN to them and a tax schema on these properties that will allow for the construction of a new set of schools (ideally a middle school and an elementary school). This is a real crisis for families in this neighborhood and your report, in my opinion, does not accurately reflect the needs or wishes of the district (it is not simply that they need more time to respond, they seem to me well aware that they could not afford to build a school with the designs as is).

I would be interested, have you all asked the school district - with this plan as it stands, would families in this tech park neighborhood have a neighborhood school that they could send their children to?

I don't think that answer is in your report, and I think we all know that the answer is 'no'.

So to go forwards with this plan is essentially agreeing to the idea that these families are going to be driving kids all over town and to Davis to attend school. That, at a minimum erases all the good 'environmental impact living with the trees and drought abatement' that is presently planned.

I appreciate you all working hard on this, but this will not work for our school district and consequently for our students.

Thank you,

-CD

Subject: Woodland Research and Technology Park Specific Plan and Final EIR...Timing of Public Hearings

Erika:

With consideration that the WRTP Final EIR is a 433-page document with detailed responses to Draft EIR public comment, I repeat my comment to you, city staff, Planning Commission and City Council from last week that:

The city of Woodland and its consultants have had over 24 months to respond to WRTP DEIR comments and RFIs for detailed data, whereas the public is allowed four days to review the Final Specific Plan and EIR and supporting documents prior to the first public Planning Commission hearing on Thurs. Aug. 17, which is the start of the final approval process.

While four working days public notice may meet the intent and/or letter of the law, it is certainly inadequate time for the public to:

1. Review 1000's of pages of posted supporting studies, data and DEIR responses for errors and omissions.
2. Make contact with city and state agencies for additional information to explain and/or provide support for Final EIR responses.

To deal with this short time frame prior to the first public meeting, I will selectively pick one topic in general, and two topics in particular to express my frustration and concerns with the Final WRTP Specific Plan and Final EIR.

General:

I have deep and broad experience in preparation of Specific Plan infrastructure studies and find the WRTP Final EIR responses to many of my DEIR drainage comments and RFIs to be vague and/or incorrect based on my interpretation of available data.

I will note that I previously requested access to the DWR 2008 LiDAR aerial topography in 2017 so I could independently evaluate/peer review drainage shed delineation limits performed by Wood Rodgers. I was denied access at the county and city staff level. After significant effort, I was able to gain access in late 2017 through Nathan Van Emmerik at the DWR to a limited area of LiDAR topo west of East St and the RR.

Since Monday Aug. 14, 2023, the first of four days after city release of its trove of Final EIR and supporting studies, I have been unable to connect with anyone at DWR and its Central Valley Floodplain Evaluation and Delineation Program. The DWR website has no useful contact information and DWR has changed many if not all phone numbers. N. Van Emmerik's phone in particular is disconnected although he is still a DWR employee. I am forced to dig deep with old connections at DWR to find someone / anyone who can help provide a PDF or digital file of the 2008 LiDAR topo.

I strongly feel that Wood Rodgers Rev. 2018 SUGA SD MP still needs an independent peer review. From my evaluation, it has embedded errors originating probably around 2003 to 2004 that impact flood threat from the remnant Willow Slough overflow.

I am therefore requesting 1.) access to the DWR 2008 LiDAR topo 2.) supplemental ground surveys and 3.) a meeting and field walk meeting with the city consultant Wood Rodgers. The purpose of this request is to:

1. Peer review Wood Rodgers shed delineations based on DWR 2008 LiDAR topo. Hard copies of one foot contour mapping is requested.
2. Written confirmation from the DWR that the 2008 LiDAR topo has 0.3 ft. accuracy. From record of a conversation with N. Van Emmerik at DWR in 2018, the accuracy was reported as 0.6 ft.
3. Ground surveys to support statements made in the Rev. Mar. 2018 SUGA SD MP and/or the WRTP Final EIR responses.
4. Field walk to review certain shed delineation areas of the Rev. Mar. 2018 SUGA SD MP to confirm Wood Rodgers delineation.
5. Field walk to review potential north bank overflow areas of Willow Slough and remnant Willow Slough from the RR to Rd. 102.
6. Meeting to review other questions related to Final EIR responses related to drainage issues.

Specific Comment 1: Final EIR comment 8c-13 which I feel is in error. Response 8c-13 concludes with:

Per Figures 4 and 7 of the 2018 Storm Drainage Facilities Master Plan South Urban Growth Area, sheds WRR1 (typo?...should be WRR1A?), WRR2A and WRR2B drain eastward and cross County Road 102 without entering Willow Slough.

BJ response to 8c-13. There is NO drainage conveyance under the RR from south of Rd. 24a until the 12'W x 5'H box culvert which is 1.5 miles south of Rd. 24a. The RR is elevated well above fields to the west, and the RR embankment routes all overland drainage south within the west ROW of the RR which incidentally follow natural contours. Rd. 25a in fact has its own low point about 1/4 mile west of the RR where flooding and overland release passes field drainage north to south in annual

local storm events. Rd. 25a west of East St. is often closed by the county during the winter due to flooding.

The 60-inch Farmers Central Ditch (FCD) culvert north of Rd. 24a crossing East St. is the remnant of the FCD High Line Irrigation Canal which was not designed nor had function to convey drainage. Since filling 3.4 miles of the FCD from a point 0.4 mile west of West St. to Rd. 102, there is no possible way any drainage from the remaining upstream FCD can enter city drainage systems unless it was pumped uphill to the 60" remnant FCD concrete culvert (maybe a syphon) crossing East St. from north of Rd. 24a to Sports Park Dr.

By definition and design, the remaining FCD transports elevated irrigation water to downstream customers, generally south of the city limits and east and west of Rd. 99. In the most severe storms recent and past, it has not conveyed any drainage except unauthorized drainage. An example is Shed WRR2A which prior to filling of the FCD from Rd. 99 to East St. and possible other upstream unauthorized connections.

The current drainage pattern from WRR1, WRR2A, and WRR2B follows the route shown by the yellow line work on the aerial photo below. The path from Rd. 24a to Rd. 101 was field verified by visual from East St. and Rd. 101. The path from Rd. 101 to Rd. 102 was not field verified due to private property access. I disagree with Response 8c-13 and assert that Sheds WRR1, WRR2A, and WRR2B definitely drain to remnant Willow Slough in the Wood Rodgers Baseline Conditions Fig. 4, and are tributary to the Willow Slough overflow condition upstream of Rd. 102.

Below: Path (yellow) of the existing route of Sheds WRR1, WRR2A, and WRR2B

Specific Comment 2: This refers to the Parkland Dr. bridge overcrossing cross section at SR 113.

From Page 4-17 in the Final Draft Specific Plan, Section B depicts the Parkland Ave bridge with two 11 ft. travel lanes and 6.0 ft bike lanes.

I recall previously commenting to city staff that the proposed Parkland Ave SR113 overcrossing cross section should have 8 ft. buffered bike lanes. I've attached aerial screen shots with bike lane dimensions for the following:

1. Gum Ave. Woodland at SR 113
2. Gibson Rd. Woodland at SR 113
3. E. Covell Blvd. Davis at the RR
4. E. Covell Blvd Davis at SR 113
5. Pole Line Rd. bridge at I-80

I note that all these locations have 8 ft. bike lanes and 12 ft. travel lanes. Given that the W RTP is planned to attract high end development from and supporting housing. I foresee the link east to west over SR 113 at Parkland as a critical path for safe bike riders in the city.

Why, therefore, would the city want to squeeze the bridge to an unsafe condition?

The intersection of HLA and Parkland Avenue will be improved with signalized controls and enhanced bike and pedestrian facilities to provide greater safety and comfort to users of the adjacent north-south greenbelt. The signalized intersection at Road B and Parkland Avenue will be similarly improved with features to enhance safety and comfort for bicycles and pedestrians.

These two focused discussion items are a small sample of a long list of responses in the WRTP Final EIR and Final Specific Plan.

At the earliest convenience, I request a meeting and field walk with Wood Rodgers, the city drainage consultant, to review and confirm certain SUGA SD MP drainage delineations issues which include the above discussed item and several others that I feel may still be in error.

Subject: Public comment for 8/1723

Dear Members of the Planning Commission:

I unfortunately am unable to attend tonight's meeting in person, but would like to submit a public comment regarding Item 'H.2.Woodland Research and Technology Park Specific Plan'. Thank you in advance for your attention and consideration.

I am writing to urge you to include zoning for an additional elementary school in the Tech Park specific plan. The expansion of Woodland in the Tech Park includes an additional 1,600 homes. With these homes will come hundreds of children who won't have access to a neighborhood school unless the City, Developers, and School District come together to make a neighborhood elementary school in the Tech park a reality. This should start with rezoning the area in the Tech Park currently zoned as "medium density residential, possible school site" to "school".

Adding so much additional housing without concrete plans for a neighborhood school is shortsighted, weakens our community, and makes Woodland less attractive to young families looking to move to our City. In the long run it can affect our property values and tax revenue for the City, will contribute to suburban sprawl, traffic congestion, and carbon emissions. We need a viable plan to ensure that a neighborhood school is included in the Tech Park so that current and future residents of Spring Lake and the Tech Park have equitable access to neighborhood schools like the Woodland residents who live West of Hwy 113.

Currently, Tafoya is the home school for Spring Lake, and there are only two elementary schools East of Hwy 113 where a significant portion of Woodland's population lives. Once Spring Lake and the Tech Park are fully built, those two developments alone will comprise nearly 25% of Woodland's population. There are only two elementary schools East of Hwy 113, and one is an "open enrollment" school. This means that for a majority of Spring Lake kids, our home school is more than two miles from our homes, necessitates crossing several major, busy roads, and is not walkable for our elementary school aged children. It takes more than 45 minutes one way to walk to Tafoya from many parts of Spring Lake and the future Tech Park. The school district is talking about redrawing attendance boundaries, but that does nothing to create equitable access to neighborhood elementary schools for residents of Spring Lake or the future Tech Park, residents

who pay a premium developer fee when we purchase homes in Spring Lake that is intended to finance schools for residents of the developments. According to the Turn of the Century Agreement, TWO elementary schools each with a capacity of 650 kids were promised in Spring Lake. Currently there is only one “open enrollment” school with a capacity for 420 kids. There’s a big difference between 1300 seats in a neighborhood school and 420.

Tafoya is at capacity, and Spring Lake Elementary is at capacity with wait lists. Families who live just steps away from Spring Lake Elementary have children who are unable to attend because there are no available seats. I am a resident of Spring Lake. Of my neighbors in the three block area where I live, multiple families did not get into SLE, so are sending their kids to school in Davis or private schools rather than drive across Woodland to infill the schools they were assigned to. Other families didn’t even try to get in because the lottery enrollment process is just too stressful and creates too much uncertainty.

Not having access to a neighborhood elementary school makes our community less cohesive, our kids less healthy, decreases parental and student engagement in schools, not to mention the environmental impacts of creating a car dependent City by increasing greenhouse gas emissions, traffic congestion from schlepping kids across town to schools outside of one’s neighborhood, and wear and tear on City infrastructure.

The goals and mission statements of Spring Lake and the Tech Park development are lofty, but increasingly are feeling like lip service only. I have lived here since 2008 when I was shown a map of the Spring Lake specific plan that depicted interconnected greenbelts, three elementary school sites, a middle school site, and neighborhood commercial every few blocks. I chose the promise of this neighborhood only to have seen just one school (which is amazing) built, two school sites now covered with houses, no neighborhood commercial sites developed to date, a promised pool and rec center now moved across Hwy 113, and no viable plan from the school district to honor the Turn of the Century agreement to provide at least two neighborhood schools to the residents of Spring Lake.

Getting schools built and making neighborhoods and communities strong and attractive to potential residents is hard, but we can do hard things. I implore the Planning Commission to change zoning in the Tech Park to include an area that is actually zoned for a school, not

a “possible school site”. We need to establish the expectation that the School District will honor the Turn of the Century agreement for a second elementary school in Spring Lake area/Tech Park. This is a vital first step to ensuring that Woodland doesn’t just turn into a sprawling car-dependent suburbia where residents need to leave their neighborhoods just to access basic services like education for our kids. Providing equitable access to neighborhood schools for residents of Spring Lake and the Tech park will make our City more attractive, stronger, greener, and is just the right thing to do. Thank you.

Subject: Public comment on item H.2, Tech Park Specific Plan, at Planning Commission 8/17/23 meeting

I would like to submit this public comment about the 8/17 Planning Commission Meeting agenda item "H.2, Woodland Research and Technology Park Specific Plan".

My name is Margaret Faye, and I am a long-term resident of Woodland. Specifically, I have lived in the Spring Lake area since 2010. I am a member of a group called the Woodland Accountability Community. I have also spent my whole professional career in the field of architecture and by association, urban planning.

Background information:

For the past 10+ years, residents of Spring Lake have been advocating at Woodland School Board meetings for the District to live up to its contractual obligations to build at least 2 schools in Spring Lake. Our concerns have mostly fallen on deaf ears.

Based on our experiences dealing with the School Board, it seems they have very little will or interest in making any short or even long-term plans to build more schools in the Spring Lake/Tech Park communities. Schools east of 113 are currently at or near capacity. If the School Board's track record is any indication, it seems very likely that the Tech Park will never have a new school. Their solution to current Spring Lake school capacity issues is to have parents drive their kids all over Woodland to fill various vacancies in other schools. They do this while at the same time extracting special fees from Spring Lake homeowners that, by previous agreement, were supposed to go towards building more neighborhood schools in our area. Spring Lake Elementary accommodates only a fraction of kids living in Spring Lake. We believe the School Board has violated previous agreements on multiple levels. It's time to start asking the Board hard questions before approving this Specific Plan for the Tech Park.

What has become apparent to me is that the City has approved and continues to approve development in the Spring Lake area without adequately ensuring that there is enough school capacity east of 113 for the new growth, trusting that the School Board will do the right thing for children and families in our area.

While there is mention of a "possible" school site zoned as residential in the Tech Park Specific Plan, the City has left it up to the School Board to determine if a school is needed. The Plan says *"The WJUSD will evaluate the attendance boundaries of existing and planned schools in the Plan Area to determine the school locations for Plan Area students."* As far as I can tell, the District should already have enough information to make this determination, and not addressing this

issue before approving the Specific Plan is just kicking the can down the road, with potentially serious and long-lasting consequences. Why has the City not demanded a commitment from the School District about how the influx of new Tech Park/ Spring Lake students are to be accommodated in ways that align with the various goals of the Specific Plan? Can't the City make the building of a school a requirement for Plan approval?

Following are some problems I have with what is written in the Tech Park Specific Plan. It includes a lot of wishful thinking when it comes to schools, and in fact, although there are a lot of feel-good buzz words used such "synergistic environment", "ecosystems", "sustainability", "emotional wellness" and "age-in-place", there is very little mention of schools and how important it is to avoid creating even more vehicle-bound-school-commuter-parents in the new area.

Let's talk about "emotional health" promoted by the Specific Plan.

The Plan states that the vision for the Tech Park is to *"create a sustainable, healthy and successful community"*. Does a community where children of the same age living in houses next to each other but attending different schools, promote emotional health? Is it healthy for a working parent to spend 1-2 hours a day shuffling kids to and from various schools across Woodland?

Let's talk about attracting brain power and talent to work and live in the Tech Park:

The Plan states that the Tech Park will be a place where *"researchers and companies can collaborate in a synergistic environment, and access to scientific, engineering, and entrepreneurial talent can be easily facilitated."* Is it realistic to think that the Tech Park will attract the kind of brain talent expected when the school access problem would be a real liability for so many of the families of these workers? If the City wants to attract and keep tech talent, they can't ignore the neighborhood school access problem. Spring Lake (and by extension, the Tech Park) are attracting people from Davis, yes, but many parents in Spring Lake are already fed up with the Woodland School District and drive their kids to schools in Davis or put their kids in private schools, because there is not enough neighborhood school capacity.

Has any kind of study been done by the City or the School District, analyzing how many Spring Lake parents currently drive their kids to Davis or private schools because there is inadequate capacity at neighborhood schools? The School District essentially gives parents a choice between driving to various other schools in Woodland (many across 113), or driving to Davis or a private school. Spring Lake is known by many as "North North Davis". This doesn't jive with the Tech Park's goal of "Woodland pride", and it also diminishes State funding for each student lost to the District.

Aside from the above, lack of neighborhood schools affects property values in a big way, and lower property values affect property tax revenue. Won't potential tech worker home buyers see what we in Spring Lake already see, that there is a big hole in the "holistic" Tech Park plan? If real estate agents won't tell these people the truth about school access when the new homes are marketed, there are plenty of us who are willing to talk about it loudly.

Let's talk about long term" lifestyle" visions included in the Specific Plan:

The Plan states that *“A dynamic work-live-play environment will attract highly skilled professionals to the region and will provide new housing opportunities and long-term economic base for future generations”*. Shouldn't the “live” part of “work-live-play” include “education”?

The plan states that *“The 135-acre Village District provides diverse, high quality and attractive new neighborhoods and housing options, which will allow employees to live and work close by and move up and/or “age in place” within the same neighborhood”*. So how does spending hours driving your kids to various schools on the other side of Woodland fit into this scenario? If the City is trying to attract young, ambitious and educated tech workers, not providing adequately for their children doesn't seem the right way to go about it. From my personal experience, access to neighborhood schools is one of the most important things young parents consider when deciding to move to an area.

Let's talk about sustainability goals in the Specific Plan:

The plan states that *“Sustainable building design, the use of low impact materials and construction techniques, on site water management and planning features that reduce commute trips and vehicle miles traveled will carry through the plan to help ensure the long-term health of the community and the environment”*. The Plan also states *“Land use strategies and transportation demand management will reduce vehicle miles traveled.”*

Has any kind of study been done analyzing how many miles each day future Tech Park parents will have to drive their kids to schools (in other parts of Woodland, Davis or private) because of this problem? How does this work with the Tech Park vision to *“play an important role in furthering the city's greenhouse gas reduction goals”*?

The Plan states: *“Well-connected parks, open spaces and greenbelts will encourage residents and employees to walk, bike, or scooter rather than drive to work, home, and play. Existing bike trails and greenbelts will extend from and connect to the adjacent community including nearby schools, community center and shopping center”*. OK let's say my family moves into the Tech Park, and the School District says most children living there won't be able to go to Spring Lake Elementary or any schools east of 113. This is what the reality is very likely going to be. How can you say that the Tech Park plan facilitates children riding their bikes to, say, Plainfield Elementary School, to which the School District might very well assign them? You can look on a map to see what that bike or walking route would be. If my child gets into Tafoya Elementary, which IS east of 113 and is actually the designated "home school" for Spring Lake residents, a walk or bike ride along major thoroughfare with heavy car traffic isn't anything I would propose for a child. Would you?

The omission of the school access problem from the Plan's discussion about sustainability goals is really troubling. Personally, as a long-time Woodland resident with pride in my City, I really want the Tech Park to live up to its goals and be the success it can be.

Let's talk about how the Specific Plan will be implemented:

The plan states:” *The coordinated delivery of public services is essential to ensure a complete community, one that provides public safety, recreational, educational and library services for the residents.* Without any kind of firm commitment to build a school in the Tech Park that serves the communities east of 113, the delivery of the public service of “education” will in fact *not* be complete.

In summary:

Designating a “potential” school site in the Tech Park Specific Plan (that is currently zoned residential), and leaving it up to the School Board to determine its fate, just doesn't cut it. The Plan should be amended with a requirement that the School District commits to a plan for a new school in the Tech Park. The site should be zoned for a school, be it public, charter or private. To do otherwise would, in my opinion, be counter to so many of the goals of the Specific Plan as I've described above. Those goals would simply become empty words without substance when it comes to creating a holistic, healthy community for families with school age children. The City should be coordinating with the School District instead of letting the District have all the power to make potentially short sighted decisions that are not in the best long-term interests of the community of Woodland.

Subject: 8/17 City of Woodland Planning Commission Meeting - Item H.2
Attachments: ABC NorCal Position Statement - CEQA Reform and Greenmail.docx

Good Evening Members of the City of Woodland Planning Commission,

My name is Joe Lubas. I am a Policy Analyst with Associated Builders and Contractors Northern California Chapter, ABC NorCal for short.

ABC NorCal is a trade association representing almost 500 companies from the Fresno region to the Oregon border. We also train over 300 apprentices annually in the Plumbing, Construction Craft Laborer, Painting, Electrical, and Carpentry trades. Of these, 121 of our Apprentices and 211 of Apprenticeship Graduates reside in the Sacramento Area. Furthermore, 122 of our contractors are located here too.

At the August 17th City of Woodland Planning Commission meeting the **Woodland Research and Technology Park Specific Plan** will be discussed. We have been made aware that you have received input re: this project from several labor unions. As such, we would like to provide input as well to ensure that contracts related to this project are fair and equitable to our member contractors, apprentices, and journeyworkers. I am sending this email to request that **ABC NorCal be included in the discussions.**

Please add us as a stakeholder not only for this project but for any other projects where the unions are also at the table.

Is there a time in which we **can meet with you regarding this project?**

We have also attached a Position Statement on the issue of CEQA.

Please let me know at your earliest convenience.

Much Thanks

Joe Lubas

Re: Item H2, August 17 2023, Woodland Research and Technology Park Specific Plan

Subject: Climate Overall, Electrification and Resilience

Dear Planning Commission Members:

Below find my comments on the Draft of the Woodland Research and Technology Park (WRTP) Specific Plan. My comments are divided into three basic areas – Climate Overall, Electrification and Resilience

CLIMATE OVERALL

We live in a very changed world than even 5 or 10 years ago due to the impacts of climate change. This past few years with drought followed by deadly floods in CA, wildfires here in CA and the wildfires just now in Hawaii are just a few of the many indicators of the rapidly changing climate and the challenge we all face going forward.

My view is that the challenge of climate change should be mentioned in all planning documents, particularly one as large as a new specific plan. While the Climate Action Plan from 2017 is mentioned quite a few times, “climate change” *per se* is not ever mentioned in the document. I think that should change! It needs to be acknowledged. Broadly the need for a carbon free/fossil fuel free future should be mentioned and for that one needs to plan with as little retrofitting in mind as possible. One also needs to plan with resilience to the impacts of climate change at the forefront.

Climate Action Plan (CAP) Analysis from UC Berkeley’s Goldman School of Public Policy – Item G3 on May 16, 2023 City Council Meeting. This was an evaluation of Woodland’s 2017 CAP and changes needed to bring it up to date. One main takeaway is that is that the 2017 CAP does not meet present state targets (it did in 2017). The students listed six areas where they made recommendations for improvement: Accountability, Community Outreach, Equity, Transportation, Energy and Adaptation & Resilience. They recommended that the Climate Action Plan (CAP) be updated and that this updated version include adaptation and the new version should be a Climate Action and Adaptation Plan (CAAP). While I realize that the recommendations from the Berkeley work need more analysis and none have been adopted, I think some of the basic recommendations can/should be considered in the Specific Plan I will note a few below

Note the presentation can be found at
<https://woodlandca.portal.civicclerk.com/event/1878/media> it begins at 55:17 and goes to 1:11:14, energy discussion begins at 1:07:41

ELECTRIFICATION

Electrification with clean renewable energy is key to addressing the climate crisis. Our cars/trucks as well as our homes and businesses are often run by mini fossil fuel plants. Changing those out for electric run options powered by carbon free electricity is one of the key strategies in addressing climate change. In recognition of this fact, there are many programs and rebates with significant dollars in the Inflation Reduction Act (IRA) to encourage electrification.

VCEA 100% Renewable by 2030. In the draft specific plan you note that Valley Clean Energy (VCEA) supplies the electricity, You say *"In June 2018 Valley Clean Energy began providing electricity in Woodland as "cleaner energy" alternative; however, distribution of said electricity remains the responsibility of PG&E (pg 205)"* That is true. VCEA does however have goals/targets for the cleaner electricity they provide and I think the specifics of that should be mentioned. At their July 13th board meeting, item 14 the Board of VCEA, voted to increase their renewable content goal to 100% by 2030. That is by 2030, the electricity they provide will be all carbon emission free. This is significant and I think should be mentioned in the information about electricity in Section 5.6 of the Specific Plan which covers electric power. VCEA supplies more than 80% of the electricity to Woodland, Combining electric homes/buildings and electric vehicles with 100% renewable energy will be a powerful tool in lowering Green House Gas emissions,

Encourage opt ups Both VCEA and PGE have programs where customers can opt-up to 100% clean electric now. It would be good to encourage those that develop in the Specific Plan to opt us to 100% -That could be businesses, EV charging stations just to name a few.

Building Electrification Building electrification, especially residential buildings, is a subject I have been communicating with Woodland staff about for quite a few years, especially as relates to the WRTP Specific Plan. Both Erika Bumgardner and Ken Hiatt can attest to my persistence on this.

In looking at the draft plan and the Climate Action Plan Checklist I see no mention of residences or buildings being all electric nor is there even mention that they should be all electric ready. There is a lot of mention of EV charging infrastructure, which is good. However there also needs to be mention of electrification relating to buildings

In the May 16th report to the City Council on the 2017 CAP, there was specific mention of building electrification in the recommendations relating to energy. On slide 16 of the presentation relating to recommendations for residential energy they specifically mention the need to transition from gas to electricity , (Note the presentation can be found at here it begins at 55:17 and goes to 1:11:14, energy discussion begins at 1:07:41) And while I acknowledge that the recommendations in this report have not been acted on, I think is appropriate to consider some of those, especially for a fairly large and long term project such as the WRTP Specific Plan.

All electric homes and buildings are not just good for the climate, they are also better for indoor air quality and overall safety. The negative impacts of gas stoves on indoor air quality have long been known and summarized in this RMI report and have been shown to increase asthma rates in children. Newer studies show that benzene is released by gas stoves. Furthermore, gas infrastructure can explode with disastrous consequences,

At a minimum I request that buildings be all-electric ready, this includes wiring and appropriate electric panel size. As someone who spent two years converting their home to all electric, I know the process can have road blocks including hand trenching to install an upgraded electric panel and long permit turn arounds for some projects, The message both from a GHG perspective and cost/ease to building owners, is IF you have to retrofit, the closer the building is to being ready for that, the better.

On page 11 of the FAQ sheet, it says “It is anticipated that all residential products (single-family homes and apartments) will be 100% electric” I would definitely like to see that sentence included in the W RTP Specific Plan. The less gas infrastructure that this plan area has, the better. Also it should be noted that the State of California is designing a plan to stop the sale of all new gas HVAC and gas hot water heater by 2030, So why install appliances for which replacements will not be available?

Best of course would be just a blanket statement that homes and buildings will be all electric where feasible. If that cannot happen, please consider the two requests above.

RESILIENCE

Broadly Woodland needs to plan for adaptation and resilience to extreme events. A lot of that is outside the scope of this specific plan, however this plan adds a lot of residences as well as various businesses to Woodland and I think some mention of the need for increased resilience planning due to that should be made. To date Woodland has escaped truly catastrophic events but that might not always be the case. During this year alone there were areas of Woodland that had extended power outages (days) during the extreme rainfall events this winter and the major fire on Lincoln lead to some power outages. Thankfully, due to firefighter efforts and not much wind that day, a more severe outcome there did not happen. Below is one specific suggestion.

Resilience Hub Resilience Hubs are “are community-serving facilities augmented to support residents, coordinate communication, distribute resources, and reduce carbon pollution while enhancing quality of life.” especially during climate and other emergency situations <http://resilience-hub.org/> They are sometimes located at schools, fire stations, community gathering centers, etc. They typically have a fairly large solar array attached to batteries. They can supply power for devices, drinking water, cooling, etc. during emergencies. Powering these hubs on page 11 with diesel/fossil fuel generators is contributing to the problem long term. I suggest that a spot for a resilience hub is designated in this plan and that whatever that spot be, that it be planned long term as a resilience hub powered by solar and batteries. This does fit into the suggestion by Berkeley students to plan with adaptation and resilience in mind.

Thank you for considering my suggestions for changes/additions to the W RTP Specific Plan.

Subject: August 17th Public Comment - Letter H Item #2

Good Evening Commissioners,

I am excited to have such an amazing development being approved walking distance from my home where I might be able to work and enjoy other amenities in hopefully the near future.

One particular item I wanted to address was the parking minimums required for housing units. Reviewing the tables I was surprised to see parking minimums applied to the multifamily units when the development is supposed to encourage multimodal approaches to life. I suggest applying parking maximums for some unit sizes (such as studios, etc.) and/or removing parking minimums entirely for the development. With the proximity to UC Davis many of the jobs will most likely attract fresh graduates whom, according to the 22-23 campus travel survey, approximately 40% of senior students had no access to a vehicle while 60% had access to a bike as means of primary transportation. Decoupling vehicle storage from housing costs may also increase the affordability for these fresh graduates and give them the opportunity to become citizens of Woodland. There is the added benefit that approximately 200 sq ft of additional indoor living space may be built when 2 unit garages are built as 1 unit garage units instead.

Thank you for your time.

Sincerely,

Frank Reyes

To: Erika Bumgardner
Subject: Final Draft Woodland Research and Technology Park Plan

Erika,

I wanted to respond with comments on the Final Draft of the R&D Park plan. If these comments should go to another email or sent to a central comment hub, please let me know so I can submit them into the public record.

First of all let me congratulate you on a brilliant document. It's so comprehensive and takes so much into account. It leaves very little to chance and the insights and design issues covered are going to ensure that the new Research and Technology Park will be a place that the City of Woodland will be proud of for generations to come, on so many levels. Bravo to you and everyone else who worked on this report.

I appreciate the language in the plan that pushes the new development towards the 2035 climate goals and the Woodland Climate Action Plan. Of course, I wish the language was stronger and the baseline would be greater than Tier 1 for code compliance. While I understand the City's concerns about scaring away economic development, most people will not go above and beyond baseline code requirements if it means a greater initial outlay of funds. Most developers are looking at quarterly profits, not long term environmental benefits, so we will be fighting that battle with each and every portion of the development unless enlightened developers are involved in the project.

The following are my questions and comments on the report. I submit these respectfully, and do not mean them as criticism in any way. The plan, the design ideas and the overall plan are really stellar.

- Is it possible to do the development without any natural gas?
- Could the City of Woodland take the lead in developing district heating and cooling for commercial areas with district heating and cooling via a ground source heat pump? Could it be encouraged in the areas of larger development?
- Could The Yard incorporate a large open pavilion for farmers markets, Food Front events, craft fairs, music, etc.... this may be in the plan and I just missed it.
- Could the bike paths extend through existing Woodland and connect Woodland to Davis with an off road bike path?
- I suggest that the VCOS park area straddle road B to some extent so the edge between the park and the adjacent commercial construction is softened a bit. Otherwise there could be a harsh edge there. Straddling the road will make The Yard seem larger and give greater connection to the industrial area. If possible, the plan could extend the VCOS into the industrial area in a T shape so there is a corridor of greenspace and park space that connects the two areas.
- If The Yard greenspace can continue, in a more granular, pocket park, greenspace connected by green paths as it extends behind the VCOS to the edges of the development area it will enhance and encourage walking, make a pleasant experience and give reason for people to travel within the development area on foot or on bike. I realize that you have covered this with the language in the report in a general way, the concern is that without designating a connected system from the start, it may become disconnected and not function if it is not a part of the plan.
- I'm wondering how you will give the requirement for Climate Action Plan Consistency discussed in 3.3.3 teeth?

- Can we require greater than code requirements for electric car charging? Car chargers cost very little and there will be a lot of demand.
- Could there be a trade off between tree shading and solar panel shading in parking lots?

Thank you and city staff for all of the hard work you have done on this project.

Sincerely,

Dee Rosenberg

I'm including a graphic that shows the idea about connected greenspace.

Re: Updated WRTP Final EIR responses to public comments

Erika:

This communication supersedes my letter/comments dated Aug. 31, 2023 and corrects several RFIs. It is a summary of WRTP FEIR rebuttal comments and/or RFI for supporting information, data, studies, and cost estimates to help the Commenter understand WRTP FEIR responses to DEIR comments by Bruce Jacks.

These FEIR Commenter Responses are directed primarily to my disagreement with the Rev. Mar. 2018 SUGA SD MP drainage shed delineations and certain decisions by the city to accept drainage improvements that deviate from City Design standards; specifically, deviation from “standard of the industry” drainage safety factors.

If these rebuttal comments and additional information submitted by the Commenter are found to be accurate, then the HGL’s in the Upper South Canal which is the disposal channel for much of the WRTP drainage may be further elevated raising flood risk to existing Spring Lake subdivisions west of CR 102. A brief summary of the highlights is as follows:

- B. Jacks’ July 22, 2021 correspondence.** Responder’s statement that 1,117+/- acres east and west of SR113 is tributary to remnant Willow Slough is accepted, however, the Responder provided only the statement that the east RR ditch routes drainage through the 24+/- ft. wide RR trestle south to Willow Slough. No supporting topographic survey or hydraulic capacity analysis of the ditch was provided, only an implied statement of conveyance adequacy based on the “field visit.” While that 1,117+/- ac shed may reach Willow Slough upstream of the diversion, there is no analysis or supporting topographic survey to ensure that the Willow Slough 100 yr. flow does not escape overbank at the vicinity of the remnant Willow Slough plug. Supplemental topography of the north and south banks with supplemental cross sections from the RR to just downstream of the Diversion Structure and hydraulic analysis is needed to prove that the 100 yr. event does not overtop the north bank and release flow to remnant Willow Slough. The yellow outlined area is the likely area a north bank overflow to remnant Willow Slough will occur. The commenter has reviewed elevation data that suggests this Willow Slough north bank zone is low enough to be easily overtopped and may release flow to the remnant Willow Slough in the 100 yr. event.

- August 31, 2023, new comment for review.** Commenter has identified an additional 502+/- acres north and south of CR 27 and west of Rd. 102 that may be tributary to remnant Willow Slough. Detailed comments are presented in the Rebuttal /RFI matrix. Yellow outline depicts the 502+/-ac area. See attached **Exhibit A**.

- Commenter rebuts Responder’s comment 8c-2 Item 4,** that 82+/- acres south of remnant Willow Slough and west of CR 102 drain east at Rd. 102 and not to the remnant slough. A field walk confirms there are two culverts on the west side of Rd. 102 at the NE corner of the 82+/- ac. One culvert drains north to the slough, the other crosses Rd. 102 draining to a daylight condition along the south side of Rd. 26a. See attached **Exhibit B**.

- Commenter submits Exhibit C** which illustrates a total 1,701+/- ac area outside the limits of the remnant Willow Slough shed delineated by Wood Rodgers. The area includes an additional 502+/- acres north and south of Rd. 27 and west of Rd. 102 that appear to drain to the remnant slough. Commenter acknowledges Responder’s FEIR comment 2.2.16 which Responder alleges the 1,117 ac Area A on the exhibit drains to Willow Slough in a ditch within the RR ROW. Supplemental field survey rather than a visual observation would be best to support the Responder’s conclusion. See attached **Exhibit C**.
- Multiple Responder comments...DWR 2008 LiDAR topo vertical accuracy is 0.33 ft.** At this link: [United States Interagency Elevation Inventory \(noaa.gov\)](https://www.noaa.gov/interagency-elevation-inventory) the DWR topo vertical accuracy is published to be 18.3 cm = 7.2 inches = 0.60 ft, not 0.33 ft. as alleged by the Responder. See attached **Exhibit D**.

Responses to WRTD DEIR Comment Letter 8A from Bruce Jacks on June 3, 2021		
Comment No.	FEIR response	Commenter's Rebuttal and/or RFI for supporting information
8a-3	Multiple detention ponds were selected to "spread the land burden" and determined to be equitable	A daisy chain of four detention basins is NOT the most inefficient use of land possible. SP-1B west of SR113 is forced to sacrifice valuable urban land for detention basins. Why not increase the size of the South Regional Pond on agricultural land south of Rd. 25a east of the WRTD? Ag land has market value a fraction of land zoned for urban development. Yes, SP-1B is ag land now, but it will be developed and will lose valuable developable land for detention basins and SD pump station footprint. Alt. & preferred solution. Increase the South Regional Pond to accommodate SP-1B.
8a-4	"Replacement of converted farmland"	Converted farmland cannot be "replaced." There is a finite area of land on the earth. Once ag land grows a house or other urban use, the ag function for that acreage is gone. Recommended. Find another word for "replaced."
8a-6	The change in peak WS to 39.8 does not inundate structures to the north of CR 25a, but is held within the USC with zero freeboard within the channel	1. RFI. <u>SURVEY REQUESTED</u> for the centerline of Rd. 25a at the Promenade Dr. intersection to show that it is at the 100 yr. HGL elev. 39.8 or higher. 2. Higher flows than calculated by Wood Rodgers should be reviewed if the tributary watershed is found to be greater per Exhibit C. See rebuttal to other FEIR responses. 3. Wind and wave action on drainage at the Rd. 25a centerline which also functions as a levee. RFI. Was wind and wave action considered to calculate the 100 yr. HGL el. 39.8 at Rd. 25a? That is one reason to meet the Standard of the Industry one foot minimum freeboard in an open channel.
8a-8	Flowage easement was determined by comparison of 2008 DWR LiDAR topo to remnant Willow Slough overbank flows	1. If the remnant Willow Slough tributary shed area is greater as alleged by the Commenter, north overbank flow will likely be higher, and inundation area larger resulting in a larger inundation easement. 2. <u>2008 DWR topo is 0.60 ft accuracy, not 0.33 ft. See 8a-17c rebuttal.</u> RFI. A spot shot field survey in the orchard and ag fields south of the USC is recommended to confirm the limit of the inundation easement.
Sub-comment 8a-10c	Cost prohibitive to modify the existing culverts under SR113 to provide gravity drainage to SP-1B	It is a multi-faceted cost analysis to support the "cost prohibitive" FEIR response. The current WRTD SD MP has a reduced size gravity SD system in SP-1 on the east side of SR113 and the South Regional Pond is apparently sized to mitigate only WRTD runoff. A reduced size SP-1A storm drainage system forces the reduction of developable land in SP-1B since SP-1B must sacrifice on site land for detention basins and SD pump stations. RFI: A cost comparison is requested to show that new/lower bored & jacked SDs under SR113 with gravity drainage to a larger South Regional Pond to accommodate SP-1B is "cost prohibitive." It is noted that maintenance of one pond (larger SRP) vs the WRTD proposal for three ponds to serve SP-1A and 1B, and no SD pump stations with the gravity option to serve SP-1B is consistent with city design standards.

Comment No.	FEIR response	Rebuttal and/or RFI for supporting information
8a-8	The area south of CR 25a is not a storage pond. Topo accuracy is also mentioned in the response.	The depressed 70+/- ft. segment of the USC south maintenance road at el. 38.14 (record) is concrete armored just west of the triple box culvert headwall. Let's call this area the entry spillway to the USC. The south maintenance road at elev. 38.44 (record) west of the spillway is 0.3 ft. higher than the entry spillway. Picking nits, but spot shots on Sht. 11 of the record drawings opposite the entry spillway show that the ag field south of the USC is lower than elev. 38, so by definition, there may be some minor storage in the ag field. Topo accuracy is critical to identify the limits of the flowage and inundation easement. Two issues cloud the accuracy of the limits of that delineation of that easement: 1. The DWR LiDAR was performed in 2008 with a vertical accuracy of 0.60 ft., not 0.33 ft. as stated by the FEIR response. See Exhibit D. 2. Topography from the USC to 2550+/- ft south has been altered since the 2008 DWR topo. Prior to 2017, aerial photos show row crop land with furrows draining west to east. Post orchard planting around 2017 over the 2,500 ft. sq. quadrant south of the USC, the drainage is within south to north draining rows. <u>In summary, reliance on 2008 LiDAR topography with 0.60 ft accuracy and subsequent altered ag field grades from conversion of row crops to orchard in 2017+/- casts doubt on the accuracy of the mapped overland flowage and inundation easement. RFI: A supplemental spot ground survey is the only way to confirm the limits of the overland flowage and inundation easement.</u>
8a-9	Peak flow in the USC is at el. 39.8 for less than one hour and the length of road that is at el. 39.8 is less than 50 ft.	1. RFI. The centerline of Rd. 25a should be field surveyed to confirm that the crown is not lower than el. 39.8 = 100 yr. HGL in USC. 2. The hydrographs shown in Response 8a-11 show a peak flow of 680+/- cfs which is 13% higher than the SUGA SD MP "guide" Q_{100} of 602 at Rd. 102. While the 680 cfs appears to be about 1 hr on the hydrograph, 600 cfs and > appears to have a duration of 7 hrs. 3. It's not clear if the "USC Upstream" hydrograph is included with the "USC at CR102" hydrograph. If they are independent, then the USC peak flow should combine the two hydrographs from 16:00 to 23:00 hr and the peak would range from 670 to 820+/- cfs during that peak 7 hour period. 4. RFI: <u>Summary...what peak flow duration is correct? The one hour peak cited in the FEIR Response 8a-9 does not seem correct.</u>
Sub-comment 8a-10c	The USC was designed with the assumption that the culverts beneath SR 113 were to remain. It would be cost prohibitive to modify the existing culverts under SR 113	The response states that the USC was designed in 2004 with the assumption that the (shallow) culverts under SR 113 would remain. Well, in 2004 that was a logical decision because I recall that in 2004, SP-1B was not in the General Plan, so agricultural drainage would continue to drain by gravity to shallow Caltrans culverts under SR 113. Fast forward to the Rev. Mar. 2018 SUGA SD MP which as a high altitude guide only, proposes the South Regional Pond east of SR 113. In 2018, the SRP was likely sized by the SD MP to mitigate drainage from SP-1B, but the narrative is silent whether SP-1B drainage would be gravity or pumped from the west to the east side of SR 113. That lack of more detailed SD planning for SP-1B creates pressure on the city to accept less than optimal drainage solution for SP-1B. Daisy chain reduced size detention facilities and SD pump stations where gravity flow can be achieved is not consistent with city design standards nor standard of the industry design to minimize drainage complexity & maintenance cost.

		The commenter repeats for the record that <u>SP-1A drainage system and detention facility should be designed to accept gravity flow without SD pump stations from SP-1B to reduce drainage system complexity and future maintenance cost.</u>
Sub-comment 8a-10c	1. ...the drainage approach summarized in the SP and DEIR is consistent with the city drainage standards. 2. Further, the approach selected by the city has the fewest environmental impacts.	1. Section 4.01 of the City Design Stds. States; <i>"A drainage system which includes unreasonable and intensive maintenance or operational requirements as determined by the City shall be rejected in favor of a drainage system which does not place an excessive burden on the owner/operators of such system."</i> Daisy chain detention basins instead of a large regional facility, and drainage pump stations where gravity flow is possible conflict with Section 4.01 2. The Response does not detail how "the approach selected by the city has the fewest environmental impacts." RFI. Please provide a comparative summary of the impacts for a gravity solution and an expanded SRP versus the selected solution of two additional detention facilities and two pump stations in SP-1B.
8a-11	...these (two) hydrographs show the urban runoff peaking around hour 13, where the peak portion of the Willow Slough overflow is arriving at hour 15 and peaking after hour 18	The commenter notes that Response comment states <i>"where the peak portion of the Willow Slough overflow is arriving at hour 15 and peaking after hour 18"</i> is interpreted to mean <u>that the USC at Rd. 102 hydrograph (portion of the Willow Slough overflow) is independent of the USC Upstream hydrograph and therefore, the two hydrographs must be superimposed to determine the peak flows and duration of the peaks.</u> RFI. Additional text should be added to the FEIR response to clarify Response 8a-11.
8a-13	If storm water was to overtop the road, the water would have to travel more than 1,000 feet in order to enter the subdivision.	1,000 ft to enter the subdivision after overtopping Rd. 25a centerline <u>is not correct.</u> The distance is about 50 ft. to enter the subdivision at Promenade Dr. and 200+/- ft. to the first intersection at Brookside Circle / Post. Pl.  RFI. Is the Commenter missing something or is the 1,000 ft reference a typo?

Comment No.	FEIR response	Rebuttal and/or RFI for supporting information
8a-16	The State's 2008 topographic data was used to verify drainage area contributions for areas draining to the Willow Slough Channel upstream of CR 102.	The Commenter has requested access to the DWR 2008 LiDAR topo but access has not been acknowledged or provided by the city or DWR. Multiple areas identified by the Commenter as tributary to the remnant Willow Slough have been rejected by the FEIR Responses. The Commenter has requested a field walk with Wood Rodgers to peer review questionable areas identified in DEIR comments, but that request has not been acknowledged, accepted, or denied. Recently, an additional 502+/- ac area has been identified north and south of Rd. 27 and west of Rd. 102 that may be tributary to the remnant Willow Slough draining in a south side Rd. 27 ditch to Willow Slough. The Commenter asserts that review of aerial topography must be combined with field review and supplemental field survey to confirm drainage patterns. The commenter requests a peer review field walk of questioned areas. <u>See attached Exhibit A for the possible 502+/- ac added shed to the slough.</u> RFI. The potential addition of 502 ac to the remnant Willow Slough shed should be evaluated by the Responder.
8a-17	Sheds WRR2A, WRR2B, and WRR1 are acknowledged by the Responder to "not flow into the Farmers Central Channel" in Baseline condition. Per Fig. 7 of the Rev. 2018 SD MP, drainage from all three basins will be "directed" to the West Regional Pond with the exception south of SP-1C which will continue to drain south as it does under Baseline conditions.	Commenter's Response. What the Response to 8a-17 does not say is that Shed areas WWR2A, WRR2B and the future undeveloped portion of WRR1B to be "directed" to the West Regional Pond <u>are actually drainage diversions.</u> Areas WWR2A and WRR2B are outside the Woodland Urban Limit Line and as such, drainage diversion affecting those properties are subject to jurisdiction of Yolo County. Section 9-4, Drainage Diversions, from the May 6, 2013 Yolo County Improvement Standards states: <i>"The diversion of natural drainage is allowable only within the limits of the proposed improvement. All Drainage must enter and leave the improved area at its original horizontal and vertical alignment unless an agreement approved by the County Engineer, has been executed with the adjoining property owners or drainage is being discharged into a public right-of way or other existing drainage feature."</i> Since WWR2A currently is a problem as that 40+/- ac shed drains overland into the city at West St., the city obviously wants to solve that problem. The simple solution on paper is to intercept and direct/divert that WWR2A 40+/- ac flow to the WRP. Since WRR2B is a 124+/- ac site in the path between WWR2A and WRR1A, that 124 ac was apparently added to the shed diversion even though WWR2B currently drains south to a 12' x 5' box RR box culvert 0.5 mile south of Rd. 25a. Land leveled farm drainage at WWR2B and WWR1A seems to be worked out between adjacent owners, but to comply with Fig. 7 of the SUGA SD MP, County Des. Std. 9-4 states an agreement approved by the County Engineer must be executed with the adjoining property owners. (WWR2A and WWR2B are both outside the General Plan). A second consideration is: 1. Does WRR2B <u>currently</u> drain through WRR1A, or is it routed around WRR1A to the west limit of the RR? If drainage is routed south at the east property line of WWR2B, it's a no brainer...WWR2B should not be diverted to the WRP. 2. Even if WRR2B currently drains through WRR1A, its current natural discharge is south and ultimately to remnant Willow Slough and County Design Std. Sec. 9-4 is clear that approvals for diversion are required.

		3. Why would the city of Woodland agree to divert 40+/- ac of WWR2A and 124+/- ac of WRR2B ag drainage <u>outside the Urban Limit Line</u> to be added to urban conveyance, urban detention, <u>and downstream city pumping</u> at the South Canal? Conclusion and recommended solution: 1. <u>Field review current drainage of WWR2B.</u> If the city of Woodland wants to accept this drainage, then it should perfect that plan via formal agreement with Yolo County and the owner of SP-1C / Shed WRR1A. It is noted there are multiple parcels and property owners within Shed WWR1A. 2. <u>Alternately,</u> update the Rev. 2018 SUGA SD MP to show that WRR2B should be permanently routed to its current terminal drainage outlet at remnant Willow Slough. 3. <u>The long term solution to drain WRR2A</u> should be considered with a  SWQ and detention at the NE corner of WRR2A and a gravity or pumped small diameter SD connection to the city SD system at Del Mar/ West St.
8a-17c	Contrary to the commenter's assertion, the published vertical accuracy of this 1-foot contour data is +/-0.33 ft.	Commenter's rebuttal. Unless the DWR LiDAR topo has somehow been enhanced, <u>the published DWR accuracy is 18.3 cm = 7.20 inches = 0.60 ft.</u> See attached Exhibit D. RFI. Commenter requests the Responder provide evidence that the DWR 2008 LiDAR topography has 0.33 ft. accuracy.
8a-19	...commenter's intent is to assert that the City should run the 25-year local analysis combined with the 100-year offsite in the Yolo Bypass.	Commenter's clarification response. The intent of the comment was to understand if the local 25-year event would be combined with a Cache Creek levee failure which has overbank flows spreading south of Rd. 25a and the Upper South Canal.
8a-20	...the city has never adopted such an overland release allowance (8" max depth at LP and/or OLR HGL)	Commenter's response.  The city needs to establish a maximum depth std. with OLR at low points which appears to be lacking in the design standards. Rd 25a appears to have been constructed with a 1.74 ft. sump at centerline elev. 39.06 at 630+/- ft. west of Promenade. The USC 100 yr. HGL at the sump, 1200+ ft upstream of the Rd. 102 triple box culvert will surely be higher than 39.8. <u>The 100 yr. Rd. 25a depth of flow will likely exceed 12 inches at centerline and 15 inches at the edge of lane at this low point.</u> RFI: Is this a safe emergency vehicle driving condition?

Comment No.	FEIR response	Rebuttal and/or RFI for supporting information
8a-31	The city has chosen to provide an exception from this design standard (1 ft. freeboard above 100 yr. HGL and 3 ft. at a levee condition). The City Engineer is allowed to make exceptions to design standard.	Commenter's response. This is a very risky decision to operate a drainage channel with zero freeboard. The HGL is calculated using AI which produces mathematical output from input which has variables. <u>That is why open channel design with one foot minimum freeboard is Standard of the Industry.</u> I recommend consideration of the following Corps of Engineers publication at: <u>*ECB 2019-8 Managed Overtopping of Levee Systems -- Category: Guidance (wbdg.org)</u> Once 100 yr. overland flow from the remnant Willow Slough reaches the USC, there will be a dead pool to the south of the USC at elev. 39.8. Typical Norcal winter storms of significant magnitude are coincident with strong south winds that will produce wave action at the Rd. 25a centerline intersection at Promenade Dr. Any anomaly not calculated by the AI program including but not limited to wave action will produce overtopping of Rd. 25a and flooding north via Promenade Dr. Multiple building pads in the subdivision north of Rd. 25a have < the city standard 1.0 ft. protection above the 100 yr. in tract HGL measured to the downstream release 600 ft. north of the USC at the Brookfield Pl/Promenade intersection. Any overtopping of the north USC bank will further reduce flood protection in the subdivision north of Rd. 25a at Promenade Dr. Recommendation. So everyone can sleep well at night during the design storm, the city and its consultant should seriously consider a solution to reduce the 100 yr. HGL in the USC west of Rd. 102 to provide the minimum city one foot freeboard.
8a-31	The City Engineer has determined that the city can adequately protect residents with the current channel and road section.	At the Rd. 25a profile grade sump, 630+/- ft west of Promenade, the north bank of the USC can reasonably be defined as a levee. The 100 yr. water surface in the channel will be significantly higher than the roadside ditch inlet at the south side of Rd. 25a. See pic below. RFI: <u>Why does the USC maintenance road south of this Rd. 25a sump condition not constitute a levee subject to 3 ft. freeboard per city standards?</u>

Responses to WRTP DEIR Comment Letter 8B from Bruce Jacks on June 18, 2021

Comment No.	FEIR response	Rebuttal and/or RFI for supporting information
8b-13	Wood Rogers extracted the (two) hydrographs from the USC at two locations to portray the timing and magnitude of inflows from development to the west and flow from (remnant) Willow Slough overflow	See commenter's response to 8a-11
8b-16	The requested ground elevation map has not been prepared as part of this study.	Commenter's response. 1. This gets back to the accuracy of the 2008 DWR LiDAR topo which is reported by DWR to be 0.60 ft., not 0.33 ft. as reported by Wood Rodgers. See attached Exhibit D. 2. If the topo has 0.60+/- ft. accuracy deviation, the flood easement delineation may be lesser or greater than mapped by Wood Rodgers. 3. Supplemental spot shot topo based on the <u>current and altered ground conditions</u> since +/- 2017 are fundamental data to verify the flood inundation limits south of the USC and west of Rd. 102.

Responses to WRTP DEIR Comment Letter 8C from Bruce Jacks on July 2, 2021

Comment No.	FEIR response	Rebuttal and/or RFI for supporting information
8c-2	This area was examined in more detail using the 2008 DWR LiDAR. The topo mapping shows that water will store in this field adjacent to CR 102 and overflow at the south end to the field across CR 102 before overtopping the raised bank of Willow Slough, and therefore the commenter's referenced 84 (corrected 82+/- ac) acres would not contribute to Willow Slough drainage	Commenter's response. The Responder should not trust <u>examination</u> of an aerial topo map to be the final verdict to determine where drainage ends up and/or releases. From field review is very clear that the 82+/- acre field drains to the ditch along the west CR 102 ROW, thence north in that roadside ditch to the south edge of a farm access road from CR 102, thence north in a pipe with outlet to a 4'+/- ditch cut into the south bank of remnant Willow Slough. At the north end of the CR 102 ditch, a second pipe which appears to be a bit higher drains under CR 102 to outlet at the south side of CR 26a where there is no discernable roadside ditch. See Attached Exhibit B <u>Summary. From field review, at least some portion, an estimated 50% or more of drainage from the 82 acres appears to drain to the remnant Willow Slough.</u> RFI. A request is made for the Responder to field verify the discharge location of the subject 82+/- acres and evaluate the percentage of design storm flow that discharges to remnant Willow Slough.

Comment No.	FEIR response	Rebuttal and/or RFI for supporting information
8c-5	The secondary overland release elevation is below the finish floor elevations for all homes in Spring Lake	Commenter's rhetorical response. 1. The response is referring to the OLR/ low point in Rd. 102 approximately 1250 ft. south of Farmers Central Rd. The lowest pads west of the Rd. 102 low point are record 37.7. The Rd. 102 centerline has multiple low point spot shots of 37.6 for a 200+/- ft. long weir overflow. 2. The Response offers no depth of flow analysis for the Rd. 102 OLR at its low point although the upstream tributary area is significant. 3. Hopefully, future development construction documents will have better review to ensure that all building pads have the city standard 1.0 ft. height above the 100 yr. and OLR water surface.
8c-7	The commenter is not correctly representing the accuracy of the data used south of CR 25a. The 2008 LiDAR was processed to provide on-foot contour intervals with a vertical accuracy of 0/-0.33 ft.	Commenter's response. In fall 2017, the commenter requested that DWR release topo contours covering the Feb. 2017 SUGA SD MP watershed. A three foot contour map was released. After further conversation with DWR, the agency agreed to "process" a limited area including SP-1C west of the RR to provide one foot contours. The vertical accuracy of the LiDAR topo is listed on the website to be 18.3 cm = 7.2 inches = 0.60 ft. See Exhibit D. <u>Stereo photo aerial topo</u> at high altitude with 2 ft. accuracy contours for example, can have one foot contours generated, but the +/- one foot accuracy for the flown 2 ft. contours does not change or improve to 0.5 ft (one half contour interval). RFI: <u>If the DWR site says the 2008 LiDAR accuracy is 0.60 ft. then how can the vertical accuracy improve to 0.33 ft by "processing"?</u>
8c-11	Furthermore, the description of the representation of the WRR2A and WRR2B sheds creating a growth inducing environmental impact is incorrect. Flows from all land outside of the city in an undeveloped state must be directed through city facilities safely and must be accounted for in an undeveloped state.	Commenter's response. 1. The Response infers lands west of the RR currently flow from west of the RR to the vicinity of the West Regional Pond and that they must be "directed" through city facilities safely and accounted for in an undeveloped state. 2. <u>That statement is not correct.</u> Flows west of the RR do not currently drain east under the RR until they reach the 12' x 5' box culvert 0.5 mile south of Rd. 25a. To be "directed" to city facilities, drainage from WRR2A and WRR2B and the SP-1C portion of WRR1 must be <u>diverted</u> to city facilities east of the RR and East St. 3. <u>If a legal challenge was initiated, it could be strongly argued that provision of drainage diversion and conveyance for WRR2A and/or WRR2B to the West Regional Pond is growth inducing.</u> The reason...a drainage connection at the west boundary of WRR1 to drain at least the ag condition for WRR2A and/or WRR2B provides a drainage solution that is far less costly than improvement of a 2.05 mile outfall channel from the SE corner of WRR2B south to the RR culvert 0.5 mile south of Rd. 25a. When SP-1C is developed, ag drainage from the west (WRR2B) should be routed south to its current disposal at remnant Willow Slough. 4. RFI. <u>Why would the city want to pump any ag drainage from WRR2B which currently drains south to the remnant Willow Slough?</u>

Comment No.	FEIR response	Rebuttal and/or RFI for supporting information
8c-13	The city reviewed this (north bank) location and found that the north bank of the Willow Slough upstream of the diversion point is uniform in elevation between the railroad and the diversion point. A low point was not observed.	Commenter's response.  "Observation" is not adequate in the real world. The south bank of Willow Slough likely elevated by the COE in 1947-48, appears to be higher than the north bank. 100 yr. flows in Willow Slough are mapped by FEMA at and upstream of the RR. It is entirely possible that north overbank flow will occur between the RR and the Willow Slough Diversion ending up in the remnant Willow Slough channel. RFI. <u>Supplemental topography in lieu of conclusion by "observation" is requested to support the Response. Ground spot survey of the yellow outlined area will answer this question.</u>
8c-13	Per Figures 4 and 7 of the 2018 SDFMP SUGA, sheds WRR1, WRR2A and WRR2B drain eastward and cross CR 102 without entering Willow Slough	Commenter's response. The city and its drainage consultant need to field walk the area west of the RR including the drainage interaction of WWR2A and WWR1 from Rd. 24a to the 12 ft x 5 ft. RR box culvert 0.5 mile south of Rd. 27 to observe actual drainage field conditions for Baseline conditions. <u>In the Figure 4, Baseline Condition reference, the Responder is not correct.</u> Shed WRR1 drains into the city at West St. and WRR2A and WRR2B definitely drain south along the west RR ROW to Willow Slough in the Baseline condition. <u>In Figure 7, Ultimate Conditions, the Responder is correct, but only because Sheds WRR1, WRR2A, and WRR2B have been conceptually diverted to the West Regional Pond. Since Areas WRR2A and WRR2B are outside the Woodland Urban Limit Line, diversion would appear to require compliance with Yolo County Improvement Standards Section 9-4, Drainage Diversions.</u> <u>Addressing growth inducing impact; providing a drainage connection for lands outside the General Plan to the WRP as shown in the SUGA SD MP provides incentive for land speculation and a General Plan Amendment application. Why is this an incentive? Because the city has provided a drainage solution, i.e. a planned drainage connection to city facilities for WRR2A and WRR2B once SP-1C (WWR1) is connected to the West Regional Pond.</u> RFI. It is recommended that a land use attorney be consulted on this issue to determine if diversion of county drainage to city facilities is growth inducing.
8c-17b	Wood Rodgers' designed the grate for 50% blockage, as is has twice the open area as needed for full flow capacity.	Commenter's response. The city of Woodland Engineering Design Stds are silent regarding the percentage of blockage at grates for design capacity. COW design stds 4.01 states "Comply with the Yolo County City/County Drainage Manual, April 2009, for situations not covered by this section." The April 2009 Yolo County Manual is silent regarding percentage of blockage of grates, but...the Yolo County Improvement Stds. 9-15B require "<u>Trash racks shall be designed such that the ratio of trash rack open area to drain opening is at a minimum of four to one (4:1).</u>" RFI: This appears to be an area where the City Engineer should formally approve a grate inlet/blockage standard to be applied to: 1. Box culvert and pipeline inlets with specified % blockage applied for vertical and angled grates 2. Field grate inlets with specified % blockage applied for angled and flat grates 3. City Design Standards should be updated to reflect a % blockage standard for inlet grates.

Response 2.2.16 Correspondence from Bruce Jacks Received July 22, 2023

2.2.16 B. Jacks correspondence submitted July 22, 2021

All runoff from the 1,117+/- acres will flow under the railroad approximately 1,500 ft north of the main Willow Slough channel and will flow southwards along the eastern side of the RR tracks and enter the main Willow Slough channel

Commenter's response.

Without permission and access to personally field review the discharge of a reported ditch at the east RR ROW with discharge to Willow Slough, the responder is forced to accept the Responder's comment of its record of a field walk and observation (no field survey) of the drainage pattern.

If the 1,117+/- acres does discharge to Willow Slough upstream of the diversion structure, that does not disprove the allegation of the Commenter that north overbank flow can occur between the RR and the diversion structure.

A previous Responder comment stated that the north bank was "observed" to be not depressed and would not facilitate overbank flow.

RFI. Did the Responder field walk the entire length of the RR ROW from Rd. 27 south to the 24'+/- RR trestle to locate additional culverts? The path of discharge from the 54" culvert at SR 113 is not clearly evident from aerial photo and no supporting DWR topo with shed delineation has been made available in the SD MP or for review at the city PW counter.

A significant system of irrigation channels east of the RR is evident which may be draining some percentage of the RR trestle conveyance from sheds east and west of SR 113 to the remnant Willow Slough. See pic below.

RFI / Survey request. The Commenter reiterates that a field ground survey of the north and south top of banks of Willow Slough including several full channel cross sections from the RR to the diversion structure with a hydraulic profile analysis will prove or disprove whether the 100 yr. storm overtops the Willow South north bank and spills to the remnant Willow Slough channel.

RFI. In addition, a field walk of the RR ROW from Rd. 27 to Willow Slough is requested if not previously completed, and a full report of all culvert crossings and sub-drainage shed delineation + final discharge location whether to Willow Slough or remnant Willow Slough is critical to calculation of remnant Willow Slough north bank overflow at Rd. 102.

End of Commenter's FEIR responses

Respectfully submitted,

Bruce Jacks

Aug. 30, 2023

Below: From aerial photo and field observation; 102+/- ac north of CR 27 & west of CR 102 drains north to south at a culvert crossing Rd. 27 at 1800+/- ft. west of CR 27, thence draining west in a ditch to Willow Slough. An additional 400+/- ac south of CR 27 & west of CR 102 appear to drain north, thence west in the CR 27 ditch to the remnant Willow Slough. Total estimated tributary area to remnant Willow Slough north & south of CR 27 not identified by the SUGA SD MP is approximately 502+/- ac.

Below: Yellow polygon is path of culvert draining N to S near low point in CR, thence in a ditch south of Rd 27 to discharge at remnant Willow Slough. Shed est. 502+/- ac

EXHIBIT B

Subject: W RTP Rebuttal to DEIR Response

Remnant Willow Slough Additional shed area omitted by Wood Rodgers' delineation

1. Area A. 1117+/- ac. Wood Rogers alleges this area drains under the RR, thence SE along the RR ROW or private ditch east of the RR ROW with discharge to Willow Slough. The commenter requested a field walk and supplemental field surveys to support Wood Rodgers' statement.
2. Area B. 82+/- ac. Wood Rodgers alleges this crosses Rd. 102 before reaching remnant Willow Slough. Field review confirms a culvert discharging north to Willow Slough at the west side of Rd. 102.
3. Area C. 502+/- ac. New area identified by the commenter as tributary to remnant Willow Slough. Field survey and verification or denial is requested.
4. Total A+B+C = 1701+/- ac = 2.66+/- sq. miles added shed.

Re: W RTP rebuttal to “Response to 8a-17a

The response states the 2008 DWR LiDAR topography has a vertical accuracy of +/-0.33 ft or 4 inches. This is not correct. From the website link below, the vertical accuracy is 7.20 inches or 0.60 ft.

2008 CA DWR LiDAR topographic Survey

[United States Interagency Elevation Inventory \(noaa.gov\)](https://www.noaa.gov/data/interagency-elevation-inventory)

Vertical accuracy is 18.3 cm = 7.20 inches = 0.60 ft.

RESOLUTION NO. PC23- 08

A RESOLUTION OF THE PLANNING COMMISSION OF THE CITY OF WOODLAND RECOMMENDING CITY COUNCIL TAKE THE FOLLOWING ACTIONS: CERTIFY THE WOODLAND RESEARCH AND TECHNOLOGY PARK SPECIFIC PLAN EIR; ADOPT THE WOODLAND RESEARCH AND TECHNOLOGY PARK SPECIFIC PLAN; APPROVE AMENDMENTS TO THE CITY OF WOODLAND GENERAL PLAN; APPROVE PREZONING FOR THE SPECIFIC PLAN AREA AND AMENDMENTS TO THE CITY OF WOODLAND ZONING CODE AND ZONING MAPS; APPROVE THE PUBLIC INFRASTRUCTURE FINANCING PLAN AND NEXUS STUDY FOR THE PROJECT; REQUEST THE YOLO LOCAL AGENCY FORMATION COMMISSION PROCESS AN ANNEXATION APPLICATION FOR THE WOODLAND RESEARCH AND TECHNOLOGY PARK SPECIFIC PLAN PURSUANT TO THE CORTESE-KNOX-HERTZBERG LOCAL GOVERNMENT REORGANIZATION ACT OF 2000 AND AUTHORIZE AND DIRECT THE CITY MANAGER TO FILE AN ANNEXATION APPLICATION WITH THE YOLO LOCAL AGENCY FORMATION COMMISSION; APPROVE AND AUTHORIZE EXECUTION OF DEVELOPMENT AGREEMENTS BY AND BETWEEN THE CITY OF WOODLAND AND EACH OF THE PROPERTY OWNERS WITHIN THE WOODLAND RESEARCH AND TECHNOLOGY PARK SPECIFIC PLAN AREA

APN: 041-080-022; 041-020-010, -017, -030, -031, -042, -043

WHEREAS, On March 6, 2017, the City received Planning Application PLNG170017 for the Woodland Research and Technology Park ("WRTP") Specific Plan ("Specific Plan"). The project, initiated by the majority landowner within the Specific Plan area boundary and in communication with the remaining three property owners, encompasses 351 acres southwest of Farmer's Central Road and Harry Lorenzo Avenue; and

WHEREAS, the Project Area is located outside of but adjoins the current corporate boundary of the City; and

WHEREAS, the City adopted an extensive General Plan update in May 2017, which designated the 351 acre project site as Specific Plan Area 1A (SP-1A); and

WHEREAS, the 2035 General Plan envisions SP-1A (and SP-1B) to develop as "*mixed-use neighborhoods anchored by a research and technology business park in the 'Southern Gateway';*" and

WHEREAS, General Plan Land Use Policy 2.L.2 directs the development of SP-1A as a mixed-residential district anchored by a research and technology business park in the South Gateway area at County Road 25A and SR 113 and assumes 2.16 million square feet of nonresidential building space and 1,600 housing units within the new growth area; and

WHEREAS, the proposed Woodland Research and Technology Park Specific Plan is consistent with these assumptions, and provides the development framework for a mix of land uses including a business/technology park, office, retail and housing of varying densities; and

WHEREAS, the proposed Prezoning of the Project Area is consistent with the 2035 General Plan policies, vision and development assumptions for the SP-1A Specific Plan area; and

WHEREAS, the City determined that the Project is subject to the California Environmental Quality Act ("CEQA"), Public Resources Code Section 21000 et seq.; and

WHEREAS, pursuant to the California Environmental Quality Act (CEQA), City conducted environmental review of the WRTP Specific Plan, prepared and duly processed an Environmental Impact Report ("Specific Plan EIR"), consisting of a Draft EIR and a Final EIR Response to Comments, and prepared a Mitigation Monitoring and Reporting Program for implementation of mitigation measures specified in the EIR ("Specific Plan MMRP") (the Specific Plan EIR and Specific Plan MMRP together, the "Specific Plan CEQA Documentation"); and

WHEREAS, the proposed amendment to the General Plan will allow for consistency with the proposed land use designations for the Project Area in order to facilitate the orderly development of a mixed-use project in the WRTP Specific Plan area including a business/technology park, office, retail and housing of varying densities; and

WHEREAS, a Notice of Public Hearing was mailed to properties within a 600-foot radius of the WRTP Specific Plan Area and to other parties on August 4, 2023, and duly published in the Woodland Daily Democrat on August 6, 2023, providing notice of the Planning Commission's August 17, 2023, public hearing regarding the WRTP Specific Plan including consideration of the WRTP EIR, General Plan Amendment, Rezoning, Public Infrastructure Financing Plan, Nexus Study and Capital Improvement Program, proposed Annexation, and Development Agreements (together, the "WRTP Approvals"); and

WHEREAS, the Planning Commission held a duly-noticed public hearing on August 17, 2023, as required by law to consider all of the information presented by staff, information presented by the Owners/Applicants, and public testimony presented in writing and at the meeting.

NOW, THEREFORE, BE IT RESOLVED, that the Planning Commission of the City of Woodland, based on facts in the staff reports, written and oral testimony, and exhibits presented, makes the following findings of fact and adopts the following recommendations to the City Council:

A. CEQA

1. The Planning Commission has reviewed and considered the information contained in the WRTP Specific Plan EIR, and written and oral comments regarding environmental effects, prior to acting on the WRTP project approvals. Each of the following Commission findings is supported by and elaborated in the attached CEQA Findings.
2. Based on all written and oral evidence and testimony in the record, the Specific Plan EIR (a) complies with the requirements of CEQA and adequately identifies and considers all potential significant environmental effects of the proposed General Plan Amendment, and (b) reflects the City's independent judgment and analysis.
3. The Specific Plan EIR identified certain environmental effects of the WRTP Specific Plan that may remain significant and unavoidable despite recommended mitigation measures. However, certain considerations and public benefits of the WRTP Approvals outweigh these unavoidable adverse effects and justify and support accepting those effects and approving the WRTP Approvals, as described in the Statement of Overriding Considerations included in the CEQA Findings (Exhibit B).

4. The Planning Commission has considered additional mitigation measures that might reduce or avoid such significant impacts, and the Commission has determined that they are either not available or not feasible. The Specific Plan EIR evaluated alternatives to the WRTP Specific Plan that might reduce or avoid such significant impacts, which the Planning Commission has considered, and the Commission has determined that there are no feasible alternatives that accomplish all or most of the objectives for the WRTP Specific Plan, and the WRTP Specific Plan is the best alternative that can be feasibly implemented taking into consideration the relevant economic, legal, social, technological and other reasons and public benefits of the WRTP Specific Plan Project.

5. The WRTP Specific Plan MMRP describes the mitigation measures recommended by the Specific Plan EIR to reduce and avoid potential significant effects of the WRTP Specific Plan and adequately identifies the appropriate timing and enforcement details for each to ensure each mitigation measure is implemented.

6. The Planning Commission recommends that the City Council (a) adopt and make the CEQA Findings and certify the Specific Plan EIR as legally adequate under CEQA as to each and all of the WRTP Approvals, (b) determine that identified considerations and public benefits outweigh significant unavoidable adverse environmental effects and that mitigation measures and alternatives which might reduce or avoid such effects are not feasible, and adopt the Statement of Overriding Considerations to support its approval of each of the WRTP Approvals, and (c) adopt the Specific Plan MMRP and incorporate its provisions as conditions of approval for each of the WRTP Approvals to the extent appropriate.

B. GENERAL PLAN AMENDMENTS

1. The WRTP General Plan Amendment (Exhibit A) appropriately amends the Woodland General Plan Land Use Diagram to reflect the intentions of the WRTP Specific Plan and ensure consistency between the General Plan and the proposed WRTP Specific Plan, including consistency between the General Plan Land Use Diagram and the Specific Plan Land Use Designation.

2. The Planning Commission recommends that the City Council adopt the WRTP General Plan Amendment to amend the Woodland General Plan to ensure consistency between the proposed WRTP Specific Plan and the General Plan.

C. SPECIFIC PLAN

1. The objectives of the WRTP Specific Plan, its concepts, policies and design guidelines are consistent with the Woodland General Plan as amended by the WRTP General Plan Amendment.

2. The Planning Commission recommends that the City Council adopt the WRTP Specific Plan in substantially the form provided with the agenda materials accompanying this Resolution.

D. PREZONING

1. The Specific Plan Prezoning, including amendments to the Zoning Map (Exhibit C), are in general conformance with the Woodland General Plan as amended by the WRTP General Plan Amendment, and the public convenience and general welfare require adoption of the proposed amendments.

2. The WRTP Specific Plan Rezoning implements the policies, concepts and design guidelines of the WRTP Specific Plan, through new zoning district classifications and regulations, and the amendments to the Woodland Zoning Map are consistent with the Specific Plan Land Use Designations.

3. The Planning Commission recommends that the City Council adopt the WRTP Rezoning Ordinance.

E. PUBLIC INFRASTRUCTURE FINANCING PLAN AND NEXUS STUDY

1. The findings, conclusions, and methodologies set forth in the Finance Plan are consistent with the 2035 General Plan.

2. The Woodland Research and Technology Park Specific Plan Public Facilities Finance Plan and Development Impact Fee Nexus Study (the "Finance Plan") sets forth a rational, fair, and equitable method by which the cost of necessary public infrastructure and facilities in the Woodland Research and Technology Park Specific Plan Area (the "Plan Area") is to be allocated to the various land uses in the Plan Area.

3. The Finance Plan properly and reasonably allocates the burden of financing Plan Area public infrastructure and facilities among development projects within the Plan Area. The burden is allocated in a manner that achieves proper proportionality in light of the impacts that may reasonably be anticipated from those projects taking into account the terms of the Development Agreements as agreed to between the City and each of the property owners that will pay the RTIF.

4. The Finance Plan: (1) properly and reasonably identifies the purpose of the fee and its intended use; (2) establishes a reasonable relationship between the fee's use and the type of development project on which the fee is imposed consistent with the terms of the Development Agreements; (3) establishes a reasonable relationship between the need for the public infrastructure and facilities and the type of development project on which the fee is imposed; and (4) forms the basis for the finding that the imposition of the fee described therein is necessary in order to protect the public health, safety, and welfare within the Plan Area and the city.

5. The Planning Commission recommends that the City Council approve the WRTP Finance Plan in substantially the form provided with the agenda materials accompanying this Resolution.

F. DEVELOPMENT AGREEMENTS

1. Each of the proposed Development Agreements are consistent with the General Plan and will not be detrimental to the health, safety, and general welfare of persons residing in the immediate area of the development nor will any of the Agreements be detrimental or injurious to the general welfare of the residents of the City as a whole.

2. The Development Agreements will not adversely affect the orderly development of property or the preservation of property values.

3. Each of the Development Agreements are consistent with the provisions of Government Code sections 65864 through 65869.5.

3. The Planning Commission recommends that the City Council approve each of the Development Agreements in substantially the form provided with the agenda materials accompanying this Resolution with the following property owners within the WRTP Specific Plan Area: Anne-Elizabeth Beeman and Bullseye Land Company; Costalotta Partners, LLC; Sewmawpaw Woodland LLC; Spencer Rev. Living Trust; and Thomas C. Heaton and Olga Chengaeva.

G. ANNEXATION

1. The WRTP Specific Plan, General Plan Amendment, Rezoning and proposed Annexation (Exhibit D) are consistent with the General Plan policies and growth assumptions which include development outside of the current municipal boundary but within the 2006 voter approved Urban Limit Line along the west side of State Route 113, including the development of SP-1A as a mixed-residential district anchored by a research and technology business park in the South Gateway area at County Road 25A and SR 113 and assumes 2.16 million square feet of nonresidential building space and 1,600 housing units.

2. The Planning Commission recommends that the City Council request Yolo LAFCo process an annexation application for the WRTP Specific Plan pursuant to the Cortese-Knox-Hertzberg local government reorganization action of 2000 and authorize and direct the City Manager to file an annexation application with the Yolo LAFCo.

PASSED AND ADOPTED, by the Planning Commission of the City of Woodland at a regular meeting of the Planning Commission held on the 17th day of August 2023, by the following vote:

AYES: *Holt, Lizarraga, Lopez, Ortiz, Smith*
NOES: *none*
ABSTAIN: *none*
ABSENT: *Harris, McLaughlin*

Marco C. Lizarraga, Chairperson

ATTEST:

Exhibit C – Rezoning

Exhibit D – Annexation Area

TO: THE HONORABLE MAYOR AND CITY COUNCIL
AGENDA: City Council Regular Meeting
DATE: September 5, 2023
ITEM #: I.14
SUBJECT: Introduce and waive the first reading of an Ordinance revising Sections within Chapter 9.28, "Offenses - Miscellaneous," to Title 9 of the Woodland Municipal Code

Recommendation for Action: Staff recommends that the City Council introduce and waive the first reading of an ordinance of the City Council of the City of Woodland, California revising sections within Chapter 9.28, "Offenses-Miscellaneous," to Title 9 of the Woodland Municipal Code.

Staff Contact:

Derrek Kaff, Chief of Police, 530-661-7865, Derrek.Kaff@cityofwoodland.org

Background:

The purpose of this agenda item is to present proposed changes and revisions to several City Ordinances that have been identified by a tenured Police Officer during a comprehensive review of the City Code. The revisions aim to address inconsistencies within the existing City Ordinances, ensuring alignment with current laws and enhancing clarity for both residents and city personnel. The proactive review conducted by the Police Officer demonstrates the City's commitment to upholding the highest standards of legal compliance, accountability, and effective governance.

Discussion:

The review revealed inconsistencies within City Ordinances, particularly concerning Ordinance 9.28.290. This section designated certain violations as infractions for the first offense and as misdemeanors for subsequent violations, leading to discrepancies in enforcement, as exemplified by Ordinance 9.28.070 and Ordinance 9.28.150.

To address these inconsistencies, several amendments are proposed. First, the violations covered under Ordinance 9.28.070 and Ordinance 9.28.280 are proposed to be removed from the list of offenses in Ordinance 9.28.290(C)(1), aligning with their direct classification as misdemeanors. Secondly, uniform language from Ordinance 9.28.170(C) has been incorporated into relevant ordinances listed in Ordinance 9.28.290(C)(1), ensuring consistent enforcement. Lastly, subsections in ordinances that specified infractions, such as Ordinance 9.28.150 and Ordinance 9.28.180, are removed to eliminate conflicting classifications.

Conclusion:

Staff recommends that the City Council introduce and waive the first reading of an ordinance of the City Council of the City of Woodland, California revising sections within Chapter 9.28, "Offenses-Miscellaneous," to Title 9 of the Woodland Municipal Code.

Chapter 9.28

OFFENSES—MISCELLANEOUS

Sections:

- 9.28.010 Drunkenness.
- 9.28.020 Firearms—Discharge.
- 9.28.030 Gambling.
- 9.28.040 Gas mains or pipes—Liability of owners for proper maintenance.
- 9.28.050 Immoral and lewd conduct—Maintaining house, room, etc., where conduct is permitted.
- 9.28.060 Possession of alcoholic beverages prohibited on premises of retail package off-sale alcoholic beverage licensee.
- 9.28.070 Rifles, pistols, etc., propelled by air, gas, etc.; bows and arrows.
- 9.28.080 Definitions for curfew provisions.
- 9.28.090 Loud, unnecessary, etc., noises prohibited—Enumeration of such noises.
- 9.28.100 Inhaling, etc., certain substances prohibited.
- 9.28.110 Consumption of alcoholic beverages in City parks prohibited without permit.
- 9.28.120 Consumption of alcoholic beverages in playgrounds and swimming pool areas in City parks prohibited—Signs.
- 9.28.130 Fortunetelling.
- 9.28.140 Restricted use of bicycles, coasters, rollerskates, skateboards or similar devices.
- 9.28.150 Parks and greenways—Driving or parking motor vehicles upon or across.
- 9.28.160 Park curfew.
- 9.28.170 No parking adjacent to parks during curfew.
- 9.28.180 Prohibition of sound amplification in parks.
- 9.28.190 Permit application for sound amplification in parks.
- 9.28.200 Injuring or interfering with police dogs prohibited.
- 9.28.210 Prohibition against loitering in no-cruising zone.
- 9.28.220 Public places—Alcoholic beverages.
- 9.28.230 Smoking.
- 9.28.240 Limitations to access to tobacco products and e-cigarettes.
- 9.28.250 Tobacco-free and e-cigarette-free zones at City parks and recreation facilities.
- 9.28.260 Adoption of Yolo County Code relating to tobacco retail permits.
- 9.28.270 Regulation of use of Woodland Cemetery.
- 9.28.280 Prohibition on public urination and defecation.
- 9.28.290 Prohibited activities in City parks.

9.28.010 Drunkenness.

- A. In Public Places. It is unlawful for any person in an intoxicated condition to appear or be in or upon any public highway, street, alley, square or public place in the City. For the purposes of this section, “intoxicated” means a person under the influence of intoxicating liquor, any drug, controlled substance, toluene, or any combination of any intoxicating liquor, drug, controlled substance, or toluene, in a condition that he or she is unable to exercise care for his or her own safety or the safety of others.

Note: “Intoxicated” is defined as in California Penal Code Section 647(f) regarding disorderly conduct.

- B. On Private Premises. It is unlawful for any person in an intoxicated condition to intrude upon or be in or remain in or upon the premises or property of another, without the express permission and consent of the person lawfully in the possession of such premises or property. For the purposes of this section, “intoxicated” means a person who is under the influence of intoxicating liquor, any drug, controlled substance, toluene, or any combination of any intoxicating liquor, drug, controlled substance, or toluene, in a condition that he or she is unable to exercise care for his or her own safety or the safety of others.

Note: “Intoxicated” is defined as per California Penal Code Section 647(f) regarding disorderly conduct.

(Prior code §§ 15-1, 15-2)

9.28.020 Firearms—Discharge.

It is unlawful for any person to unnecessarily discharge any firearms of any nature whatsoever within the limits of the City, without first procuring a written permit to do so from the Chief of Police. The foregoing provisions as to the use of firearms shall not apply to:

- A. Peace officers or soldiers in the discharge of their official duties and while in the exercise of reasonable care;
- B. A person using firearms in necessary self defense;
- C. Persons conducting a shooting gallery who have first procured a license therefor in accordance with the license ordinance of the City; and
- D. Shooting clubs where such shooting clubs are properly licensed by the City. (Prior code § 15-3)

9.28.030 Gambling.

- A. Prohibited—Exception. It is unlawful for any person, within the corporate boundaries of the City, to deal, play or carry on, open or cause to be opened, or conduct, either as owner, employee or as an individual, any game of draw poker, solo or any other games played with cards, dice or any device, for money, checks, credits or other representative of value; provided, that it is not unlawful to play in any duly licensed cigar store, card room, soft drink establishment or clubroom for not more than one cigar or for not more than one drink, per game for each player actually engaged in the game.
- B. Permitting Building, Room, Etc., to Be Used for Gambling. It is unlawful for any person or club, within the boundaries of the City, either as owner, lessee, agent or otherwise, to conduct a building, room, space or enclosure, for the purpose of carrying on games played by cards, dice or any device for money, checks, credit or other representative of value, or to knowingly permit any person to play any games played with cards, dice or any device, for money, checks, credit or other representative of value, contrary to the provisions of the preceding section in any building, room, space or enclosure occupied by such person or club. (Prior code §§ 15-4, 15-5)

9.28.040 Gas mains or pipes—Liability of owners for proper maintenance.

It shall be the duty of any person owning, maintaining or operating any gas pipes or gas mains beneath the surface of any public street to prevent leaks in such pipes or mains and to repair the same immediately. In the event that any person refuses or neglects to repair such leaks, it is lawful for the City to make or cause to be made the necessary repairs thereto, and the cost and expense of making the repairs shall be paid to the City by the person owning, maintaining or operating the gas pipes or gas mains. (Prior code § 15-6)

9.28.050

9.28.050 Immoral and lewd conduct—Maintaining house, room, etc., where conduct is permitted.

It is unlawful for any person to keep, conduct or maintain, or aid or assist in keeping, conducting or maintaining within the limits of the City, any house, room or apartment in which persons of lewd or immoral character habitually congregate, assemble or meet, or to which such persons frequent or visit in any considerable numbers, for the purpose of eating or drinking therein. (Prior code § 15-8)

9.28.060 Possession of alcoholic beverages prohibited on premises of retail package off-sale alcoholic beverage licensee.

- A. This section may be cited as the “illegal consumption of alcoholic beverages ordinance.”
- B. No person shall consume any alcoholic beverage, as defined in Business and Professions Code Section 23004, on or in any posted parking lot immediately adjacent to the posted premises of any retail package off-sale alcoholic beverage licensee licensed pursuant to Division 9 (commencing with Section 23000) of the Business and Professions Code, or on any public sidewalk immediately adjacent to the licensed and posted premises. Any person violating the provisions hereof shall be guilty of an infraction.
- C. As used in subsection B above, “posted premises” means those premises which are subject to licensure under any retail package off-sale alcoholic beverage license, the parking lot immediately adjacent to the licensed premises and any public sidewalk immediately adjacent to the licensed premises on which clearly visible notices indicate to the patrons of the licensee and parking lot and to persons on the public sidewalk, that the provisions of subsection B above are applicable.
- D. The provisions of this section shall not apply to a private residential parking lot which is immediately adjacent to the posted premises, but nothing in this subsection shall affect the power of the City to regulate the possession of an opened alcoholic beverage in any public place or in a place open to the public. (Prior code § 15-9)

9.28.070 Rifles, pistols, etc., propelled by air, gas, etc.; bows and arrows.

- A. No person or persons shall at any time fire or discharge, or cause to be fired or discharged, any air gun, “BB” gun, pellet gun, cannon, any air- or gas-propelled rifle or pistol of any kind, or any sling shot, within the limits of the City.
- B. No person or persons shall at any time fire or discharge, or cause to be fired or discharged, any bow or other device capable of propelling an arrow, within the limits of the City, except as provided hereinafter:
 - 1. Where use of such a bow or other device is an approved part of a regularly scheduled program sponsored and supervised by the City Parks and Recreation Department; or
 - 2. Where use of such a bow or other device is an approved part of a regularly scheduled program sponsored and supervised by the Woodland Unified School District.
- C. Violation—Forfeiture and Destruction of Rifle, Pistol, Bow, Etc. The judge before whom any person is tried for a violation of any provision of the preceding section may, in his or her discretion, upon the conviction of the accused, order the forfeiture of the air gun, “BB” gun, pellet gun, cannon, air- or gas-propelled air rifle, sling shot, or bow. Such forfeited device may be destroyed by the Police Department or sold and the proceeds placed in the general fund of the City.

- D. Fine and Imprisonment. Any person or persons, who shall violate any of the provisions of this section, shall be guilty of a misdemeanor and upon conviction thereof shall be punished in accordance with Section 1.08.070 (General penalty—Continuing violations—Aiding or abetting) of this code. (Prior code §§ 15-19—15-21)

9.28.080 Definitions for curfew provisions.

A. For purposes of this section:

1. “Curfew hours” means the period from 10:00 p.m., any evening of the week, or 11:00 p.m., daylight savings time, until 6:00 a.m. the following day.
2. “Emergency” means an unforeseen combination of circumstances or the resulting state that calls for immediate action. The term includes, but is not limited to, a fire, natural disaster, an automobile accident or any situation requiring immediate action to prevent serious bodily injury or loss of life.
3. “Establishment” means any privately owned place of business operated for a profit to which the public is invited, including, but not limited to, any place of amusement or entertainment.
4. “Guardian” means: (a) a person who, under court order, is the guardian of a minor; or (b) a public or private agency with whom a minor has been placed by the court.
5. “Minor” means any person under 18 years of age.
6. “Parent” means a person who is a natural parent, adoptive parent, or step-parent of the minor.
7. “Public place” means any place to which the public or a substantial group of the public has access and includes, but is not limited to, streets, highways, and the common areas of schools, hospitals, apartment houses, office buildings, transport facilities, and shops.
8. “Responsible adult” means a person 18 years of age or older, authorized by a parent or guardian to have the care and custody of a minor.
9. “Serious bodily injury” means bodily injury that creates a substantial risk of death or that causes death, serious permanent disfigurement or protracted loss or impairment of the function of any bodily member or organ.

B. Curfew Restrictions.

1. It is unlawful for any minor to be present in any public place or on the premises of any establishment within the City of Woodland during curfew hours.
2. It is unlawful for any parent or guardian of a minor to knowingly permit, or by insufficient control to allow, the minor to be present in any public place or on the premises of any establishment within the City during curfew hours.
3. It is a defense to prosecution under subsection (B)(1) or (2) of this section that the minor was:
 - a. Accompanied by the minor’s parent or guardian, or by a responsible adult;
 - b. On an errand at the direction of the minor’s parent or guardian, or the responsible adult, without any detour or stop;
 - c. In a motor vehicle involved in interstate travel;
 - d. Engaged in an employment activity, or going to or returning home from an employment activity, without any detour or stop;

9.28.090

- e. Involved in, or acting in response to, an emergency;
 - f. On the sidewalk abutting the minor's residence;
 - g. Attending an official school, religious, or other recreational activity supervised by adults and sponsored by the City of Woodland, a civic organization, or another similar entity that takes responsibility for the minor;
 - h. Exercising First Amendment rights protected by the United States Constitution; or
 - i. Emancipated pursuant to law.
4. Before taking any enforcement action under this subsection, a police officer shall ask the apparent offender's age and reason for being in the public place or on the premises of the establishment during curfew hours. The officer shall not issue a citation or make an arrest under this section unless the officer reasonably believes that an offense has occurred and that, based on any responses and other circumstances, no defense under subsection (B)(3) of this section is present or applicable.
5. Each violation of this section shall constitute a separate offense.
- C. Curfew—Penalty.
- 1. Any minor violating the provisions of subsection B of this section shall be guilty of a misdemeanor, and shall be dealt with in accordance with juvenile court law and procedure.
 - 2. Any parent, guardian or other adult person, having the care and custody of a minor, who knowingly and wilfully allows such minor to violate subsection B of this section shall be guilty of a misdemeanor. (Prior code §§ 15-23—15-25)

9.28.090 Loud, unnecessary, etc., noises prohibited—Enumeration of such noises.

- A. It is unlawful for any person to make, continue or cause to be made or continued, any loud, unnecessary or unusual noise or any noise which either annoys, disturbs, injures or endangers the comfort, repose, health, peace or safety of others, within the limits of the City.
- B. The following acts, among others, are declared to be loud, disturbing and unnecessary noises in violation of this section, but such enumeration shall not be deemed to be exclusive, namely:
- 1. Motor Noises. Any noise made by the motor of any automobile, truck, tractor or motorcycle, not reasonably required in the operation thereof under the circumstances and shall include, but not be limited to, backfiring and motor racing.
 - 2. Horns and Signaling Devices. The sounding of any horn or signaling device on any automobile, motorcycle, trolley coach or other vehicle on any street or public place of the City, except as a danger warning; the creation by means of any such signaling device of any unreasonably loud or harsh sound and the sounding of any such device for an unnecessary and unreasonable period of time. The use of any signaling device except one operated by hand or electricity; the use of any horn, whistle or any other device operated by engine exhaust and the use of any such signaling device when traffic is for any reason held up.
 - 3. Yelling and Shouting. Yelling, shouting, hooting, whistling, singing or blowing of horns on the public streets, particularly between the hours of 10:00 p.m. and 7:00 a.m., or any time or place so as to annoy or disturb the quiet, comfort or repose of persons in any office, or in any dwelling, hotel, apartment or other type of residence, or of any persons in the vicinity.

4. Construction or Repairing of Buildings. The erection (including excavation), demolition, alteration or repair of any building other than between the hours of 7:00 a.m. and 6:00 p.m. on Monday, Tuesday, Wednesday, Thursday, Friday and Saturday, and between 9:00 a.m. and 6:00 p.m. on Sunday, except in case of urgent necessity in the interest of public health and safety, and then only with a permit from the building inspector, which permit may be granted for a period not to exceed three days or less while the emergency continues, and which permit may be renewed for a period of three days or less while the emergency continues. If the building inspector should determine that the public health and safety will not be impaired by the erection, demolition, alteration or repair of any building or the excavation of streets and highways within the hours of 6:00 p.m. and 7:00 a.m. on weekdays and 6:00 p.m. and 9:00 a.m. on Sundays, and if he or she shall further determine that loss or inconvenience would result to any party in interest, he or she may grant permission for such work to be done within the hours of 6:00 p.m. and 7:00 a.m. on weekdays and 6:00 p.m. and 9:00 a.m. on Sundays, upon application being made at the time the permit for the work is awarded or during the progress of the work.
5. Pile Drivers, Hammers, Etc. The operation between the hours of 10:00 p.m. and 7:00 a.m. of any pile driver, steamshovel, pneumatic hammer, derrick, steam and electric hoist or other appliance, the use of which is attended by loud or unusual noise.
6. Tools. The use of or operation between the hours of 10:00 p.m. and 7:00 a.m. of any power saw, power planer or other powered tool or appliance or saw or hammer, or other tool, so as to disturb the quiet, comfort or repose of persons in any dwelling, hotel, apartment or other type of residence, or of any person in the vicinity.
7. Blowers. The operating of any noise-creating blower or power fan or any internal combustion engine the operation of which causes noise due to the explosion of operating gases or fluids unless the noise from such blower or fan is muffled and such engine is equipped with a muffler device sufficient to deaden such noise.
8. The operation of any type of suction sweeper or cleaner between the hours of 10:00 p.m. and 7:00 a.m., the use of which is attended by loud or unusual noise which disturbs the quiet, comfort or repose of persons in any dwelling, hotel, apartment or other type of residence, or of any person in the vicinity.
9. Exhausts. The discharge into the open air of the exhaust of any steam engine, stationary internal combustion engine, motor boat or motor vehicle except through a muffler or other device which will effectively prevent loud or explosive noises therefrom.
10. Hawkers, Peddlers and Vendors. The shouting and crying of peddlers, hawkers and vendors which disturb the peace and quiet of persons in the neighborhood.
11. The use of any drum or other instrument or device for the purpose of attracting attention by creation of noise to any performance, show or sale.
12. Animals, Birds, Fowl. The keeping of any animal, fowl or bird which by causing frequent or long continual noise shall disturb the comfort or repose of persons in the vicinity.
13. Sound Amplifiers—Permit Required.
 - a. It is unlawful for any person to broadcast from a radio, phonograph or similar instrument, using voice or sound amplifiers, either into a public thoroughfare from a fixed location, from a movable vehicle or in connection with any public celebration or public function on

9.28.100

public holidays or in connection with the broadcast of events of interest to the general public without first obtaining a permit from the Chief of Police.

- b. Hours of Operation. It is unlawful for any person including any service club, church, school and other nonprofit organizations to have in operation or permit to be in operation any loud-speaker or sound-amplifying device or radio, television or musical instrument between the hours of 10:30 p.m., of any day and 10:00 a.m. the following day.
14. Emergency Operation of Backup Generators for City of Woodland Facilities and the Drilling of City of Woodland Water Wells. A backup generator used for the emergency operation of a City of Woodland water well or other City facility and the drilling of a City of Woodland water well shall not be considered loud, disturbing, or unnecessary noises. (Prior code § 15-26)

9.28.100 Inhaling, etc., certain substances prohibited.

It is unlawful for any person to inhale, breathe, drink or in any manner use any product or substance or combination thereof containing organic solvents, which include amyl acetate, trichlorethylene, acetone or other closely related or similar compounds used as solvents for products referred to as “glue,” “adhesive cement,” “mucilage” or “dope,” with the intent of becoming intoxicated, elated, dazed, paralyzed, irrational or in any manner changing, distorting, disturbing the eyesight, thinking process, balance coordination or affecting the central nervous system of such person. For the purposes of this section, any such condition so induced shall be deemed to be an “intoxicated condition.” The provisions of this section shall not pertain to any person who inhales, breathes or drinks or uses such product or substance pursuant to the direction or prescription of any doctor, physician, surgeon, dentist or podiatrist authorized to so direct or prescribe. (Prior code § 15-27)

9.28.110 Consumption of alcoholic beverages in City parks prohibited without permit.

A. Except when authorized by a written permit from the Parks and Recreation Department, it is unlawful for any person or persons to consume any alcoholic beverage or possess any open container containing any alcoholic beverage in or upon any community park, neighborhood park or greenbelt park within the City. Applications for permits shall be submitted to the Parks and Recreation Department at least one business day before the event at which alcohol is to be consumed, and a copy of the permit must be in the possession of a responsible party at the community park, neighborhood park or greenbelt park at all times during the event at which alcohol is to be consumed or possessed in an open container. (Prior code § 15-28)

B. Violation of this section shall be punishable pursuant to Section 9.28.290.

9.28.120 Consumption of alcoholic beverages in playgrounds and swimming pool areas in City parks prohibited—Signs.

It is unlawful for any person or persons to consume any alcoholic beverage or possess any open container containing any alcoholic beverage in or about any swimming pool premises maintained and operated by the City as a swimming pool, and in or about any youth sports/recreation field and bleacher section adjacent to such youth sports/recreation field, and in or about any playground area of any park or recreation area maintained by the City. The City Parks and Recreation Director shall cause to be posted appropriate warning signs in all such areas in which the consumption of alcoholic beverages, or the possession of any open container containing alcoholic beverages, is prohibited by this section and Section 9.28.120. (Prior code § 15-29)

9.28.130 FortUNETelling.**A. Purpose and Findings.**

1. The practice of fortunetelling, as defined in this section, has historically been subject to abuse by certain unscrupulous practitioners using the practice to commit fraud and larceny upon clients.
2. The City Council wishes to regulate the practice of fortunetelling to reduce the risk of fraud and larceny to clients while allowing fortunetellers to provide their services with only minimal restrictions.
3. The provisions of this section will make it more difficult for an unscrupulous fortuneteller to commit fraud or larceny, and yet as informational regulations will not affect the nature of the information conveyed or the manner of conveyance.
4. The regulations require only minimal expense and effort on the part of the fortuneteller and, therefore, will not impose any undue burdens on the fortuneteller's practice.
5. Fortunetelling for entertainment purposes, as defined in this section, does not create the same risk of fraud and larceny by unscrupulous practitioners as would the practice with an individual client because it is done with a group at a public place for the purposes of entertaining and not to deal with the private concerns of an individual.
6. Fortunetelling for religious purposes, as defined in this section, creates a low risk of consumer fraud.

B. Definitions.

1. "Fortunetelling" shall mean and include telling of fortunes, forecasting of future events or furnishing any information not otherwise obtainable by the ordinary process of knowledge, by means of any occult or psychic power, faculty or force, including, but not included to, clairvoyance, clairaudience, cartomancy, phrenology, spirits, tea leaves or other such reading, mediumship, seership, prophecy, augury, astrology, palmistry, necromancy, mindreading, telepathy, or other craft, art, cards, talisman, charm, potion, magnetism, magnetized article or substance, crystal gazing, or magic, of any kind or nature.
2. "For pay" shall mean for a fee, reward, donation, loan or receipt of anything of value.
3. "Collector" means that person designated by Section 5.04.010 of the Woodland Municipal Code to administer the business license provisions of the code.

C. Permit Application. Every natural person who, for pay, conducts, engages in, carries on, or practices fortunetelling shall file a separate verified application for a fortunetelling license with the collector. The application shall contain:

1. The full true name and any other names used by the applicant;
2. The two previous residential addresses and business addresses, if any, immediately prior to the present address of the applicant; and current residential and business telephone numbers of the applicant;
3. The applicant's height, weight, color of eyes, and hair;
4. The business, occupation, or employment of the applicant for the 10 years immediately preceding the date of the application;

5. The records of all criminal convictions, except minor traffic violations;
 6. Business license history of the applicant, either alone or in conjunction with others; whether the applicant, in previously operating in this City or another City, County or State under a license or permit, has had such license revoked or suspended; the reasons therefor and the business activity or occupation subsequent to such action of suspension or revocation;
 7. Two sets of fingerprints and a photograph taken by the Woodland Police Department to be submitted to the Department of Justice for verification of the information submitted by the applicant, for which the applicant will pay such fees incurred therefor as are charged by the Woodland Police Department;
 8. Such other identification and information as determined by the Police Chief, any other City department of jurisdiction, or any agency of jurisdiction to be necessary to verify the truth of the matters required by this section;
 9. A nonrefundable application fee in an amount set by Council resolution.
- D. Approval of License. Upon receipt of the completed application the collector shall submit the application to the Police Department for verification of the information contained in the application. The Police Department shall submit the fingerprints to the department of justice to verify the information in the application. The Police Department shall have 10 business days to verify the information and report its findings to the collector.
- The collector shall then approve the application if:
1. All of the information contained in the application is true; and
 2. The applicant has not, within one year from the date of application, been convicted of any violation of this section or crimes involving prediction of future events by the occult arts, larceny, perjury, bribery, extortion, fraud, or similar crimes involving moral turpitude.
- The collector shall notify the applicant by mail of the decision.
- Any applicant dissatisfied with the decision of the collector may appeal the decision to the City Council within 10 days after notice of the decision is mailed. The City Council shall hold a hearing within 30 days of the application for a hearing. At least 10 days before the hearing date, the collector shall mail a notice of the date. The Council shall consider evidence and make findings. The Council's findings are final.
- E. Term of the Fortunetelling License. The term of the fortunetelling license shall be the same as the regular business license. A renewal application shall be filed at least 30 days before the license will expire and shall be processed in the same manner as a new application.
- F. Compliance with Other Laws. Fortunetellers are required to comply with the municipal code and other laws including zoning and business license ordinances. The license issued pursuant to this section is in addition to any necessary business license.
- G. Posting of Fees.
1. Each person required to obtain a permit pursuant to this section shall post on his or her business premises a sign containing the following information:
 - a. The true name of the fortuneteller;
 - b. Each service provided by the fortuneteller;

- c. The fees charged for each service provided by the fortuneteller;
- d. The statement, "By law, this business is prohibited from charging or soliciting any fee, payment or remuneration beyond these established rates."
- 2. The sign required by subsection (G)(1) of this section shall be prominently posted in the interior of the business premises at a point near the entry and shall be conspicuously visible to every person seeking the services of the fortuneteller. The sign lettering shall be of uniform size with each letter at least one-half inch in height.
- 3. If the fortunetelling service is provided at a location other than the fortuneteller's permanent place of business, the fortuneteller shall provide the information required in subsection (G)(1) of this section on paper at least eight and one-half by 11 inches and legibly printed or typewritten. The paper shall also include the name and permanent address of the person providing the fortunetelling services. A true and correct copy of such paper shall be given to each client prior to providing any fortunetelling services.
- 4. No person shall charge any fee payment, remuneration or item of value for fortunetelling services in excess of the fees set forth on the sign or paper required by subsection G of this section.
- H. Receipts. Prior to the acceptance of any money or item of value from a client, other than a gratuitous tip given voluntarily by the client, the fortuneteller shall issue to the client a written receipt showing:
 - 1. The date the service was rendered;
 - 2. The name of the client;
 - 3. The amount of money received or a specific description of the item of value received; and
 - 4. The purpose for which the money or item of value was received.
- I. Client Record of Consultation. No person engaging in fortunetelling services shall prohibit a client from making an audio recording or taking written notes of the information conveyed by the fortuneteller.
- J. Exception—Entertainment. The provisions of this section shall not apply to any person engaged solely in the business of entertaining the public by demonstrations of fortunetelling at public places and in the presence of and within the hearing of all other persons in attendance, and at which no questions are answered as part of such entertainment except in a manner to permit all persons present at such public place to hear such answers.
- K. Exception—Religious Practice. The provisions of this section shall not apply to any person conducting or participating in any religious ceremony or service when such person holds a certificate of ordination as a minister, missionary, healer, or clairvoyant (hereinafter collectively referred to as minister) from any bona fide church or religious association maintaining a church and holding regular services and having a creed or set of religious principles that is recognized by all churches of like faith; provided that:
 - 1. Except as provided in subsection (H)(3) of this section, the fees, gratuities, emoluments, and profits thereof shall be regularly accounted for and paid solely to or for the benefit of the bona fide church or religious association, as herein defined.
 - 2. The minister holding a certificate of ordination from such bona fide church or religious association shall file with the collector, a declaration under penalty of perjury which states the minister's

9.28.140

name, street address, and telephone number in this City where the activity set forth herein is to be conducted.

3. Such bona fide church or religious association, as defined herein, may pay to its ministers a salary or compensation based upon a percentage basis, pursuant to an agreement between the church and the minister which is embodied in a resolution and transcribed in the minutes of such church or religious association.
- L. Revocation of Fortunetelling Permit. A fortunetelling permit, issued by the collector, shall be revoked or suspended where it is found that the licensee has been convicted of any offense which would be cause for denial of a license upon an original application, has made a false statement on an application for a license, or has committed an act in violation of this section. Revocation proceedings shall be conducted as prescribed by Section 5.04.070.
- M. Violation a Public Nuisance. The City Council declares a violation of this section to be a public nuisance. (Prior code § 15-30)

9.28.140 Restricted use of bicycles, coasters, rollerskates, skateboards or similar devices.

- A. Purpose. The City Council finds the operation of bicycles, coasters, rollerskates, skateboards, or similar devices, including those which are motorized, upon certain public property and upon private property used for public purposes to be hazardous to pedestrians, motorists, and to the persons operating such devices.
- B. Definitions.
 1. "Coaster" shall mean a surface mounted on wheels or rollers designed or used to transport human beings which is intended to be propelled primarily by a skating motion of a human being, or by a pulling or pushing motion of a human being while simultaneously making contact with the surface mounted on wheels or rollers and the ground. The term "coaster" shall include, but not be limited to, coasters, scooters, skateboards, and rollerskates.
 2. "Motorized" devices are the same devices as those listed above in all respects except that they are designed to be or can be self-propelled by motorized power.
 3. "Private property used for public purposes" are those sidewalks, access ways, interior malls, roads, parking lots, or other areas which are privately owned and maintained, but are generally open to the public for purposes of vehicular or pedestrian traffic to serve commercial establishments or hospitals, or to provide access to the disabled.
- C. Exclusions. This section shall not apply to wheeled devices required to be used by one who is disabled and which are being used for the purpose of allowing the disabled person to be mobile.
- D. Places Prohibited. No person upon a coaster, bicycle or similar device shall ride:
 1. Upon tennis courts, handball courts, swimming pool areas, or front or rear yard of buildings, which are City owned, operated or maintained;
 2. Upon any sidewalk within the central traffic district;
 3. Upon any City public sidewalk ramp, or access way especially designed for use by the disabled;
 4. Upon any City parking lot; however, bicycles may be ridden if they follow the normal flow of traffic and are being used solely as a means of transportation; or

5. Upon any private or public property where not otherwise specifically prohibited as set forth hereinabove when such property has been posted pursuant to this section.
- E. Posting Notice. The City Manager is authorized to post or erect or cause to be posted or erected signs, at owner's expense, prohibiting the riding of coasters, bicycles, or similar devices at such places where request has been made to, and approved by, the Police Chief under subsection (D)(5) of this section.
- F. Manner Prohibited. Where riding is otherwise allowed, no person upon a bicycle or above-defined device shall:
 1. Violate the right-of-way of a vehicle or a pedestrian;
 2. Ride recklessly or in such a manner as to cause danger or injury to him or herself or to others.
- G. Enforcement. It shall be the duty of the Woodland Police Department to enforce this section upon City property and the Police Department may enforce it upon the above-designated private property when the violation occurred in the officer's presence or the private property owner has requested enforcement or filed a complaint.
- H. Penalty.
 1. It is an infraction for any person to do any act forbidden or fail to perform any act required in this section.
 2. The parent of any child and the guardian of any ward shall not authorize or knowingly permit any such child or ward to violate any of the provisions of this section.
 3. The Chief of Police shall have the authority to issue juvenile citations. "Notice to Appear at the Probation Office," to any minor person who violates any provision of this chapter, with a copy of such citation mailed to the parent or guardian of the violator. (Prior code § 15-31)

9.28.150 Parks and greenways—Driving or parking motor vehicles upon or across.

- A. Driving or Parking Prohibited. No person shall park, permit the parking of, drive or permit to be driven any motor vehicle, including any motorcycle or any motor-driven bicycle or scooter, upon or across any park or greenway owned and maintained by the City unless a permit shall have been obtained as hereinafter provided and subject to the terms and conditions set forth in such permit. This prohibition shall not be applicable to emergency vehicles or to vehicles owned and operated by the City.
- B. Permits for Driving or Parking. The Director of Parks and Recreation may issue permits to drive or park a vehicle across or upon such parks or greenways upon finding, based on such application as he or she may from time to time direct, the following:
 1. That such person is an employee of the City and uses his or her personal vehicle in the course of performing official duties arising from such employment;
 2. The vehicle shall be used only for the purpose of transporting a person to a facility within the subject park or greenway, which person is, because of physical disability, unable to get to and from such a facility without vehicular assistance;
 3. That such person is transporting equipment or supplies for a program within the park or greenway, which equipment or supplies cannot reasonably be carried to the area where the activity is to be conducted.

9.28.160

Any permit issued according to this section shall state thereon any and all conditions as to when it may be used, the purpose for which it was issued, and such other conditions as the Director of Parks and Recreation may deem reasonably necessary to protect the person and property of others using the park or greenway. It is unlawful for any person to park or drive in violation of such conditions or to otherwise alter or misuse such permit. The permit shall be displayed on the dashboard or other appropriate place on the vehicle so that its conditions can be easily observed without entering the vehicle.

- C. Speed Limit. No vehicle shall be driven on or across a park or greenway at a speed in excess of five miles per hour unless such park or greenway is otherwise posted.
- D. Penalty. ~~Any person violating the provisions of this section shall be guilty of an infraction and shall be subject to no less than a \$25.00 fine. (Prior code § 15-32) Violation of this section shall be punishable pursuant to Section 9.28.290.~~

9.28.160 Park curfew.

- A. Notwithstanding Section 9.36.020 of the City Code, no person shall be within any park from 30 minutes after sunset until 30 minutes before sunrise, except as provided in subsection B. Each park shall be posted with a sign or signs prohibiting the same.
- B. Subsection A shall not apply to individuals:
 - 1. Engaged in City business;
 - 2. Engaged in a program or activity preapproved by the City; or
 - 3. Engaged in an activity at a park for which a City facility use permit authorizing use during the hours prohibited pursuant to subsection A has been obtained from the City Parks and Recreation Department.
- C. For purposes of this section, “park” means a community, neighborhood, or greenbelt park.
- D. Violation of this section shall be punishable pursuant to Section 9.28.290. (Prior code § 15-33)

9.28.170 No parking adjacent to parks during curfew.

- A. Notwithstanding any other provision of the City Code, no person shall park a vehicle on the side of a street immediately adjacent to any park from 30 minutes after sunset until 30 minutes before sunrise, unless such person is authorized to be within a park pursuant to Section 9.28.160. Each street affected by this prohibition shall be posted with a sign or signs prohibiting the same.
- B. For purposes of this section, “park” shall have the meaning set forth in Section 9.28.160.
- C. Violation of this section shall be punishable pursuant to Section 9.28.290. (Prior code § 15-34)

9.28.180 Prohibition of sound amplification in parks.

- A. All sound amplification of speech or music of whatever type or kind shall be prohibited within the confines of any City park when posted by a sign or signs prohibiting the same unless excepted as hereinafter provided.
- B. Sound amplification shall include, but not be limited to, sound amplification by means of standard radios and the like.

- C. The confines of any City park, as used in this section, shall be deemed to include a street and sidewalks on both sides of a street bounding the City park.
- D. When a written permit is previously obtained from the Parks Director or deputized agent, sound amplification equipment necessary to further the public interest, such as in the case of political rallies, public celebrations, sports events, and other significant public events may be permitted subject to conditions assuring that the peace and quiet of the adjacent neighborhood is not unreasonably disturbed.
- E. Sound amplification, as used in this section, shall not include a standard automobile radio when used and heard in the vehicle only by the occupants of the vehicle in which it is installed.
- F. ~~Violation of this section shall be punishable pursuant to Section 9.28.290. Violation of this section shall be an infraction. (Prior code § 15-35)~~

9.28.190 Permit application for sound amplification in parks.

Applications for a permit to amplify sound in a public park shall include the following:

- A. Name and address of the applicant;
- B. If different, name and address of the person who shall have direct responsibility for the use and operation of the sound amplification equipment;
- C. The purpose for which the sound amplification is proposed to be used;
- D. The designated location within the park area where it is proposed to install and operate the sound amplification equipment;
- E. A general description of the sound amplifying equipment proposed for use;
- F. The maximum sound producing power of the proposed sound amplifying equipment to be used, including, the wattage of the equipment, the maximum volume in decibels of sound which the equipment will produce, and the approximate maximum distance during daytime hours at which sound from the equipment may be heard with the equipment in operation at maximum volume. (Prior code § 15-36)

9.28.200 Injuring or interfering with police dogs prohibited.

Any person injuring, teasing, striking or otherwise interfering with a police dog under the custody of, or being used by, a law enforcement officer in performance of his or her official duties shall be punishable for an infraction as then defined by the law of the State. "Police dog" means any dog trained for assistance to law enforcement officers. (Prior code § 15-37)

9.28.210 Prohibition against loitering in no-cruising zone.

- A. It is unlawful for any person to loiter on any property in the proximity of any posted no-cruising zone between the hours of 8:00 p.m. of one day and 6:00 a.m. of the next day.
- B. For purposes of this section, "loitering" shall mean remaining on any property under such circumstances that a reasonable person would conclude that the person who remains on the property:
 - 1. Does not have a purpose connected with the usual and ordinary use to which such property is put; and
 - 2. Does not have a bona fide intent to exercise a constitutional right; and

9.28.220

3. Is causing public inconvenience or annoyance by blocking, impeding or interfering with pedestrian, vehicular or other traffic.
- C. For the purposes of this section, “property in the proximity of any posted no-cruising zone” shall mean any property which is both visible from and located within 300 feet of any portion of a street, alley or highway which is posted as a no-cruising zoning pursuant to Section 10.08.230(G) of the municipal code.
- D. No person shall be held in violation of this section unless that person has, within the prior four hours, been warned, either verbally or in writing, that it is unlawful to loiter in the proximity of a posted no-cruising zone.
- E. It shall be a separate offense if, upon citation for loitering pursuant to this section, a person fails to depart promptly from the proximity of the posted no-cruising zone.
- F. Violation of this section is an infraction and shall be punished in accordance with Section 1.08.070 (General penalty—Continuing violations—Aiding or abetting) of this code. (Prior code § 15-38)

9.28.220 Public places—Alcoholic beverages.

- A. No person shall consume any alcoholic beverage, as defined in Business and Professions Code Section 23004, on any public parking lot, on any private parking lot held open to the public, on any public street, sidewalk, alley or walkway, or in any place held open to the public within 250 feet of any establishment selling alcoholic beverages.
- B. A person or group applying for a block party permit may request, on the application for a block party permit, exemption from this section for the duration and location of the block party. If the person or group has requested this exemption and the block party permit is granted, the provisions of this section shall not apply during the time requested in the permit application to the public street, sidewalk, alley, walkway, or party thereof which is described in the permit application.
- C. Anyone found guilty of violating this section shall be guilty of an infraction.
- D. This section shall not be construed to prohibit any act which is prohibited by any laws of the State of California. (Prior code § 15-39)

9.28.230 Smoking.

- A. Findings of Fact.
 1. The U.S. Environmental Protection Agency (EPA) has designated environmental tobacco smoke (ETS) a Class A carcinogen and has determined that ETS is a major source of indoor air pollution and a cause of lung cancer in nonsmokers.
 2. While all members of the population are at increased risk due to exposure to ETS, it constitutes a special health hazard for children, the elderly, and people with chronic lung disorders, cardiovascular disease, and obstructive airway disease.
 3. State law prohibits the sale of tobacco products and e-cigarettes to individuals under the age of 18.
 4. It has been shown that minors have access to tobacco in vending machines. State and Federal law require retail sales of cigarettes to be vendor-assisted and conducted face-to-face with few exceptions.

5. While e-cigarettes are too new for longitudinal studies on their health effects, current research indicates that chemicals contained in e-cigarettes may be harmful and that vaping does release contents of e-cigarettes into the air.
- B. Statement of Purpose. It is the purpose of this section to promote the public health, safety and general welfare and to minimize the health risk that secondhand smoke poses to citizens of the Woodland community by provisions designed to:
 1. Regulate access to tobacco products and e-cigarettes in vending machines;
 2. Prohibit smoking in certain public places; and
 3. Regulate e-cigarettes in the same manner as conventional cigarettes and tobacco products.
- C. Prohibition on Sale of Tobacco Products and E-Cigarettes from Vending Machines. No cigarette, other tobacco product, or e-cigarette may be sold, offered for sale, or distributed by or from a vending machine or appliance, or any other device designed or used for vending purposes, except where minors are prohibited from entering without adult supervision.
- D. Prohibition Against Smoking in Certain Public Places. Smoking shall be prohibited at all times in the following public places:
 1. Areas measuring a distance of 20 feet from the main entrance of a commercial building:
 - a. The main entrance will be determined by either building design or how the address for the business is determined.
 - b. The posting of this entrance as “No Smoking Within 20 feet” is mandatory.
 - c. Exemptions to this Subsection.
 - i. Bars with ABC license Type 40, 43, or 48 are exempt from this subsection between the hours of 8:00 p.m. and 4:00 a.m. of the following day, an eight-hour period.
 - ii. Restaurants/bars with ABC license Type 41, 47, 51, 52, 57, or 69 are exempt from this subsection after food service has ceased, but not before 8:00 p.m. of that day and lasting until 4:00 a.m. of the following day.
 - iii. Vehicle occupants, whether the vehicle is either parked or in transit, which encroach on the 20-foot radius to the main entrance of a commercial building are exempt from this subsection.
 - iv. The 20-foot radius established by this section does not extend into the building.
 2. City Facilities. All City-owned buildings, Buchignani Ball Park, Clark Field, Camarena Ball Park, Community Swim Center, the Municipal Swim Pool, the Woodland Public Library, and any future outdoor City park facility operated primarily for youth events, as designated by the Director of Parks and Community Services. The prohibition on smoking at these facilities includes the facility and the public property on which it is located extending to the adjacent public sidewalk. All such areas and facilities shall be posted as nonsmoking.
 3. Outdoor locations as specified in this subsection including areas located within a distance of 20 feet from the entrances and exits to such outdoor locations: public events, including, but not limited to, sports events, entertainment, speaking performances, ceremonies, pageants and fairs.
- E. Smoking Defined. For purposes of this section, “smoking” means inhaling, exhaling, burning or carrying any lighted cigarette, cigar, pipe, weed, plant, or other combustible substance in any manner or in

any form. Smoking also includes the use of an e-cigarette that creates a vapor, in any manner or in any form, or the use of any oral smoking device.

- F. E-Cigarette Defined. For purposes of this section, “e-cigarette” means any electronic oral device, such as one composed of a heating element, battery and/or electronic circuit, which provides a vapor of nicotine or any other substances, and the use or inhalation of which simulates smoking. The term shall include any such device, whether manufactured, distributed, marketed, or sold as an e-cigarette, e-cigar, e-pipe, hookah pen, or under any other product name or descriptor.
- G. Violations and Penalties. Any person or entity which violates the prohibitions or fails to meet the requirements of this section shall be guilty of an infraction, punishable in the manner hereinafter prescribed:
 1. Upon the first violation, shall be guilty of an infraction and, upon conviction, shall be subject to a fine not to exceed \$100.00;
 2. Upon the second violation within one year, shall be guilty of an infraction and, upon conviction, shall be subject to a fine not to exceed \$200.00;
 3. Upon the third and additional violations within one year of previous violation, shall be guilty of an infraction and, upon conviction, shall be subject to a fine not to exceed \$500.00 per conviction;
 4. These penalties are in addition to those which may be imposed pursuant to State law. (Prior code § 15-40)

9.28.240 Limitations to access to tobacco products and e-cigarettes.

- A. Purpose. The purpose of this section is to reduce the ability of minors to purchase cigarettes and e-cigarettes by eliminating self-service displays in the City.
- B. Findings.
 1. Each year more than 400,000 Americans die prematurely from tobacco-related illnesses. Tobacco use has been linked to cancer, emphysema, heart disease and a variety of other life-threatening health problems.
 2. These health problems create a burden for local communities, and more specifically for the City. In addition to the health care cost for these diseases, there is the lost human and economic contributions of each individual who suffers from the preventable effects of tobacco use.
 3. According to the 2013 State Health Officer’s Report on Tobacco Use and Promotion in California, 64% of California smokers start by the age of 18. The California Department of Public Health Tobacco Control Program has found that while adult tobacco use has been declining, youth use, including use of new tobacco products, has been rising.
 4. All 50 states, and the District of Columbia, prohibit the sale of tobacco products to minors. California State Penal Code Section 308(a) and 308(b) prohibit the sale of tobacco products and paraphernalia to minors and possession of tobacco by a minor. However, from 2010 to 2012 illegal sales of tobacco products to minors increased in California.
 5. California Revenue and Taxation Code Section 30101.7 requires retail sales of cigarettes to be vendor-assisted and conducted face-to-face, except in limited circumstances involving mail-order sales.

6. In 2010, the Food and Drug Administration enacted regulations that require cigarette and smokeless tobacco retailers to verify the age of each purchaser by photographic identification, to only sell cigarettes and smokeless tobacco in a direct, face-to-face exchange, and to not use self-service displays and vending machines for cigarettes and smokeless tobacco unless they are located in a facility where no person younger than 18 may enter.
 7. According to the 2013 State Health Officer's Report on Tobacco Use and Promotion in California, youth are more likely to smoke if they are exposed to tobacco product displays.
 8. State law prohibits the sale of e-cigarettes to minors.
 9. While e-cigarettes are too new for longitudinal studies on their health effects, current research indicates that chemicals contained in e-cigarettes may be harmful and that vaping does release contents of e-cigarettes into the air.
 10. According to the Center for Disease Control, from 2011 to 2012 e-cigarette use increased significantly among middle school and high school students.
- C. Definitions. For the purposes of this section, unless otherwise apparent from the context, certain words and phrases used in this section are defined as follows:
1. "Business" means a fixed location, whether indoors or outdoors, at which merchandise is offered for sale at retail.
 2. "Minor" means any person under 21 years of age.
 3. "Self-service displays" means open displays of tobacco products and e-cigarettes and point-of-sale tobacco and e-cigarette promotional products that the public has access to without the intervention of a store employee.
 4. "Tobacco product" means:
 - a. A product containing, made from, or derived from tobacco or nicotine that is intended for human consumption, whether smoked, heated, chewed, absorbed, dissolved, inhaled, snorted, sniffed, or ingested by any other means, including, but not limited to, cigarettes, cigars, little cigars, chewing tobacco, pipe tobacco, or snuff.
 - b. An electronic device that delivers nicotine or other vaporized liquids to the person inhaling from the device, including, but not limited to, an electronic cigarette, cigar, pipe, or hookah.
 - c. Any component, part, or accessory of a tobacco product, whether or not sold separately.

Tobacco products do not include products approved by the U.S. Food and Drug Administration for sale as a tobacco cessation product or for other therapeutic purposes where the product is marketed and sold solely for such an approved purpose.
 5. "Vendor-assisted" means only a store owner or employee shall have access to the tobacco product or e-cigarette and assist the customer by supplying the product or e-cigarette. The customer may not take possession of the product or e-cigarette until after it is purchased.
- D. Identification Required. No retailer or vendor shall sell or permit to be sold cigarettes, other tobacco products or e-cigarettes to an individual without requesting and examining photographic identification establishing the purchaser's age as 18 years or greater, unless the vendor or employee has a reasonable basis in fact to know the buyer is over the age of 18.
- E. Vendor-Assisted Sales.

1. It is unlawful for any person, business or tobacco retailer to sell, permit to be sold, offer for sale or display for sale any tobacco product or e-cigarette by means of a self-service display rack or shelf that allows self-service sales or any means other than vendor-assisted sales.
 2. All tobacco products and e-cigarettes shall be displayed and offered for sale exclusively by means of vendor/employee assistance, with tobacco products or e-cigarettes in a location which requires vendor or employee assistance to retrieve the tobacco product or e-cigarette.
- F. Out-of-Package Sales. No person, business, tobacco retailer, or other establishment in the City shall sell or offer for sale cigarettes, other tobacco products or e-cigarettes not in the original packaging provided by the manufacturer and with all required health warnings. This section shall not apply to cigars dispensed from bulk packaging.
- G. Posting of Signs. Any person, business, tobacco retailer, or other establishment in the City which sells tobacco products or e-cigarettes shall post plainly visible signs at the point of purchase of tobacco products or e-cigarettes which comply with California State Business and Professions Code Section 22952 (STAKE Act). All letters of the sign shall be at least one-half inch high or larger.
- H. Severability. If any portion of this section or the application thereof to any person or circumstances is held invalid, the invalidity shall not affect the other provisions or applications of this section which can be given effect without the invalid provision or application, and to this end, the provisions of this section are severable.
- I. Enforcement.
1. Enforcement of this section shall be the responsibility of the Woodland Police Chief or designee, and the Woodland code enforcement officer. Further enforcement against a person shall not be undertaken without giving one warning to the offending business and/or offering an education session with a staff person designated by the Director of the County Health Department.
 2. Notice of this section shall be given to all applicants for a business license or renewal thereof.
 3. Any citizen who wishes to register a complaint under this section may initiate enforcement by bringing the matter to the attention of the staff person designated by the Director of the County Health Department, the Woodland Police Department or the Woodland code enforcement officer.
- J. Violations—Infractions.
1. It is unlawful for any person who owns, manages, operates or otherwise controls the use of any premises subject to this regulation of this section to refuse to comply with any of its provisions.
 2. Any person, business, tobacco retailer, owner, manager or operator of any establishment subject to this section who violates any provision of this section shall be deemed guilty of an infraction punishable by:
 - a. A fine not exceeding \$100.00 for the first violation;
 - b. A fine not exceeding \$200.00 for a second violation within one year; and
 - c. A fine not exceeding \$500.00 for a third violation and for each additional violation of this section within one year.
 3. A person who violates any provision of this section shall be deemed guilty of a separate offense for each day, or portion thereof, during which the violation continues.

- K. **Public Education.** The Woodland Police Department and the Woodland Community Development Department shall engage in a continuing program to explain and clarify the purpose and requirements of this section to citizens and businesses affected by it, and to guide owners, operators and managers in their compliance with it. Such program may include publication of a brochure for affected businesses and individuals explaining the provisions of this section. (Prior code § 15-41)

9.28.250 Tobacco-free and e-cigarette-free zones at City parks and recreation facilities.

- A. **Findings and Purpose.** The City Council hereby declares that substantial scientific evidence exists that the use of tobacco products cause cancer, heart disease, and various other medical diseases. The Surgeon General of the United States has found that tobacco-caused diseases are the leading cause of premature, preventable death and disability in the United States. While e-cigarettes are too new for longitudinal studies on their health effects, current research indicates that chemicals contained in e-cigarettes may be harmful and that vaping does release contents of e-cigarettes into the air. Accordingly, the City Council finds and declares it is in the public interest to establish regulations with respect to prohibiting the use of tobacco products and e-cigarettes in public park and recreational facilities, buildings, and areas.
- B. **Definitions.** For the purposes of this section, the following definitions shall apply:
1. “Minor, child, or children” means any person under 21 years of age.
 2. “Park” means all park and recreational facilities, including, but not limited to, playgrounds, skate parks, picnic areas, sports areas, parking lots, and other buildings or structures built or installed in the City for public use by children, to which the public has an unrestricted right of access and use for park or recreation purposes, and every other recreation facility owned, managed or controlled by the City, in either incorporated or unincorporated territory.
 3. “Person” means any natural person, individual, partnership, cooperative association, private corporation, personal representative, receiver, trustee, assignee, or any other legal entity.
 4. “Tobacco product” means:
 - a. A product containing, made from, or derived from, tobacco or nicotine that is intended for human consumption, whether smoked, heated, chewed, absorbed, dissolved, inhaled, snorted, sniffed, or ingested by any other means, including, but not limited to, cigarettes, cigars, little cigars, chewing tobacco, pipe tobacco, or snuff.
 - b. An electronic device that delivers nicotine or other vaporized liquids to the person inhaling from the device, including, but not limited to, an electronic cigarette, cigar, pipe, or hookah.
 - c. Any component, part, or accessory of a tobacco product, whether or not sold separately.

Tobacco products do not include products approved by the U.S. Food and Drug Administration for sale as a tobacco cessation product or for other therapeutic purposes where the product is marketed and sold solely for such an approved purpose.
- C. **Smoking Prohibited in Park and Recreation Facilities and Areas.** It is unlawful for any person to use and/or discard lighted or unlighted tobacco products or e-cigarettes in any park unless otherwise designated by clearly posted and visible signage. Any person or entity violating any provision of this section may be issued an administrative citation pursuant to Chapter 9.20 of this title. Any person or entity violating any provision of this section within a 12-month period of the first violation shall be issued an additional administrative citation pursuant to Section 9.20.030(D)(2).

9.28.260

- D. Severability. If any provision, clause, sentence or paragraph of this section or the application thereof to any person or circumstance shall be held invalid, such invalidity shall not affect the other provisions of this section which can be given effect without the invalid provision or application, and to this end the provisions of this section are declared to be severable. (Prior code § 15-42)

9.28.260 Adoption of Yolo County Code relating to tobacco retail permits.

- A. Title 6, Chapter 15 of the Yolo County Code, pertaining to tobacco retailer permits, is hereby incorporated, in its entirety, with the exception of Section 6-15-04, by reference into this code and shall be enforced within the limits of the City.
- B. All references to the term “unincorporated areas of the County of Yolo” in Title 6, Chapter 15 of the Yolo County Code shall be to the term “City limits.” All references to the term “Chapter” in Title 6, Chapter 15 of the Yolo County Code shall be to the term “Article.” All references to the term “Yolo County Code” in Title 6, Chapter 15 of the Yolo County Code shall be to the Woodland Municipal Code. The reference to the term “County” in Section 6-15.07(c) of the Yolo County Code shall be to the term “City.” The reference to the term “County of Yolo” in Section 6-15.15(f) of the Yolo County Code shall be to the term “City.” The reference to the term “Board of Supervisors of the County of Yolo” in Section 6-15.16 of the Yolo County Code shall be to the term “City Council of the City of Woodland.”
- C. A tobacco retailer license may be renewed for any location in the City so long as: (1) no permanent revocation (as opposed to temporary suspension) of a license previously held for the location has occurred; (2) tobacco retailing has not ceased at the location for 60 consecutive days or longer, whether due to a business closure or otherwise; (3) the licensee does not substantially change the business premises or business operation; and (4) the licensee retains the right to operate under other applicable laws, including without limitation the zoning ordinance, building codes, or other applicable codes. (Ord. 1652 § 1, 2019; prior code § 15-43)

9.28.270 Regulation of use of Woodland Cemetery.

- A. Hours of Operation and Business. The Woodland Cemetery shall be open to the public from 7:00 a.m. to dusk, seven days per week. The cemetery shall be open for business from 7:00 a.m. to 4:00 p.m., Monday through Friday, except City holidays.
- B. Prohibition on Use of Alcoholic Beverages. It is unlawful for any person(s) to consume any alcoholic beverage, as defined in Business and Professions Code Section 23004, or possess any open container containing any alcoholic beverage in or about the Woodland Cemetery.
- C. Dogs Prohibited. It is unlawful for any owner or bailee of a dog to permit such dog to enter the Woodland Cemetery. Exception: Guide dogs for the disabled.
- D. Violation—Penalty. Any violation of any provision of this section shall constitute an infraction, and upon conviction thereof, shall be punished as set forth in Section 1.08.070(B) (General penalty—Continuing violations—Aiding or abetting). (Prior code § 15-50)

9.28.280 Prohibition on public urination and defecation.

- A. It is unlawful and a misdemeanor for any person to urinate or defecate in or upon any street, sidewalk, alley, plaza, park, public building, publicly maintained facility, or any place open to the public or ex-

posed to public view. This section shall not be construed to prohibit the use for urination or defecation of lawfully constructed restroom facilities designed for the sanitary disposal of human waste.

- B. Violations. Any person who violates this section shall be guilty of a misdemeanor and upon conviction shall be punished in accordance with Section 1.08.070 (General penalty—Continuing violations—Aiding or abetting). (Prior code § 15-55)

9.28.290 Prohibited activities in City parks.

- A. Storage of Personal Property. No person shall store any personal belongings or property within the confines of any City park. An item shall be considered storage if it has been left unattended for a period of at least six consecutive hours.
- B. Cooking. No person shall establish or maintain in any City park a temporary or permanent place for cooking or set up any grill, stove, or burner; provided, however, that any person may set up and use cooking equipment if he or she does so within an area of a City park designated by the City for cooking and food preparation or if he or she is participating in either a scheduled, City-sponsored event or an approved, permitted event, which event has, as part of its stated purpose, the preparation of food for human consumption.
- C. Violations.
 - 1. First Violation. Any person who either violates any provision of this section or any provision of Section ~~9.28.070~~, 9.28.110, 9.28.120, 9.28.150, 9.28.170, 9.28.180, ~~9.28.280~~, or 9.36.020 within the confines of any City park shall be guilty of an infraction and fined \$100.00 for the first violation.
 - 2. Second Violation. In the event any person commits a second violation of this section or of any provision enumerated in subsection (C)(1), regardless of whether the first and second offenses involve violation of the same section, he or she shall be guilty of a misdemeanor and shall be fined \$200.00. (Prior code § 15-56)

Chapter 9.32

FILMING

Sections:

9.32.010 Filming permits.

9.32.020 Disruption of motion picture or television productions.

9.32.010 Filming permits.

- A. Statement of Purpose and Intent. This chapter establishes procedures for the review and issuance of permits allowing work associated with the production of commercial filming activities within the City. The intent of this chapter is to facilitate the production of such work while protecting the residents and property owners from the potential adverse impacts of filming activities.
- B. Definitions. For purposes of this chapter, the following definitions shall apply:
 1. "Applicant" means any person who has applied for a City filming permit.
 2. "City filming permit" or "permit" shall mean a permit issued by the City to allow the activities associated with the production, filming or videotaping of commercial motion picture and television shows, programs and commercials.
 3. "City Filming Permit Coordinator" shall mean the City Manager of the City or the City Manager's designee.
 4. "Motion picture or television production" or "production" means all activity attendant to staging, making, filming or videotaping commercial motion pictures and television shows, programs and commercials.
 5. "Permittee" means any person who has been issued a City filming permit by the City.
 6. "Person" means any individual, firm, partnership, association, corporation, company or organization of any kind.
- C. Permit Required. No person shall use any public or private property, building, facility or residence for the purpose of producing, taking or making any motion picture or television production without first applying for and receiving a City filming permit issued pursuant to the provisions of this chapter.
- D. Permit Exceptions.
 1. Non-profit organizations shall be exempt from the permit fee requirements only, provided they supply a certificate to the City stating that they are exempt and classified as non-profit under State and Federal taxing statutes. All other requirements of this chapter, however, shall apply to such organizations.
 2. The provisions of this chapter shall not apply to:
 - a. Current news, which includes reporters, photographers or cameramen in the employment of a newspaper, news service, broadcasting station or similar entity engaged in the broadcasting of news events.
 - b. Productions that are conducted by a cable television company operating under a franchise granted by the City which involve less than two motor vehicles.

- c. Student and educational filming, provided a written certificate is submitted from the school of their attendance stating they are currently an enrolled student and/or the educational film shall be limited to classroom viewing only.
- d. The filming or videotaping of motion pictures solely for private use.
- e. Any motion picture or television production at a motion picture or television studio located in the City.

E. Permit Applications.

1. Permit Application. Any person desiring a City filming permit shall complete an application on a filming permit application form provided by the City Filming Permit Coordinator. Filming permit applications shall be submitted at least three working days prior to the date on which such person desires to conduct an activity for which a permit is required. If such activity will interfere with traffic or involves potential public safety hazards, an application shall be submitted at least five working days in advance.
2. Application Fee. The application for a City filming permit shall be accompanied by a non-refundable permit application fee in the amount set by City Council resolution. This non-refundable fee shall cover the actual costs of processing and investigating permit applications and administering the City filming permit program.
3. Permits from Additional Jurisdictions. Written evidence of permits and/or coordination with other public agencies may be required upon submission of an application for a City film permit. In such instances, requirements of the applicable responsible agencies shall also be made a requirement of the City film permit. Examples of potential agencies include, but are not limited to, the California Highway Patrol, Yolo County Sheriff's Department and Fire Protection Districts in Yolo County.
4. Cleaning Deposit. Each application shall be accompanied by a refundable \$500.00 faithful performance bond (cash or bond) in favor of the City at the time of application to ensure clean up and restoration of the production location. This amount may be increased as provided in subsection G below. The bond shall be returned upon completion of filming and after an inspection to the City's satisfaction.

F. Permit Denials. The City Filming Permit Coordinator may deny a permit as provided for in this chapter if, based on a consideration of the application and from such other information as may be otherwise obtained, the City Filming Permit Coordinator finds that:

1. The production will unduly interfere with traffic, pedestrian movement or endanger public safety.
2. The production will unduly interfere with normal governmental or City operations, threaten to result in damage or detriment to private or public property, or result in the City incurring costs or expenditures in either money or personnel not reimbursed in advance by the applicant.
3. The production will constitute a fire hazard or any other type of safety hazard that cannot be adequately mitigated.
4. Information contained in the application, or supplemental information requested from the applicant, is false in any material detail.
5. The application is incomplete or the applicant failed to complete the application after having been notified of the additional information or documents required.

- G. Permit Conditions. The City Filming Permit Coordinator may impose any conditions found necessary to protect the public health, safety and welfare. The permittee shall comply with any conditions or restrictions the City may impose as a condition to issuing a permit. No changes shall be made without first obtaining the City's written approval. In addition to specific conditions placed on individual City filming permits by the City and other public agencies, the following conditions shall apply:
1. Special Effects. Any use of special effects (e.g., pyrotechnics, open flames, small explosives, etc.) shall require a separate special effects permit from the City Fire Department. Evidence of such a permit shall be submitted at the time of application for a City filming permit.
 2. Traffic Control. Production companies must use the City Police Department for any filming that requires interim traffic control ("ITC"). ITC on major roads is limited to five minutes. ITC shall not occur more than once during any 20-minute period. The permittee is responsible for obtaining, and paying the cost of, the required officers. The following conditions shall apply:
 - a. The permittee shall furnish and install all advance warning signs and any other traffic control devices in conformance with Caltrans' Manual of Traffic Controls for construction and maintenance work zones.
 - b. Traffic shall not be detoured across a double centerline without prior approval of the City Engineer/Public Works Director.
 - c. Camera cars must drive with the flow of traffic and must not interfere with other vehicles on the road.
 - d. Stationary cameras should be mounted off of the roadway. If a stationary camera is to be located in a traffic lane, all necessary lane closures must be provided and this matter must be disclosed on the permit.
 - e. No existing regulatory or warning signs may be bagged or removed without City approval.
 - f. If a production company wets the roadway for filming purposes, the filming company may not strike the set until the roadway is dry to the City's satisfaction.
 3. City Fire Department. Production companies shall comply with the provisions set forth in "Filming in California. A Fire Protection Handbook." All productions numbering over 50 cast and crewmembers require Fire Department notification. Production companies are further responsible for contacting the Fire Department to determine the requirements of the Fire Safety Advisor Coordinator. Written evidence of the Fire Safety Advisor Coordinator's requirements for the production shall be required upon submission of an application for a City filming permit. Fire safety advisors are required for:
 - a. Productions using special effects.
 - b. Productions involving helicopter refueling, stunt operations and location takeoffs and landing.
 - c. Productions occurring in native vegetative areas.
 - d. Interior productions closed to the public where crew and cast exceed 25 members.
 - e. Productions involving refueling operations in excess of 10 gallons.
 4. Limitation of Filming Hours. Filming activity of commercial motion picture or television productions shall be limited to between the hours of 7:00 a.m. and 7:00 p.m.

- a. Residential Extension. Filming activity hours may be extended beyond 7:00 p.m. in residential areas upon the submission of written approval of 75% of the property owners and/or residents within a 500-foot radius of the filming location. The approval form shall be provided by the City.
 - b. Nonresidential Extension. Filming activity hours in nonresidential areas may be extended beyond 7:00 p.m. with the consent of both the City and 75% of the property owners and/or occupants within a 500-foot radius of the filming location.
- 5. Insurance. The City shall require, as a condition of issuing such a permit, that the applicant furnish acceptable proof of insurance in a minimum amount of \$1,000,000.00 to protect the City against claims of third persons for personal injury, wrongful death and property damage and to indemnify the City for damage to City property arising out of the permittee's activities. The City, in its sole discretion, may require additional insurance for certain filming activities. A copy of the policy will remain on file with the application. The City and its officers and employees shall be named as additional insured under the policy which shall not be subject to cancellation or modification until after 30 days' written notice to the City. The applicant shall also submit verification that adequate worker's compensation insurance coverage is maintained.
- 6. Cleanup/Restoration.
 - a. Depending on the nature of the production, the City may require an additional deposit in excess of the \$500.00 deposit set forth in subsection (E)(4), above.
 - b. The permittee shall conduct operations in an orderly fashion with continuous attention to the storage of equipment not in use and the cleanup of trash and debris. The area used shall be cleaned of trash and debris within two hours of the completion of the activity to the satisfaction of the City. The permittee shall be responsible for restoring any area damaged or disrupted before leaving the production location. If the production location is not repaired or restored to the City's satisfaction, the City Filming Permit Coordinator shall have the necessary restoration and/or repairs performed at the expense of the permittee.
- 7. Reimbursement. The applicant shall pay the City for all costs and expenses incurred by the City as a result of the production. The City Filming Permit Coordinator may require the applicant to post a cash bond in an amount to be determined by the City Filming Permit Coordinator sufficient to satisfy this reimbursement obligation.
- H. Public Service Fees.
 - 1. Upon approval of an application for a City filming permit, the City filming permit coordinator shall provide the applicant with a statement of the estimated cost of providing police, fire, emergency medical services and other City employees and services for public safety for the filming event. The cost of such services shall be solely borne by the applicant and shall be paid to the City prior to the conducting a production. The amount of such fees shall be based on the City's actual cost of providing the required number of police and other City employees and services necessary to ensure the safety of both the participants of the production and the community.
 - 2. If the actual cost of public services for the filming event is less than the estimated cost pursuant to subsection (H)(1) of this section, the permittee shall promptly be refunded the difference by the City. If the actual cost for public services is more than the estimated cost pursuant to subsection

(H)(1) of this section, the difference shall become due and payable to the City upon the permittee's receipt of a statement of actual costs by the City.

I. Permit Issuance.

1. Prior to the issuance of a City filming permit, the applicant shall execute a hold harmless agreement. In this agreement, the applicant shall consent to defend, indemnify and hold harmless the City and its officers and employees from any liability to any persons or property resulting from any damage or injury occurring in connection with the permitted filming event, insofar as permitted by law.
2. Prior to the issuance of a City filming permit, the applicant shall be required to execute a location filming checklist.
3. Unless grounds for denial exist pursuant to subsection F, above, the City Filming Permit Coordinator shall issue the City filming permit after the application has been approved, the applicant has agreed in writing to comply with all of the terms and conditions of the permit, and the requirements of this chapter respecting indemnification, insurance, police, traffic-control, fees, and cleanup deposits have been fully satisfied.

J. Filming Requirements.

1. Safety. No person shall engage in any motion picture or television production that would constitute a hazard to public safety or otherwise interfere with or endanger the public place or rights of any owners or occupants of property to the quiet, peaceful and unmolested enjoyment of their property.
2. Location Filming Requirements. Permittees shall comply with the following requirements filming requirements:
 - a. In preparing for the filming, consideration must be given to all neighbors or business owners who will be impacted.
 - b. When filming in a neighborhood or business district, proper notification shall be provided to each neighbor or merchant within the total reasonable range of the filming's impact and physical presence. The filming notice shall, at a minimum, include the name of the company, name of production, kind of production (e.g., feature film, etc.), duration of activity (e.g., date(s), 7:00 a.m. to 7:00 p.m., etc.), description of filming activity, company contact and a signed copy of the location filming checklist.
 - c. Production vehicles arriving on location in or near a residential neighborhood shall not enter the area at a time earlier than the time stipulated in the permit.
 - d. Production vehicles shall neither park in nor block driveways without the express permission of the City and driveway owner.
 - e. All productions shall keep noise levels as low as possible, and strive to maintain a "low profile" during their presence in the area.
 - f. All catering, craft services, construction, strike and personal trash is to be removed from the location and its impacted area.
 - g. Cast and crew meals shall be confined to the area designated in the permit. Individuals shall eat within the designated meal area during scheduled crew feedings.

- h. Removal, trimming and/or cutting of vegetation or trees is prohibited, unless approved by permit or property owner. Requirements of any applicable City tree ordinance shall be satisfied.
- i. All signs erected for filming purposes shall be removed upon completion of the day's filming, unless otherwise stipulated by the permit.
- j. The removal, moving or towing of the public's vehicles is prohibited without the express permission of the City or the owner of the vehicle.
- k. All members of the cast and crew of the production shall behave in a courteous manner.
- l. The production shall not interfere with the normal activities of the neighborhood, unless specified in the permit.
- m. Any roadwork or construction by City crews and/or private contractors under permit or contract to the City shall have priority over filming activities.
- n. All fire lanes shall remain open at all times. The access to all private and public buildings must be maintained. Intersection sight distance must also be maintained.
- o. The City shall not provide posting of advance parking reservations for any production company. The permittee is responsible for posting of all public or private parking areas.
- p. The production area and all surrounding areas, including the public right-of-way shall be cleaned daily by the permittee. No litter shall remain upon completion of the filming. If either the City or a homeowners association is required to clean up the street as a result of a complaint, the production company shall be liable for such costs.
- q. There shall be no interference with the normal activities of any neighborhood, such as refuse collection, street sweeping, deliveries or ingress or egress to public or private property.
- r. The use of bullhorns shall not be permitted.

K. Rules and Regulations.

- 1. Change of Date. Upon request of the permittee, the City shall have the power, upon a showing of good cause, to change the date for which the permit has been issued, provided established limitations are complied with in respect to time and location.
- 2. Rules. The City Filming Permit Coordinator is hereby authorized and directed to promulgate rules and regulations, subject to approval by resolution of the Council, governing the form, time, and location of any motion picture or television production conducted within the City. The rules and regulations promulgated by the City Filming Permit Coordinator shall be based upon the following criteria:
 - a. The health and safety of all persons;
 - b. Avoidance of undue disruption of all persons within the affected area;
 - c. The safety of property within the City and;
 - d. Traffic congestion at particular locations within the City.

- L. Appeal Procedures. The decision of the City filming Permit Coordinator to issue, conditionally issue, or not issue a permit shall be final, unless appealed in writing within five working days of the decision by requesting a hearing of the City Council at the next available meeting. Such written request for an appeal consideration shall be accompanied by a fee, as established by City Council resolution. If the

9.32.020

length of time between the appeal and the filming event prevents an appropriate review by the City Council, then the decision of the City Filming Permit Coordinator is final.

M. Revocation of Permit.

1. The City Filming Permit Coordinator may revoke a permit upon a finding that any term, condition, restriction or limitation of such permit has not been complied with, including the timely payment of all required deposits. A permit may also be revoked if the City Filming Permit Coordinator determines that, as a result of changed circumstances, any one or more of the grounds for denial specified in subsection F have been met. Notice of such action revoking a permit shall be delivered in writing to the permittee by personal service or by registered mail. Appeal to the City Council from any such revocation may be taken as specified in subsection L.
2. The City Filming Permit Coordinator may revoke a City filming permit prior to the expiration of the City filming permit in the event of the occurrence of a riot, major disorder or serious breach of the peace when, in his or her opinion, it is necessary to prevent injury to persons and/or to property.

N. Enforcement. A violation of the provisions of this chapter shall be a misdemeanor and may be punishable in accordance with Section 1.08.070 (General penalty—Continuing violations—Aiding or abetting). (Prior code § 15-51)

9.32.020 Disruption of motion picture or television productions.

- A. No person, after first being warned by a peace officer to cease the conduct, shall engage in conduct that disrupts motion picture or television productions undertaken pursuant to a City filming permit issued by the City.
- B. For purposes of this chapter, “conduct which disrupts motion picture or television production” includes, but is not limited to:
 1. Creating or causing audible interference to the recording of sound;
 2. Interfering with the ability of a production to achieve consistent light levels by shining or reflecting light onto a set or at a camera or by utilizing some other artificial means to adversely affect lighting;
 3. Interfering with the ingress or egress of production equipment or personnel;
 4. The placement of any obstacles at any location where production is taking place.
- C. A violation of the provisions of this chapter shall be a misdemeanor and may be punishable in accordance with Section 1.08.070 (General penalty—Continuing violations—Aiding or abetting).
- D. This section shall not apply to any person who is engaged in the bona fide exercise of a constitutional right. (Prior code § 15-52)

Chapter 9.36

CLOSURES OF PUBLIC PLACES

Sections:

9.36.010 Closure of walkway between Cottonwood and Ashley Streets.

9.36.020 Public use of Freeman Park.

9.36.010 Closure of walkway between Cottonwood and Ashley Streets.

- A. Closure of Walkway. The walkway between Cottonwood Street and Ashley Street shall be closed to the public between dusk and dawn daily. This closure shall be effective upon the posting of appropriate signage informing the public thereof.
- B. Violation—Penalty. Any violation of any provision of this section shall constitute an infraction, and upon conviction thereof, shall be punished in accordance with Section 1.08.070 (General penalty—Continuing violations—Aiding or abetting). (Prior code § 15-53)

9.36.020 Public use of Freeman Park.

- A. Closure of Park. Freeman Park shall be open to the public daily between the hours of 8:00 a.m. and 6:00 p.m. or dusk, whichever is earlier; provided, however, that any person may use Freeman Park between 6:00 p.m. or dusk, whichever is earlier, and 8:00 a.m. if he or she does so as part of a scheduled, City-sponsored event or if he or she is participating in an approved, permitted event.
- B. Gazebo/Bandstand Use.
 - 1. No person shall use the gazebo/bandstand in Freeman Park unless the Parks, Recreation, and Community Services Director, or assignee, has issued a permit for that use. For purposes of this section, the gazebo/bandstand shall include both the gazebo/bandstand structure itself and an area extending in a five-foot radius around that structure.
 - 2. An application form for a permit to use the gazebo/bandstand shall be available at the Parks, Recreation, and Community Services Office, and applicants shall be required to include the following:
 - a. The name and address of the applicant;
 - b. The name and address of the person, if different from the applicant, who shall have direct responsibility for the use of the gazebo/bandstand;
 - c. The purpose or purposes for which the applicant proposes to use the gazebo/bandstand;
 - d. A general description of any equipment or materials the applicant proposes to attach to or use in, on or around the gazebo/bandstand;
 - e. Whether the purpose for which the applicant proposes to use the gazebo/bandstand will include cooking or the use of fire or electrical equipment of any kind; and
 - f. The date and time period for which the applicant seeks to use the gazebo/bandstand. (Prior code § 15.54)

C. Violation of this section shall be punishable pursuant to Section 9.28.290.

TO: THE HONORABLE MAYOR AND CITY COUNCIL
 AGENDA: City Council Regular Meeting
 DATE: September 5, 2023
 ITEM #: I.15
 SUBJECT: Woodland Finance Authority Wastewater Revenue Refunding Bond, Series 2022 Interest Rate Conversion

Recommendation for Action: Staff recommends that the Board of the Woodland Finance Authority approve Resolution No. _____, approving the Conversion of the Interest Rate on the Wastewater Revenue Bonds, Refunding Series 2022.

Staff Contact:

Kim McKinney, Administrative Services Director, (530) 661-5849, kim.mckinney@cityofwoodland.org

Fiscal Impact:

The 2022 Wastewater Refunding Bond (2022 Bond) was issued to refund, for significant economic savings, the Wastewater Revenue Bonds Refunding Series 2014 (the 2014 Bonds). The 2022 Bond, like the 2014 Bonds, is payable solely from net revenues of the City's wastewater system. At the time of issuance of the 2022 Bonds, the bonds were issued at a taxable interest rate, but are now being converted to a tax-exempt interest rate as discussed herein.

The following table summarizes the calculation of the savings between the 2022 Bonds and the 2014 Bonds, assuming conversion of the interest rate from 3.60% (taxable) to 2.845% (tax-exempt) on or before December 5, 2023:

Table 1: Savings Assuming Conversion

Date	Prior Debt Service	Refunding Debt Service	Savings
3/1/2023	1,022,850.00	887,082.57	135,767.43
3/1/2024	1,022,850.00	887,082.34	135,767.66
3/1/2025	2,537,850.00	2,402,082.94	135,767.06
3/1/2026	2,537,100.00	2,401,333.04	135,766.96
3/1/2027	2,537,600.00	2,401,832.82	135,767.18
3/1/2028	2,539,100.00	2,403,332.94	135,767.06
3/1/2029	2,536,350.00	2,400,583.02	135,766.98
3/1/2030	2,539,350.00	2,403,583.06	135,766.94
3/1/2031	2,537,600.00	2,401,832.70	135,767.30
3/1/2032	2,536,100.00	2,400,332.56	135,767.44
3/1/2033	2,699,600.00	2,563,832.40	135,767.60
3/1/2034	2,698,600.00	2,562,832.40	135,767.60
3/1/2035	2,698,800.00	2,563,032.12	135,767.88
	30,443,750.00	28,678,774.91	1,764,975.09

The total cash flow savings are over \$1.76 million with an average annual savings of \$135,767 per year from fiscal years 2023 to 2035. The net present value savings are over \$1.46 million or 8.32%

as a percentage of the outstanding 2014 Bonds refunded. The California Debt and Investment Advisory Commission ("CDIAC") notes refundings with net present value savings which exceed 3.0% to 5.0% can be considered significant. The refunding exceeded this range at 8.32%.

There are certain bond counsel and municipal advisor costs associated with the conversion, including preparing the 2023 Interest Rate Conversion Notice (attached hereto) and preparing a tax-exempt opinion and other related costs. These costs were not charged to the original transaction but will be charged post conversion.

Note: Should the interest rate conversion not occur, there are still total savings of \$629,500 or \$48,423 per year with a net present value benefit of \$492,290 or 2.242%.

Background:

The Woodland Finance Authority issued the Wastewater Revenue Bonds, Refunding Series 2014 (Junior Lien) (The "2014 Bonds") in the original amount of \$33.825 million. The proceeds of the 2014 Bonds were used refund bonds issued by the Authority for the City's wastewater system in 2002 and 2005 and to pay costs of issuance. At the time of the refunding there were \$24.77 million outstanding 2014 Bonds.

The Tax Cuts and Jobs Act of 2017 eliminated the ability for issuers to refund, on a tax-exempt basis, bonds in advance of their call date. This is commonly known as an advance refunding. However, bonds may be refunded as tax-exempt within 90 days of their call date, a structure which is commonly known as a current refunding. The 2014 Bonds were not callable until March 1, 2024, meaning a tax-exempt advance refunding was not currently permitted and the Authority would need to wait to do a current refunding until 90 days before March 1, 2024, or on or after December 1, 2023. However, a refunding of the 2014 Bonds could be completed early by selling a refunding bond at a taxable interest rate which will be in effect until 90 days before the call date or, in this case, December 5, 2023. On December 5, 2023, the interest rate will convert to tax-exempt. This structure is commonly known as a "Convertible" bond or a "Cinderella" bond.

In 2022, staff and the Authority's Financing Team set out to secure proposals from direct placement financial institutions that might consider purchasing a Convertible bond. The Financing Team prepared a term sheet that went out to numerous financial institutions. The Authority received five (5) qualified responses from various financial institutions. Webster National Bank (the "Purchaser") was the clear winner with both the lowest taxable (3.60%) and the lowest converted tax-exempt interest rate (2.845%).

The 2022 Bond refunded for significant savings the outstanding 2014 bonds payable on or after March 1, 2025 to March 1, 2035, outstanding in the amount of \$21.955 million. The 2014 Bonds maturing on March 1, 2023 and March 1, 2024, outstanding in the amount of \$2.815 million, were non-callable and refunding them did not provide any economic benefit. The 2023 and 2024 maturities of the 2014 Bonds remained outstanding and will be paid as regularly scheduled.

Discussion:

Pursuant to Section 13.09 of the Trust Agreement, the Authority has the right, subject to the satisfaction of certain conditions, at any time on or after December 5, 2023, to convert the interest rate payable on the Series 2022 Bond from 3.60% per annum, which is the federally taxable rate of interest currently borne by the Series 2022 Bond, to 2.845% per annum (the "Tax Exempt Rate"). The attached resolution and document serve to approve the conversion and serve notice to Webster National Bank (the "Purchaser").

Prior to the conversion date of December 5, 2023, the Authority will notify the Purchaser that the

Authority wishes to exercise the option to convert from taxable to tax-exempt. The Purchaser will then have the option to determine whether the Refunding Bonds are callable beginning on any interest payment date at one of the following two options:

3/1/26 Through 9/1/27 @102%
3/1/28 Through 9/1/29 @ 101%
3/1/30 and Thereafter @ 100%
or
3/1/24 Through 9/1/25 @ 103%
3/1/26 Through 9/1/27 @ 102%
3/1/28 Through 9/1/29 @ 101%
3/1/30 and Thereafter @ 100%

The resolution appoints the following firms to work on the conversion (the “Financing Team”):

- Lozano Smith LLP as Bond Counsel
- Del Rio Advisors, LLC, as Municipal Advisor

Table 2 summarizes the results of refunding the callable 2014 Bonds with the issuance of the 2022 Bond. This table also assumes the conversion takes place on or before December 5, 2023.

Table 2: Refunding Results

Estimated Refunding Results ⁽¹⁾	
2014 Bonds Original Par Amount	\$33,825,000
2014 Bonds Outstanding	\$24,770,000
2014 Bonds Amount Refunded ⁽¹⁾	\$21,955,000
Refunding Par Amount ⁽²⁾	\$23,134,477
Final Maturity (2014 Bonds)	March 1, 2035
Final Maturity (2022 Bond)	March 1, 2035
Total Savings ⁽²⁾⁽³⁾	\$1,764,975
Average Annual Savings ⁽²⁾⁽³⁾	\$135,767
Net Present Value Savings ⁽²⁾	\$1,462,050
Net Present Value Savings Percentage ⁽²⁾⁽³⁾	8.32%

Notes

- (1) The March 1, 2023 (\$1,375,000) and March 1, 2024 (\$1,440,000) bonds were not refunded.
(2) Assumes the interest rates presented by the Purchaser in their term sheet dated April 11, 2022
(3) From Fiscal Years 2023 to 2035 (see Table 1)
(4) As a percentage of the par amount of bonds being refunded

Documents for Review and Consideration

2023 Interest Rate Conversion Notice whereby the Authority notifies the Purchaser of its desire to convert the interest rate and the Purchaser has the right to choose one of two optional redemption provisions.

Members of the Financing Team are present tonight to answer any questions.

Conclusion:

Staff recommends that the Board of the Woodland Finance Authority approve Resolution No. _____, approving the Conversion of the Interest Rate on the Wastewater Revenue Bonds, Refunding Series 2022.

WOODLAND FINANCE AUTHORITY

RESOLUTION NO. 23-01

RESOLUTION APPROVING THE CONVERSION OF THE INTEREST RATE ON THE AUTHORITY'S WASTEWATER REVENUE BOND, REFUNDING SERIES 2022 TO THE TAX-EXEMPT RATE

WHEREAS, the Woodland Finance Authority (the "Authority") issued its Wastewater Revenue Bond, Refunding Series 2022 (Federally Taxable Convertible) (the "Series 2022 Bond") on May 25, 2022, pursuant to the Trust Agreement as supplemented by the first supplemental trust agreement, both dated March 1, 2014, and the second supplemental trust agreement dated May 1, 2022 (as so amended and supplemented, the "Trust Agreement"), each between the Authority and U.S. Bank Trust Company, National Association (as successor-in-interest to U.S. Bank National Association), as trustee (the "Trustee");

WHEREAS, pursuant to Section 13.09 of the Trust Agreement, the Authority has the right, subject to the satisfaction of the conditions provided therein, at any time on or after December 5, 2023, to convert the interest rate payable on the Series 2022 Bond from 3.60% per annum, which is the federally taxable rate of interest currently borne by the Series 2022 Bond, to 2.845% per annum (the "Tax-Exempt Rate");

WHEREAS, it appears to the Board of Directors of the Authority (the "Board") that the conversion of the interest rate on the Series 2022 Bond to the Tax-Exempt Rate on December 5, 2023, is desirable and in the best interests of the Authority;

NOW, THEREFORE, BE IT RESOLVED, by the Board of the Woodland Finance Authority, as follows:

Section 1. Recitals. The foregoing recitals are true and correct and the Board so finds and determines.

Section 2. Authorization of Officers to Implement the Conversion. The Board hereby authorizes and directs the President, the Vice President, the Administrator, the Treasurer/Controller and the Secretary of the Authority, and their respective designees, as have been designated by the Board ("Designated Officers"), for and in the name of the Authority, to do any and all things and to execute and deliver any and all documents that they may deem necessary or advisable in order to complete the conversion of the interest rate on the Series 2022 Bond to the Tax-Exempt Rate. All actions heretofore taken by such officers and agents that are in conformity with the purposes and intent of this resolution are hereby ratified, confirmed and approved in all respects.

Section 3. Identification of Professionals Involved. The Board hereby approves the firm of Del Rio Advisors, LLC, to act as municipal advisor (the "Municipal Advisor"), and the firm of Lozano Smith, LLP, to act as bond counsel with respect to the conversion of the interest rate on the Series 2022 Bond. A Designated Officer is hereby authorized to execute and deliver service agreements with such firms.

Section 4. **General Authorization.** The Board hereby authorizes and directs the Designated Officers and other officers and agents of the Authority, and each of them individually, for and in the name of and on behalf of the Authority, to do any and all things and to execute and deliver any and all documents that they may deem necessary or advisable in order to complete the sale, issuance, and delivery of the Bond and otherwise to carry out, give effect to, and comply with the terms and intent of this resolution. All actions heretofore taken by such officers and agents that are in conformity with the purposes and intent of this resolution are hereby ratified, confirmed and approved in all respects.

Section 5. **Effective Date.** This resolution takes effect immediately upon its passage.

APPROVED, PASSED AND ADOPTED on September 5, 2023, by the following vote:

Re: Woodland Finance Authority
Wastewater Revenue Bond, Refunding Series 2022
(Federally Taxable Convertible):
Election to Convert the Interest Rate on the Series 2022 Bond

Dear Mr. Leonard:

This notice is given pursuant to Section 13.09 of the Trust Agreement as supplemented by the first supplemental trust agreement, both dated March 1, 2014, and the second supplemental trust agreement dated May 1, 2022 (as so amended and supplemented, the “Trust Agreement”), each between the Woodland Finance Authority (the “Authority”) and U.S. Bank Trust Company, National Association (as successor-in-interest to U.S. Bank National Association), as trustee (the “Trustee”), pursuant to which the Authority’s 2022 Wastewater Revenue Bond, Refunding Series 2022 (Federally Taxable Convertible) (the “Series 2022 Bond”) was issued. Capitalized terms used below have the meanings specified in the Trust Agreement.

The Authority hereby notifies you:

- (i) that the interest rate on the Series 2022 Bond will be converted to the Tax-Exempt Rate on December 5, 2023, which is the Conversion Date hereby selected by the Authority, subject to the delivery of the items required by Section 13.09(C) of the Trust Agreement on or prior to the Conversion Date; and
- (ii) that the Owner of the Series 2022 Bond shall exercise its option to choose one of two optional redemption provisions for the Series 2022 Bond as provided in Section 13.03(C) of the Trust Agreement by delivering to the Authority and the Trustee not less than thirty (30) days prior to December 5, 2023, the Owner’s Change in Redemption Notice.

Sincerely,

[AUTHORITY NAME/TITLE]
